MICHELE GIRARDI

Catalani, Angelica (*b* Sinigaglia, 10 May 1780; *d* Paris, 12 June 1849). Italian soprano. She received very little formal musical instruction and made her début at La Fenice at the age of 17 in Mayr's *La Lodoiska*. In 1800 she sang in Cimarosa's *Gli Orazi ed i Curiazi* in Trieste, and the following season in the same composer's *Clitennestra* at La Scala. After appearances in Florence and Rome, in 1804 she went to Lisbon, and in 1806 she made her London début at the King's Theatre in M.A. Portugal's *Semiramide* (see illustration), also singing in Portugal's *Il ritorno di Serse* and *La morte di Mitridate*, Mayr's *Che originali* (*Il fanatico per la musica*) and Nasolini's *La morte di Cleopatra*.

Between 1808 and 1814 at the King's she appeared in Paisiello's *La frascatana* and *Didone*, sang Sesostris in

Angelica Catalani in the title role of Portugal's 'La morte di Semiramide': lithograph by Samuel Freeman after Adam Buck, 1807

Nasolini's *La festa d'Iside*, and sang in Pucitta's *La vestale*, *Le tre sultane* and *La caccia di Enrico IV*, Piccinni's *La buona figliuola* and Paer's *Camilla*. She also sang Vitellia (*La clemenza di Tito*) and Susanna in the first London performance of *Le nozze di Figaro* (1812). Moving to Paris, she took over the direction of the Théâtre Italien in 1814, continuing to sing in operas written for her by Pucitta and Portugal. In 1817 she embarked on an extended tour of Europe, returning to London in 1824 for a few performances of *Che originali* (*Il fanatico per la musica*); then she gave up the stage. A beautiful woman with a superb, perfectly controlled voice, and a fine actress, she lacked the taste or education to make the most of her gifts.

ELIZABETH FORBES

Catalani [Catalano], **Ottavio** [Ottaviano] (*b* Enna, Sicily; *d* ?Messina, 1644 or later). Italian composer and organist. He was an organist at Catania before he left Sicily for Rome (some time before 1600), where in 1601 he is known to have been *maestro di cappella* of S Apollinare. He spent the earlier part of his composing life in Rome: he was employed as a composer and teacher at the Collegio Germanico for some years up to 1615, and from April 1613 until at least the end of 1621 he was the private teacher of Prince Marc'Antonio Borghese of Sulmona, nephew of Pope Paul V, from whom he received patronage in the form of ecclesiastical benefices. During his time in Rome he also taught the nephews of Popes Clement VIII and Leo XI and was named *maestro di cappella* to the King of Poland. He also took part in Easter processions at the Oratorio di S Marcello. Some time between 1622 and 1624 he returned to Sicily, becoming *maestro* of Messina Cathedral in the latter year. The heading of *Sacro invito* described him as an abbot.

Catalani belonged by adoption to the Roman school that flourished in the generation after the death of Palestrina. According to Lionnet, his music, which is almost entirely for the church, is in a modern style. Some works employ up-to-date concertato textures, and in the *Pastorale* Lionnet finds foreshadowing of the style of Luigi Rossi. Catalini's only extant publication is the *Sacrarum cantionum … liber primus*. His other published music is found in several Roman anthologies and also in some published as far afield as Leipzig and Strasbourg. Like many of his contemporaries he wrote works for two choirs, for example two settings of the psalm *Beatus vir* (in manuscripts at *GB-Ob*). One, in the 8th mode, has no continuo but is in a lively style with much rhythmic variety; there are few tuttis and no word-painting. The other, by contrast, has some massive tuttis and restrained word-painting and is more homophonic. Catalani also wrote oratorio-like music for particular occasions at Messina: the Quarant'ore devotion at the Jesuit church on 19 February 1640 and a Novena celebration in 1644 by the Theatine Fathers of the Oratorio de' Mendicanti. In these he used an up-to-date array of instruments of all kinds, including a varied continuo section.

WORKS

David Musicus, 1613, text only
Sacrarum cantionum … liber primus, 2–8vv, bc (org) (Rome, 1616)
15 motets, 1612^{3}, 1616^{1}, 1618^{3}, 1621^{2}, 1621^{3}, 1621^{16}, 1622^{2}, 1625^{1}, 1647^{1}
1 madrigal, 1609^{17}; 6 secular works, 1621^{15}
Lamento di Erminia, 1619, *I-Bc*, *Vc*
Pastorale nel Santissimo Natale di Christo, *I-Rc*
Sacro invito d'angioli per la solenne festa dell'oratione delle 40 hore, Messina, 1640, lost
Visione rappresentata … dialogo recitato coll'occasione della festività della Novena, Messina, 1644, lost
Works in *GB-Ob*; many lost MS works, titles known through catalogues of *I-Rcg* and Biblioteca Borghese, Rome

JEROME ROCHE/R

Cataldo, Salvatore di. *See* DI CATALDO, SALVATORE.

Catán (Porteny), Daniel (*b* Mexico City, 3 April 1949). Mexican composer. He graduated in philosophy at the University of Sussex (1970) and obtained the PhD in music composition and theory from Princeton University (1977), where his teachers included Babbitt, James Randall and Boretz. He also studied the Japanese traditional arts with particular focus on the combination of music and drama. He was composer-in-residence with the WNO (1986–7) and received the Placido Domingo Award for his outstanding contribution to opera in Spanish.

Catán's output comprises mainly symphonic music, orchestral songs and operas. His work with intervallic collections creates clear tonal centres and harmonies with a structural function. His angular but eminently singable melodies meld with lush, romantic harmonies supported by a fastidiously transparent orchestration which never obscures the human voice. His most recent operas, *Florencia en el Amazonas* (1996) and *Las bodas de Salsipuedes* (1998–9), incorporate Latin American percussion instruments and rhythmic patterns derived from Afro-Caribbean popular music. *La hija de Rappaccini*, based on a play by Octavio Paz, and *Florencia en el Amazonas* (the first opera in Spanish commissioned by a major opera company in the United States), which incorporates Gabriel García Marquez's magic realism, have marked the infusion of Latin American culture into traditional opera.

LEONORA SAAVEDRA

Catania. Italian city in Sicily. The city was founded as a Greek colony in the 8th century BCE. A large Greco-Roman theatre, seating 1300, survives to the present day. Despite the natural disasters that have destroyed many of the city's records, it is known that chant was taught at the Benedictine cathedral from its foundation in 1091. The only music surviving from the Middle Ages is a Troper in Aquitanian notation (*E-Mn* 19421, *c*1200), which contains four polyphonic unica as well as a large number of monophonic pieces, one of them in praise of the Catanese martyr Agatha.

The monk Blandino noted that in 1131 a certain Pietro of Pisa entered the cathedral to the sound of an organ; by the mid-15th century there was an organist and a choir of monks and boys. Only after the secularization of the cathedral in 1575 was it possible to have professional singers and instrumentalists, who, according to an early 17th-century *ceremoniale*, also served on important occasions at other Catanese churches. The same source refers to polychoral psalm singing, but later expense accounts show the increasing popularity of the use of smaller forces, often with castratos as soloists. Conspicuous among the many *maestri di cappella* of the city is V.T. Bellini, Vincenzo Bellini's grandfather, who served at the church of S Nicolò l'Arena, the same church that in 1767 a large organ was installed by Donato Del Piano.

There were probably many early *sacre rappresentazioni* given in the monasteries. In 1440 a Passion play was enacted at the church of S Maria la Grande, and throughout the Renaissance there were many other performances, mostly under the auspices of the cathedral but also at the convent of S Placido and at the Jesuit church. Continued Jesuit influence, both through their own theatre and through that of the Accademia dei Chiari, was largely responsible for the religious or moralistic tone of several 17th-century opera plots. There are also a number of 18th-century references to *feste teatrali*, such as *La città di Abella liberata* (performed in 1780 and 1783) by the local composer Giuseppe Geremia, while opera of a more strictly commercial type was performed both at the Teatro dell'Università and at the theatres of the princes Biscari and S Domenica. The suppression of these private theatres in the early 19th century prepared the way for the opening of the Teatro Comunale Provvisorio with a production of Rossini's *L'Aureliano in Palmira* in 1821. Basic to its repertory were the works of the leading Italian composers, but the theatre also contributed to creating a forum during the 19th century for such local musicians as P.A. Coppola, Pietro Platania, Salvatore Pappalardo and F.P. Frontini, who is also known for his research into the folksongs of the Etna region and eastern Sicily. In 1890 the magnificent Teatro Massimo Bellini, designed by Carlo Sada, opened with a production of *Norma*. The theatre was described by Gigli in his memoirs as 'the most beautiful and most acoustically perfect in the world', and remains the principal musical institution in the city.

In the 20th century musical life in Catania was stimulated by the foundation of several concert organizations, including the Lyceum Club (1928), the Società Catanese Amici della Musica, which existed between 1947 and 1962, and, more recently, the Associazione Musicale Etnea (1974), whose programmes are notable for promoting contemporary and non-European music. In 1989 the Teatro Massimo Bellini founded an annual festival dedicated to Bellini. The university has also contributed to the growth of music in the city, with the establishment in 1970 of a professorship in music history in the faculty of arts and philosophy, which promotes conferences, seminars and festivals such as the 'Siculorum Gymnasii Musica'. Catania's other principal musical institutions are the Istituto Musicale Pareggiato Vincenzo Bellini, founded in 1951, which trains performing musicians, and the Istituto Musicale Sylvestro Ganassi.

Among the leading composers produced by the city in the 20th century are Alfredo Sangiorgi, Aldo Clementi, Francesco Pennisi and Franco Battiato. Ensembles formed in recent years include the Camerata Polifonica Siciliana, the Orchestra Barocca di Catania and the Mille Regretz choir. Mention should also be made of the initiatives promoted by the local authority, which has organized summer concerts in the city since 1981, and by the regional authority, which since 1985 has organized the Catania Musica Estate, a prestigious festival featuring international artists. The Bellini d'Oro prize was established in the city in 1968. Recent research into music preserved in Catania reveals that the disastrous earthquake of 1693 was a watershed in the history and culture of the city. Little remains from before this date beyond the fragments of music and liturgy from the 14th to 16th centuries held in the Archivio di Stato. From the period following the disaster there are various collections of music held in the Biblioteche Riunite Civica ed Antonio Ursino Recupero, where a rare medieval treatise with particular contrapuntal rules 'ad usum Regni Siciliae' can also be found. Other collections are housed at the Museo Belliniano, the Curia Arcivescovile, the Società di Storia Patria per la Sicilia Orientale and in the Biblioteca Regionale Universitaria, which since 1995 has had a specialist musicological section.

Catargi, Alexis (*b* Bucharest, 17 Sept 1876; *d* Sinaia, 20 Aug 1923). Romanian composer. He studied music in Bucharest, Vienna, Rome and Paris with teachers including Enescu, Van Dyck, André Gédalge, d'Indy and the violinist Robert Klenk. Catargi was secretary and cultural attaché at the Romanian Embassy in Paris (1914–18). In addition to his work as a composer he conducted

orchestral and theatrical groups and wrote reviews. His works, which bear the print of late Romanticism, were mainly written for the stage, though he turned to chamber music at the end of his life.

OCTAVIAN COSMA

Catch. A type of comic round for male voices, popular in England from the late 16th century until about 1800. The earliest known catches are those in an English manuscript of 1580 (*GB-Ckc* 1). Morley gave brief instructions on how to compose them in his *Plaine and Easie Introduction to Practicall Musicke* (1597), and Shakespeare's *Twelfth Night* includes a scene where the catch *Hold thy peace* is sung by three members of the cast. Catches first appeared in print in three collections published in London by Thomas Ravenscroft, *Pammelia* (1609), *Deuteromelia* (1609) and *Melismata* (1611); an important later collection is John Hilton's *Catch that Catch Can* (1652; fig.1).

The essential characteristic of the genre is its humour: catches were a celebration of irresponsible male leisure time, spent out of reach of the demands of women and children. Their words are usually on such subjects as drink, tobacco, music, different trades and their shortcomings, poor service in taverns and, especially, sex in its most ridiculous and least mentionable forms, the bodily functions of women being described with schoolboyish gusto. Occasionally the mixed blessings of fatherhood are also discussed (for example in Atterbury's *Hot Cross Buns*, 1777).

Catches were mainly written for three or four voices, exceptionally for as many as eight or ten. They were designed to work well even if sung badly, and were not intended to have a formal audience; any listeners eavesdropping on performances would have been invited to join in. The social class of the men who sang them is not entirely clear. If, as seems likely, catches began as an amusement for the moneyed and privileged, they must have spread to lower social groups during the reign of James I.

By the mid-18th century, singing groups meeting informally in taverns were increasingly being constituted as formal clubs. Catch clubs sprang up all over England (and also in some parts of Scotland and Ireland) with the aim of revitalizing a genre that some saw as having gone stale. Thomas Warren, secretary of the distinguished Noblemen and Gentlemen's Catch Club in London, described catches in 1763 as an 'entertaining species of music, now almost buried in oblivion'. In the event, however, the catch clubs did more to foster and promote glees (*see* GLEE): changing social manners in the 1780s ensured the decline of the catch, turning its heartiness into an embarrassment, its unbuttoned intimacy into an insult to politeness. William Jackson, who was the organist of Exeter Cathedral in the 1790s, defined catches as 'three parts obscenity to one part music'. Attempts were made to rewrite their words in a more genteel style (for example, Purcell's catch beginning 'Once, twice, thrice, I Julia try'd, / The scornful puss as oft deny'd' appeared in Rimbault's *Rounds, Catches and Canons of England* in 1860 altered to 'One, two, three, our number's right / To sing our song

1. *Title-page of 'Catch that Catch Can, or A Choice Collection of Catches, Rounds, & Canons' (London: John Hilton (ii), 1652)*

2. *'The Catch Singers': engraving, c1776; satire on political profiteering in the war with the American colonies, portraying (from left to right) Sir William Howe, Lord Howe, Lord George Germain and the Prime Minister, Lord North*

tonight'), but despite such efforts only a small handful of catches have survived in the choral repertory since 1800.

Many catches have great musical merit, but it is hard to see how they could be revived in the present day: they require male voices, and do not have the same effect if sung by female or mixed choirs; they have large vocal ranges (often an octave and a 6th) and were designed for baritones who could take top notes in falsetto, a skill now lost by both professionals and amateurs; and their words are completely at odds with current attitudes to sexual openness. Nevertheless, editions by R. Cass-Beggs (*The Penguin Book of Rounds*, 1982) and P. Hillier (*The Catch Book*, 1987) represent brave attempts to publish a substantial collection of unexpurgated catches.

The origin of the term 'catch' is obscure. It may have some connection with the 14th- and 15th-century Italian 'caccia', though the two types of song are quite different (except that a few catches are, like cacce, on the subject of hunting). Another theory, widely believed by English musicians even if it is untrue historically, is that the term refers to the technique, characteristic of catches, of arranging the words so that new meanings are thrown up by the juxtaposition of the different lines when they are sung simultaneously. For example, in Cranford's *Here dwells a pretty mayd* (1652) the phrase 'her whole estate is seventeen pence a yeare' in line 2 takes on a new meaning once line 3 adds in front of it 'you may kisse'. The words thus 'catch' at each other in passing, or they may have 'a catch' in them. This word-setting technique has other expressive possibilities besides those of sexual innuendo, and is still used from time to time by composers of modern English rounds.

DAVID JOHNSON

Catch, Jack. *See* BATES, WILLIAM.

Catel, Charles-Simon (*b* Laigle, Normandy, 10 June 1773; *d* Paris, 29 Nov 1830). French composer and theorist. He went to Paris at the age of 11 to study composition with Gossec and the piano with Gobert. With the outbreak of the Revolution he joined the band of the Garde Nationale de Paris, for which he supplied new music for public functions. After a brief period in the army, he was assigned to teach solfège and harmony to the *corps de musique* of the National Guard. He also took on duties as répétiteur at the Opéra, a post he held till 1803; and in 1795 he was appointed professor of harmony and counterpoint at the newly founded Conservatoire. From 1792 to 1797 he composed at least 25 works for performance at Revolutionary *fêtes nationales*; these included hymns, marches and military symphonies. During the late 1790s he composed a number of chamber works, including quartets and quintets for strings and wind.

In 1802 Catel published a short monograph, *Traité d'harmonie*, a manual of basic principles and rules of harmonic practice rather than a theoretical tract in the tradition of Rameau. His purpose was to simplify and codify the elements of good harmonic writing and his approach was logical, precise and systematic. The treatise remained a standard text for many years in France, and became popular in translation in Germany, Italy and England.

In 1802 he turned his attention to the stage, and by 1819 had written ten works in the various operatic genres currently in vogue. In 1810 he won two honourable mentions for his *Sémiramis* and *L'Auberge de Bagnères* by the special jury awarding the decennial prize for the best musical dramas. In the same year he was appointed inspector at the Conservatoire, but as a result of internal political machinations he severed his ties with the school in 1816. In 1817 he was accepted into the Académie des Beaux Arts. After the failure of his last two operas in 1818 and 1819 he stopped composing altogether and spent his remaining years in virtual retirement, devoting his attention to horticulture. In 1825 he was awarded the cross of the Légion d'honneur. He appears to have been a quiet, lonely man, notwithstanding a close circle of friends.

Catel's four stage works for the Académie de Musique exemplify the approach of his generation to operatic composition. *Sémiramis* (1802), based on the play by Voltaire, demonstrates Catel's acceptance and understanding of the conventions of the *tragédie lyrique* of the preceding century. In *Alexandre chez Apelles* (1808), with choreography by Gardel, he made ambitious use of the popular *ballet d'action*. This work combines both formal and dramatically motivated dance sequences, and includes among its several borrowed numbers the first movement of Mozart's G minor Symphony (K550). With *Les bayadères* (1810), a *tragi-comédie* set in India, Catel acknowledged the latest trends in operatic dramaturgy in a style (similar to Spontini's in *La Vestale*, 1807), that

marks the transition from the older tradition to that of 19th-century grand opera. This spectacular and grandiloquent work typifies the *style empire* approved by Napoleon. Finally, *Zirphile et Fleur de Myrte* (1818), an *opéra féerie*, illustrated Catel's desire to experiment, being a work unique at the Académie both in its *opéra comique* subject matter and in its musical style.

Of Catel's six *opéras comiques* all but one, *Wallace, ou Le ménestrel écossais* (1817), are lighthearted farces, in which the plots, structures and musical styles – in particular the ensembles and finales – are indebted to late 18th-century Italian *opera buffa*. These were remote from the dramatic 'rescue' and 'horror' operas of the 1790s that were also called *opéras comiques*. In *Wallace* Catel aspired to a more serious style; it is one of the first musical works with a Romantic Gothic and Scottish plot and evocations of the Scottish landscape.

Catel was neither a visionary nor an innovator. He was limited also by banal librettos, and the musical and dramatic interest of his works is never sustained. But he was a capable craftsman with an expert approach to details and a sense of a work as an entity; he created unity by such relatively new techniques as the recurring theme. He sought consistency in his portrayal of individual characters and endeavoured to relate musical expression to the immediate dramatic context. In his first works Catel favoured the control and balance of the musical forms of 18th-century opera, but gradually he wearied of the inflexibility of the number opera and began to compose extended scene complexes (e.g. the end of Act 2 of *Les bayadères*), heightening dramatic continuity by a carefully, structured tonal scheme, a recurrence of musical motifs, and a systematic piling up of impressive climaxes. There is an absence of rhythmic diversity; similar patterns tend to dominate a work such as *Les bayadères*. On the other hand, the technical proficiency of the music, the sweeping melodic lines, the rich and often eloquent harmonic language, the symphonic developmental procedures and the skilful handling of instrumental tone-colour all reveal an imaginative and articulate composer. Moreover, all the large-scale works afford scope for the theatrical spectacle dear to French opera audiences and manifest the variety and opulence of the *style empire*. Although he was not a dramatist of the first order, Catel composed music that is often moving, with passages that could stand beside the finest contributions of his age.

21 of Catel's works composed during the Revolutionary period can be readily consulted in a condensed format in Constant Pierre's *Musique des fêtes et cérémonies de la révolution française* (Paris, 1899).

SYLVAN SUSKIN

Catelani, Angelo (*b* Guastalla, 30 March 1811; *d* San Martino di Mugnano, Modena, 5 Sept 1866). Italian musicologist and composer. The date of his death has sometimes been given incorrectly as 15 September. He studied music in Modena and in 1831 was sent by a wealthy Modenese to the Naples Conservatory, which he left after six months, continuing his lessons with Zingarelli and Crescentini as a private pupil. He also had lessons from Donizetti. In 1834 he stopped receiving financial support and moved to Messina, where Donizetti secured him a contract for the 1835–6 season as composer and conductor at the theatre. After returning to Modena in 1837 to escape an epidemic in Sicily, he was made *maestro di cappella* at Reggio nell'Emilia by the Duke of Modena, but gave up the position in 1839 because of local opposition to the appointment. He wrote an opera for Modena in 1840, but because of the death of the duchess it was not performed. He took this score and the libretto of a new opera to Bologna in 1841 for Rossini's criticism, initiating a friendship that lasted until his death. The new work, *Caràttaco*, was successful in Modena in 1842, but on hearing Verdi's *Nabucco*, he abandoned writing for the stage. He was appointed *maestro di cappella* to the

Modenese court in 1846 and at the cathedral in 1848 according to his memoirs, but Roncaglia stated that his court position was that of *Regolatore delle funzioni di chiesa*. From 1841 he wrote critical articles for Modenese journals and newspapers. His friendship with Gaetano Gaspari led him to historical research, and after 1850 he published a series of biographical and bibliographical studies that constitutes his most important and lasting work. In 1860 he became assistant librarian at the Biblioteca Palatina in Modena and began cataloguing its music collections.

Catenacci, Gian Domenico. *See* CATTENACCI, GIAN DOMENICO.

Cathala [Cathalas], **Jean** (*fl* 1646–83). French composer, singer and cornettist. He is first heard of on 17 February 1646 as a tenor (*clerc-taille*) and cornettist at the Ste Chapelle, Paris. He was still recorded there on 28 May 1650, but he also appears in the records of Notre Dame, Paris, on 2 July 1649 and again in 1652. On 2 October 1656 he was appointed choirmaster of Amiens Cathedral and made a vicar of the chapel of St Quentin. He resigned on 13 November 1658, probably because his manner caused difficulties. He seems, however, to have stayed on and was finally instructed to leave by St Andrew's Day (30 November). He then succeeded Annibal Gantez as choirmaster of Auxerre Cathedral. It is known that on St Peter's Day 1665, while still choirmaster at Auxerre, he played the cornett at Troyes Cathedral. It is likely that he was the church singer 'Cathalas', living in the rue Marsousets in the parish of the Madeleine, who was present on 27 February 1673 at the funeral of the son of Louis Gingart, musician to the king and queen. Finally, on 31 December 1679, he was recorded as teaching music in Paris when he was witness to the wedding of an officer of the archbishop. He is known to have had six masses published in Paris: *Missa 'Laetare Jerusalem'* and *Missa 'In luce stellarum'*, both for five voices (1666), *Missa 'Inclina cor meum Deus'* for four voices (1678), *Missa 'Nigra sum sed formosa'*, written only in black notes, for five voices (1678), *Missa 'Non recuso laborem'* for four voices (1680) and *Messe syllabique en plein-chant* for four voices (1683); three were still listed in Ballard's catalogue of 1707, but only two, '*Nigra sum*' and '*Non recuso laborem*', are now extant. Their melodies are well developed with fewer repeated notes and a wider range than was usual in such music and they have more interesting rhythms and imitative counterpoint than is generally found in late 17th-century French masses.

WILLIAM HAYS

Catholic Monarchs. Ferdinand (V of Aragon, II of Castile; reigned 1479–1516) and Isabella of Castile (reigned 1474–1504) were important patrons of music on the Iberian peninsula at the turn of the 15th century. Since Barbieri's discovery of the so-called Palace Songbook (*Cancionero Musical de Palacio*, *E-Mp* 1335), and especially since Anglès's studies and editions (in MME), the reign of Ferdinand and Isabella has been recognized as an era in which polyphonic music flourished on an unprecedented scale in the kingdoms of Aragon and Castile. This burst of activity may be somewhat exaggerated by the loss of Spanish musical sources from earlier in the 15th century, since there was clearly an existing musical tradition of long standing. But the discovery and publication of an indigenous musical repertory, almost all of which seems to be attributed to composers who worked in the royal chapels, has allowed for the addition of music patronage to the many other achievements of the Catholic Monarchs.

Of their musical tastes and education almost nothing is known: the customary chapel choirs, corps of trumpeters and drummers and ensembles of *ministriles altos* and other instrumentalists were employed in both households to fulfil the needs of court ceremony. According to contemporary chroniclers, it was usual for Ferdinand to

have vihuela music in his chambers and for Isabella to correct any chaplain who sang a wrong note or misplaced a syllable in the performance of plainchant. Both apparently favoured the singing of devotional songs in the vernacular in their halls. Their son and heir, Prince Juan (*d* 1497), was known to sing polyphonic songs with his chapel master, Juan de Anchieta, and four or five choirboys. In addition, he kept a large collection of musical instruments.

The relative wealth and stability of the monarchs' reign allowed for the expansion of their royal households, already based on the Burgundian model in structure. The maintenance by the two monarchs of separate households, funded by separate chanceries, resulted in substantial combined musical resources. In addition, both chapels were greatly expanded over the course of their rule (Ferdinand's chapel increased from eight to almost 50 during his reign). The singers, recruited from the cathedrals as the monarchs travelled through their kingdoms, were rewarded with both high salaries and ecclesiastical benefices. This close relationship between church and court, together with the monarchs' concern for ecclesiastical reform, helped to lay the foundations of the so-called Golden Age of Spanish polyphony later in the 16th century. With the notable exceptions of north European musicians such as Juan de Urrede and Enrique de Paris, most of the singers employed in the royal chapels were native to Castile or Aragon. And though the suggestion by Anglès and others that an indigenous school was deliberately fostered at court is unlikely, it did result in a new emphasis on the production of Castilian-texted polyphonic song, marking the final shift from the French repertory that appears to have dominated courtly entertainment earlier in the 15th century.

The Spanish musicians working at court were nonetheless well acquainted with musical developments in northern Europe and Italy. The major composers associated with the royal chapels – Peñalosa, Escobar, Anchieta and many others – wrote in an idiom that combined elements of the latest Franco-Netherlandish polyphonic devices with a more direct, syllabic style that was essentially chordally conceived and which probably had its roots in non-written traditions. Humanistically educated figures such as the composer Juan del Encina and the royal chronicler Lucas Marineus Siculus undoubtedly also influenced the way in which vernacular lyric verse and Latin motet texts were set by these composers.

TESS KNIGHTON

Catlett, Sid(ney) [Big Sid] (*b* Evansville, IN, 17 Jan 1910; *d* Chicago, 25 March 1951). American jazz drummer. He played in several minor bands in Chicago before moving in 1930 to New York, where he began a career working freelance; he made many recordings and appeared with Benny Carter (1932–3), McKinney's Cotton Pickers (1934–5), Fletcher Henderson (1936) and Don Redman (1936–8). From 1938 to 1941 he was prominently featured in the big band led by Louis Armstrong, whose preferred drummer he became. During 1941 he worked briefly with Benny Goodman, then led his own groups in various cities, among them a quartet with Ben Webster which recorded *Sleep* (1944, Com.). Catlett also recorded as a sideman with Dizzy Gillespie at one of the first bop sessions, which included *Salt Peanuts* (1945, Guild). From 1947 to 1949 he was again with Armstrong, playing New Orleans jazz in the latter's small group, the All Stars.

Catlett was among the outstanding drummers of the swing period, and many later jazz drummers were influenced by his work. He had a bright, firm touch and absolute metrical precision in his right-hand ride patterns, which allowed him to create unpredictable cross-accents with the left, including his famous, expertly timed rimshots. By almost imperceptibly rushing the beat he could at times generate enormous intensity in a big-band performance. He was an expert accompanist in a small-group setting, carefully adjusting his timbres to suit the soloist and sometimes anticipating the course of the improvisation. He also provided some of the most satisfying extended solos in pre-modern jazz drumming, revealing a clear sense of logical development and drum 'melody' which set him apart from contemporaries such as Gene Krupa. Perhaps most remarkable was his individual way of adapting to all the jazz styles then available, as reflected in his many recordings with leading musicians in the New Orleans, Chicago, swing and even bop styles. His unrestrained manner is well captured in the film *Jammin' the Blues* (1944).

J. BRADFORD ROBINSON

Catley, Ann [Anne] (*b* London, 1745; *d* nr Brentford, 14 Oct 1789). English soprano. The daughter of a hackney coachman and a washerwoman, she was apprenticed to William Bates about 1760. She sang at Vauxhall and Covent Garden in 1762–3 and then went to Dublin after the scandal arising from a payment of £200 by her lover, Sir Francis Blake Delaval, to end her apprenticeship. There she played Polly and later a 'rakish, joyous Macheath'; the ladies had their hair 'Catleyfied', she earned enormous sums and had a scandalous reputation. O'Keeffe, who knew her at this time, wrote in his

Recollections: 'She was one of the most beautiful women I ever saw ... She was eccentric, but had an excellent heart'. She returned to Covent Garden in 1770, making her mark as Rosetta in the pasticcio *Love in a Village*, Rachel in the ballad opera *The Jovial Crew* and a scandalously impudent Juno in O'Hara's burletta *The Golden Pippin*, a part designed for her. In *Love in a Village*, she introduced her own setting of 'Cease bold seducers', which was later published. Boaden praised the brilliance and neatness of her singing, and Parke remembered her being vehemently encored for singing 'the whole of Fischer's minuet staccato ... with most extraordinary power of voice and articulation'.

An intelligent and generous woman, she settled down with Colonel Lascelles after her notorious youth, and her will provided for their eight surviving children. She was ill in the later part of her career (she died of tuberculosis), but retained on stage the 'bold, volatile, audacious' manner which captivated audiences.

OLIVE BALDWIN, THELMA WILSON

Catlin, George (*b* Wethersfield, CT, 1777 or 1778; *d* Camden, NJ, 1 May 1852). American musical instrument maker. He worked in Hartford, Connecticut, from about 1799 until at least 1813, and made a wide variety of instruments including woodwinds, string instruments, harpsichords, pianos and organs. Among the more unusual instruments mentioned in his advertisements were tenoroons, tenor clarinets and clarions (bassoon-shaped bass clarinets). He also advertised measuring and surveying instruments. He formed at least two partnerships of short duration before leaving Hartford. Bassoons signed Catlin & Bliss and Catlin & Bacon are known, and an organ for Christ Church, Hartford, was made by Catlin & Bacon in 1812. Catlin's clarions, first produced about 1810, were popular during the following 15 or 20 years and were copied by several other American makers.

By 1815 at the latest Catlin had moved to Philadelphia, where he continued his business on a smaller scale. He entered a flute in the second Annual Exhibition of the Franklin Institute in 1825. The judging committee stated that 'the ingenuity and skill of this artist are well known and the flute presented by him was a very fair specimen of his talent'. Catlin also entered some 'violin trimings' in the 17th exhibition in 1847. His production could not have been large, judging from the number of surviving instruments; however, his bassoons and bass clarinets from his Hartford period were unusual accomplishments for a maker in the USA at that time. Interesting examples of Catlin's work are found at the Smithsonian Institution, the Shrine to Music Museum, University of South Dakota, and the Henry Ford Museum, Dearborn, Michigan.

ROBERT E. ELIASON

Cato, Diomedes (*b* ?Serravalle, nr Treviso, 1560–65; *d* after 1607 or 1618). Italian composer and lutenist, active in Poland. He was often referred to simply as 'Diomedes'. His father Costantino, who was a Protestant, was a teacher in Serravalle in about 1562; he left in about 1565 to escape the Inquisition, and settled in Kraków. His wife followed soon afterwards with their three children, of whom Diomedes was the youngest. His employment as a lutenist at the court of King Sigismund III of Poland is documented from 20 March 1588 until August 1593 and again in about 1602. In 1593–4 he probably accompanied the king on a journey to Sweden, where, according to Norlind, he was among the best-known foreign composers by 1600. A manuscript chronicle of 1623 reports that, together with Antonio Fulvio, he wrote music for the wedding celebrations of Jan Kostka, which took place at the castle of Świecie (nr Toruń) in 1591. The same document states that Stanisław Kostka, a patron of Cato, left him a substantial legacy (1602). Radke cited a note stating that Cato was heard playing on 21 March 1619; however, the note has not been found.

Cato's output includes music for voices, viol consort and keyboard, but it is for his lute pieces that he is best known. These comprise preludes and fantasias, dances and intabulations of vocal pieces. In the preludes homophony predominates, though there are occasional imitative entries and some florid, quasi-improvisatory passage-work. One is in the form of a miniature set of variations. The fantasias, Cato's most interesting compositions, are mostly of the imitative ricercare type. The melodic material is notably homogeneous, and some of the pieces are clearly monothematic. Those in the Fitzwilliam Museum, Cambridge, are stylistically firmly rooted in the Renaissance, imitative throughout and with melodic lines of vocal character; one of them is based on the melody of Janequin's chanson *Le chant des oiseaux*. The fantasias in RISM 1603[15], however, contain certain traits characteristic of Baroque polyphony, especially in the use of short motifs to shape melodic lines and in the episodic structure of certain sections; episodes often appear within and between the expositions of thematic material. Sometimes there are sharp contrasts between successive short sections. Among the dances, several merit special attention, particularly two unusual Italian dances: the barriera, a court dance, and the favorito, which can perhaps be regarded as an elaboration of a 'favourite' galliard. Eight Polish dances are probably based on folk melodies. The madrigal *Tirsi morir volea* is extant in two sources with only the top part texted, indicating that it was performed as a solo song with instrumental accompaniment, but in fact it was conceived as a five-part vocal work.

WORKS

LUTE

8 choreae polonicae, 7 fantasias (1 doubtful), favorito, 6 galliards, 2 madrigal transcrs., 2 passamezzos, 5 preludes, 1600[6], 1603[15],

PIOTR POŹNIAK

Catoire [Katuar], **Georgy (L'vovich)** (*b* Moscow, 27 April 1861; *d* Moscow, 21 May 1926). Russian composer and musicologist of French descent. He was taught the piano by Klindworth, who encouraged him to study the works of Wagner; he joined the Wagner Society in 1879 and attended a festival at Bayreuth in 1885. In 1884 he graduated from the mathematics department of Moscow University, but afterwards devoted himself entirely to music. The next year he went to Berlin, where he continued his studies with Klindworth and took composition lessons with Tirsch, later with Rüfer. After a disappointing period of study with Rimsky-Korsakov and Lyadov, he returned to Moscow, where he taught himself and consulted with Arensky and Sergey Taneyev. In 1916 he was appointed professor of composition at the Moscow Conservatory, a post he held until his death; Bely, Kabalevsky, Polovinkin and Fere were among his pupils.

During his professorship Catoire began to study questions of music theory, and he was the first Russian theorist to adopt Riemann's approach for pedagogical use. In *Teoreticheskiy kurs garmonii* ('Theoretical course in harmony', Moscow, 1924–5) he based his conclusions on works from the late 19th century, discussing tonality and chord structure in broader perspective. In the incomplete and posthumously published *Muzïkal'naya forma* ('Musical form', Moscow, 1934–6) he challenged and expanded some of the arbitrary aspects of Riemann's rhythmic theories, and pointed to the existence of mixed and transitional types of forms. These works laid the foundation for the development of music theory in the USSR. As a composer he belonged on the whole to the 'Moscow school' and his work takes Tchaikovsky as its point of departure. The influence of Wagner is also apparent, though enhanced by a sensitivity to the styles of Chopin, Franck and later even Debussy.

L.M. BUTIR

Catrufo, Gioseffo [Giuseppe] (*b* Naples, 19 April 1771; *d* London, 19 Aug 1851). Italian composer. A student at the Conservatorio della Pietà dei Turchini, Naples, he was known under the name 'Spagnoletto' as a singer of comic roles. At the end of 1791 he went to Malta, where he made a reputation as an opera composer: his *opere buffe Il Corriere* and *Cajacciello disertore* were given at the Manoel Theatre in 1792. Possibly involved in the Naples Revolution of 1799, he emigrated to France in the same year and followed a military career until 1804. He then returned to Italy to resume his theatrical activities, settling in Geneva. In 1810 he moved to Paris working in particular at the Théâtre Feydeau. In 1835 he moved to London and taught singing there for the rest of his career. Known chiefly for his stage works (his output included songs and piano pieces), Catrufo followed closely in the footsteps of the *opéra comique* composers of the beginning of the 19th century. He possessed a fresh melodic inspiration and a spontaneous, popular and simple style.

WORKS
(*selective list*)

OPERAS

first performed in Paris, Théâtre Feydeau by the Opéra-Comique, unless otherwise stated

Il Corriere (ob, 2), Malta, Manoel, spr. 1792

Cajacciello disertore (ob, 1), Malta, Manoel, 1792

FRANCESCO BUSSI

Cattani, Giovanni Lorenzo (*b* Carrara, 1642; *d* Pisa, 1713). Italian composer and organist. His family included Danese, a sculptor, architect and poet, and his son Perseo, a talented man of letters and politician who at one time was rector of the University of Pisa.

Born Jacopo, after two years as a novice at Pietrasanta he became an Augustinian friar in the convent of S Giovanni, Livorno, and held various posts in the order, becoming Provincial of Pisa in 1695. He was appointed second organist of Pisa Cathedral in 1664, and in 1668 he moved to the conventual church of the Cavalieri di S Stefano where he served first as organist and from 1670 as *maestro di cappella*. Significant results of Cattani's years at this church were the gradual increase in the number of voices (to nine) and instruments, including the arrival of distinguished violinists Costantino Clari and Francesco Ciampi. He was also a successful teacher: his pupils included the castrato Petrilli. Cattani's activities during these years included participation in musical events in other ecclesiastical buildings in the province of Pisa and in neighbouring cities.

Cattani was active in the theatre, probably from 1679 when the presence in Pisa of the court of the Grand Duke during Carnival occasioned theatrical performances by the Accademia Lunatici e Stravaganti. From 1681 Cattani was often called upon to celebrate events in honour of the Medici. He wrote for Florentine theatres both *opere serie* and *opere buffe*. In the 1690s Cattani also wrote oratorios, performed by numerous Florentine confraternities.

PATRIZIA RADICCHI ELEFANTE

Cattenacci [Catenacci], **Gian Domenico** (*d* Milan, *c*1800). Italian organist, composer and teacher. A Franciscan monk, he was a member of the Observant Minorites and lived in the cloister of S Angelo in Milan. In 1779 he was one of the judges of the competition for the post of *maestro di cappella* at the cathedral. He had many organ pupils. At a time when styles more appropriate to the opera house and concert hall strongly influenced many Italian organists' performances and compositions, Cattenacci was among the few who attempted both in his playing and in his published music to emphasize the polyphonic nature of the instrument. This is especially evident in the predominantly contrapuntal texture of his 19 *Sonate d'organo* (Milan, 1791). In his later collections, the 24 *Sonate d'organo* (Milan, 1792/*R*) and the two books of the *Raccolta di versetti fugati e ideali in tutti i toni maggiori* (Milan, 1794), he included, as a concession to dilettantes, a number of works featuring *galant* style and homophonic textures. (The 1792 collection also contains an informative preface.) Cattenacci composed a large amount of church music, including masses, mass movements, *Magnificat* and psalm settings, hymns and a *Te Deum*, all in manuscript (*CH-E, I-Mcap, VIGsa*).

MILTON SUTTER

Cattenar, Enrico (*b* Chissigné, Franconia, *c*1620; *d* Turin, 29 July 1701). Italian violin maker. Cattenar appears to have been the most important violin maker in Turin during the 17th century. While many writers record him as having been a pupil of Chiaffredo Cappa, he was actually considerably older. Cattenar first appeared in Turin as a maker of lutes and other stringed instruments in 1650, when he first acquired his workshop and shortly thereafter married the widow of the Tyrolean lute maker Johann Angerer (*c*1620–1650). In early documents his name is often given as Casner; only from the 1670s onwards is he consistently referred to as Cattenar. He maintained an active and successful workshop in Turin until the end of the century and was well connected to the Court; his eldest son was a prominent physician, and another son, Francesco Giuseppe (*b* Turin, *c*1664; *d* Turin, after 1732), was a violinist in the Royal Chapel.

Few original labels survive in Cattenar's instruments. Known examples reveal an excellent fusion of the methods of German makers with those of Italy, especially those of Cremona. The models are those of Amati, particularly the small Amati pattern, with a high degree of precision, a

clean finish, and great delicacy, but they also bear characteristics of the northern European schools, such as the use of a channel in the back perimeter for inlaying the ribs and a tendency to give the final cut of the volutes an extra 90° turn, rather than stopping opposite the throat. The woods used are typically Piedmontese in origin. His varnish, usually a dark red-orange to golden brown in colour, is soft in texture and not dissimilar to that of Cappa, hence the assumption of an apprenticeship. The rare original labels which still survive give his name as Henricus Cattenar.

PHILIP J. KASS

Cattin, Giulio (*b* Vicenza, 22 May 1929). Italian musicologist. He was ordained a priest in 1951 and gained an arts degree from the Catholic University of Milan in 1959. In the same year he began teaching arts and humanities disciplines at the Episcopal Seminary in Vicenza and concurrently from 1974 to 1979 he taught the history of liturgy at the University of Pisa. He was appointed professor of music history at the University of Padua in 1978 and frequently taught on international courses at the Centro di Studi sull'Ars Nova italiana in Certaldo. He was vice-president of the Italian Society of Musicology (1982–8) and is on the steering committee of the International Society of Musicology. He has been on the research committee for the *Rivista italiana di musicologia* (1980–82), and in 1989 became chairman of the committee for the Fondazione Levi, Venice. He is on the editorial boards of the *Journal of Musicology*, *Musica e storia* and *Il saggiatore musicale*, and together with G. Morelli edits the periodical *Rassegna veneta di studi musicali*. His main interests are Italian and French liturgical and secular music of the medieval period up to the 16th century. He has also carried out research into the *laude* and poetry written for musical purposes in the 15th and 16th centuries.

TERESA M. GIALDRONI

Catullus, Gaius Valerius (*b* Verona, ?84 BCE; *d* ?54 BCE). Roman poet. He settled in the capital while still a youth, and there formed an adulterous liaison with the woman whom he called Lesbia in his poems. These include one group (1–60) of short pieces reflecting particular occasions, a second (61–4) made up of long poems, and a third (65–116) which ranges from the epigram to the epyllion, a miniature epic, but which retains elegiac metre throughout. Catullus's characteristic passion and simplicity could often manifest themselves as extreme obscenity.

References to music occur only in the second group of poems. At the beginning of 63, the poet lists the instruments that are proper to the cult of Cybele: the

tympanum (a small drum), the cymbal and the 'deep-sounding' Phrygian aulos 'with curved pipe', popular in Rome (63.8–10, 21–2). These reappear in his description of Bacchic rites (64.261–4), with trumpets, described as having a raucous, booming tone. Poem 64 also contains a spinning song (323–81), sung by the Fates; 61 begins with a cult song to the wedding god; and 62, an amoebean wedding song for double chorus, has the tone of folk poetry. Catullus never mentioned the lyre or any other string instrument, nor is there any direct evidence that his poetry was sung during his own time. The qualities already noted, however, together with related evidence, suggest that such performance was possible. The clearest case is 34, a hymn to Diana which parallels the *Carmen saeculare* of Horace. Music is likely, however, to have had a place of greater importance in the Horatian lyric.

WARREN ANDERSON/THOMAS J. MATHIESEN

Catunda, Eunice. *See* KATUNDA, EUNICE.

Caturla, Alejandro García (*b* Remedios, 7 March 1906; *d* Remedios, 12 Nov 1940). Cuban composer. Born to Spanish parents, as an adolescent he married an Afro-Cuban woman, and later her sister, raising a total of 11 *mestizo* children. He began piano and violin lessons at the age of eight; subsequently he taught himself the saxophone. Following music studies in Havana (1926–7) with Pedro Sanjuán (composition) and Arturo Bovi (voice), he studied with Boulanger in Paris (1926). He also studied law (which was to become his profession) in Havana (1924–7), meanwhile composing, performing and distributing his own popular songs and solo piano music (tango, *criolla-bolero*, ballade, *danzón* and *son*) set in crude, unconventional harmonies often with humorous, satirical titles. He formed the Jazz Band Caribe, played the piano for silent films and puppet shows and became a member of Sanjuán's Havana PO, where he met Roldán.

Influenced by the Cuban writer Alejo Carpentier, Caturla's experiments with European modernism led to his unsuccessful composition début in 1927 with the *Preludio* (played by the Havana PO under Sanjuán). Subsequently he followed the intitiative of Roldán and embarked upon a symphonic style based on rhythms derived from such forms as the *son*, rumba, *danzón*, *comparsa* and conga) and using native percussion (e.g. timbales, bongos, congas, guiro and claves). But music such as 'Comparsa' from *Primera suite cubana*, in which the spirit of carnival is gradually transformed into a dirge, and *Bembé*, his most frenzied ritualistic music, set him apart from Roldán's more disciplined approach. With its shrill dissonances, polytonality, twitching syncopations, hammering keyboard percussion and extraordinary polyryhthmic textures, *Bembé* was Caturla's favourite and most frequently performed composition. Along with *Yamba-O*, *Primera suite cubana* and *Manita en el suelo* (a one-act puppet opera to a libretto by Carpentier), it marked the zenith of his Afro-Cuban style, whose 'aesthetic supermacy' over previous Cuban music he advocated in his uncompromising music criticism and essays in Havana's *Musicalia*.

Caturla gained recognition abroad at the 1929 Festivales Sinfónicos Ibero-Americanos in Barcelona and Seville (with Ernesto Halffter conducting), and at the Marius Gaillard concerts in Paris that same year. Performances in Boston, New York, Philadelphia, Berlin and Vienna followed. As a member of Cowell's Pan American Association of Composers (PAAC), he arranged concerts for Cowell and Slonimsky in Havana (1930–32). His music was later published and recorded in Cowell's *New Music Quarterly*, and he established a network of correspondence with other PAAC members, including Ives, Varèse, Stokowski, McPhee, Cage and Slonimsky, to whom he sent his scores, seeking performances or opinions.

In 1932 Caturla founded the Orquesta de Conciertos de Caibarién, a 'symphonic band', with whom he conducted transcriptions of his own music and that of PAAC composers (including Cowell). He also arranged music of his own and others for municipal bands and wind ensembles (including saxophone septet) in the small towns where he worked as a judge. In his songs which set Cuban *negrista* poetry he established a new formally free vocal style, with cries, chants, vocalises, sudden endings, extreme melodic leaps and polytonality. These songs blend rhythms of the *son*, rumba and *comparsa* and in some cases (e.g. *Dos poemas afro-cubanos*) imitate the sonority of the Cuban *tres* in the piano accompaniment. Caturla's last song, *Sabás* – with its pentatonicism, polyrhythms, silent downbeats, call and response between vocal and instrumental parts and rich instrumental timbres – epitomizes his African style. In sharp contrast the three *a cappella* choruses exhibit a dissonant motivic counterpoint, unusual voice crossings, intricate rhythms and fluctuating dynamics.

Caturla won first prize in Cuba's Concurso Nacional de Música (1938) for his *Obertura cubana*, and the following year Lange did much to spread Caturla's music throughout Latin America through his *Boletín latino americano de música*; both Chavez and Revueltas conducted his music in Mexico City. His life was cut short when he was shot dead by a criminal who mistakenly believed he was to be sentenced in his court. But with the establishment in the 1970s of the Alejandro García Caturla Museo in Remedios and a concert hall and music school named after him in Havana, he has since become recognized as one of Cuba's foremost composers.

WORKS
(*selective list*)

Stage: El lucero (operetta, 2), vv, pf, 1924; Olilé (El Velorio) (ballet), 1929–30; Manita en el suelo (puppet chbr op, 1, A. Carpentier), puppets, chorus, orch, 1934–7

CHARLES WHITE

Cauchie, Maurice (*b* Paris, 8 Oct 1882; *d* Paris, 21 March 1963). French musicologist. He was a scientist by training and civil servant by profession, and pursued his musical interests as a leading member of the Cercle Musical in Annecy (1906–14), promoting performances of unfamiliar early and modern French music. His research after 1917 dealt mainly with early 17th-century French literature, and French music of the 16th and 17th centuries, the subject of many articles in the *Bulletin de la Société française de musicologie*, the *Revue de musicologie* and *Le ménestrel*. He also contributed many articles on 19th-century French comic opera to *Opéra-comique*, of which he was editor from 1928 to 1931.

WRITINGS

'Les chansons à trois voix de Pierre Clérau', *Beethoven-Zentenarfeier: Vienna 1927*, 175–80

MALCOLM TURNER

Caudella, Eduard (*b* Iaşi, 22 May/3 June 1841; *d* Iaşi, 15 April 1924). Romanian composer, violinist and teacher. After studying the violin in Berlin with Hubert Ries, in Frankfurt with Vieuxtemps and in Paris with Massart and Alard, he worked as a violinist at the court of Prince Alexandru Ioan Cuza in Iaşi. He soon established himself in Iaşi as a violin teacher (1861–1901), teacher and director at the Conservatory (1893–1901), director of the

National Theatre, involved with German lyric groups and at the Italian Opera (1870–74) and teacher of music aesthetics at the University (1875–7). During the early part of his career he spent much time as a concert violinist in Romania and abroad. He was also active as a music chronicler, writing for several Romanian publications. He produced a number of collections and arrangements of folk music and played an important part in the development of the young George Enescu. He organized and conducted the Conservatory orchestra, promoting the values of Classical and Romantic music; in his later years he took a stance against modernism, which he considered dangerous and anti-artistic.

As a prolific composer, Caudella had considerable influence on the formation and consolidation of Romanian music schools. He promoted two essential practices: the adoption of folk melodies and their reworking in classical forms; the forging of a discourse along nationalist lines through the use of 'national scales', about which he had already developed a theory. In his own compositions he made use of liberal, rhapsodic structures, which he called fantasias. These fantasias contain programmatic and patriotic elements. Caudella also adopted the Romanian theme in his theatrical works: his *Petru Rareş* was the first nationalist Romanian opera.

WORKS

many MSS in RO-Ba

STAGE

Vlăduţul mamii [Mother's little Vlad] (musical comedy), 1862

Harţa răzeşul [The Peasant Skirmish] (musical comedy, V. Alecsandri), 1872

OCTAVIAN COSMA

Caudella [Kandela], **Philipp** (*b* Kojetín, Moravia [now Czech Republic], 25 March 1771; *d* Hermannstadt, Transylvania [now Sibiu, Romania], 1826). Moravian composer and choirmaster. He studied with Albrechtsberger and Clementi. From 1797 he was active as a pianist and teacher in Vienna, where he succeeded in having some of his works printed. In 1808 (or 1806) he became Kapellmeister to the Russian envoy, Prince Alexandre Kourakin. In 1810 he went to Russia where, according to Fétis, he also died. Nevertheless, in 1814 he appeared in Transylvania where he was initially teacher to Baron Wesselényis in Cluj. Characteristic of his artistic attitude was his membership of an anti-Beethoven society that publically burnt the Waldstein Sonata. In 1817 Caudella became *regens chori* at the Catholic city church in Hermannstadt. In 1818 he was also appointed music teacher at the German Protestant Gymnasium. His piano piece *Tanz der Siebenbürger Wallachen* (Dance of the Transylvanian Valachians) shows his links with Romanian culture. Caudella's connecting role between the Hungarian, German and Romanian people in Transylvania as well as his simultaneous service for both the Catholic and the Protestant church was unique for his time.

WORKS

(selective list)

Sacred: motets: Ecce sacerdos magnus (*A-Wgm*), Cantate Domino (Lithographisches Institut, Hermannstadt), Protector noster aspice Domine (*RO-Sa*), Vias tuas Domine demonstra mihi (*RO-Sa*); TeD (*A-Wgm*); Choral-Buch für die Kirchengesänge der Christlichen Gemeinden A[ugsburg] .C[onfessio]. in Siebenbürgen (Hermannstadt, 1823)

Chbr: Sonata, vn, pf (Vienna and Pest, 1808); sonata, C, 'im Stile Beethoven's', op.9

Pf: Fuga in Albrechtsbergers meines verehrten Meisters Style (*A-Wgm*); 12 variations on Du pas des trois from the ballet La Dansomanie (Vienna, 1806); Thême Russe avec variations suivi d'un rondo et d'une fugue sur le même thême, op.3 (Vienna, 1807); Thême favori, op.7 (Vienna, 1809); Romance, rondeau en fantasie, op.9 (Vienna and Pest, n.d.); 3 Thêmes variées (*RO-Cu*, no.2 *RO-Sa*); Marsch von dem ritterlich-bürgerlichen Scharfschützen-Corps (Vienna and Pest, n.d.); 3 Hongroises (n.p., n.d.)

FERENC LÁSZLÓ

Caulery [Cauleray], **Jean** (*fl* mid-16th century). French composer. On 18 July 1556 he dedicated a set of ten *chansons spirituelles* to his cousin Michel de Francqueville, Abbot of St Aubin, Cambrai; on the title-page of this work, the second volume of *Jardin musical* (RISM

1556[18]), he described himself as *maître de chapelle* to the Queen of France, Catherine de' Medici, at that time resident in Brussels. All his known works – five secular and 11 sacred chansons – were published by Phalèse at Louvain (in RISM 1552[13], 1553[33], 1554[24], 1555[20]) and Waelrant & Laet at Antwerp (1556[17], 1556[18] and 1556[19], ed. in SCC, i–ii, 1992). They are all for four voices and are written in the polyphonic style characteristic of the northern French chanson. He set two psalms: *Réveillez-vous chacun fidèle* (Psalm xxxiii) and *Jusques à quand as estably* (Psalm xiii); the Lord's Prayer: *Père de nous qui es la hault es cieulx*; the Angelus: *Resjouy toy vierge Marie*; and the *Nunc dimittis*: *Or laisse créateur* – all settings of Marot's verse translations – but did not use the corresponding Huguenot melodies. Of Caulery's six other religious songs, three are settings of texts by another poet sympathetic to the Reformation, Eustorg de Beaulieu; one, *Las voulez vous que la personne chante*, is in Becker (1880), and a secular chanson, *En espérant j'endure du tourment*, is in A. Mairy, ed.: *Chansons au luth et airs de cour français du XVIe siècle* (Paris, 1934).

MARC HONEGGER

Caupain, Ernoul (*fl* ?mid-13th century). Trouvère. It is doubtful that this man was identifiable, as suggested by Gröber, with the 'Copin' who appears as judge in a jeu-parti involving members of the Arras literary circle. His two pastourelles with variable refrains (*Entre Godefroi et Robin* and *Ier main*), religious poem (*De l'amour*), and *chanson courtoise* have longer than average strophes of 11, 12 or 15 lines. Except for *Ier main pensis chevauchai*, which employs four different line lengths, the poems mix octosyllabic lines with lines of either six or seven syllables. Most of his melodies are in the authentic G mode with reasonably strong tonal centres, and are cast in bar form. (The reading of *Ier main* in *F-Pn* fr.844 incorporates a transformation of phrases three and four resulting in a non-repetitive structure.) In view of the length of the strophes, the restrained use of literal repetition in the caudas is noteworthy, although the reading of *De l'amour celi sui espris* in *F-Pn* fr.844 makes interesting use of asymmetrical, varied repetition. No melodies in mensural notation are extant; there is an increase in rhythmic activity towards the end of *Quant j'oi chanter ces oiseillons* and *Ier main*.

THEODORE KARP

Caurroy, Eustache du. *See* DU CAURROY, EUSTACHE.

Caus, Salomon de (*b* nr Dieppe, *c*1576; *d* Paris, bur. 28 Feb 1626). French engineer, architect and theorist. A student of mathematics and mechanics, he travelled to Italy before being named engineer to the court of Archduke Albrecht in Brussels in 1605; there he met Peter Philips, who later contributed musical examples to his publications. Subsequently he served Prince Henry in London (in 1610) and the Elector Palatine Friedrich V in Heidelberg (in 1614) before returning to France. He settled in Paris about 1620 and was named *ingénieur et architecte du roi*. Of the two of his works that contain noteworthy contributions to music, *Institution harmonique* is devoted principally to a study of intervallic proportions in music (both of ancient Greece and of his own time) and to a systematic review of contrapuntal theory (based in part on the work of Zarlino), and *Les raisons des forces mouvantes* includes in its several sections discussions of machines constructed to produce music, notably of organs, in book 3.

WRITINGS

ALBERT COHEN

Caussé, Gérard (*b* Toulouse, 26 June 1948). French viola player. Brought up in a musical family, he began playing the viola at eight, studying with Pierre Meynard and Lucien Moruë in his home town and from 1967 at the Paris Conservatoire, where his tutors were Léon Pascal for viola and Joseph Calvet and Jean Hubeau for chamber music – he won first prizes in both disciplines. He played in the Quatuor Via Nova (1969–71) and in 1971 won an award from the Fondation de la Vocation. He then played in the Parrenin Quartet (1971–80) and the Ensemble Intercontemporain (1976–82). He has continued to play chamber music on a regular basis, with the Ivaldi Piano Quartet and such colleagues as Augustin Dumay, Pierre Amoyal, Gidon Kremer, Dmitry Sitkovetsky, Gary Hoffman, Paul Meyer and François-René Duchâble. He was appointed professor at the Boulogne Conservatoire in 1980, deputy to his teacher Hubeau at the Paris Conservatoire in 1981, professor at the Lyons Conservatoire in 1982 and professor of viola at the Paris Conservatoire in 1987, holding that post until 1992. He has also taught at the Accademia Musicale Chigiana in Siena. Caussé produces a large but refined tone and plays a wide repertory with considerable virtuosity. He has given the premières of works by Griffith Rose, Jean-Yves Boneur, René Koering, Jacques Lenot, Pehr Henrik Nordgren,

Horatiu Radulescu, Philippe Hersant, Betsy Jolas, Gérard Grisey, Emmanuel Nunes, Gérard Masson, Antoine Tisné and Serge Nigg. Many of his interpretations have been recorded, including Mozart's Sinfonia Concertante (twice), Hoffmeister's Concerto, Berlioz's *Harold en Italie* (in both the original version and Liszt's recension with piano), Bruch's Double Concerto and Hindemith's solo Sonata, *Trauermusik* and *Der Schwanendreher*. He plays the 1570 Gasparo da Salò viola which previously belonged to Herbert Downes.

TULLY POTTER

Caussin [Causin], **Ernold** [Causinus, Arnoldus] (*b* Ath, *c*1510; *d* ?1548). Netherlandish composer. He was a choirboy at Cambrai Cathedral in 1520 and was influenced by Josquin Des Prez, whose student he claimed to be. In 1526 he studied at the University of Kraków. In October 1529 he was at the Chiesa della Madonna della Steccata at Parma, becoming director there from 1534 to 1539. He was also there between April 1547 and February 1548, but there is no further evidence of his activity.

WORKS

Motectorum luculenti diligentia nuperrime editorum, liber primus, 5vv (Venice, 1548), ed. in SCMot, xxiii (1995)

Motets, 1539[11], 1542[5], 1555[10], 1556[8], *D-Z*

LAVERN J. WAGNER

Caustun [Causton, Cawston], **Thomas** (*b* ?*c*1520–25; *d* London, 28 Oct 1569). English church musician, composer and arranger. In about 1550 he was listed in the junior ranks of the singing men of the Chapel Royal. Later accounts place him higher in the ranking; by 1563/4 his salary was that of a full Gentleman of the Chapel Royal. References to the death of a musician named Caustun in 1569 and to his replacement at the Chapel Royal by Richard Farrant probably refer to Thomas, and not to his colleague (and possible relative) James.

All of Thomas Caustun's surviving compositions are settings of English sacred words. Some of them draw on liturgical texts from the 1549 or 1553 versions of the Book of Common Prayer, and were intended for church use during the earliest years of the Reformation. Others are settings of metrical psalms or canticles, and were more likely used by amateur singers for devotional recreation. The majority were published by John Day, either in *Mornyng and Evenyng Prayer* (London, 1565; ed. in Holman, ii), or in *The Whole Psalmes in Foure Partes* (London, 1563).

The task of assessing Caustun's music is made difficult by his habit of borrowing without acknowledgment from other composers. Pieces published under his name include contrafacta or adaptations of works by Gombert, Pathie, Taverner and Philip Van Wilder. Even in settings that seem more securely to be Caustun's own, echoes of other composers' music can sometimes be heard, especially in polyphonic sections. Elsewhere his style is severe: the service music for men's voices, for example, includes long passages of syllabic homophony. In that respect it follows the directives of the more radical Protestant reformers, who sought to purge English church music of all gratuitous ornament. Caustun's close connection with the printing press – he may have had an editorial role in the preparation of Day's *Mornyng and Evenyng Prayer*, and contributed half of its contents – suggests that he was sympathetic to Protestant doctrine, and recognized the potential of publication as a means of disseminating a new musical repertory.

WORKS

in 1565[4] except where stated; all for 4 voices

Service for men (Ven, TeD, Bs, Cr, San, Gl, Mag, Nunc)

Service for children (SATB) (Ven, TeD, Bs, Ky, Cr, San, Gl, Mag, Nunc) [San adapted from S. Festa: O passi sparsi; Gl adapted from R. Pathie: D'amours me plains]

Evening service for men (Mag, Nunc)

In trouble and adversity [adapted from J. Taverner: 'In nomine' (Bs), Missa 'Gloria tibi Trinitas']

Most blessed Lord Jesu [adapted from N. Gombert: Puis qu'ainsi est (ii)]

Rejoice in the Lord always

Show us, O Lord, the light

Turn thou us, O good Lord [adapted from P. Van Wilder: Amour me point]

Yield unto God (*US-NYp*)

27 metrical psalms, canticles, 1563[8]

JOHN MILSOM

Cautelay, Guillaume. *See* COSTELEY, GUILLAUME.

Cauvin, Gaspard Alexis (*fl* 1740–60). French collector, possibly also a professional music copyist. His name is gold-stamped on the covers of 21 volumes containing full scores of 41 of Lalande's *grands motets* and smaller sacred works (vols.i–xx in *F-V*, Ms mus 216–35 and vol.xxi in *Pn*, Rés Vmb ms 16) and on two volumes of printed music in a private collection (see D. Herlin, *Collection Musicale François Lang: Catalogue*, Paris, 1993). The printed volumes are copies of cantatas by L.-N. Clérambault, published in 1714–26 and the *Premier livre de sonates* of J.-M. Leclair, the elder, published in 1723. If Cauvin was also the copyist as well as the owner of the Lalande volumes (which are watermarked 1742), his career extended as late as 1757, when the same hand is seen in the copy of Rameau's *Les surprises de l'Amour* (*F-Pn*, Vm2 386), and in nine other volumes of the Decroix collection of Rameau's works. This hand is also seen in manuscripts (in *F-LYm*) including copies of works by Lalande, Royer (*Almasis*), Mondonville (*Jubilate Deo*; another copy in the same hand is in *F-AIXmc*).

LIONEL SAWKINS

Cauvin, Jean. *See* CALVIN, JEAN.

Caux de Cappeval, N. de (*b* Rouen, *c*1700; *d* Mannheim, 1774). French poet. A supporter of French opera during the Querelle des Bouffons, he contributed a lengthy poem in five cantos, the *Apologie du goût français*, in the early months of 1754 as a rejoinder to Rousseau's *Lettre sur la musique françoise*. The frontispiece depicts Pegasus unseating Rousseau while Grimm (*le petit prophète*)

receives a vigorous thrashing from two satyrs. An introductory *Discours apologétique*, in prose, provides a historical account of the quarrel; the poem itself celebrates French opera, criticizes the 'false brilliance' of Italian music and accuses the *philosophes* of deliberately campaigning to 'massacre' French traditions. A concluding poem, the *Adieux aux bouffons*, is a reworking of an earlier pamphlet, *L'anti-scurra, ou Préservatif contre les bouffons italiens*, published on 6 February 1753. Cappeval may therefore also have written three other poems appearing in short succession during that month – *La réforme de l'opéra*, *Epître aux bouffonnistes* and *Réflexions liriques* – though these attributions remain uncertain.

ELISABETH COOK

Cavaccio [Cavacchio, Cavaggio, Cavazzio], **Giovanni** (*b* Bergamo, *c*1556; *d* Bergamo, 11 Aug 1626). Italian composer, organist, singer and poet. According to Calvi he spent his youth at the Bavarian court and then visited Rome and Venice. It is known that he spent most of his adult life in Bergamo, where he was *maestro di cappella* of the cathedral from 1581 to 1598 (Calvi said that he served there for 23 years) and of S Maria Maggiore from then until his death. That his reputation was by no means limited to his native region is clear from the inclusion of pieces by him in anthologies as various as *Il trionfo di Dori* (RISM 1592[11]), *De floridi virtuosi d'Italia* (1600[8]) and *Parnassus musicus Ferdinandaeus* (1615[13]) and in manuscripts of south German and Austrian provenance. His literary reputation was such that he was elected to the Accademia degli Elevati of Florence, an honour proudly acknowledged on the title-page of his *Sudori musicali* (1626), and also to Venetian academies (Calvi). His published output of music includes books of masses, *Magnificat* settings, psalms, hymns, motets, madrigals, canzonettas and organ pieces; at least four volumes of five-part madrigals are lost.

Much of the sacred music was sung at S Maria Maggiore, Bergamo; it was customary to list the music and instruments belonging to it on the appointment of each new director, and the list given to Cavaccio's successor, Alessandro Grandi (i), includes several manuscripts of his works, as well as many printed volumes. Most of these works were designed for moderately large choral forces, using the polychoral style associated with Venice. Cavaccio's output is substantial. Few of the vocal works are available in modern edition, and they remain completely unstudied. The instrumental works, most of which are readily available, have fared better. The keyboard music of the *Sudori musicali* is clearly intended for performance during the mass. The *Musica* of 1597 includes the usual variety of instrumental genres; of special interest are four Italian-texted canzonas which, like the book's untexted canzonas, are in the rhythmically foursquare, homophonic style of the madrigal.

WORKS

Printed works except anthologies published in Venice unless otherwise stated.

SACRED VOCAL

Missae, 5, 7vv (1580)
Magnificat omnitonum, 4vv (1581), ed. in AntMI, *Monumenta lombarda B: Polifonia Sacra*, i (1965)
Liber secundus Magnificat omnitonum, 4vv (1582)
Psalmorum toto anni tempore vespertinis, 4vv (1585), inc.
Litanie in 2 modi con il Pange lingua, 2 choirs (1587), inc.
Salmi di compietta, 8vv, falsobordoni, 5vv (1591), mentioned in Calvi
Missae 4 pro defunctis, pars secunda, 5vv (1593)
Salmi ... per tutti i vespri dell'anno, 5vv (1593), mentioned in Calvi
Motetti, 4–6, 8, 12vv (1596)
Hinni correnti in tutti i tempi dell'anno secondo il rito romano, 4vv (1605)
Messe per i defunti . . . con alcuni motetti corrispondenti, 4, 5vv (Milan, 1611)
Musica concordia concorde all'armoniosa cetra Davidica de salmi de vespri intieri, 4vv, org, op.24 (1620)
Works in 1586[1], 1592[3], 1596[1], 1596[2], 1600[2], 1603[2], 1609[1], 1613[1], 1615[13], 1622[4]
Works in *A-Wn*, *D-Mbs*, *GB-Lcm*

SECULAR VOCAL

Libro primo di madrigali, 5vv (1583)
Musica ... sopra le parole di una leggiadrissima canzon pastorale, & alcune napolitane, 5vv (1585)
Secondo libro di madrigali, 5vv (before 1591), *MischiatiI* no.I:236
Terzo libro di madrigali, 5vv (before 1591), *MischiatiI* no.I:236
Canzonette, 3vv (1592)
Il sesto libro de madrigali, 5vv (1599)
Nuovo giardino di spirito et harmonia, 1–6vv (1620), ?lost, listed in *EitnerQ*
Works in 1583[10], 1583[11], 1585[17], 1587[5], 1588[17], 1588[19], 1592[11], 1594[6], 1596[11], 1601[5], 1604[8], 1608[13], 1609[17], 1611[14], 1616[10]

INSTRUMENTAL

Musica ... ove si contengono 2 fantasie ... canzoni alla franzese, pavana co'l saltarello, madrigali, et in proverbio, a 4 (1597); ed. in IIM, x (1990)
Sudori musicali (4 toccatas, ricercares, a 3, 4, canzona a 4–8), org (1626); ed. in CEKM, xliii (1984), 4 pieces ed. in AMI, iii (1897/*R*1969)
Lute intabulations in 1593[11], 1599[19]

PATRICIA ANN MYERS/R

Cavaco (Port.). A plucked lute midway between a guitar and a mandolin, used in Portugal. It usually has four strings – tuned *d′–g′–b′–d″* or *d′–g′–b′–e″* – although some instruments have six strings tuned like a guitar. A small *cavaco* is called a CAVAQUINHO or a MACHETE.

Cavaglieri, Geronimo (*b* Milan, *c*1550; *d* after 1615). Italian composer and editor. He was a monk in the order of S Basilio degli Armeni, and was at the monastery of SS Cosma e Damiano in Milan when Cardinal Borromeo visited the house in 1583. He had links with the church of S Maria della Scala, and the many points in common between his first book of *Nova Metamorfosi* (RISM 1600[11]) and Orfeo Vecchi's posthumous *Scielta de madrigali* (1604[11]) show that he was regularly in contact with that church. From 1603 he was in Genoa, where his increasing collaboration with Simone Molinaro culminated in 1616 with the publication of the *Madrigali de diversi autori* (1616[8]), in Loano, near Savona.

Cavaglieri is the compiler of five collections of Latin contrafacta of Italian madrigals, including three in the series *Nova Metamorfosi* (1600[11], 1605[6]/*R*1996, 1610[10]), the *Madrigali de diversi* (1616[8]) and a lost 'opera quarta'.

His Latin texts are mostly centonizations from the bible, especially the Song of Songs; but there are also some liturgical texts. The composers who appear most frequently are Marenzio, Andrea Gabrieli and G.M. Nanino. He did not hesitate to modify the music (abridging or expanding it) to adapt it to his texts. The handful of unattributed works in the volumes are probably motets by Cavaglieri himself.

ANTONIO DELFINO

Cavaillé-Coll, Aristide (*b* Montpellier, 4 Feb 1811; *d* Paris, 13 Oct 1899). French organ builder. His ancestors came from Gaillac on the Tarn River in the south of France, and his great-great-uncle, the Dominican Joseph Cavaillé, was an organ builder in Toulouse in the 18th century. Joseph's nephew, Jean-Pierre Cavaillé (1743–1809), learnt organ building from him and went to Barcelona where he married María Francesca Coll. Following Spanish custom, their son, Dominique (1771–1862), and further descendants received both parents' surnames: Cavaillé-Coll. Jean-Pierre, Dominique and his sons Aristide and Vincent (1808–86) were active both in southern France (at Montréal, Gaillac, Perpignan, Albi, Toulouse) and in Spain (Barcelona, Puigcerdá and Lérida [Lleida]). Encouraged by Rossini, who had been impressed by his *poïkilorgue* in Toulouse (for details and illustration, *see* REED ORGAN, §1 and fig.2), Aristide went to study in Paris in the autumn of 1833, where on extremely short notice he was the surprise winner of the design competition for a major instrument at the abbey of St Denis. The family thereupon moved operations to the capital, Dominique working on site in St Denis while Aristide, not yet 25, effectively was running the business at the Paris shop. His first organs, on which his brother collaborated, were at Notre Dame de Lorette, Paris, and in Brittany. When at the end of 1849 the father-and-sons partnership was dissolved, the firm's title became Cavaillé-Coll fils instead of 'père et fils'; later partnerships yielded the name A. Cavaillé-Coll et Cie (*c*1858), the nameplates ultimately bearing the sole inscription A. Cavaillé-Coll (from about 1872). Important employees of the firm were the Reinburgs, the Glocks, Neuburger, Carloni, Veerkamp and Bonneau. Shortly before Cavaillé-Coll's death the business was taken over by his former employee Charles Mutin. Numerous other pupils eventually set up independent shops in the French provinces and in other European countries.

Cavaillé-Coll built nearly 500 organs, mostly in France but also throughout western Europe (excluding Germany) and South America. Many of his instruments were subsequently altered, including those in Notre Dame de Lorette, Ste Marie-Madeleine, Ste Clotilde, Notre Dame, La Trinité and the Palais du Trocadéro (all in Paris),

Cavaillé-Coll showroom, Paris: engraving from 'L'illustration' (12 March 1870)

Brussels Conservatory and the Paleis voor Volksvlijt, Amsterdam (now in the Concertgebouw, Haarlem). Representative large organs in their original or restored state are in St Denis Abbey (1833–41; for a full discussion *see* ORGAN, §VI, 3, esp. Table 25), Saint Brieuc Cathedral (1848; four manuals, 41 stops), Notre Dame, Saint Omer (1855; four manuals, 50 stops), Perpignan Cathedral (1851; four manuals, 58 stops), Bayeux Cathedral (1861; three manuals, 44 stops), S María del Coro, San Sebastián (1862; three manuals, 44 stops), Notre Dame, Epernay (1869; three manuals, 34 stops), Orléans Cathedral (1875; four manuals, 50 stops), St François-de-Sales, Lyons (1880; three manuals, 45 stops), St Etienne, Caen (1885; three manuals, 50 stops), St Sernin, Toulouse (1889; three manuals, 55 stops), S Ignacio de Loyola, Azpeitia (1889; three manuals, 36 stops), St Ouen, Rouen (1890; four manuals, 64 stops), and S María, Azcoitia (1898, three manuals, 40 stops). With 100 stops on five manuals, the organ of St Sulpice in Paris (1862) is in every way exceptional.

Depending on the room size and each instrument's musical function, Cavaillé-Coll built instruments with four stops or more. Two-manual designs comprised from eight to 26 stops on *Grand orgue* (Great, usually the lowermost manual) and *Récit expressif* (Swell), beyond which a *Positif* (Choir) division (often under expression from 1865 onwards) was included. A fourth manual, when the stoplist exceeded 50, would be called *Bombarde* and essentially contain the reeds and mixtures of the main division. (In St Denis *Grand orgue* and *Bombarde* were playable from a single keyboard, while the five-manual

organs of St Sulpice and Notre Dame (1868, 86 stops) in Paris have an additional *Grand choeur* manual.) Usually, the Pedal division was quite sparse thanks to the uncanny versatility of its registers. When reusing classical cases Cavaillé-Coll retained a dorsal position for the *Positif* division, but in new organs there was most often a single case into which it was incorporated. Cavaillé-Coll's Swell boxes have relatively thick walls, and he ostensibly preferred to keep the enclosures small, often posting the basses outside the box and avoiding 16′ stops. Barring exceptional use of cone-chests for speaking pipe façades (Dreux, Perpignan, St Vincent-de-Paul, Bonsecours) or large pedal-chests (Orléans), he built only slider-chests, with separate pallet boxes for foundation stops and reeds and, when means permitted, the treble and bass divisions in the manuals. Each manual could therefore control several chests. Aside from pedal *ravalement* to *A′* or *F′* in the very first instruments (as required in Franck's early organ music), compasses were *C-f‴* in the manuals and *C-d′* in the pedal until about 1862, and *C-g‴* and *C-f′* thereafter. 61-note manuals occurred only in a few late instruments. All couplers, the Swell box shutters and the ventil pedals for the reed/mixture pallet boxes are controlled by the feet. From about 1872 the hitch-down, spoon-shaped *cuiller* Swell pedal to the extreme right was replaced by the modern balanced and centred pedal.

Cavaillé-Coll and his clients favoured detached and reversed consoles; but attached keyboards (*console en fenêtre*) were not uncommon, particularly in rebuilds; on two-manual organs they were readily installed at the side, a mechanically and liturgically advantageous solution. (Only rarely was the organ set up in two symmetrical cases flanking a rose window.) He remained staunchly faithful to tracker action, many larger instruments being equipped with the 'Barker lever' (*see* BARKER, CHARLES SPACKMAN). Great care was taken over the provision and distribution of the wind supply, using a large reservoir bellows which accumulated the necessary amount of air and smaller adjustable bellows for each division to regulate and stabilize the wind. Aside from extreme cases, the wind pressures were in the range of 90 to 110 mm, not greatly removed from late-classical organs in France or Germany (in Italy and Spain the figure could be as low as 40–55 mm). When feasible, wind pressures for reeds and the treble range are higher than for the foundations and bass stops.

Each department of a middle-to-large Cavaillé-Coll organ includes the tonal components of the *Grand choeur* (full tutti), with Trumpets complemented by a finely proportioned slate of Clairons, and 16′ Basson or Bombarde (sometimes both). One or more ranks may have harmonic (double-length) trebles, enhancing the richness and balance of tone, and several large organs have sets of horizontal reeds crowning the ensemble. Cavaillé-Coll introduced and perfected overblowing flutes without extensive knowledge of Renaissance and Baroque models: he named these Flûte harmonique 8′ (Flûte traversière in the *Récit*), Flûte octaviante 4′, Octavin 2′ and Piccolo 1′, and they invariably formed the characteristic ensemble of the *Récit* division. The main *jeux de fonds* (foundation stops) were Montre (Principal or Diapason on the secondary divisions), Prestant, the softer, conical Octave 4′ on the reed ventil, Bourdon 16′ and 8′ (the stopped 4′ being named Flûte douce), and narrow-scaled stops such as Quintaton, Viole de gambe, Salicional and Violoncelle. Other reeds used by Cavaillé-Coll were the Basson and Cor anglais 16′, and the Cromorne, Vox humana and Clarinet 8′ (he had a great aversion to free reeds); the treble 8′ Hautbois was combined on one register with a Basson bass, and the undulating stops Voix céleste (*Récit*, with the Gamba) and Unda maris (*Positif*, with Principal or Salicional) were regular features. The *Récit* division started out with a post-classical solo-echo function and over the decades gradually took on symphonic dimensions: the *Grand orgue* and *Récit* in Caudebec-lès-Elbeuf (1891) have six and nine stops respectively, while in St Ouen, Rouen, the *Récit* contains nearly a third of the organ's 64 stops. From the early 1860s onwards, the legal French pitch of A=435 Hz was adhered to, and some instruments have been tonally maimed in recent decades by raising their pitch to 440 Hz.

Being on familiar terms with several of France's leading contemporary scientists, Cavaillé-Coll incessantly conducted experiments in the design of pipes, soon adopting the timely concept of geometrical scaling progressions. His fondness for the adjective 'harmonique' can perhaps be traced to his quest for the famous 'ascending voicing', allowing the normally weaker trebles to sing forth strongly. The disposition of Mixtures and Cornets varied considerably: broadly speaking, classical compositions prevailed except from about 1857 to about 1875, when 'progressive' *pleins jeux* (following German models), devoid of higher-pitched ranks in the bass and tenor, were favoured.

One of the finest developments that Cavaillé-Coll brought to the organ was the flexibility and expressiveness of gradations in volume from soft to full organ. The 'grand crescendo' and the diminuendo became increasingly characteristic of the music of the period. In central Europe a general crescendo on the organ was produced adding in turn mutations, reeds and Mixtures to the foundation stops, inevitably bringing about arbitrary changes in tone colour. Cavaillé-Coll's solution took into better account the nature of the instrument. By disposing the essential elements of the *grand choeur* throughout every division of the organ – bringing into use the enclosed *Récit* Trumpet and Clairon first – it was possible to increase and decrease the volume while preserving the same basic timbre at each dynamic level. As the couplers, Swell boxes and reed/mixture sections were controlled by pedals, the player could effect a general crescendo with a consistent tone colour though the whole dynamic range without removing the hands from the keyboards.

Cavaillé-Coll was the true creator of the French Romantic organ, and his influence on English and German organ building was considerable. To the classical French organ he added overblowing flutes, the Swell box and *chamade* Trumpets used in Spain, and German-inspired string stops. The craftsmanship and materials of Cavaillé-Coll's organs are outstanding, and his stops were superbly voiced. Important classical elements such as mixture choruses and wide-scaled mutations were, to be sure, somewhat neglected, making his organs inappropriate to the performance of the early French repertoire. But the greatest French organ composers from Franck to Messiaen were inspired by the instruments he created. In addition to his legacy of world-famous organs, Aristide Cavaillé-Coll left behind a reputation as a devoted ally of worthy

musicians and causes, the very personification of human and artistic integrity.

HANS KLOTZ/KURT LUEDERS

Cavalaro, Ascanio. See TROMBETTI, ASCANIO.

Cavaliere del Liuto [Cavalier du luth]. See LORENZINO.

Cavalieri, Catarina [Cavalier, Catharina Magdalena Josepha] (*b* Vienna, 18 March 1755; *d* Vienna, 30 June 1801). Austrian soprano. The baptismal record establishes her correct name and date of birth (Weinmann). During a versatile career, confined almost exclusively to Vienna, she appeared with equal success in comic and serious roles in both the Italian and German repertories. Until late in her career Cavalieri possessed an impressive upper range, to *d'''*. An extraordinary stamina and flexibility are reflected in consistently large-scale bravura arias. Of her début in Vienna (19 June 1775 at the Kärntnertortheater), as Sandrina in Anfossi's *La finta giardiniera*, Prince Khevenhüller wrote that she possessed a very strong chest voice and met with 'well-deserved approbation'. In 1776–7 she belonged to a troupe of Italian singers led by V. Fanti. In 1778 she sang Sophie in Umlauf's *Die Bergknappen*, the inaugural production of the National Singspiel, and went on to sing 18 leading roles in the company including Nannette in Salieri's *Der Rauchfangkehrer* (1781) and Konstanze in Mozart's *Die Entführung* (1782). Of the challenging *fioriture* in 'Ach ich liebte', Mozart wrote to his father (26 September 1781): 'I have sacrificed Konstanze's aria a little to the flexible throat of Mlle Cavallieri'; this and another bravura showcase in the same act, 'Martern aller Arten', came willingly from the astute Mozart, eager to ingratiate himself with Cavalieri and her protector, the court composer Salieri. When Joseph II inaugurated *opera buffa* at the Burgtheater, Cavalieri was put to use both as a serious and comic lead.

During 1781 Cavalieri sang in at least six different Singspiels. A notice by M.A. Schmitt (*Meine Empfindungen im Theater*, 1781) of Salieri's *Der Rauchfangkehrer* said:

> Demoiselle Cavalieri, who has the reputation among connoisseurs of being one of the first singers, and who through her beautiful singing also pleases the ordinary man, played the girl. Her acting is improving daily and it is noticeable how much more trouble she takes if she is playing with others whose own acting contains more animation and accuracy, and a firmer assurance. In speech she is not yet natural enough: she overemphasizes final syllables and clips the last words of her speeches so much that she becomes unintelligible. Her arms are still a little too stiff, bent too far forward and not loose enough: but she has already considerable expression in her bearing, has fine deportment, and soon will delight us as an actress as much as she does with her voice.

Cavalieri is best known through Mozart's music for her. Her aria as Mme Silberklang in *Der Schauspieldirektor* (1786) has athletic tunes, with driving, vigorous two-note phrases and quaver scales. For her appearance as Donna Elvira in the first Vienna production of *Don Giovanni* (1788), Mozart composed a large-scale aria ('Mi tradì') for her. For the revival of *Le nozze di Figaro* (1789), in which Cavalieri sang the Countess, Mozart rewrote 'Dove sono', eliminating the repeat of the intimate, restrained initial material and adding *fioriture* in the faster section.

Early in her career, Cavalieri was said to want 'animation and accuracy, and a firmer assurance', and

criticized for almost 'unintelligible' speech (Schmitt). The Viennese dramatist Gebler, writing in 1780–81, said she had 'a strong and pleasant voice, in both the high and the low notes, a combination which one seldom encounters, [she] sings equally well the most difficult passages'. Zinzendorf noted that in a duet in Sarti's *Giulio Sabino* 'Cavalieri drowned Marchesini's voice with her shouts' (4 August 1785), but two days later recorded that 'she screamed less'.

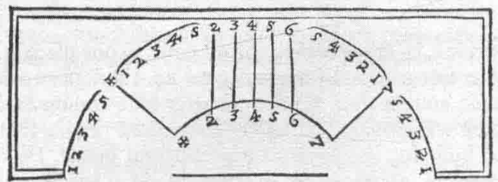
PATRICIA LEWY GIDWITZ

Cavalieri, Emilio de' (*b* Rome, *c*1550; *d* Rome, 11 March 1602). Italian composer, organist, singing teacher, dancer, choreographer, administrator and diplomat. He was the composer of the first surviving play set entirely to music, the *Rappresentatione di Anima, et di Corpo* (Rome, 1600), the score of which is the earliest one printed with a figured bass.

1. LIFE. Cavalieri was the son of Lavinia della Valle and Tommaso Cavalieri (1512–87), an architect and intimate friend of Michelangelo Buonarotti. His brother, Mario (*d* 1580), coordinated the Lenten music in the Oratorio del Ss Crocifisso in S Marcello, Rome, between 1568 and 1579. He himself also participated in this Oratorio both as an organist and as a coordinator of Lenten music from 1578 until at least 1584 (the account books are missing for 1584–94); during his administration the yearly expenditure on music rose from 51 to 140 scudi.

Meanwhile, Cavalieri was active also on the diplomatic front. In late 1590 he coordinated from Florence the efforts of the grand duke's agents in Rome, who helped engineer the election of Pope Urban VII and shortly afterwards of Gregory XIV. When the latter became ill Cavalieri was dispatched to Rome in September 1591 on the first of several secret missions to buy the votes of key cardinals in the forthcoming papal conclaves with the object of securing a pope who would support Ferdinando's foreign policy. He served in this capacity in the conclaves that led to the election of Innocent IX (in October 1591) and Clement VIII (in 1592). He made several other extended trips to Rome, combining personal business with artistic and diplomatic missions, between October 1593 and March 1594, during Lent in 1597 and during Carnival and Lent in 1599–1600.

Cavalieri was associated in Rome with Giangiorgio Cesarini and Cardinal Ferdinando de' Medici, and when in 1587 the cardinal became Grand Duke of Tuscany on the death of his brother Francesco, he made Cavalieri overseer of artists and craftsmen and of vocal and instrumental musicians. He was officially appointed on 3 September 1588 at a salary of 25 ducats a month, a horse and an apartment in the Palazzo Pitti, Florence. He soon began the preparations for the wedding of Ferdinando to Christine of Lorraine. He oversaw the staging of the most lavish series of *intermedi* ever conceived (see illustration). The account books recording every item of expense for costuming, scenery and music are witnesses to his orderly administration. Those who collaborated in the production were Giovanni de' Bardi, who conceived the allegorical plan and wrote some of the poetry and music, Bernardo Buontalenti, who designed the sets and costumes, the poets Ottavio Rinuccini, Giovanni Battista Strozzi and Laura Guidiccioni Lucchesini, and the composers Malvezzi, Marenzio, Caccini, Peri and Cavalieri himself. Whereas these *intermedi* reflected the humanistic Platonism of Bardi, Cavalieri in the 1590s gave impetus to the newer vogue of the pastoral. For Carnival 1590 he produced Tasso's *Aminta*, with sets and machines by Buontalenti and possibly including some of his own music, and his own musical pastorals (now lost) on texts by Laura Guidiccioni, *Satiro* and *La disperazione di Fileno*, the latter featuring his protégée, the *virtuosa* Vittoria Archilei, whom he brought with him from Rome.



Another of the poets that he favoured was Guarini, whose *Il pastor fido* was the source of the pastorella *Il giuoco della cieca*, adapted by Laura Guidiccioni and set entirely to music by Cavalieri for the visit of Cardinal Montalto on 29 October 1595 in the Hall of Statues of the Palazzo Pitti and revived there on 5 January 1599. Guarini was also the poet of *La contesa fra Giunone e Minerva*, which Cavalieri set to music for the banquet on 5 October 1600 in honour of the wedding of Henri IV of France and Maria de' Medici. Cavalieri also produced for the occasion the *Euridice* of Rinuccini: most of the music was by Peri, and some was by Caccini. The main nuptial spectacle, *Il rapimento di Cefalo*, slipped from his control into the hands of Giovanni de' Medici and Caccini. He considered the wedding festivities, apart from the banquet, a disaster and went to Rome disillusioned, never to return to Florence. During diplomatic sojourns in Rome in the 1590s he had continued to be active at the Oratorio del Ss Crocifisso – he is mentioned in the archives as overseeing the Lenten music of 1597 – and during Carnival in February of the Holy Year 1600 he twice presented at the Oratorio de S Maria in Vallicella (Chiesa Nuova) his *Rappresentatione di Anima, et di Corpo*, which is said to have been seen by 35 cardinals.

2. WORKS. Besides overseeing the whole production for the *intermedi* of 1589, Cavalieri contributed some of the music. The music of the opening madrigal on Bardi's text 'Dalle più alte sfere', sung by Vittoria Archilei, was attributed to Cavalieri by the chronicler of the wedding, Bastiano de' Rossi, but to Antonio Archilei in one of the partbooks published in 1591 by Malvezzi. The attribution to Cavalieri is the more plausible in view of the madrigal's prominent initial position, its star performer, its poet and its stylistic resemblance to a madrigal certainly by him, 'Godi turba mortal' in the sixth *intermedio*. These are the only monodic pieces in the printed collection. Both are set for a four-part instrumental choir, the top part of which is doubled by a soprano voice that presents a highly embellished version of it. The diminutions give an idea of the graceful manner of Vittoria Archilei. Unlike Caccini, who tended to limit runs to penultimate syllables, the arranger of these pieces put them everywhere. The final ballo, given the text 'O che nuovo miracolo' by Laura

BALLO
DELL'VLTIMO INTERMEDIO.

QVesto disegno ci ha da rappresentare il Palco : & i numeri rappresentano le persone, il qual segno, ò freggio, come si chiami, che è dietro a' numeri hanno hauer uolte le spalle; cosi seguirà stando in Scena, et in ciascuna attione, che nel presente Ballo s'interuenga.

RItrouandosi tutti in su la Scena come si dimostra si lascierà passar dodici pause e di poi .1.7. che son segnati passeranno auanti con due seguiti, & alla fine di quei si trouceranno in Luna come qui sopra si uede. Auuertendo, che i Vinti che restano staranno fermi, e dipoi i Sette, daranno principio al presente Ballo.

QVesto Ballo sarà principiato da Sette Persone; cioè da Quattro Dame, e Tre Huomini, lequali saranno queste le Dame .1.3.5.7. e questi .2.4.6. gli Huomini, & insieme col pie sinistro faranno la Riuerenza, & à man sinistra le continenze, e una Riuerenza à man sinistra, e .2. cangi co'l pie sinistro, & uno seguito trangato auanti, & uno in dietro, e dipoi tutti in ruota à man sinistra col pie sinistro quattro spezzate, & altre quattro scorse ritornando al suo luogo, e subito gli Huomini un trabocchetto auanti su'l pie sinistro, & uno in dietro su'l destro, & una scorsa di un seguito barattandosi i luoghi; & il simile faranno le Dame.

KK Le

INTERMEDIO.

e quello, che è in mezzo terrà le due Dame per mano; auuertendo, che le due coppie sieno un poco lontane da quella di mezzo; e dipoi tutti Vinti, e i Sette faranno la Riuerenza col pie sinistro.

In questa sesta, & ultima parte i Vinti si diuideranno in Quattro Schiere, come qui sopra ci dimostra il disegno pigliandosi per mano Schiera per Schiera uoltando tutti la faccia in fuora, e subito questi uerranno .5.5.5.5. auanti con due seguiti, stando fermi questi .1.1.1.1. pur presi per mano, e pigliando quei Quattro à Cinque l'altra mano delle Dame stando, come ci mostra il dissegno, e di subito queste .1 1.1.1. andranno auanti passando ciascun di loro sotto il braccio di quelli tre Huomini passando tutta la Schiera, e questi .7.4 2. lascieranno le Dame, e quelle le merranno uia restando i tre Huomini, e subito faranno una treccia di otto Fioretti, e otto mezze capriole, & alla fine accostandosi al luogo doue se ne andorno gli altri uoltandosi in faccia facendo una capriola tagliata à diritto, & una incrocciata, & un salto tondo, & col pie sinistro la Riuerenza, & andarsene doue gli altri : e cosi finisca.

A' LETTORI.

VI auuertiamo (Benigni Lettori,) che ui sono alcuni numeri delle facciate fallati, come sarebbe il 23. posto innanzi al 22. in alcune Parti, & ui sono anco in molti luoghi, oue sono delle Cantilene à Tre, à Quattro, Cinque, & Sei Voci, che in quei Libri, che non si Cantano si doueua metter il nome del Madrigale, e dire, Tace. Però importando qualche cosa ue n'habbiamo uoluto auuertire, accioche nel Cantare possiate seguitare giustamente il Sogetto dell'Opera. Delle littere poste una per un'altra non ne facciamo altra mētione, sapendo che ogn'uno saprà da persè accōmodarle.

Cavalieri's choreography for the final ballo of the 1589 intermedi, from the 9th partbook of Cristofano Malvezzi's 'Intermedii et concerti' (1591)

Guidiccioni after the music was composed, was Cavalieri's best-known contribution to the festivities. Kirkendale (1972) identified 128 pieces that are based on the ballo's opening tutti chorus, later celebrated as the *Ballo del Gran Duca*, *Aria di Fiorenza* or *Ballo di Palazzo*. Its well-defined yet varied harmonic scheme which unfolds over six segments each of four semibreve bars was understandably popular with guitarists and other instrumentalists as an air for variations and dancing. Cavalieri himself varied the air – a pavan – in certain of the ritornellos through galliard and corrente rhythms, a technique he was to apply again in the final ballo of the *Rappresentatione*. The return of segments of the tutti chorus as ritornellos between the *risposte* of the trios for solo singers and at the end prefigures the later concerto grosso. Cavalieri's unusually detailed choreography with diagrams was published in the ninth partbook (see illustration).

To what extent Cavalieri should be credited with the development of the *stile rappresentativo* or dramatic monody was already a point of contention in his lifetime. Rinuccini in the dedication (dated 4 October 1600) of the libretto of *L'Euridice* claimed that he and Peri were the first to revive the ancient manner of reciting in music. This angered Cavalieri, because, as he wrote to Marcello Accolti on 10 November 1600, 'this [style] was invented by me, and everyone knows this, and I find myself having said so in print' (i.e. in Alessandro Guidotti's preface, dated 3 September 1600, to the *Rappresentatione*). Caccini made an even larger claim, boasting in the dedication (dated 20 December 1600) of his setting of *Euridice* that he had been using this style for 15 years. Peri, on the other hand, in the preface (dated 6 February 1601) to his score for *L'Euridice* treated Cavalieri quite fairly, acknowledging that it was he who 'before any other so far as I know, enabled us with marvelous invention to hear our kind of music upon the stage' (translation from *Strunk SR2* 151). G.B. Doni, at a distance of some 40 years, judged that there was no stage music worthy of mention before Cavalieri's. On the other hand he judged Cavalieri's style to 'have nothing to do with the good and true theatrical music', for he found in it only 'ariettas with many devices of repetition, echoes and the like' (*Trattato della musica scenica*, in *Lyra Barberina*, ed. A.F. Gori and G.B. Passeri, Florence, 1763, ii, 22).

The solo music of the *Rappresentatione*, like that of the first musical pastorals of Peri and Caccini, includes speech-like recitative, tuneful madrigals, songs in dance metres and strophic songs. The recitative is made expressive by judicious false relations and striking changes of harmony, though it lacks the free dissonance and rhythmic variety of Peri. Among the more conventional pieces are florid madrigals such as Anima Beata's 'Eterno, eterno regno' (no.71) and strophic airs, such as the dialogue between Corpo and Anima, 'Anima mia, che pensi' (nos.4–13), the text of which is taken from *alauda* by Agostino Manni of 1577. The choruses are mostly in the note-against-note texture of the popular canzonetta, and these were meant to be danced; but some, for example 'Questa vita mortale' (no.2), are choral recitatives. After returning to Rome in November 1600 Cavalieri boasted that those who had seen both

his modest *Rappresentatione* in Rome and the more elaborate wedding production in Florence found the former 'more to their taste, because the music moved them to tears and laughter and pleased them greatly, unlike this music of Florence, which did not move them at all, unless to boredom and irritation'.

Cavalieri's *Lamentationes* and *Responsi* for Holy Week are among the most original sacred works of the late 16th century. The manuscript containing them is in four sections: Lamentations for Thursday, Friday and Saturday of Holy Week; nine responsories for the same days; a second set of Lamentations; and alternate choral settings for the second set. According to Bradshaw, the first two sections were probably written to be performed at the Chiesa Nuova in Rome in 1600, while the third part was probably written in 1599 for S Nicola in Pisa, where the Florentine court usually celebrated the Easter season. Both the Lamentations and Responsories are for one to five voices. While the Hebrew letters are given to the chorus, most of the verses are set monodically, some in a declamatory manner similar to *falsobordone*, others in a songful yet severe style; neither resembles Florentine recitative. The monodic portions of the Roman sections employ the same figured bass notation and symbols for ornaments as the *Rappresentatione*. Notes in the third and fourth sections indicate that Vittoria Archilei was to perform some of the choral responses as solos. Explorations of the chromatic idiom, both in the form of semitone motion (ex.1) and of juxtaposed triads with roots a 3rd apart (ex.2), are prevalent throughout. In one place in the Florentine sections Cavalieri gave an alternative enharmonic ending that requires quarter-tone tuning (ex.3), which was possible on one of the special organs that he had built for this kind of experimental music. He told Luzzaschi about it in a letter of 31 October 1592 describing 'an organ I am having built that will be finished at Christmas, on which it will not only be possible to play enharmonically but which will have the whole tone divided into ten commas'. There is no documentary basis for the belief that Duritio Isorelli, a singer and player of the viola bastarda and longtime associate of Cavalieri, had a share in the composition of the *Rappresentatione* or of his music for Holy Week, except for certain substitute settings that appear towards the end of the manuscript.

Ex.1 *Lamentationes,* Prima die, lectio prima, f.7

Ex.2 *Lamentationes*, Prima die, lectio prima, f.6

Ex.3 *Lamentationes,* second set, Prima die, lectio secunda, f.47 (Cavalieri's unconventional enharmonic signs are unaltered)

CLAUDE V. PALISCA

Cavalieri, Lina [Natalina] (*b* Viterbo, 25 Dec 1874; *d* Florence, 7 Feb 1944). Italian soprano. Of the humblest origin, she began her career at the age of 14 singing in cafés and soon became celebrated for her exceptional beauty. Encouraged by the tenor Francesco Marconi to devote herself to opera, she studied with Maddelena Mariani-Masi and made her début in 1900 at the S Carlos, Lisbon, in *Pagliacci*, immediately afterwards singing in *La bohème* at the S Carlo, Naples. Although mostly engaged in Paris, Monte Carlo and, above all, St Petersburg, she also sang in New York (Metropolitan and Manhattan Opera House) between 1907 and 1910, and in London in 1908 (Covent Garden) and 1911 (London Opera House).

With an agreeable though limited voice, Cavalieri was an elegant, natural actress and preferred roles that allowed her to display her attractive figure in splendid jewels and spectacular costumes: Violetta, Manon (both Massenet and Puccini), Thaïs, Fedora, Tosca. She was married four times; one of her husbands (from 1913 to 1919) was the tenor Lucien Muratore. Between 1914 and 1921 she starred in several films. Her autobiography *Le mie verità* was published in Rome in 1936.

RODOLFO CELLETTI/VALERIA PREGLIASCO GUALERZI

Cavalieri, Paolo (*b* ?Bologna, *c*1560; *d* Bologna, 3 Feb 1613). Italian composer. In August 1571 he entered the school attached to S Petronio, Bologna, where he studied grammar and music. He was in the *cappella musicale* there in 1574 and again in 1581–2. He received numerous gifts from the vestry board, evidently in appreciation of his outstanding qualities. In 1582 he was ordained a priest and shortly thereafter left the service of S Petronio. Two years later he was employed by the cathedral of S Pietro, Bologna, as *mansionario* or beneficed priest. The only other details of his career are found among the papers of Martini, in which, in a notice of Cavalieri's death on 3 February 1613, he is called 'theologiae magister, atque in arte musica peritissimus'. Gaspari assumed that he was *maestro di cappella* at the cathedral, but he was probably *maestro di canto*, as Lorenzo Vecchi held the position of *maestro di cappella* from 1599 to 1618.

Cavalieri's psalm settings are in traditional polychoral style, antiphonal and homophonic, occasionally employing brief imitation at the beginning of a section. His madrigals are much more elegant, with a fluid melodic line and a good understanding of the varied possibilities of five-part texture.

Cavalli [Caletti, Caletto, Bruni, Caletti-Bruni, Caletto Bruni], **(Pietro)** [Pier] **Francesco** (*b* Crema, 14 Feb 1602; *d* Venice, 14 Jan 1676). Italian composer, organist and singer, son of GIOVANNI BATTISTA CALETTI. He was the most performed, and perhaps the most representative, composer of opera in the quarter-century after Monteverdi and was a leading figure, as both composer and performer, in Venetian musical life.

1. Life. 2. Reputation. 3. Operas. 4. Sacred works.

1. LIFE. According to the contemporary account of Lodovico Canobio (see Sforza Benvenuti, 1888), Cavalli received his first instruction in music from his father and was an unusually gifted boy soprano; he probably sang in the cathedral choir. His sweetness of voice and musical accomplishment brought him to the notice of Federico Cavalli, Venetian governor of Crema from July 1614 to March 1616, who with some difficulty (if this is not an embellishment of Canobio) persuaded Caletti to let him take the boy to Venice at the end of his term of office. Doubtless under the protection of Cavalli (whose name he later adopted: see below), Francesco entered the *cappella* of S Marco, Venice, on 18 December 1616, as a soprano with an annual salary of 80 ducats, and on 18 February 1617 he was formally presented (as P.F. Bruni) to the doge. His voice must have broken almost at once, but he is not mentioned as a tenor until 1 February 1627 (as F. Caletto); on 1 January 1635 his salary was raised to 100 ducats. (The fact that he was a tenor puts paid to a legend of jealous rivalry with Cesti based on Salvator Rosa's remark in a letter of 30 November 1652 about Cesti's success 'alla barba del basso che li voleva dar il naso in culo'.)

During the first quarter-century of Cavalli's activity at S Marco the music was directed by Monteverdi, with whom he clearly enjoyed a close association, whether or not he ever formally studied with him. Moreover, he was probably the editor of Monteverdi's posthumously published *Messa a 4 voci et salmi* (Venice, 1650), which includes Cavalli's own six-voice *Magnificat* setting. Traces of his hand and indeed of his music – the bass line of the opening sinfonia of *Doriclea* – occur in the Venetian manuscript of *L'incoronazione di Poppea*, prepared about the same time. In the *cappella* of S Marco he also had the company of the slightly older Giovanni Rovetta and several other singer-composers. The breadth of musical life at Venice in his youth can be glimpsed in Leonardo Simonetti's *Ghirlanda sacra* (RISM 1625²), an anthology of solo motets by 26 composers, most of them Venetian, which includes Cavalli's first known work. He is described as organist at the church of SS Giovanni e Paolo, a more distinguished position perhaps than that of singer at S Marco, though less well-paid. He received the appointment on 18 May 1620, at which time he was living in the house of the nobleman Alvise Mocenigo, and he was given a salary of 30 ducats a year (see Arnold, 1965). His duties were not all that demanding, but even so they must have conflicted with those at S Marco and involved him in the common practice of paying a substitute. Like all those who could, he further supplemented his income by playing or singing at church feasts. His participation in the patron saint's day celebration at the Scuola di S Rocco in 1627 for 26 lire (about four ducats), his organization of music for Pentecost at the Chiesa dello Spirito Santo in 1637 and his intervention as organist at S Caterina in 1646 are the documented fragments of what was probably a wide-ranging 'freelance' activity, partly engaged in together with the *cappella* of S Marco.

Cavalli was dismissed, or acknowledged to have resigned, from SS Giovanni e Paolo on 4 November 1630, having not played the organ there since the preceding Lent. Venice was at that time in the throes of plague, and the church was in quarantine; however his departure was not, as has been supposed, due to these circumstances (the plague did not arrive until June) but, probably, to another: his marriage on 7 January 1630 to Maria Sozomeno, niece of the Bishop of Pula and widow of a well-to-do Venetian, Alvise Schiavina. Maria brought a dowry of more than 1200 ducats, together with a considerable amount of land and other capital. This advantageous marriage gave Cavalli some degree of financial independence and may explain his disinclination to travel and his early willingness to invest in operatic ventures. Also from about this time he began to use the name of his first patron: his earliest surviving aria (in RISM 1634⁷) is ascribed to 'Francesco Bruni detto il Cavalli', while the motet *O quam suavis* (in RISM 1645³) is signed 'Francesco Cavalli', but in official documents the distinction between his real and assumed names was nearly always made as 'Francesco Caletti detto il Cavalli'.

Cavalli won the competition for the post of second organist at S Marco on 23 January 1639, following the death of G.P. Berti, and received a salary of 140 ducats a year, rising in stages to the maximum of 200 in 1653. It is not surprising that when Monteverdi died in 1643 the senior and much published Rovetta, rather than Cavalli, should receive the post of *maestro di cappella*, but Massimiliano Neri's appointment as first organist in 1644 is more puzzling: Cavalli was the principal organist throughout the period, whatever his title, for he received a higher salary than Neri, and his playing was much praised by visitors, associates and propagandists. In 1647 Paul Hainlein compared him to Frescobaldi, complaining that he was too rarely heard. Ziotti (1655) commented that 'truly in Italy he has no equal' as a singer, organist and composer; similar remarks occur in G.B. Volpe's collection of his uncle Rovetta's madrigals (1645), which is dedicated to him. The date traditionally given for his promotion to first organist – 11 January 1665 – must have been an administrative adjustment following Neri's departure.

Cavalli's début as an opera composer occurred the day after his election as organist at S Marco and only two seasons after the introduction to Venice of musical theatre for paying audiences. His role was at first that of investor and organizer as well as composer. On 14 April he was co-signatory of an agreement to produce 'accademie in musica' at the Teatro S Cassiano, Venice's first opera house, entered into with the librettist Orazio Persiani, the singer Felicita Uga and the dancing-master Giovanni Battista Balbi (Uga and Balbi had been working there already: see Morelli and Walker, 1972). The first fruit of their collaboration was the 'opera scenica' *Le nozze di Teti e di Peleo*. Although the group was soon disrupted by financial difficulties, Cavalli wrote eight more operas for S Cassiano during the next decade. His only digression was in 1642, when he composed the 'favola' *Amore innamorato* for the Teatro S Moisè, where he again acted as some sort of impresario (see Pirrotta, 1966). The librettos of his second and third operas, *Gli amori d'Apollo e di Dafne* (1640) and *Didone* (1641), were by

G.F. Busenello, a member of the influential Accademia degli Incogniti, but most of Cavalli's operas during the 1640s were to librettos by Giovanni Faustini. Beginning with *La virtù de' strali d'Amore* (1642) and *Egisto* (1643), Cavalli's collaborations with Faustini over the next decade were important in shaping 17th-century Venetian opera. *Egisto* enjoyed wide success as part of the repertory of travelling companies, which were instrumental in the spread of opera throughout Italy on the organizational model of the *commedia dell'arte*; it was even performed in Paris (1646) and possibly at Vienna (the only evidence for a performance is the presence of a score there). More successful still was Cavalli's setting of G.A. Cicognini's libretto *Giasone* (1649), with *Orontea* (also to a text by Cicognini, music by Cesti) the most enduringly popular opera in 17th-century Italy. They were the first works to turn completely to complex, fast-paced action and comic dexterity in place of the literary atmosphere of Venetian academies that clung to the earlier operas.

Cavalli's activity in the 1650s reflects the many facets of the development of public opera more than any individual initiative. When Faustini took an interest in the Teatro S Apollinare in 1650, he followed him there, composing four operas in two years. After Faustini's death in December 1651, he worked for the Teatro di SS Giovanni e Paolo, partly in association with the librettist Nicolò Minato, who was also his lawyer (fig.1). In 1658–9 both were at the Teatro S Cassiano, which had been taken over by Marco Faustini, Giovanni's elder brother and another of Cavalli's lawyers. With Balbi, Cavalli contributed to the installation of a stable opera at Naples, where in 1650 and 1651 *Didone, Giasone* and *Egisto* were staged, and also a version of *L'incoronazione di Poppea*, in whose preparation he had a part. *Veremonda* was probably written for Naples and was given there on 21 December 1652, shortly before its first Venetian performance. In general Cavalli's works (above all *Egisto*, *Giasone*, *Xerse* and *Erismena*) were a mainstay of the repertory as opera gained a firm footing even in many smaller Italian towns during the 1650s and 60s.

From 1647 until his death Cavalli rented a house on the Grand Canal from one Sebastian Michiel for 108 ducats a year. His wife died in 1652; they had no children. By her will, probated on 16 September, she left nearly all her property to him and testified to his zeal in caring for her family, including her children by her first marriage. Most of the operas that he composed specifically for other cities date from the next period, and he may have considered seeking employment away from Venice after his release from family responsibilities, though he apparently did not travel then. As has been mentioned, *Veremonda* was performed at Naples at the end of 1652. In 1653 *Orione* was given at Milan to celebrate the election of Ferdinand IV, King of the Romans; the libretto had originally been offered to the Teatro S Moisè, Venice, in 1642 (see Pirrotta, 1966), but the music is certainly of the 1650s. *Hipermestra* was composed for Florence at the instance of Cardinal Gian Carlo de' Medici; although it was used to celebrate the birth of the Spanish infante in 1658 (fig.2), Cavalli had sent the score in the autumn of 1654. Gian Carlo's patronage is confirmed in the dedication of the first of Cavalli's two publications, *Musiche sacre* (1656), which alluded to 'other compositions' already commissioned.

Following the Treaty of the Pyrenees between France and Spain (1659), the French prime minister, Cardinal Mazarin, laid plans for the celebration of the marriage of Louis XIV to Maria Theresa, daughter of the King of Spain. So that he could stage the grandest possible spectacle he sent for the well-known Italian architect Gaspare Vigarani and commissioned him to build a large theatre in the Tuileries. Still in line with his long-standing cultural politics, Mazarin decided to mount an Italian opera with the aid of imported musicians. At the suggestion of Atto Melani, Cavalli was asked to compose it, but he reacted with some hesitation. In his letter of 22 August 1659 to the superintendent of Italian artists, Francesco Buti, he demurred on the grounds of age, obligation and aversion to travel; reduction of the original high salary offer was also a factor, perhaps the principal

1. Autograph of Cavalli's 'Xerse', Act 2 scene xviii (the beginning of Adelanta's 'Et e pur vero, o core'), first performed at the Teatro SS Giovanni e Paolo, Venice, 1655 (I-Vnm)

2. Costume design by Stefano della Bella for the title role in Cavalli's 'Hipermestra', Teatro della Pergola, Florence, 12 June 1658: pen and brown ink with colour wash (British Museum, London)

one. Buti proposed Cesti as a substitute, but Mazarin successfully used the French ambassador to Venice to secure Cavalli's acceptance, intervening with the procurators of S Marco to ensure that his position as organist would be held for him and his salary paid even during his absence. The affair was not resolved until March 1660, but on 25 January the ambassador had a *Te Deum* sung at the church of SS Giovanni e Paolo in celebration of the French victory. Cavalli led it and was doubtless also its composer.

Cavalli left for France in April or May 1660 with an entourage of five, including two singers from S Marco, the soprano Giovanni Caliari (or Calegari) and the tenor Giovanni Antonio Poncelli, and a boy, Giacomo da Murano, who may have been his copyist. On the way they visited the court at Innsbruck, where on 5 June a payment was recorded for the gift to Cavalli of 'guldne und silberne Trinkgeschirr' (the 'Pellicone d'argento indorato in forma di Struzzo' which he left to one of his executors). They may also have stayed at Munich, for it has been claimed (see Doglioni, 1671 edn) that Cavalli was called to the Bavarian court. In July they arrived at Paris to find the theatre far from ready.

Cavalli spent nearly two years in Paris and must have been musically active throughout, but he left little trace of his presence; one French musician whose acquaintance he made was François Roberday, to whom he gave a fugue subject in August 1660. Beginning on 22 November *Xerse* was given as an interim measure in a temporary theatre built in the great picture gallery of the Louvre. A notable change from the Venetian version was the brutal octave transposition of the title role into the baritone range; the original three acts were redistributed into five and supplied with *entrées de ballet* by Lully. Accounts of the performance say nothing particularly good or bad about the music and in that respect are typical of 17th-century descriptions of opera, even in Italy. Cavalli probably composed the celebratory opera, *Ercole amante*, on Buti's libretto during his first 12 months in France. Mazarin's death on 9 March 1661 spelt the beginning of the end of Italian cultural prominence at the court, and the opera might not have been performed at all had not so much money already been spent on it. A supposed conspiracy against the Italian artists may have sabotaged Vigarani's machinery; but if Cavalli's music was not appreciated when *Ercole amante* was first performed on 7 February 1662, it was because no-one could hear it, owing to the theatre's bad acoustics. The Venetian ambassador Grimani reported that 'The music was very fine and fitting; because of the vastness of the theatre it could not be enjoyed, but at the rehearsals at Mazarin's palace it always came off very well and to the complete satisfaction of the king and the court'. The spectacle lasted six hours and again included ballets by Lully, in which the king, queen and others of the court danced: little wonder that these received most of the attention in contemporary accounts.

The last performance of *Ercole amante* took place on 6 May 1662, and by the summer, having meanwhile visited his birthplace, Cavalli was again in Venice, where he resumed his duties as organist. The fame that his visit to France gave him is indicated in the laudatory dedication to him (together with the other chief musicians of S Marco) of Bonifatio Gratiani's *Sacri concerti* (1668). Cavalli had left behind in Venice an unfulfilled contract for operas with Marco Faustini, but in a letter of 8 August he declared that he had left France resolved never to work for the theatre again. This statement has been interpreted as disillusionment over the reception of *Ercole amante*. It may just as well reflect his large financial reward from the French court (including a diamond ring 'bizzarramente e gentilmente lavorato': see Sforza Benvenuti, 1888), which would have freed him from any necessity to earn his living by the composition of operas, had he so chosen. He proposed to Faustini a Venetian performance of *Ercole amante*, but this came to nothing.

In the event, Cavalli set three more librettos by Minato, the first for Faustini at the Teatro SS Giovanni e Paolo, the others for the Teatro S Salvador, in which, together with Minato, he seems to have had a financial interest. Two other operas composed for Venice were never performed: *Eliogabalo*, intended for Carnival 1668, and *Massenzio*, composed for Carnival 1673, were scrapped during rehearsals, the former possibly and the latter certainly because Cavalli's arias were not liked. *Coriolano*, his last new opera to be performed, was again a celebratory piece, written for the Farnese theatre at Piacenza (1669); he probably did not attend the performance. After his stay in France his life centred more on S Marco than on the theatres. On 20 November 1668 he succeeded Rovetta as *maestro di cappella* and remained in the post until his death, confirming his attention to church music by a second publication, the eight-voice *Vesperi* of 1675; an inventory of the archive of S Marco in 1720 records several other works now lost (see Caffi, 1854–5).

Cavalli was buried in the church of S Lorenzo beside his sisters Diambra Caterina and Cecilia and his wife and her uncle. He made provision for an elaborate requiem mass to be put together for his funeral rites by the new *maestro di cappella* or, if one had not been selected, the *vicemaestro* (in either case this would have been Natale Monferrato). Twice a year thereafter Cavalli's own Requiem for two choirs was to be sung by the *cappella* and canons of S Marco. He similarly combined piety with benefit by stipulating that the daily Mass paid for from his estate be celebrated by Caliari, whom he had raised and trained. His will and property inventory show that he was assiduous, if conservative, in building an estate. All his life he had fought off indebtedness and invested cautiously, even rejecting his father's estate in 1642 as being too encumbered by debts. He left more than 6000 ducats in interest-bearing accounts at the Venetian mint and salt office (about 1670 the doge's annual provision was just over 14,000 ducats, the entire budget for the *cappella* of S Marco 5000), a good deal more land than he began with and an endless list of valuable objects, including paintings by his (unidentified) brother and a saucer with his coat-of-arms. A most important item was his collection of opera scores, which he gave to Caliari: shortly afterwards it passed to the Contarini collection (*See* CONTARINI, MARCO), which now includes all his surviving operas. He had no direct heirs, and after remembering friends and patrons he left the residuum of his estate to the nuns of S Lorenzo, with whom he and his wife had long had close relations. Two in particular, Fiorenza Grimani and Betta Mocenigo, he described as his pupils; both were children of noble houses with which he had been closely connected. Besides these two and Caliari and another youth whom he had taken on on a similar basis in the 1640s (see Morelli and Walker, 1972), his pupils included G.B. Volpe, Antonia Bembo and Barbara Strozzi, who acknowledged her debt in her *Cantate* op.2 (1651).

2. REPUTATION. Cavalli's growing fame in later life and after his death was in contrast to his waning effectiveness as an opera composer. Visits by foreign musicians such as J.P. Krieger (1672) and possibly J.W. Franck were probably common in his old age. The survival of a score of *Erismena* in English translation argues that his reputation even reached England. Benedetto Ferrari, in justifying his own application at an advanced age for the post of *maestro di cappella* at Modena (1674) noted that Cavalli, who was then *maestro di cappella* at Venice, 'in età cadente fa colle sue virtù risplendere quella reggia' ('even in his failing years makes the republic shine with his virtues').

Publication of the first chronology of Venetian opera by his erstwhile collaborator CRISTOFORO IVANOVICH made Cavalli seem an even more central figure than he was, for Ivanovich attributed to him most of the anonymous works from the first 15 years of public opera, many of which were taken up in later chronicles (see Walker, 1972). In the 18th century he remained on the margins of music historiography. Walther did not mention him; Mattheson (1740), who reported Krieger's visit to Venice, wished for him a more prominent place in lexicons, and Scheibe (1745), who owned the score of one of his operas, praised the bold and affective character of his recitative. Burney judged *Erismena*, whose score (not the English-language one) he borrowed from 'Dr. Bever, the civilian', to be 'so deficient in poetical and musical merit that no perfection of performance could render it palatable' and full of airs which were 'psalmodic, monotonous and dull'. Fétis included several arias by Cavalli in his historical concerts in Paris from 1832, and Vincent Novello gave him some attention in a lecture at the London Institute in 1840. The first critical treatment of his music was by Ambros (1878), who likened his position to that of Josquin; appreciation developed largely through the writings of Goldschmidt, Kretzschmar, Prunières and Wellesz. These studies, together with later ones by Bianconi, Walker, Glover and Rosand, have provided the foundation for a variety of approaches to both individual works and broader issues.

Critical study and performance of Cavalli's music has largely followed on that of Monteverdi in both secular and sacred spheres. *Didone* was performed in Florence in 1952 on the 350th anniversary of his birth. A seminal stage in the revival of his operas was the series of popular and controversial reconstructions (of *Ormindo, Calisto* and *Egisto*) by Raymond Leppard from 1967, the first two initially for Glyndebourne. Subsequent productions by René Jacobs and by Jane Glover have led to an increasing interest in performances and editions of Cavalli's operas.

3. OPERAS. Cavalli produced music for the theatre during most of his working life. He composed nearly 30 operas for Venetian houses, and they run from the tentative beginnings of public opera to the establishment of Venice as a centre whose operas were imitated by, and exported to, cities throughout Italy. His works are central to that process of dissemination (see the detailed account by Bianconi in *DBI*, also Bianconi and Walker, 1975), and as only four operas by other composers (Monteverdi, Cesti and Sacrati) survive from before the late 1650s, his operas offer the only continuous view of musical style in Venetian opera over two decades. The absence of a development in his musical language has sometimes been overstated, but stability weighs more heavily than change; his continuity of style was a key factor in the establishment of a musical language to express the genre's dramatic conventions. Such obvious external differences between operas as the number and placing and even the form of arias or the use of refrains, duets and choruses come directly or indirectly from the structure of the poem. Since Cavalli was first and foremost an evaluator and inventive translator of the affective moment, even differences of musical mood between operas (the lugubriousness of *Didone*, the rustic playfulness of *Calisto*) and within a single work can be traced to the poetry.

Most free verse is set as recitative. However inventive, it rarely shows a broad melodic form. It usually consists of a succession of phrases, each ending in a clearly formulated and carefully approached cadence. Often the phrases are grouped into tonally closed paragraphs, corresponding to coherent sections of poetry. Another common technique of organization in the early operas is a long, slowly descending bass, over which any amount of melodic thread can be spun (e.g. *Gli amori d'Apollo e di Dafne*, Act 1 scene iii). The categories of gesture in Cavalli's recitative are by and large those of Monteverdi. If there are standard reactions to excited exclamation (rapid note values, word repetition) and to pathos (slow, descending lines, chromatic writing, usually in the bass), the details are always worked out afresh. His rhetoric is

also responsive to syntax (questions, paragraphs) and sensitive and resourceful in the face of surprise. A casual madrigalism and symbolism of idea inform many passages (ex.1). More overt instances of word-painting cover a range of emotion but are most commonly associated with passage-work (ex.2).

In the later operas rapid dialogue accounts for much of the poetry. This is particularly apparent in the faster cadence formulae of the recitative. In some of the settings of librettos by Minato (*Xerse*, *Artemisia*) much of the recitative dialogue is set out in open score. Lively argument and dramatic development are sometimes supported by a chain of 5ths in the harmony (e.g. *Scipione affricano*, Act 3 scene xviii).

Nearly all the recitative is 'semplice', accompanied only by continuo. Exceptional moments, rarely more than one per opera, may be underscored by string accompaniment in sustained chords, usually with no parts in the violin clef. In Zelemina's plea 'Invitta Veremonda' (*Veremonda*, Act 3 scene vii) and Misena's false quotation of Periandro 'Prendi quella corona' (*Eritrea*, Act 3 scene x) the two upper parts are called 'viole': it has not been shown whether these are viole da braccio or viole da gamba, but the former seems more likely. Nerea's plea to Pluto (*Rosinda*, Act 1 scene vii) is a loosely strophic setting of two quatrains with a normal ritornello after the first, and Giuliano's exchange with Eritea 'Deh manda quei singulti' (*Eliogabalo*, Act 2 scene iii) is a varied strophic recitative

Ex.1 *Gli amori d'Apollo e di Dafne*, Act 3 scene iv

Ex.2 *Gli amori d'Apollo e di Dafne*, Act 1 scene iv

with four-part string accompaniment. Ercole's plaint 'Ma l'atroce mia doglia' (*Ercole amante*, Act 5) is exceptional in including violins in the five-part string ensemble, perhaps because the role is for bass.

In *Le nozze di Teti e di Peleo, Didone* and *Gli amori d'Apollo e di Dafne*, arioso passages – that is, recitative verse set lyrically – are infrequent. These passages usually involve either a shift to triple metre or a 'walking' bass in crotchets. In *Didone*, for example, the few ariosos are nearly all of the second type. From *La virtù de' strali d'Amore* onwards, and particularly in settings of librettos by Faustini, arioso plays a much larger part and lends greater fluidity to the later operas. Occasionally it responds to lines of contrasting metre, but mostly it is motivated by text meaning or situation. Many ariosos are settings of aphoristic final lines or couplets, others are madrigalesque in impulse, still others reflect outbursts, festive or pathetic. The gestural content of arioso is similar to, if perhaps more limited than, that of aria. Most arioso passages are short and simple, though melismatic writing and text repetition are part of the equipment, and emphasis may be given by an instrumental sinfonia, usually based on the preceding vocal material, as in 'Tu lieto intanto vivi' (*La virtù de' strali d'Amore*, Act 1 scene iv) or the end of Lesbo's speech in *Eritrea*, Act 3 scene v, the musical style of which is barely elevated over that of the preceding recitative.

Most poetry other than recitative verse in Cavalli's librettos is strophic, and it is this kind of verse on which most pieces that the sources call arias are based. The first three operas have a great quantity of such verse (between 20 and 25 poems). A majority of these poems use the same metres as recitative (lines of seven and 11 syllables); they may have up to nine strophes. They are always set as some sort of musical unit, whatever the internal changes of metre, rhythm or melodic character. All of the earliest operas include recitative settings of strophic poems, usually with the melody, but not the bass line, varied between the strophes. Some have their stanzas separated by a ritornello, as Ascanio's 'Son figlio di Enea' (*Didone*, Act 1 scene ii). Strophic recitative is an old-fashioned procedure, and examples in Cavalli's later operas are rare. It is significant that as early as *Ormindo* such pieces are uttered by gods (Destiny, Fortune), though strophic recitative can be used for other character types in a

dramatic context. The inclusion of one in the prologue to *Elena* is exceptional, and the piece from *Eliogabalo* mentioned above is a curiosity: the texts of both operas are considerably earlier than their musical settings.

Most of Cavalli's arias are in triple metre. This is particularly true of the first operas, for example *Gli amori d'Apollo e di Dafne*, which apart from strophic recitatives has only three arias in duple time. Brief recitative interruptions such as in 'Maladette le guerre' (*Doriclea*, Act 1 scene iv) are frequent, however; sometimes they prepare the triple-time settings of a gnomic final line or couplet, as in the last strophe of 'Giovanetta che tiene' (*Gli amori d'Apollo e di Dafne*, Act 1 scene i). Varied strophes in triple metre also occur in the early operas, for example 'Padre, ferma i passi e l'armi' from *Didone* (Act 1 scene i). How rooted the idiom of aria composition is in the style of Monteverdi can be seen clearly in Cavalli's earliest surviving aria, *Son ancor pargoletta* (RISM 1634[7]). As with arioso, the other most common feature of aria-writing is the 'walking' bass.

There is less plain strophic poetry in Faustini's librettos than in most others that Cavalli set before or after. By way of compensation they have many groups of lines of distinct poetic metre (four, five, six or eight syllables), which are usually composed in arioso fashion. These librettos also abound in refrains. Cavalli usually set them as large and highly articulated aria forms (see Rosand, 1991), complete with ritornello and sometimes with contrasts of musical metre, for example 'Udite, amanti' (*Doriclea*, Act 1 scene vi) or 'D'haver un consorte io son risoluta' (*Calisto*, Act 2 scene xiv). Other examples of dramatically or textually motivated structures larger and more elaborate than the simple aria are the several alternating pairs of strophes in *Egisto* ('Hor che l'Aurora', Act 1 scene i; 'E grato il penare', Act 3 scene i; 'Amanti, sperate', followed by a duet, Act 3 scene x); the prison scene in *Ormindo* Act 3 (also used in *Erismena*: see Rosand, 1975); the large duet sequence in Act 1 of *Orimonte*; the double varied strophic setting of *capitoli sdruccioli* at the beginning of Act 3 of *Veremonda* ('Né meste più, né più dolenti siano'), whose concluding duet is freely based on both sets of strophes; and the comic aria 'A chi voler fiori' from *Xerse* (Act 2 scene i), whose first lines punctuate the following dialogue in the manner of a refrain.

Cavalli's aria style, while essentially syllabic, makes use of melismatic flourishes; these are more often than not madrigalesque image portrayals, but their real function is increasingly that of 'bel canto' writing motivated by dramatic eloquence and characterization. Aria poems are set one or two lines at a time, with some kind of cadence but not necessarily a rhythmic hiatus at the end of each unit. Phrases tend to be asymmetrical and irregular in length and cannot in general be referred to preconceived patterns. The relationship of musical rhythm to poetic metre is highly variable. It is least predictable in settings of *versi sciolti* (lines of seven and 11 syllables), whereas it is almost tediously regular in the six-syllable verse much used by Faustini (ex.3). A related special case is the five-syllable *sdruccioli* (lines with antepenultimate accent) widely used for rage, terror or invocation in 17th-century opera. The best-known example is Medea's incantation scene 'Dell'antro magico' (*Giasone*, Act 1 scene xv), but a related piece occurs already in *Didone* (Ecuba's aria 'Tremulo spirito', Act 1 scene vii); on the margin of this category is 'Grandini, turbini' from *Orimonte* (Act 3 scene xi). Furthermore, the entire roles of Pane, Silvano and Satiretto in *Calisto* are composed of *sdruccioli*; the rustic comedy of this well-established poetic tradition is heightened by Cavalli's setting, which emphasizes the rhythmic peculiarity.

Librettists, following classical models, included laments as well as incantations as part of the same dramatic convention. The lament especially was an important vehicle for expressive eloquence for female characters, providing them with an outlet for rhetorical power (Heller, 1995). The operatic lament has its principal model in Monteverdi's *Arianna*; recitative laments, such as monologues by Dido (*Didone*, Act 3 scene xi) and Isifile (*Giasone*, Act 3 scene xxi) are especially evident in early opera. Another model for Cavalli was the lament repertory using stepwise descending ostinatos. Nearly all his operas include at least one lament, almost invariably in triple metre ('L'alma fiacca svani', *Didone*, Act 1 scene iv, is exceptionally in duple) and the minor mode. Some are ostinato pieces, either chromatic ('Piangete, occhi dolenti', *Egisto*, Act 2 scene vi) or diatonic ('Al carro trionfale', *Statira*, Act 3 scene iv); 'Lasso io vivo e non ho vita' (*Egisto*, Act 2 scene i) has a descending tetrachord ritornello labelled 'passacalio'. Several have recitative interruptions ('Con infocati teli', *Doriclea*, Act 2 scene ii) or else dissolve into recitative ('Rivolgo altrove il piede', *Didone*, Act 2 scene ii). The straight ostinato went out of fashion in the 1650s (at least in Venice), and most of Cavalli's later pieces in this vein have a middle section in which the ostinato pattern is transposed to another key ('Misero cosi và', *Eliogabalo*, Act 1 scene xiii). Even many laments not actually using an ostinato begin with a descending bass line, simple or elaborated; one such is 'Ardo, sospiro e piango' (*Artemisia*, Act 1 scene xviii), which is also one of several with string accompaniment throughout. Pathetic chromaticism expressed either harmonically or melodically, rhythmically eccentric outbursts of passion and a sense of resignation conveyed by regularly cadencing phrases and descending lines are the common coin of his laments. Simple use of ostinato technique apart from the lament, such as in 'Vieni, vieni in questo seno' (*Rosinda*, Act 3 scene vi), is rare. 'Per me la vita' (*La virtù de' strali d'Amore*, Act 3 scene ii) uses a bass of the

chaconne type in a traditional way, that of expressing carefree joy.

Cavalli responded in various ways to comedy, following literary conventions by having comic characters address the audience, summarize the action and deliver ironic commentary. Arias by comic characters may make their point by assertive repetition, as in 'Pazze voi che sdegnate' (*Egisto*, Act 1 scene vi), or, as in 'Che città' (*Ormindo*, Act 1 scene iii), by jagged rhythms taken over in the ritornello. Tuneful melodies of regular phrase length, and sprightly 'walking' basses (e.g. 'O sagace chi sa', *Ormindo*, Act 2 scene vi), are also associated with humorous contexts. Occasionally he used intentionally bizarre gestures, as in the falling-3rd cadences of 'Fleria la mia diletta' (*Orimonte*, Act 1 scene xii) or the image-motivated cross-rhythms of 'Sempre garisce e grida' (*Eritrea*, Act 3 scene v: ex.4).

'Sempre garisce e grida' is representative of a formal expansion and increase in range of gesture that mark Cavalli's aria style from the early 1650s. Arias in duple metre (though still a minority) are more numerous than before, and they use means other than the 'walking' bass. Several pieces from *Oristeo* onwards, such as 'Quell'amante che vuole' (Act 2 scene xvi), have basses in quaver motion; the semiquaver bass line of 'Che non può lo stral d'Amore' (*Elena*, Act 2 scene xiii) is a device more often used by a younger generation of composers. Also in line with more modern taste are the motto openings of 'Bel sembiante' (*Rosinda*, Act 3 scene xi) and particularly 'Bella fede, over sei gita' (*Veremonda*, Act 1 scene xi). Something of the same kind, in a more varied gestural context, is found in 'Vada pur dotto marito', from the same scene of *Veremonda*. The fleet vocality of 'La bellezza è un don fugace' (*Xerse*, Act 2 scene ix) is indicative of the increase in passage-work; less ostentatious but equally characteristic is the aria in triple metre 'Zeffiretti placidetti' from *Artemisia* (Act 1 scene xiii). *Artemisia* also includes the only example in Cavalli of an 'aria in eco' ('Fortunato, chi piegato', Act 2 scene vi), a double reducing echo added (after the fact) to phrase endings. There runs throughout the operas a tendency to use similar ideas in successive pieces, for example the relationship in *La virtù de' strali d'Amore* between 'Per me la vita' and 'Tu là di Cocito', which occur within a few pages of each other. It is probably less a quest for unity than a response, possibly subconscious, to the dramatic situation.

Ex.4 *Eritrea*, Act 3 scene v

The librettos of Cavalli's later operas contain large numbers of two-strophe aria poems (*Scipione affricano*, for example, has 35), and they mostly fall into a few metrical patterns. They are usually set as *ABB′* forms (transposed and often otherwise modified repetition of the music for the final line or couplet) or as *ABA* (elementary da capo arias). In many of his arias from the last three dramas by Minato the musical rhythm rests directly on that of the poetry, with results that are not very striking. At the same time most of them are less obviously dance-like than those of some younger composers, and this may account for the failure of his last two Venetian operas to reach performance. The contrast of style is particularly evident between his *Eliogabalo* and the opera of the same title by Boretti which replaced it.

The amount of duet writing varies greatly from opera to opera, according to the structure of the libretto; it is concentrated in the dramas by Faustini. Although there are examples of duet recitative (*La virtù de' strali d'Amore* has several), the vast majority of duets are in triple metre and in a lightly imitative style. A standard procedure is to spin out the imitations over a bass line that moves predominantly in dotted semibreves, as in 'Noi tem priamo' or 'Nel gran regno' from *Egisto*, Act 1. Less usual, though not less interesting, is the intricately imitative binary movement of 'Aure trecce inanellate', which begins Act 2 of *Ormindo*. Pieces for larger solo ensembles are demanded less often by the librettos. They are largely extensions of duet technique. Choral writing in most operas is brief and incidental, for instance the shout of 'Viva' that greets Pompeo in Act 2 scene vi of *Pompeo magno*. For obvious reasons of circumstance it is very much more extensive in *Ercole amante*, which includes in 'Dall'occaso' (Act 5) a genuine four-part continuo madrigal. The choruses of the earliest operas, such as 'Al cinghiale' in *Didone* (Act 3 scene ii), are probably best seen in the light of the earlier traditions of concertato writing and of danced *intermedi*.

The principal function of Cavalli's orchestra is to provide ritornellos before and/or after the strophes of arias. The music of the ritornello is nearly always related to that of the aria, tending to use the beginning of the vocal line if it precedes the aria or the melody of the final line or couplet if it follows it. The material is often varied and concentrated with respect to the aria. Ritornellos may have one, two, or three phrases; the most common type has two phrases of roughly equal length, each based on a point of imitation and often using sequence. In nearly all the operas (*Orimonte* being an exception) some arias have more elaborate accompaniment, either phrase by phrase in antiphonal fashion, over the voice throughout

(particularly in laments and pieces of related mood), or some combination of the two. *Gli amori d'Apollo e di Dafne* has one such aria, *Pompeo magno* nine.

Sinfonias also form part of all the operas. Those at the beginnings of operas or acts most commonly are in duple metre with a *grave* minim movement, though some (including those that introduce most of the later operas) have more than one movement and use triple metre as well. More descriptive orchestral music, usually of an extremely simple and rhythmic character, is provided by battle pieces (such as the 'combattimento' and 'sinfonia navale' of *Didone* and the 'sinfonia in battaglia' of *La virtù de' strali d'Amore*), and by music for special staging, such as the 'infernale' of *Ercole amante* and the 'ballo di quattro cavalli naturelli vivi' of *Pompeo magno*. There are also elements of *stile concitato* in several works, either as an independent orchestral movement (*Doriclea*) or as accompaniment to recitative (*La virtù de' strali d'Amore*), aria (*Doriclea*) or chorus (*Eliogabalo*).

The orchestra is laid out in five, less often four, parts in nearly all full fair-copy scores, but the musical skeleton consists of two violins and bass, the combination found in all Cavalli's autographs. Wind instruments may have been used in the very first operas and *Ercole amante*; otherwise his orchestra certainly consisted of (solo) strings and continuo (lutes, theorbos, harpsichords), though one piece in *Elena* seems to call for trumpets in A. Expressive indications are very few and far between, but one does meet 'piano' (*Xerse*, which also has an aria 'cantata in misura larga'), 'adagio' (*Hipermestra*), 'affettuoso' (*Hipermestra, Doriclea*) and 'altiero' (*Doriclea*).

4. SACRED WORKS. The relatively modest quantity of extant sacred music by Cavalli is probably only a small part of a continuous production over his entire career. Most of it follows in the tradition of large concerted church works fundamental to musical practice at S Marco, best represented by the Gabrielis and Monteverdi. Cavalli's earliest surviving piece, the solo motet *Cantate Domino*, is almost indistinguishable in style from Monteverdi, but most of his later works deliberately avoid extremes of gesture, even though a sensitivity to the imagery of the text remains the rule.

The Marian antiphons from the *Musiche sacre* (1656) illustrate writing for a small number of voices (from two to five). They obey a largely syllabic style, relieved by a few conventional or madrigalesque melismas. The rests of 'suspiramus' in *Salve regina* and the falling figure on 'cadente' in *Alma Redemptoris mater* reveal a close kinship to the rhetoric of secular text-setting. The opening of *Salve regina* uses a quotation from plainchant. All make use of light contrapuntal development. Although plain recitative is not an essential part of the style, there are moments of declamation which approach it.

The *Messa concertata*, also from *Musiche sacre*, is Venetian festive music on a grand scale, conceived for two choruses with instrumental accompaniment. Massive but also airy in construction, it uses a variety of vocal combinations, solo against tutti and choir against choir, with many orchestral interpolations used to set off one section from another. Its sections in triple metre use a fairly narrow range of figures; those in duple metre are more varied, with some arresting tunes. The Gloria and Credo have mock-fugal conclusions; the Sanctus and Agnus Dei are brief, in accordance with Venetian usage (see Bonta, 1969). Only in a few places is solo ornamentation clearly demanded.

The three *Magnificat* settings from the *Vesperi* (1675) are also for double choir, though without explicit instrumental parts except for continuo. Block harmony outweighs imitative textures, and sections for full chorus outnumber those for a reduced number of voices. They are set verse by verse, with fairly regular alternation between choirs. In the same tradition is the Requiem which Cavalli prepared as his own memorial. Solemn and full of *prima pratica* counterpoint, it is closer to the spirit of the early Seicento than to that of the 1670s.

The six instrumental works from the 1656 print, indiscriminately designated 'sonata' and 'canzone', were doubtless intended for liturgical use (see Bonta, 1969). They are close to Giovanni Gabrieli in style, if harmonically more modern, and only rarely partake of the idiomatic writing already present in many ritornellos of Cavalli's later operas. In the larger works – those in eight, ten and 12 parts – the instruments are handled polychorally; several pieces are in four sections with identical second and fourth movements in triple metre (see Selfridge-Field, 1975).

WORKS

Dates are generally those of the printed librettos; arias in MS are indicative rather than exhaustive; performed in Venice unless otherwise stated

OPERAS

Title	*Genre, acts*	*Libretto*	*Performance*	*Sources, remarks*
Le nozze di Teti e di Peleo	opera scenica/festa teatrale, prol, 3	O. Persiani	S Cassiano, 24 Jan 1639	*I-Vnm*
Gli amori d'Apollo e di Dafne	opera, prol, 3	G.F. Busenello	S Cassiano, 1640	*Vnm* (facs. in IOB, i, 1978), lib. first published 1656 in Busenello's works
Didone	opera, prol, 3	Busenello	S Cassiano, 1641	*Vnm*, lib. first published 1656 in Busenello's works
Amore innamorato	favola, prol, 3	plot by G.F. Loredan, poetry P. Michiel, rev. G.B. Fusconi	S Moisè, 1 Jan 1642	music lost

OTHER SECULAR

most attributions doubtful; arias by Cavalli are probably from operas

Arias: Son ancor pargoletta, 1634[7], ed. K. Jeppesen, *La Flora* (Copenhagen, 1949); E rimedio al mal d'amore, 1656[4] (see also Erismena); Dolce colpo d'un sguardo amoroso, *F-Pn*; In amor non ho fortuna, *Pn*; O dolce servitù, *Pn*; Dolce amor, ?*Pn* (formerly *GB-T*), probably the piece ed. J. Stainer, *Six Italian Songs for a Mezzo-soprano Voice* (London, 1897), and E. Rung, *Musica scelta di antichi maestri italiani* (Mainz, n.d.), almost certainly not by Cavalli

Cantatas: Arm'il petto d'orgoglio, *I-Vc* (6 arias wrongly attrib. Cavalli in same MS); Chi non fa il giardinier, dated 1662, *MOe*; Ho un cor che non sa (Amante veridico), 1662, *MOe*; Levamiti davanti (Vanità in amore), 1662, *MOe*; Se laggiù negli abissi, *Nc*, ed. H. Riemann, *Kantaten-Frühling (1633–1682)* (Leipzig, 1912)

Arias ed.: F.-A. Gevaert, *Les gloires de l'Italie* (Paris, 1868); *Echi d'Italia* (?1880); A. Parisotti, *Arie antiche a una voce* (Milan, 1885–*c*1898/*R*1947); Goldschmidt (1893); Goldschmidt (1901); M. Zanon, *Francesco Cavalli: venti arie* (Venice, 1908); Prunières (1913); Wellesz (1913); Prunières, *Cavalli* (1931); Wolff (1937); Worsthorne (1954); Hjelmborg (1962); R. Leppard, *Francesco Cavalli: Five Operatic Arias* (London, 1966); Rosand (1975)

THOMAS WALKER/IRENE ALM

Cavalliere, Giovanni Filippo (*b* ?Genoa; *fl* ?Naples, 1634). Italian music theorist and ?composer. On the title-page of his single surviving work, *Il scolaro principiante di musica* (Naples, 1634, 2/1639), he referred to himself as 'Signor Gio: Filippo Cavalliere alias Pollero genovese'. A coat of arms engraved there, together with the tone of certain phrases in the dedication addressed to his mother, indicates that he may have belonged to the noble Genoese family of Cavalleri (or Cavalieriy). He was probably living at Naples, where he may have opened a school of music. In his treatise the basic principles of plainsong and measured music are set out in a somewhat schematic form. He dealt summarily with measured music, but in the section on plainsong he illustrated in detail the Guidonian Hand, the eight psalm tones, solmization and mutations. The only deviation from tradition is that according to him the Guidonian Hand did not originate from *Gamma ut* or *G Sol re ut* but from a 5th lower, *C ut*. His 'Rule for learning to tune all sorts of keyboard instruments' and 'Rules for learning to play from score' are more interesting. The 17 rules in the latter section include some basic principles for the realization of a basso continuo. At the back of the treatise there are some hymns, some *canzonette alla napolitana* in praise of the Madonna and a *falsobordone* Vespers setting, all presumably composed by Cavalliere himself; they are for two to four voices, and one of the duets has an organ bass. It is known that Girolamo Chiti owned a copy of *Il scolaro*.

AGOSTINO ZIINO

Cavallini, Ernesto (*b* Milan, 30 Aug 1807; *d* Milan, 7 Jan 1874). Italian clarinettist, brother of Eugenio Cavallini. At the age of nine he became a pupil at the Milan Conservatory under Benedetto Carulli. From 1831 to 1851 he played in the orchestra of La Scala, which was led by his brother Eugenio (1806–81). As a soloist he earned the reputation of being Italy's most outstanding clarinettist of the 19th century. Although using a primitive six-keyed instrument, his technique was such that Lazarus called him the Paganini of the clarinet. His performances outside Italy included Vienna (1839), Paris (1842), London (1842 and 1845), Geneva (1844) and Brussels (1845).

In 1851 Cavallini resigned from his orchestral post and toured extensively through Spain, France, Austria, Germany and Hungary before settling in St Petersburg during 1854. The tsar appointed him solo clarinettist to the court and in 1862 Anton Rubinstein nominated him to the professorship in the newly opened Conservatory. At this time Cavallini took up teaching singing and also began composing for the voice. On 10 November 1862 Verdi's *La forza del destino* received its première in St Petersburg under the composer's direction and with Cavallini playing the famous Act III solo that was written for him. Cavallini had taken part in four Verdi premières during his time at La Scala and undoubtedly influenced the composer's writing for the instrument. In 1869 he returned to Milan and from 1871 until his death he taught at the Conservatory. He wrote studies and many attractive concert pieces for the clarinet.

PAMELA WESTON

Cavallini, Eugenio (*b* Milan, 16 June 1806; *d* Milan, 11 April 1881). Italian violinist, viola player and composer, brother of Ernesto Cavallini. He first studied the viola with Pietro Tassistro (first viola in the orchestra at La Scala), and possibly with Dognazzi. At the age of 11 he joined Alessandro Rolla's violin and viola class at the Milan Conservatory. As soon as he had obtained his diploma he joined the orchestra of the Milan royal theatres (La Scala and Canobbiana) as a violinist, under the baton of Rolla. In 1833 he replaced Rolla temporarily and in 1834 the impresario Carlo Visconti engaged him as leader of the orchestra at La Scala on a permanent basis. (The support of Maria Malibran, who was in Milan at the time, seems to have contributed towards this appointment.) 19th-century Milanese periodicals include references to frequent orchestral 'academies' conducted by Cavallini and by his former fellow student Bernardo Ferrara in 1843–4, mostly under the auspices of the Società Filarmonica (which was responsible for the Milan première of Beethoven's 'Eroica' Symphony). With his brother Ernesto (a clarinettist), the flautist Giuseppe Raboni and other members of La Scala orchestra he gave chamber concerts in Milan and other Italian cities. From 1848 he organized benefit concerts at the Teatro Carcano in Milan, given by and on behalf of the orchestra of La Scala, whose members had been unpaid as a result of political events in the city. In 1868 Cavallini resigned from La Scala and from the professorship of violin at the conservatory, a position he had held since 1844 (officially from 1851). As Rolla's successor, he had come to be considered an authority on the performance of Austro-German standard works. At La Scala he gave the first performances of Donizetti's *Lucrezia Borgia*, the first five Verdi operas written for the theatre (from *Oberto* to *Giovanna d'Arco*), Mercadante's *Il giuramento* and *Il bravo*, and the Italian première of Bellini's *I puritani*. Verdi wrote the extended violin solo in the third act of *I Lombardi* (defined by Julian Budden as a miniature concerto) for Cavallini. His compositions include concert pieces – solo concertos, variations and divertimentos or capriccios – and teaching works. The outstanding *Guida*

per lo studio elementare progressivo della viola (in three volumes) contains his own compositions and otherwise unpublished pieces by Rolla and Giacomo Zucchi.

ANTONIO ROSTAGNO

Cavallini, Ivano (*b* Adria, 27 Sept 1952). Italian musicologist. He took a degree in the history of philosophy at the University of Padua (1976) and studied the flute at the Adria Conservatory (diploma 1977), and then undertook a postgraduate course in musicology under Giuseppe Vecchi at the University of Bologna (diploma 1978), where he became reader in paleography (1978–82). In 1998 he gained the doctorate in musicology at the University of Zagreb. He taught music history at the conservatory of Trieste (1990–98) and at Trieste University (1996–9). During 1989 he was Visiting Professor at the University of Warsaw. In 1990 Cavallini was appointed director of the department of musicology at the Circolo della Cultura e delle Arti in Trieste and in 1999 he began teaching music history at the University of Palermo. He has been director of the journal *Subsidia musica veneta* and is on the advisory boards of the journals *Recercare*, *Arti musices* (Zagreb) and the complete edition of the works of Alessandro Orologio. His research is focussed on the connections between Italian music and Slav cultures of central and southern Europe, particularly in those regions under Venetian rule. Other areas of study are music historiography and music criticism in the 17th and 18th centuries and forms of theatrical entertainment with music from the 16th century to the 18th.

Cavana, Giovanni Battista (*b* Mantua; *fl* 1684–1732). Italian bass. He was the most important *buffo* singer of his time, possessing a masterly technique and an outstanding aptitude for expressive acting without theatricality. 18 *buffo* scenes composed for him in Naples between 1696 and 1702 by Alessandro Scarlatti, Aldrovandini, Giovanni Bononcini and others have survived in a Dresden manuscript (*D-Dl*). From 1706 he was active at the Teatro S Cassiano, Venice, where he formed a close professional partnership with Santa Marchesini and collaborated with Pariati, Francesco Gasparini, Lotti and Albinoni in launching the first independent intermezzos. The production of this repertory at the Teatro S Cassiano was intimately connected with the presence of Cavana in Venice and came to an end only one season after his departure for Naples with Marchesini in spring 1709. Cavana took this repertory all around Italy, introducing it to Rome in 1711, when he sang at Prince Ruspoli's private theatre. He was praised by the poet P.A. Rolli, and often highly paid for his performances. At the end of his career he was elected to the Accademia dei Geniali of Padua.

Cavanillas [Cavanilles], **Juan Bautista José.** *See* CABANILLES, JUAN BAUTISTA JOSÉ.

Cavanni [Cavani], **Francesco** (*b* Mantua; *fl* 1679–93). Italian composer. In 1679 he was employed at S Marco, Venice, as a bass. Presumably absent for some time, he was reinstated there in 1687. He received an increase in wages in 1692, but was re-employed in 1693 at a lower salary, indicating an unauthorized absence. Cavanni was a charter member of the Instrumentalists' Guild in Venice from its inception in 1687. He may also have been active in Bologna. As a composer he is known by *Le nove lettioni della Settimana Santa* op.1, for solo voice and continuo (Bologna, 1689), dedicated to Carlo III, Duke of Mantua.

OLGA TERMINI

Cavaquinho. Plucked lute of Portugal and Brazil, midway between a guitar and a mandolin; a small CAVACO. From the 15th century the four-course *cavaquinho* reached Africa, the Americas and even Hawaii, where it became the four-string UKULELE. In the northern areas of Latin America and in the West Indies it became known also as the *cuatro*. In Portugal it is used with other instruments to accompany dances. In Brazil, where its four metal strings are tuned *d′–g′–b′–d″*, it has become popular in the cities since the mid-19th century. *See also* MACHETE.

□

Cavata (It.: 'excavated'). (1) In the 17th and early 18th centuries a setting in aria style ('arioso') of the last line or couplet of a recitative text – i.e. an aria 'excavated' from recitative. The words normally sum up the sentiment of the passage, and the setting underlines their significance. This kind of cavata, which is described by Salvadori, Neumeister, Walther and Quadrio, is found in most forms of Baroque vocal music, including opera, though the most characteristic examples occur in Italian chamber cantatas from about 1670 to 1720. It may take one of a variety of forms (e.g. *AA′*, *AABB*), normally exhibits a contrapuntal texture between voice and basso continuo, and is often the tonal complement of the preceding recitative. The earliest cavata is the six-bar phrase 'La Ragion perde dov'il Senso abbonda' in Domenico Mazzocchi's opera *La catena d'Adone* (1626, Rome), while some of the latest appear in the church cantatas of Bach (e.g. BWV76 and 117).

(2) In the first half of the 18th century a substantial and carefully composed aria, with instrumental accompaniment, set to blank or rhymed verse but not in da capo form. This definition, derived from Mattheson, could apply to many cavatas of the standard type (1), but it also seems to refer to the kind of non-da capo aria, increasingly common in 18th-century opera, that came to be known as the CAVATINA. By 1751 and 1760 Traetta could use the words 'cavata' and 'cavatina' apparently without distinction.

COLIN TIMMS

Cavatina (It.; Fr. *cavatine*; Ger. *Kavatine*). In 18th-century opera the term, the diminutive of CAVATA, signifies a short ARIA without da capo; it may occur as an independent piece or as an interpolation in a recitative. Many such arias, though not necessarily described as cavatinas, occur in the operas of Keiser, C.H. Graun and their contemporaries: Graun's *Montezuma* (1755) has an unusually large number of cavatinas, apparently at the prompting of Frederick the Great, who wrote the original libretto. Mozart used the term three times in *Le nozze di Figaro* (1786), for Figaro's 'Se vuol ballare', the Countess's 'Porgi amor' and Barbarina's 'L'ho perduta', and Haydn used it for Hanne's 'Licht und Leben' in *The Seasons* (1799–1801). The tradition was maintained in the 19th century by Rossini, as in 'Ah! che scordar non so' in *Tancredi* (1813), Weber in 'Und ob die Wolke' in *Der Freischütz* (1821) and 'Glöcklein im Thale' in *Euryanthe* (1823), and by French composers, for example 'Salut! demeure chaste et pure' in Gounod's *Faust* (1859) and the Duke's 'Elle sortait de sa demeure' in Bizet's *La jolie fille de Perth* (1867). While the French and German terms retained their meaning, by 1820 the Italian one was regularly applied to a principal singer's opening aria, whether in one movement or two; but it could also serve for an elaborate aria demanding considerable virtuosity, such as Rosina's 'Una voce poco fa' in Rossini's *Il barbiere di Siviglia* (1816) or Lady Macbeth's 'Vieni! t'affretta' in Verdi's *Macbeth* (1847, rev. 1865). Modern writers frequently employ it to describe the slow first movement (more often called 'cantabile') of a double aria; this has no basis in 19th-century usage. The term has also been used in its original sense for a songlike piece of instrumental music, as in the penultimate movement of Beethoven's String Quartet in B♭ op.130.

For bibliography *see* ARIA and CAVATA.

Cavatoni [Cavatone], **Pietro** (*fl* 1572–9; *d* ? before 1586). Italian composer. The only facts known about his life are that he was nominated to the post of *maestro di musica* at the Accademia dei Novelli (rival of the famous Accademia Filarmonica) in Verona before 1572 and was living in Rome in 1579. In his own time he was regarded as a musician of high merit, as is learnt from Adriano Valerini, who in his *Le bellezze di Verona* (1586) said: 'Nella Musica è stato celebre Gabriele Martinengo, Pietro Cavatone, celebratissimi sono Vincenzo Ruffo e Marcantonio Ingegneri' (the use of the past tense for Cavatoni suggests that, as was certainly true of Martinengo, he had already died by 1586). The compositions in *Scielta di madrigali* (Venice, 1572) dedicated to the 'Accademici Novelli' were intended for use by them at their musical meetings. The text of the madrigal *Veggio quall'hor un'honorata gara* gives vent, with a play on words, to the rivalry with the Accademia alla Vittoria, which joined the Filarmonica in 1564. In the dedication to *Il primo libro de madrigali a cinque voci* (Venice, 1579) there is a reference to a third (apparently lost) printed collection.

Cavazzio, Giovanni. *See* CAVACCIO, GIOVANNI.

Cavazzoni, Girolamo (*b* c1525; *d* after 1577). Italian composer, son of MARCO ANTONIO CAVAZZONI. Mischiati placed his birth between 1506 and 1512, when both his father and Pietro Bembo were in Urbino, on the basis of a confusion between him and Girolamo de Adaldis, an organist at Mantua from about 1520 to 1564. Certainly, Cavazzoni said that he was born while his father was in Bembo's service, but in the preface to his first publication (*Intavolatura libro primo*, 1543) he referred to himself as 'quasi fanciullo' (probably about 17). He obtained a privilege from the Venetian senate on 31 October 1542 for the printing of this volume. The second volume, which carries no publication date, must have been printed before 1549, the date of the death of its dedicatee, Benedetto Accolti, Cardinal of Ravenna. Ortensio Landi referred to a 'Girolamo d'Urbino' in his *Cathaloghi* (Venice, 1552) as one of the best musicians of that period; and three of Cavazzoni's works were reprinted after 1555, ascribed to Hieronymo d'Urbino. In 1565–6 he supervised the building of the organ in the church of S Barbara, Mantua, and also played the organ there at Mass. He apparently was closely associated with the music-loving Guglielmo Gonzaga, for on 17 October 1565 he requested the duke to purchase some silver spoons for him at Venice. During his Mantuan years Cavazzoni taught the organ to Costanzo Antegnati (1549–1624), son of the organ builder at S Barbara, Graziadio Antegnati. Costanzo's *L'arte organica* (Brescia, 1608) recalls Cavazzoni as 'Hieronimo d'Urbino già mio honorato maestro'. Mischiati stated that Cavazzoni was still organist at S Barbara in 1577.

Cavazzoni's four ricercares (1543) differ strikingly from the pair published in 1523 by his father, Marco Antonio, for they comprise a series of imitative expositions, each having from three to 19 entries, connected by a few free figurative sections. The large number of entries of a single point and also the appearance of an ensuing point as the conclusion of a preceding one suggest that the stylistic model was the vocal music of Gombert's generation. Unlike Cavazzoni's rather austere ensemble ricercares of 1540 (a 4) and 1551 (a 3), those of 1543 are enlivened by idiomatic cadential flourishes and occasional rapid passage-work; they are, however, almost always supported by continuing polyphony. Aside from modal similarities, there is no indication that the four keyboard ricercares of 1543 were intended to be connected with their ensuing canzonas, hymns or *Magnificat* settings. Brevity, restricted range, absence of clear cadential points and a subsequent lack of sectionalism distinguish Cavazzoni's two ensemble ricercares from those for keyboard.

The two canzonas are modelled on chansons by Josquin and Passereau. They are not transcriptions but arrangements, reducing Josquin's five voices to four, altering pitches of the points of imitation and the times of their entries, radically shortening Passereau's chanson, and introducing *passaggi*, especially at cadences.

The 12 hymns, probably intended to be played in alternation with a choir, present their cantus firmi usually in a single voice, normally superius or bassus (tenor in *Jesu nostra redemptio*), and only occasionally migrate from one voice to another (e.g. bass to tenor in *Jesu corona virginum*). Sometimes a brief contrapuntal introduction precedes the statement of the hymn tune, and motifs derived from the tune inspire the surrounding imitative polyphony. The textural severity is lightened by

passaggi, which in *Christi redemptor omnium* are quite extended. Cavazzoni's four *Magnificat* settings are for *alternatim* performance. He set the odd-numbered verses, treating the chant not as a cantus firmus, however, but as a source for imitative expositions. Since the chant is both decorated and presented differently in each verse, a series of miniature variations results.

The three settings of the Mass are also for organ performance alternating with a choir. The first is based on Mass IV, the second on Mass XI, and the third on Mass IX. The Gloria of the last incorporates some Marian tropes which were customary in masses *de Beata Virgine* before they were eliminated by the Council of Trent. The compositional style closely resembles that of the *Magnificat* sections.

H. COLIN SLIM

Cavazzoni, Marco Antonio [Marco Antonio da Bologna, Marco Antonio da Urbino] (*b* Bologna, *c*1490; *d* Venice, *c*1560). Italian keyboard composer, father of GIROLAMO CAVAZZONI. He belonged to a prosperous Bolognese family with its own coat of arms. He probably spent considerable time at Urbino, possibly as early as 1512: Duchess Leonora Gonzaga referred, in June, July and November 1512, to a 'Marc Antonio mio musico' who was making short trips to Rome and Mantua. Whether 'el Bolognino', one of five organists esteemed as 'divino' in 1513 by Philateo in his *Viridario*, was Cavazzoni remains uncertain. In 1516 he was testing an organ in Ferrara. From August 1517 until 1524 he lived in Venice and corresponded with the theorist Giovanni Spataro at Bologna; he was in Rome playing for Pope Leo X from about April 1520 until February 1521. Returning to Venice after Leo's death in December 1521, Cavazzoni dedicated his *Recerchari, motetti, canzoni ... libro primo* (1523) to the Venetian patrician Francesco Cornaro, in whose service he may have been from 1512 to 1517. He may have been the singer called Marc'Antonio who was at S Marco as early as 1522. In the dedication of an edition of Petrarch to Cavazzoni in 1523 Giovannilanzo Gabbiano noted Leo X's fondness for him and his pre-eminence in playing keyboard instruments. At the birth of his son, Girolamo (probably *c*1525), Cavazzoni was with Pietro Bembo, who was then living in nearby Padua. From 1528 to 1531 he was again in Venice, and was a friend of Pietro Aaron and Willaert. In addition to teaching, a sinecure in Brescia supplemented his income. Cavazzoni was possibly the organist 'M. Marco' at S Stefano in Venice who in 1532 was appointed at Treviso Cathedral, and was almost certainly the 'Marcho Antonio da Urbin' at Chioggia Cathedral from 1536 to 1537.

In a letter dated 10 December 1537 Pietro Aretino expressed pleasure that 'Marcantonio da Urbino' had left the papal court of Paul III and urged him to enter the service of the Duchess of Urbino. This may have been Cavazzoni, for Aretino's *Il Marescalco* (Venice, 1533) lists 'Marcantonio' among great keyboard players. Pietro Aaron, in his *Lucidario* (1545), mentioned a 'Marc'Antonio del doge da Vinegia', referring possibly not to Cavazzoni but to the 'ser Marc'Antonio de Alvise' who substituted for the aged Willaert at S Marco during Willaert's absence in 1559 and who was *maestro di cappella* there from 1564 to 1565. Confusion between Cavazzoni and Alvise arises also from Willaert's testament of 1552, which names 'Marc'Antonio Cavazzoni' as an executor, although two later testaments (1558, 1559) call the executor simply Marc'Antonio, singer at S Marco. Cavazzoni described himself as a singer at S Marco in his own first will of 1560. There must have been two aged musicians called Marc'Antonio (Cavazzoni and Alvise) singing at the basilica during this period. The shaky and uncertain handwriting of Cavazzoni's final testament of 1560 confirms his old age. Neither will mentions his son, Girolamo, still alive in 1570. Cavazzoni probably died soon after 1560 and should not be confused with the bass singer Marco Antonio in the Vienna court chapel in 1570.

On 10 January 1523 the Venetian senate granted 'maestro Antonio da Bologna' a printing privilege for a 'new method of intabulating songs and masses for the organ'. In April his *Recerchari, motetti, canzoni ... libro primo* appeared, printed for him by Bernardo Vercelensis and containing two ricercares and intabulations of two motets and four chansons. Since no vocal models have been located, Cavazzoni may well have arranged his own vocal compositions for organ. The two ricercares, though modally connected, are thematically only loosely related to their ensuing motets. Both ricercares, the earliest known for keyboard, are astonishingly mature compared with the first lute ricercares that Petrucci printed 15 years earlier. Although the two ricercares still bear the stamp of written-down improvisations, they differ from the early lute pieces in their amount of thematic growth. The number of parallel 5ths and octaves and the grinding dissonances on strong beats testify to their independence from vocal music. A somewhat less elaborate ricercare by a 'Ma[r]ca[ntonio] in bologna' appears among the keyboard manuscripts at Castell'Arquato. Whether or not the motets are Cavazzoni's own or arrangements of now lost works, the prototype seems to be the Josquin-style motet of around 1500, with imitative duets, frequent use of sequence, and many parallel 6th chords alternating with freely imitative episodes. Lowinsky and Ward saw Cavazzoni's motet *Salve virgo* as the source for the beginning of the *Fancy* by Master Newman in the Mulliner Book. Cavazzoni's four chanson arrangements are obviously highly decorated versions of simpler melodic lines.

Formally they have a great deal in common with the polyphonic vocal chanson.

Jeppesen ascribed to Cavazzoni a mass in a Bolognese manuscript (*I-Bsp*, A.XXXVIII) copied by Spataro and entitled *Domini Marci Antonii*, on the strength of its cantus firmus, a *soggetto cavato* on the vowels of 'Domini Maria Antonii Cavazzoni'. Jeppesen dated it between 1520 and 1530. However, it appears with nine other masses, one of which, *La bataille* by Janequin, appears in the Bologna manuscript in a five-voice version (with the added fifth part by Verdelot) that was first published in 1545. Thus Spataro probably copied all ten masses after 1545. It seems more probable that the mass is not by Cavazzoni but was dedicated to him as a member of a noble family.

Caveau, Société (des dîners) du. *See* SOCIÉTÉ DU CAVEAU.

Cavedagna, Vincenzo (*b* Bologna, *c*1740; *d* Bologna, 1824). Italian cellist and composer. He was a cellist at S Petronio, Bologna, from about 1765. In 1773 he was admitted to the Accademia Filarmonica of Bologna. His works were frequently played at special Accademia concerts, and he served as *Principe* in 1778, 1782, 1794 and 1822. At the founding of the Liceo Filarmonico in 1804 he was appointed cello professor, a post he held until shortly before his death. 18 sacred works by Cavedagna for chorus, soloists and orchestra are in manuscript in the Bologna Conservatory.

HOWARD BROFSKY

Cavendish, Michael (*b* *c*1565; *d* London, ?5 July 1628). English composer. He was the youngest son of William Cavendish, a member of an important Suffolk family notable for its patronage of musicians; Sir Charles Cavendish, William's cousin, was the dedicatee of Wilbye's first madrigal volume (1598), and Sir Charles's brother-in-law, Sir Henry Pierrepont, was the dedicatee of Greaves's *Songes of Sundrie Kindes* (1604). Cavendish dedicated his single volume (1598) to his own second cousin, Lady Arabella Stuart (also the dedicatee of Wilbye's second set of 1609), and the preface implies that he was himself a man 'humbled with adversities'. Cavendish was later a 'servant in the bedchamber' to Prince Charles, son of James I. He made his will on 5 July 1628 in the parish of St Mary Aldermanbury, London; the will was proved on 11 July. He died unmarried.

Cavendish's volume resembles that of Greaves in that it contains both songs and madrigals. The last six of Cavendish's 19 lute-songs are given in alternative versions for four voices, while *Wandring in this place* and *Everie bush new springing* also occur in five-voice vocal versions among the eight madrigals which complete the volume. Cavendish's ayres show an admirable and often very attractive fund of melody. Some are strongly influenced by the older tradition of the viol-accompanied song, notably in their extended imitative introductions and their measured vocal style. As a madrigal composer Cavendish was less assured, possessing much of Morley's charm, but little of his distinction. His technique was not over-strong, and the expressive character of his musical paragraphs is sometimes weakened by the tentative treatment and frequent modifications of his imitative points. Cavendish frequently inserted triple-time passages into duple-time works, and he liked to gravitate heavily (and sometimes strikingly) to the flat side of his tonic. Two of his madrigals, *Zephirus brings the time* and *In flowre of Aprill springing*, borrow musically from Ferrabosco's settings of the same texts, first published in the second volume of Yonge's *Musica transalpina* (RISM 1597[24]), while *Come gentle swains* takes from Croce's *Hard by a crystal fountain* (also included in *Musica transalpina*) the refrain 'Then sang the shepherds and nymphs of Diana: Long live fair Oriana!', which was later to form the basis for the conclusion of every madrigal in *The Triumphes of Oriana* (1601[16]). Cavendish himself contributed to this collection, using again the lyric *Come gentle swains*, but drastically refashioning his earlier music.

WORKS

The exact title of Cavendish's volume of music is unknown, since the top of the title-page of the single surviving copy of this print is missing. The title given below is the subtitle.

14. Ayres, 2vv, lute, b viol, or 1v, lute, 6. More, 4vv, lute, and 8. Madrigalles, 5vv (London, 1598/*R*); the 20 ayres with lute, ed. in EL, 2nd ser., vii (1926); the madrigals, ed. in EM, xxxvi (1924, 2/1961)

1 psalm setting, 1592[7], 1 madrigal, 1601[16]; ed. in EM, xxxii (1923, 2/1962)

DAVID BROWN

Cavendish, William, Duke of Newcastle (bap. Handsworth, Yorks., 16 Dec 1593; *d* Welbeck Abbey, Notts., 25 Dec 1676). English poet, playwright and music patron. Christopher Simpson recognized his knowledge of and skill in the science of music and praised him for 'cherishing and maintaining such as are excellent in it' (*A Compendium of Practical Musick*, 1667). The duke's enthusiasm for playing divisions on the bass viol is reflected in his employment of Maurice Webster, from whom he acquired four books of divisions (now lost), and his close friendship with Simpson, who during the early years of the Civil War served under Newcastle's younger son. A 1636

inventory of the duke's music collection lists important manuscript sources, including the only surviving copy of John Dowland's funeral psalms for Henry Noel (*GB-NO*) and a set of 'Fantasies, Almaigns Corantoes, &c.' by Webster, Stephen Nau and John Adson (now lost), as well as madrigal prints by English and continental composers and Roman Catholic liturgical works by Infantas and Byrd. Newcastle came into close contact with many theatrical composers. Four songs from his comedy *The Varietie* (London, 1649), acted by the King's Men at the Blackfriars Theatre, 1639–42, were set to music by John Wilson. He also collaborated with Locke on the 1674 production of his comedy *The Triumphant Widow* (London, 1677); two autograph songs survive among the duke's papers (*NO*).

LYNN HULSE

Cavi, Filippo da (*b* Cavi, nr Rome; *fl* 1641–2). Italian composer and organist. An Augustinian monk, in 1642 he was organist and *maestro di cappella* of S Agostino, Rome. He is known by two sets of vesper psalms, opp.2–3 (1641–2), the first (which survives incomplete) for five voices and continuo, the second for four; each volume also includes a mass and litanies. A sacred piece by him also survives (in RISM 1643[1]).

□

Cavos, Catterino Al'bertovich (*b* Venice, 30 Oct 1775; *d* St Petersburg, 28 April/10 May 1840). Russian composer and conductor of Italian birth. He received his early musical education from Francesco Bianchi, and later worked in the Teatro La Fenice in Venice, where his father, Alberto Cavos (or Gavosi), was ballet-master. There his *Inno patriotico in onore della guardia civica* was given its first performance on 13 September 1797, and the following year he composed a cantata entitled *L'eroe*, in celebration of the Austrian imperial army's entry into Venice.

He travelled to Russia in 1799 and quickly became involved with the Italian opera troupe; in 1803 he was officially appointed its director, following the reorganization of the Imperial Theatres. He also began to teach at both the city's theatre school and the College of the Order of St Catherine. For the rest of his life Cavos remained closely involved in music education in the city, but he was most noted for his contribution to operatic life there. In 1806 he replaced Stepan Davïdov as conductor of the Russian Opera, a position he held until his death. According to the terms of his contract, he was obliged to write music for the French, Russian and Italian troupes, and also to compose ballets.

The success of Cavos's additional music to the adapted Russian version of Ferdinand Kauer's Singspiel *Das Donauweibchen* – renamed *Dneprovskaya rusalka* ('The Dnepr Water-Nymph') and first performed at the Bol'shoy Theatre, St Petersburg, on 5/17 May 1804 – marked the beginning of an outstanding career as a composer of Russian opera. In 1805 *Knyaz' nevidimka, ili Richard-volshebnik* ('The Invisible Prince, or Richard the Magician') received an extravagant première in St Petersburg and remained popular for many years, and in 1806 he completed *Lyubovnaya pochta* ('The Lovers' Post') to a libretto by Prince Aleksandr Shakhovskoy (1777–1846), Intendant of the St Petersburg Imperial Theatres from 1802. Shakhovskoy was Cavos's principal literary collaborator over the following 15 years, supplying him with a further five librettos. Of these, *Ivan Susanin* (1815) is probably Cavos's best-known work. It makes substantial use of folk melody and its plot is similar to Glinka's *A Life for the Tsar*, although Cavos and Shakhovskoy chose not to have the hero murdered by the Poles in the final act, but rather to have him saved by the timely arrival of the Russian army. In 1836 Cavos coached the singers and conducted the first performance of Glinka's opera in St Petersburg.

For many years Cavos was a close associate of Charles Didelot (1767–1837), the French choreographer who became director of the Russian Imperial Ballet. Together they produced *Zefir i Flora* (1808), *Amur i Psikheya* (1809), *Asis i Galateya* (1815), *Karlos i Rosalba* (1817), and *Raul de Kreki* (1819), based on Dalayrac's opera to Boutet de Monvel's text *Raoul, sire de Créqui* (1789). In 1821 Cavos composed music for the ballet *Roland i Morgana* (1821) and *Kavkazskiy plennik* ('The Prisoner in the Caucasus', 1823).

Cavos worked as a singing teacher in the Smolny Institute, 1811–29; in 1821 he was made inspector of the court orchestras and in 1832 was promoted to the directorship, with control of all the imperial orchestras. From 1828 until 1831 he was Kapellmeister of the Italian opera troupe, and from 1832 until his death he held a similar post with the Russian and German companies. He also wrote incidental music to plays by Shakhovskoy and contributed to several pasticcios, of which *Miroslava*, written in 1827 in collaboration with Antonolini, is his last known composition.

Cavos's wife, Camilla Baglioni, was a singer who appeared in seconda donna comic parts in Venice between 1791 and 1795, and his son Giovanni Cavos was a respected conductor at the Imperial Theatres in St Petersburg. Another son, Alberto Cavos (1801–63), became a prominent architect: he was responsible for reconstructing the Moscow Bol'shoy Theatre after it burnt down in 1853, and for rebuilding the Mariinskiy Theatre and the Mikhaylavskiy Theatre (now the Malïy) in St Petersburg; he also published a *Traîté de la construction des théâtres*.

WORKS

(*selective list*)

all first performed in St Petersburg

MSS mainly in RUS-SPtob

Dneprovskaya rusalka [The Dnepr Water-Nymph] (magical-comical op, 3, N. Kras'nopolsky), Bol'shoy, 5/17 May 1804; music by F. Kauer from *Das Donauweibchen*, with addl numbers by Cavos

Knyaz' nevidimka, ili Richard-volshebnik [The Invisible Prince, or Richard the Magician] (magical-comical op, 4, Ye. Lifanov, after the oc Le prince invisible, ou Arlequin Prothée by M. Hapdé), Bol'shoy, 5/17 May 1805

Lyubovnaya pochta [The Lovers' Post] (comic op, 1, A. Shakhovskoy), Bol'shoy, 21 Jan/3 Feb 1806

Beglets ot svoyey nevestï [He Deserted his Bride] (comic op, 1, Shakhovskoy), Bol'shoy, 18/30 April 1806

Il'ya bogatïr' [Ilya the Hero] (grand magical-comical op, 4, I. Krïlov), Bol'shoy, 31 Dec 1806/12 Jan 1807

Tri brata gorbunï [The Three Hunchbacked Brothers] (comic op, 1, A. Luknitsky, after Cavos: *Les trois bossus*), Bol'shoy, 15/27 April 1808

Kazak stikhotvorets [The Cossack Poet] (anecdotal opera-vaudeville, 1, Shakhovskoy), Winter Palace, 15/27 May 1812

Mnimïy nevidimka, ili Sumatokha v traktire [The Imaginary Invisible Man, or Commotion in a Tavern] (comic op, 1, A. Scheller, from the Ger.), German Theatre, 26 May/7 June 1813

Soliman vtoroy, ili Tri sultanshï [Suleiman II, or The Three Sultanesses] (comic op, 1, Scheller, from the Fr.), German Theatre, 26 May/7 June 1813

Otkupshchik Brazhkin, ili Prodazha sela [Brazhkin the Tax-Farmer, or The Village is Sold] (comic op, 1, Shakhovskoy), Malïy, 17 Feb/1 March 1815

Ivan Susanin (op, 2, Shakovskoy), Malïy, 19/31 Oct 1815

Vavilonskiye razvalinï, ili Torzhestvo i padeniye Giafara Barmesida [Babylonian Ruins, or The Triumph and Fall of Giafar Barmecides] (historical op, 3, from the Fr.), Bol'shoy, 6/18 Nov 1818

Dobrïnya Nikitich, ili Strashnïy zamok [Dobrïnya Nikitich, or The Haunted Castle] (magic op, 3), Bol'shoy, 25 Nov/7 Dec 1818, with F. Antonolini

Volshebnïy baraban, ili Blagodetel'nïy dervish [The Magic Drum, or The Beneficent Dervish] (magical-comical op, 3, E. Schikaneder, trans. Kunyayev), Pashkov's Theatre, 31 Oct/12 Nov 1819, with Antonolini and Schneider

Novaya sumatokha, ili Zhenikhi chuzhikh nevest [A New Commotion, or The Grooms Take the Wrong Brides] (comic op, 1, Shakhovskoy), Bol'shoy, 22 Sept/4 Oct 1820, partly after Rossini

Zhar'-ptitsa, ili Priklyucheniya Lesvila-Tsarevicha [The Firebird, or The Adventures of Tsarevich Lesvil] (magic op, 3, M. Lebedev, after S. Andreyev), Bol'shoy, 6/18 Nov 1822, with Antonolini

Svetlana, ili Sto let v odin den' [Svetlana, or A Hundred Years in One Day] (op, 2, A. Veshnyakov, after V.A. Zhukovsky), Bol'shoy, 29 Dec 1822/10 Jan 1823, music adapted from C.S. Catel with addl numbers by Cavos

Geniy Itrubiyel', ili Tisyacha let v dvukh dnyakh Vizirya Garuna [The Genie Itrubiel, or The Vizier Harun's Thousand Years in Two Days] (op, 3, R. Zotov), 5/17 Nov 1923, with Antonolini; incl. music by Méhul and Isouard

P'yemontskiye gorï, ili Vzorvaniye chortoga mosta [The Mountains of Piedmont, or The Devil's Bridge is Blown up] (op, 3, Scheller, from the Fr.), Bol'shoy, 16/28 Oct 1825, with I. Lengard

1-act comic ops, in Fr.: L'alchimiste; Le mariage d'Aubigny; Les trois bossus; L'intrigue dans les ruines

GEOFFREY NORRIS/NIGEL YANDELL

Cawston, Thomas. *See* CAUSTUN, THOMAS.

Caylus, Anne Claude Philippe de Pestels de Lévis de Tubières-Grimoard, Comte de (*b* Paris, 1692; *d* Paris, 1765). French patron and writer. He came from an old and illustrious family and pursued a military career before turning to the arts and letters and taking up archaeological research and the life of high society. His mother, a niece of Mme de Maintenon, was an excellent singer and harpsichordist who corresponded with the abbé Antonio Conti. Caylus travelled in Italy in 1714–15 and became a devotee of the opera of Venice, Bologna and Milan; on returning to Paris he provided the Crozat concerts with new Italian works. When his mother died in 1729 he immersed himself in his studies of archaeology and history. He rediscovered Guillaume de Machaut and also the musical past of France, particularly its folklore and chansons, thus inaugurating a movement continued by Jean Monnet and Charles de Lusse. His work on the instruments of antiquity sparked off François Arnaud's *Lettre sur la musique* (1754), and he may have inspired also Rémont de Saint Mard's *Réflexions sur l'opéra* (1747). Caylus was the author of a *Lettre sur l'origine de la musique* in which he set Psyche and Venus against each other and defended the ideal of a melodious, simple style, speaking straight to the heart (i.e. French music). Once a devotee of the Italian style, Caylus became a supporter of the music of his own country when, in later life, his interest was caught by history (see M. Barthélémy: 'Le comte de Caylus et la musique', *RBM*, xliv (1990), 5–12).

MAURICE BARTHÉLÉMY

Caza, Francesco (*fl* 1492). Italian theorist. A pupil of Franchinus Gaffurius, he is the nominal author of *Tractato vulgare de canto figurato* (Milan, 1492; facs., with Ger. trans. by J. Wolf, Veröffentlichungen der Musik-Bibliothek Paul Hirsch, ser.1, i, Berlin 1922). This treatise, dedicated by Gaffurius to Filippino Fiesco, is a greatly abbreviated translation of Gaffurius's *Musices practicabilis libellus*, written in about 1480, which later became book 2 of the *Practica musicae* (1496; see *SpataroC*, 166–72). It discusses, in Italian, the rudiments of mensural notation: note values, ligatures, rests, modus, tempus and prolation, imperfection, dots, alteration, diminution and syncopation, describing these as 'material very useful and necessary for those who wish to know how to sing'. The examples are added by hand in the only surviving copy (*GB-Lbl* Hirsch I.110).

BONNIE J. BLACKBURN

Cazaban, Costin (*b* Bucharest, 9 Sept 1946). Romanian composer. After studying composition with Olah, orchestration with Stroe and counterpoint with Marbe at the Bucharest Academy (1964–71), he gained a teaching post at the George Enescu Lyceum (1971–8) and worked as an editor for the journal *Muzica* (1971–83). Settling in Paris in 1983, Cazaban studied composition at the Sorbonne with Xenakis (1983–4) and aesthetics with Costin Miereanu (1984–93; PhD 1993). At Darmstadt he attended classes in 1982 and 1984 and taught in 1986. He became a journalist for *Le monde de la musique* in 1985 and *Le monde* in 1987 and a music critic for Radio France Internationale in 1989; he also teaches musical aesthetics at the Sorbonne. A rigorous composer, Cazaban has developed a system of composition and analysis derived from the logic of Stéphane Lopasco, involving such dualities as real/unreal and composed/uncomposed. The resulting aesthetic and semiotic principles have influenced his stylistic development. Devoted particularly to chamber music, he combines postmodernism with elements of fantasy in his works.

OCTAVIAN COSMA

Cazden, Norman (*b* New York, 23 Sept 1914; *d* Bangor, ME, 18 Aug 1980). American composer, musicologist and pianist. He received a teacher's diploma from the Juilliard Graduate School (1932) and a BS in social science at the City College, New York (1943); he studied musicology at Harvard University (PhD 1948), where he also took composition lessons with Piston and Copland. As a pianist he made his début in 1926 and until 1943 worked as composer-pianist for several modern dance groups. Throughout his career he appeared as a soloist and accompanist and taught theory and piano privately; for a year he was music director of the New York radio station WLIB. He held appointments at Vassar College (1947), the Peabody Conservatory (1948) and the universities of Michigan (1949) and Illinois (1950–53). His career was then interrupted by his refusal to answer questions from the US House Un-American Activities Committee until in 1969 he secured an appointment at the University of Maine, Orono, where he remained until his death. A versatile composer, he wrote music broad in expressive range, with marked rhythmic impulse, frequent use of polyphony and widely expanded tonality. His melodies sometimes reflect his deep interest in folk music, the lifelong study of which led to collaborations on a number of published collections, and to a suggested alternative to modal terminology and traditional analytical methods (Cazden, 1971). Cazden also published a number of articles on the nature and perception of consonance and dissonance, challenging earlier theories and concluding that societal cultures and musical context, not acoustical laws, determine musical response.

WORKS

Stage: The Lonely Ones (ballet, W. Steig), op.44, pf/orch, 1944; Dingle Hill (dramatic cant., Cazden), op.70, 1958; The Merry Wives of Windsor (incid music, W. Shakespeare), op.78, 1962; The Tempest (incid music, Shakespeare), op.83, 1963

Orch: Preamble, op.18, 1938; 6 Definitions, op.25, 1930–39; 3 Dances, op.28, 1940; Stony Hollow, op.47, 1944; Sym., op.49, 1948; 3 Ballads, op.52, 1949; Songs from the Catskills, op.54, band, 1950; Woodland Valley Sketches, op.73, 1960; Adventure, op.85, 1963; Chbr Conc., op.94, cl, str, 1965; Va Conc., op.103, 1972

RUTH B. HILTON/MICHAEL MECKNA

Cazeaux, Isabelle (Anne-Marie) (*b* New York, 24 Feb 1926). French-American musicologist. She took the BA at Hunter College in 1945, then did graduate work under Alfred Einstein at Smith College (MA 1946). In Paris she studied the violin at the Ecole Normale de Musique and worked with Norbert Dufourcq at the Conservatoire. Returning to America, she undertook further graduate studies at Columbia University, taking the MS in library science (1959) and the PhD in musicology (1961). She also studied at the Sorbonne with Paul-Marie Masson and at the Ecole Pratique des Hautes Etudes with Solange Corbin.

Isabelle Cazeaux worked at the New York Public Library as a music cataloguer from 1957 to 1963. From 1963 until her retirement in 1992 she was a member of the music faculty of Bryn Mawr College, holding the chair there from 1978; she also taught at the Manhattan School of Music from 1969 to 1982. She has specialized in French music and literature of the Renaissance and the *belle époque*, particularly opera, and the chansons of Claudin de Sermisy. She has also translated French literary documents and memoirs of the 15th and 18th centuries.

PAULA MORGAN

Cazotte, Jacques (*b* Dijon, 7 Oct 1719; *d* Paris, 25 Sept 1792). French writer. Educated at the Jesuit college of Dijon, he entered the marine ministry, serving as *contrôleur* to the West Indies from 1747 to 1759. He retired at an early age, due to ill health and on his return to France he adopted literature as his profession. The themes of his fashionable fairy stories, *contes* and *romances* inspired contemporary opera: Dalayrac's *Agnès et Olivier* (1791) was based on the *romance Olivier*, which had secured Cazotte's literary reputation, and his masterpiece, the *conte Le diable amoureux*, served as the model for Paisiello's *L'infante de Zamore* (1781). His one libretto, to Duni's *opéra comique Les sabots* (1768), was unsuccessful: Duni sought the assistance of Sedaine, who refashioned the text substantially but retained Cazotte's name on the title-page.

Cazotte also contributed two pamphlets to the Querelle des Bouffons while on leave in Paris in 1753. *La guerre de l'opéra*, a dispassionate account of the controversy, using humorous warfare imagery, was written in response to Grimm's *Le petit prophète* and showed firm (though not uncritical) support for French opera. The *Observations sur la lettre de J.J. Rousseau*, the first reply to Rousseau's infamous epistle, was considerably more anti-*philosophe* in tone and maintained that French composers could set French texts successfully to music. Cazotte supported not only his country's opera but also its monarchy: he was guillotined in 1792.

ELISABETH COOK

Cazzati, Maurizio (*b* Luzzara (now Lucera), duchy of Guastalla, nr Reggio nell'Emilia, 1616; *d* Mantua, 1678). Italian composer and organist. During his term as *maestro di cappella* of S Petronio, Bologna (1657–71), he made significant contributions to the development of instrumental music, especially in the unique repertory of music for trumpet and strings.

1. Life. Cazzati may have been appointed to his first musical position at the age of 17, at S Pietro, Guastalla, serving Ferrante III, Duke of Guastalla. After his ordination to the priesthood Cazzati became *maestro di cappella* and organist of S Andrea, Mantua, in 1641. He was in charge of music at the court of Scipione Gonzaga, Prince of Bozzolo in 1647 and 1648, when he was elected *maestro di cappella* of the Accademia della Morte at Ferrara. He served there from 3 June 1648 to 15 September 1652. On 17 April 1653 he was elected *maestro di cappella* of S Maria Maggiore, Bergamo. He acquired works for the chapel by important contemporary composers, significantly enlarging its repertory. While in Bergamo he was a member of the Accademia degli Eccitati. In April 1657 he returned to Ferrara, serving again as *maestro di cappella* of the Accademia della Morte until late August, when he applied for a similar post at S Petronio, Bologna. His election came as the result of an impressive performance of one of his masses at the nearby church of S Salvatore. In spite of a promising start his career at S Petronio was marked by continued personal and professional difficulties, bitter polemics and evident dissatisfaction on the part of the Bolognese musical community.

On taking up his duties at S Petronio he instituted a reform of the *cappella musicale*, establishing a fixed number of 35 singers and instrumentalists, who performed for prescribed ecclesiastical functions of the church year. This group was traditionally augmented for the patronal feast on 4 October to add to its splendour. Cazzati provided a climate favourable to the development of instrumental music within the liturgy by hiring, in addition to highly-paid solo singers, instrumentalists who were also paid relatively high wages. Among the musicians he thus attracted to the *cappella musicale* were G.B. Vitali and Pietro degli Antonii.

Perhaps because of certain reforms initiated by Cazzati, a bitter polemic began in 1659 from the pen of Lorenzo Perti, a beneficed priest at S Petronio, later *maestro di cappella* of Bologna Cathedral. He was soon joined by G.C. Arresti, organist of S Petronio. The controversy centred round some musical errors in the Kyrie of Cazzati's *Missa primi toni* published in the five-part *Messa e salmi* op.17 (1655). An anonymous author wrote the initial document, *Dialogo fatto tra un maestro et un discepolo desideroso d'approffitarsi nel contrapunto*, in 1658, attacking Cazzati's Kyrie in deprecatory, verbose style (the document was once considered to be by Arresti but Brett presents convincing evidence that it was by another, unknown, author). In 1659 Perti wrote his *Viglietto* (perhaps for an academic discussion), a much more concise, reasoned criticism of the same work, following it in September of that year with a similar letter to the chapter of S Petronio. Arresti, newly appointed as organist, offered to defend Cazzati but was rebuffed on the grounds that he had published nothing and was therefore not qualified. Dismissed in 1661 as organist, Arresti entered the polemic against Cazzati, taking up the points raised in Perti's *Viglietto* in his newly published *Messa e Vespro* op.1 (1663), in which he included an anonymous copy of Cazzati's Kyrie. By annotating the work in rather brutal terms, he criticized Cazzati's use of mode, providing correct usages in his own work based on themes from Cazzati's mass.

In his response, the *Risposta*, Cazzati based his arguments, point by point, on the *Viglietto* used by Arresti, citing similar passages in the music of his contemporaries, including Arresti. Meanwhile, Arresti continued his criticism in the letter to the reader of his op.2, where he dismissed some points raised in the

Viglietto but raised new ones. Cazzati answered with his *Poscritto* (published along with the *Risposta*) in which he soundly criticized Arresti's op.1 precisely on the grounds raised in Perti's *Viglietto*. In 1664 Arresti published his collection of five psalms, *Gare musicali*, once again including a work by Cazzati from his op.33, its errors indicated by annotations as before, but without verbal comment. Instead, he invites comparison with his own psalms. The written polemic seems to have ended here, except that Cazzati reprinted the offending op.17 in 1667 with some errors corrected, but not those which concerned his alleged mistakes in using the first mode.

Cazzati's conspicuous absence from the Accademia Filarmonica, founded in 1666 (Arresti was one of the founder-members), suggests that the quarrel affected the entire Bolognese musical community. However, the vestry board of S Petronio had shown its support of Cazzati from the beginning and continued to do so, even authorizing payments for the expenses of private *accademie* held by Cazzati at S Petronio, perhaps in defiance of the Accademia Filarmonica. Cazzati also established his own printing press, probably in the house attached to S Petronio intended for the use of the *maestro di cappella*. From this press evidently issued his opp.41–7, 49–53 and 55–8, none of which bears a publisher's name. Their publication by Cazzati himself may very well indicate that his relations with Bolognese music publishers were also strained.

Perhaps because of the pressure of constant controversy the vestry board dismissed Cazzati from S Petronio on 27 June 1671. He returned to Mantua, where he continued his publishing activities and served Duchess Anna Isabella Gonzaga as *maestro di cappella di camera*. During this time six of his oratorios were performed at court. He also served as *maestro di cappella* of Mantua Cathedral from 29 September 1672, and composed music for the feasts of S Tommaso and S Antonio beginning in 1671 at the Cappella S Barbara until his death on 18 September 1678. A letter from the executor of his will indicated his intention to donate 12 large books of polyphonic music to the church of S Petronio, evidence of his esteem for the vestry board that employed him. Among his effects were about 130 paintings, three musical instruments, the printing press and type with which he printed his own music, and a list of his works, four of which have not survived (opp.60–62 and 64).

2. Works. Although instrumental music forms only a relatively small part of Cazzati's output of 66 published volumes, it is in this genre that he made his most influential contribution. His early ensemble sonatas and canzonas are in the Venetian canzona tradition: they are in imitative style and consist of short contrasting sections with stereotyped cadential formulae. His op.18 sonatas of 1656 codify many characteristics of the mature Baroque sonata, hinted at in earlier collections: clear formal design in separated movements, thematic expansion, incorporation of dance rhythms and greater use of homophony. His sonatas progressed from modal ambiguity to tonal clarity and functional harmony, often through the use of bass patterns, but his choice of tonal centres and harmonic palette remained conservative. His string writing became increasingly idiomatic, and his interest lay in establishing formal concepts, often with interesting musical ideas and treatments of themes and motives. His five publications of dance movements contain typical mid-17th-century dances as well as some ostinato compositions and a complete programme for a masked ball (op.22). Such collections were among the important predecessors to Corelli's publications of *Sonate da camera* at the end of the century.

In his three sonatas which include the trumpet (in op.35) he opened the way for the unique repertory of music for trumpet and strings peculiar to the S Petronio *cappella musicale*. Although he indicated that in the absence of a trumpet its part may be played on a violin (perhaps as a concession to the novelty of the combination), the style of these sonatas is clearly distinct from that of the works without trumpet. He used a limited clarino range for the trumpet, from *a′* to *a″* (Cazzati's trumpet works call for trumpet in C, but later pieces in the S Petronio repertory are written for trumpet in D). The massive string style evidently required by the acoustics at S Petronio is here set in relief by the trumpet, which moves slowly in motifs of minims and crotchets. Because of the trumpet's limited ability to participate in the normal fugal writing for strings, its inclusion invited a concerto-like opposition of the two styles, which was used to a greater extent by later S Petronio composers such as G.A. Perti and Torelli. In clear contrast to his music for strings alone, Cazzati wrote these sonatas in a homophonic style, sometimes incorporating an opening idiomatic fanfare. Occasionally he differentiated the trumpet motifs from those of the strings, but more often the strings respond with motivic material that has already been stated by the trumpet.

Cazzati was the first Bolognese composer to publish solo violin sonatas (op.55). They are written in an economical, concise string style and are somewhat severe and restrained works: Cazzati left to later composers the exuberance and lyricism that inform the style of Bolognese violin music and avoided colourful virtuoso writing.

Most of Cazzati's sacred music, the genre that forms the majority of his published works, is service music written as part of his duty as *maestro di cappella* – settings of psalms, responses, antiphons, hymns and the *Magnificat*, characterized by varied melodies, rhythms and contrasting sections of metre and style. The psalms and *Magnificat* settings are stylistically varied: some are choral or solo concertato works with instruments, some are for one or more choirs (some in *prima pratica* style), and others adopt a *spezzato* style in which verses alternate *prima* and *seconda pratica* characteristics. In longer works such as the concerted masses he frequently used the instrumental ritornello as a structural element, perhaps to compensate for his inability to sustain long contrapuntal sections for voices. Here and in other places he showed his chief weakness in contrapuntal writing and the one for which his contemporaries justly criticized him: an insensitivity to successions of perfect intervals. Perhaps his most successful vocal works are the motets for solo voice and continuo written in the full bloom of the bel canto style with an abundance of ternary rhythms, hemiola cadences and a certain degree of harmonic invention. His sacred music also includes monodic lamentations and Latin dialogues. In similar style are the solo and duet cantatas for voice and continuo (some with two violins), characterized by charming simplicity, conservative harmonies and supple melodies with occasional virtuoso passages.

The judgment of early historians (e.g. Fétis and Torchi) has been hard on Cazzati as a composer, and indeed at best he can only be considered a composer of ordinary inspiration. However, recent scholars have recognized his significant contribution to instrumental ensemble music, his melodic gift in solo vocal music, and his capacity to organize and develop *cappelle musicali*. His great contribution to the development of music in Bologna lay in his initiative in attracting fine instrumentalists to S Petronio, in inventing and encouraging the composition of a new genre of instrumental music and providing a place for it in the liturgy.

WORKS

INSTRUMENTAL

op.
2 Canzoni, 2 vn, vle, bc, e nel fine un Confitebor ed un Laetatus, 5vv (Venice, 1642)
4 Corenti e balletti, a 3–4 (Antwerp, 1651)
8 Il secondo libro delle sonate, a 1–4 (Venice, 1648); no.1, 'La Vertua', ed. in Klenz, 261; ed. R. Armstrong (thesis, California State U., Long Beach, 1984)
15 Correnti e balletti alla francese e all'itagliana a 5 con alcune sonate, a 5–8 (Venice, 1654)
18 Suonate, 2 vn, bc, org (Bologna, 1656); excerpt no.12, 'La Strozzi', ed. A. Heuss, *SIMG*, iv (1902–3), 476; no.9, 'La Martinenga', ed. in HM, xxxiv (1949); no.7, 'La Rosella', ed. in Klenz, 268
22 Trattenimento per camera d'arie, correnti, e balletti, 2 vn, vle (Bologna, 1660)
30 Correnti, e balletti per sonare, spinet/lute/theorbo (Bologna, 1662)
35 Sonate, a 2–5, some with tpt (Bologna, 1665); nos.1 and 7 ed. in Klenz, 276, 285; nos.10–12 ed. E. Tarr, *Musica rara italiana* (London, 1961), nos.1507–9
50 Varii, e diversi capricci per camera e per chiesa, 1–3 insts (Bologna, 1669)
55 Sonate a 2 istromenti, vn, vle (Bologna, 1670); no.1, 'La Pellicana', ed. in HAM (1966), ii, no.219
18 works in *F-Pn* MS Rés. Vm7 673 (Rost Codex)

SACRED VOCAL

1 Salmi e messa, 5vv, 2 vn (Venice, 1641)
3 Le concertate lodi della chiesa militante, 2–4vv, bc (Milan, 1647)
5 Il primo libro de motetti, 1v (Venice, 1647)
6 Il secondo libro de motetti, 1v (Venice, 1648/*R*1988 in SMSC, vi)
7 Compieta e letanie, 4vv (Venice, 1647)
9 Messa e salmi e letanie, 3vv, bc (Venice, 1648)
10 Motetti, 2vv (Venice, 1648)
12 Motetti, 2–4vv (Venice, 1650)
13 Il terzo libro de motetti, 1v (Venice, 1651/*R*1988 in SMSC, vi)
14 Messa e salmi, 3–4vv, insts (Venice, 1653); mass ed. in SCISM, vi (1996)
16 Motetti e hymni, 1v (Venice, 1655; 2/1658 with 2 vn, bn ad lib)
17 Messa e salmi, 5vv (Venice, 1655)
19 Antifone, letanie, e Te Deum, 8vv (Venice, 1658)
21 Salmi per tutto l'anno, 8vv (Bologna, 1660)
23 Tributo di sagri concerti, a 2–4 (Bologna, 1660)
24 Messa, e salmi, A, T, B, vns, ripieno (Bologna, 1660); mass excerpts ed. in Klenz, 272
25 Il quarto libro de motetti, 1v (Bologna, 1661/*R*1988 in SMSC, vi)
28 Messe brevi, 8vv, con una concertata a 4 (Bologna, 1662); 1 missa brevis ed. in SCISM, vii (1996)
29 Hinni per tutto l'anno, 1v, vns ad lib (Bologna, 1662)
31 Messe e salmi per li defonti, 5vv (Bologna, 1663)
32 Antifone, e letanie concertate a 2–5 (Bologna, 1663)
33 Salmi da capella per tutto l'anno, 4vv, some with vn (Bologna, 1663)
34 Sacri concerti di motetti, 2vv (Bologna, 1664)
36 Messa e salmi, 5vv, 4 insts (Bologna, 1665)
37 Messa, e salmi, 4vv, 2 vn (Bologna, 1666)
38 Salmi per le domeniche, 8vv (Bologna, 1666)
39 Il quinto libro de motetti, 1v (Bologna, 1666/*R*1988 in SMSC, viii)
40 Compieta concertata, 2–4vv, vns (Bologna, 1666)
42 Le 4 antifone annuali della BVM poste in musica (Bologna, 1667)
44 Sacre Lamentationi della Settimana Santa (Bologna, 1668)
45 Benedictus, Miserere e Tantum ergo, 4vv, 2 vn (Bologna, 1668)
47 Sacri concerti, a 2–5, some with vns (Bologna, 1668)
48 Messa, salmi, e litanie, 3vv (Bologna, 1668)
51 Motetti, 1v, 2 vn (Antwerp, 1676)
52 Motetti, 8vv, bc (Bologna, 1669)
53 Salmi di terza con le 3 sequenze correnti dell'anno (Bologna, 1669)
54 Salmi brevi da capella, 8vv, bc, vle/theorbo (Bologna, 1669)
56 Messa a capella, Magnificat, 4vv (Bologna, 1670)
57 Hinni sacri per tutto l'anno, 4vv, bc (Bologna, 1670)
58 Salmi brevi, 4vv, 2 vn (Bologna, 1671)
59 L'armonia sacra dell'antifone, 1v, libro primo (Mantua, 1672)
60 Antifone a voce sola, lost
62 Introduzioni diverse a voce sola per Messe e Salmi, lost
63 Il sesto libro delli motetti, 1v (Mantua, 1676/*R*1988 in SMSC, vii)
64 Il settimo libro dei motetti a voce sola in contralto, lost
65 Motetti, 1v, libro ottavo (Bologna, 1678); 3 ed. in Cantio sacra, xix, 1v, 1x (Cologne, 1964–71/*R*1988 in SMSC, vii)

SECULAR VOCAL

11 Arie, Cantate, 1v, libro primo (Venice, 1649)
20 Cantate morali, e spirituali, 1v (Bologna, 1659/*R*)
26 Madrigali, e canzonette per camera, 2–3vv, some with vn (Bologna, 1661)
27 Canzonette per camera, 1v (Bologna, 1661; 7 *R*1985 in ICSC, viii)
41 Arie e cantate, 1v (Bologna, 1666; 8 *R*1985 in ICSC, viii)
43 Il quarto libro delle canzonette, 1v (Bologna, 1667; 7 *R*1985 in ICSC, viii)
46 Il quinto libro delle canzonette, 1v, vn (Bologna, 1668; 8 *R*1985 in ICSC, viii)
49 Diporti spirituali per camera e per oratorii, 1–4vv (Bologna, 1668)
61 Dialoghi amorosi da camera, 2–3vv, lost
66 Duetti per camera (Bologna, 1677; 3 *R*1985 in ICSC, viii)

ANNE SCHNOEBELEN

CBS [Columbia Broadcasting System]. For the recording activities of this company in the USA, *see* COLUMBIA; for its recording activities in Great Britain, *see* EMI.

CD [compact disc]. A small, rainbow-reflective, digital audio disc, now standardized at 4½ inches, on to which sound is recorded as a series of metallic pits enclosed in PVC and read by an optical laser. A related format is the compact videodisc, which has the facility to play both pictures and sound. Phillips began work on the compact disc in 1969, but it was only in the mid-1980s that CD began to usurp vinyl as the preferred format for recorded sound. The first million-selling CD came in 1986 with Dire Straits's *Brothers In Arms*. By 1992 CD sales stood at 1.115 billion, with sales of pre-recorded cassettes at 1.55 billion, vinyl albums at 130 million and singles at 330 million. By the mid-1990s the CD single had also largely replaced the old vinyl 45 r.p.m. single as the preferred form for single releases and had helped revitalize the format; thus, in 1997, UK single sales were the highest since 1983. CD allows for a longer listening time than vinyl and arguably possesses a clearer, cleaner and superior sound. However, its size means that it struggles to compete with vinyl in terms of packaging or sleeve design, and detractors claim that this makes the format inferior. Critics have also claimed that CDs have traditionally been overpriced, despite their longer playing times.

The rise of CD technology has had two important effects on audiences for popular music. First, it has created an older market for pop and indeed has attracted disaffected music lovers back as consumers as audiences replace their old vinyl records with CD reissues, and many established pop stars from the 1960s have consequently had their careers prolonged. Second, the CD's success has paradoxically created a cult among admirers of the vinyl disc, and vinyl sales are a small, but not insignificant part of the market for popular music. By the late 1990s, however, there was considerable debate around the CD's future as a format. Developments such as that of affordable recordable CDs for home consumption and of near CD-quality music that could be downloaded from the Internet (the idea of 'audio on demand' exclusively through the Internet, thus bypassing CD) began to cast a certain doubt over recorded CDs' hegemonic position.

DAVID BUCKLEY

Ceballos [Cevallos, Zaballos, Zavallos], **Francisco de** (*b* Burgos, 1571). Spanish choirmaster. He was *maestro de capilla* at Burgos Cathedral from 1535 until his death. Hilarión Eslava (*Breve memoria histórica de la música religiosa en España*, Madrid, 1860; *Lira sacro-hispana*, Madrid, 1869) mistakenly suggested that he and RODRIGO DE CEBALLOS were brothers and attributed to him several motets now known to be Rodrigo's. No music by him survives.

□

Ceballos [Çavallos, Cevallos, Zaballos, etc.], **Rodrigo de** (*b* ?Aracena, province of Huelva, *c*1525–30; *d* Granada, 1581). Spanish composer. He may have received his early training in Burgos, where his father Juan was a singer at the cathedral in 1532–3. He is first recorded in Seville on 7 October 1553 as 'an unemployed musician living in the city'; the canons of the cathedral commissioned him to copy two or three new books of music to contain the best available masses in order to improve the quality of the music being sung at the cathedral. A surviving volume of motets (*E-S* 1) may be part of this commission. In June 1554 Ceballos was the second choice of the chapter of Málaga Cathedral for the post of choirmaster, which had become vacant on the death of Morales the preceding autumn. He returned to Seville, where he sang at some church other than the cathedral, perhaps S Salvador. In January 1556 the treasurer of Córdoba Cathedral recommended him as a possible successor to the elderly *maestro de capilla* Alonso de Vieras; Ceballos was hired on 1 June as a *tiple* singer and to assist Vieras and took up his duties on 10 June. Towards the end of 1556 he visited Seville to be ordained priest, and after his return to Córdoba he shared the title of *maestro de capilla* with Vieras until the latter's retirement in May 1557.

Ceballos sent a choirbook containing works of his in 1560 to Málaga Cathedral, whose chapter wrote on 12 June to thank him and to present him with six ducats. On 1 October 1561 he resigned his post at Córdoba to become choirmaster of the Capilla Real in Granada (not the Spanish royal chapel but the tomb of Ferdinand and Isabella, their daughter Juana and her husband Philip I), a position to which he had been appointed by royal decree on 28 June. Further royal decrees of 30 November 1561 and 29 January 1572 confirmed his rights as *maestro de capilla* and guaranteed him a vote in the cathedral chapter. He maintained cordial relations with Córdoba, returning in 1563 and 1567 to help judge candidates for the

choirmaster's post there. Unfortunately the Granada chapter acts of this period are lost, so the only other fact that is known about his time there is the year of his death.

Ceballos's music resembles that of Guerrero in its fluency and expressiveness; on the whole his works are distinguished by their concision. All three of his masses expand to five voices in the final Agnus Dei by means of a two-voice canon. His motets are nearly all musically free; those that are based on the plainchant melodies belonging to their words (*Gaude Dei genitrix*, *Haec dies*, *Regina caeli* and *Salve regina*) seem to have been intended primarily for performance at the independent Salve service, as does the five-voice setting of the troped response to 'Benedicamus Domino', *Deo dicamus gratias*.

ROBERT J. SNOW/R

CeBeDeM. Founded in 1951, the Centre Belge de Documentation Musicale is a non-profit-making society dependent on the Belgian federal government. It is affiliated to the International Association of Music Libraries and is a member of the International Association of Music Information Centres. The aim of CeBeDeM is the propagation of contemporary Belgian music. Composers lodge a copy of each of their works in the centre's library, which also publishes certain new compositions or assumes responsibility for preparing the orchestral parts. In 1998 the library contained some 26,000 works. CeBeDeM has published over 2000 compositions and each year adds about 200 works to its tally of publications. A detailed catalogue (Brussels, 1996, 3 vols.) gives a complete list of all the centre's publications. CeBeDeM also keeps a library of recordings of works by its members and is a centre of documentation on musical life in Belgium. The society takes part in international contemporary music festivals and has published *CeBeDeM and its Affiliated Composers* (Brussels, 1977–80, 2 vols.), which gives for each of its members a brief biography, a catalogue of works and a discography.

HENRI VANHULST

Cebell. *See* CIBELL.

Cebotari, Maria (*b* Kishineu, 10/23 Feb 1910; *d* Vienna, 9 June 1949). Austrian soprano of Russian birth. She studied with Oskar Daniel in Berlin and made her début at the Dresden Staatsoper in 1931 as Mimì, remaining there until 1936; in 1935 she created Aminta in *Die schweigsame Frau*. She sang at the Berlin Staatsoper (1936–44) and at the Vienna Staatsoper (1946–9). She first appeared at Covent Garden with the Dresden company in 1936 as Susanna, Zerlina and Sophie, soubrette roles in which she was then irresistible; she returned there in 1947 with the Vienna Staatsoper as Countess Almaviva, Donna Anna and Salome, the role that proved the apex of her career. She appeared regularly in Salzburg in Mozart roles, and there created Lucile in *Dantons Tod* (1947). Her repertory also included Butterfly and Violetta, both memorably moving, Tatyana, Arabella and Turandot. Cebotari was a sensitive artist and a fine actress, with a clear, beautiful voice and a charming stage presence. Her ecstatic account of Salome's final scene on disc explains why Strauss inordinately admired her in that role.

HAROLD ROSENTHAL/ALAN BLYTH

Ceccarelli, Francesco (*b* Foligno, 1752; *d* Dresden, 21 Sept 1814). Italian soprano castrato. After early opera appearances in his native Umbria, he sang mainly in the German-speaking countries and was thought better suited to church and concert music. His most notable engagement was as court singer at Salzburg (1777–88), where he became a friend of the Mozart family; Mozart wrote a mass, K275/272*b*, and a rondò, K374, for him. Later he held posts at Mainz (1788–92) and sang in opera in Italy. In decline he served the Elector of Saxony in Dresden from 1800. He was said in 1790 to have 'grace and a perfect method'.

JOHN ROSSELLI

Ceccarelli, Odoardo (*b* Bevagna, nr Foligno; *d* Rome, 7–9 March 1668). Italian singer and composer. He is described as both tenor and bass from the beginning of his career in Rome (at Santo Spirito in Sassia in 1620 and at the Collegio Germanico, 1622–3). He continued his musical association with the college chapel, S Apollinare, until July 1645, even after he became a member of the Cappella Sistina. He entered the Cappella as a supernumerary in 1628 under the sponsorship of Cardinal Girolamo Colonna, became a full member in 1633 and a priest by 1641. He took a turn in its rotating positions of *puntatore* in 1647 and of *maestro di cappella* in 1652, taking the obligatory retirement after 25 years in 1658. Like other musicians of his calibre he worked at numerous other sacred and secular venues, for example at the oratories of S Girolamo della Carità and SS Crocifisso at S Marcello, where he served as a musical adviser from 1658 to 1667 and to which archconfraternity he left most of his possessions in his will.

Ceccarelli was among the Roman singers called for the Farnese–Medici wedding spectacles held in Parma in 1628 (presumably to appear in Marco da Gagliano's *La Flora* and Monteverdi's *intermedi* and *torneo*). He performed in five operas in Rome between 1633 and 1645: *I santi Didimo e Teodora* and *Il ratto di Proserpina*, both by unknown composers, Michelangelo Rossi's *Erminia sul Giordano*, Angelo Cecchini's *La Sincerità trionfante* and Luigi Rossi's *Il palazzo incantato*. His own creative work centres on the religious. From 1634 he collaborated in the revision of the hymns of the breviary and their associated musical settings by Palestrina, a task made necessary by the general reform of the breviary promulgated in 1631 under Pope Urban VIII. The new *Hymni sacri in Breviario romano* (Antwerp and Rome, 1644), which included metric versions from the pope's own hand, were made obligatory throughout the Catholic world by papal edict. In 1647 Ceccarelli published two Latin commentaries on images of the Virgin. Only two original musical works by him are known, a lost oratorio executed at S Marcello in 1661 (see Wessely-Kropik, 57) and a solo canzonetta, *Ecco il re del cielo immenso*, in a Roman manuscript anthology of largely devotional music, collected about 1630–40 (*I-Rc* 2472).

MARGARET MURATA

Cecchelli, Carlo (*fl* 1626–64). Italian composer. He was a soprano in the choir of S Luigi dei Francesi, Rome, in 1626. He became a singer and musician at the Collegio Germanico, Rome, on 25 August 1637 and was organist of the second choir there between March 1639 and November 1640. He was *maestro di cappella* of Tivoli Cathedral between June 1641 and October 1642 and of the Gesù and the Seminario Romano in 1645. From about December 1646 to 1 September 1649 he was *maestro di cappella* of S Maria Maggiore, and he is heard of between September 1651 and 17 August 1653 in a similar position at the Santa Casa at Loreto, which had close musical connections with the Roman school. Cecchelli belonged to a group of Roman church composers led by Carissimi who, partly through the influence of the new oratorio style, adopted a thoroughly modern idiom that had hitherto been slow to appear in Rome compared with northern Italy. Like those of some of his colleagues, his few surviving motets were all printed in anthologies: *Per rigidos montes*, for two sopranos and bass, two violins and basso continuo, is characteristic of Roman motets of this period with its instrumental sinfonias, flowing triple-time melody and strong tonal feeling (the various sections explore keys related to the tonic, E minor).

WORKS

1 mass in 1651^1; 15 motets in 1645^2, 1647^2, 1648^1, 1649^2, 1652^1, 1664^1, *GB-Lcm*

4 madrigals in 1652^3, 1653^4; 2 arias in 1646^7

Prol and chorus to S Ermenegildo (tragedy), Rome, Seminario Romano, carn., 1644

JEROME ROCHE

Cecchi, Domenico ['Il Cortona'] (*b* Cortona, *c*1650–55; *d* Cortona or Vienna, 1717–18). Italian soprano castrato. He studied singing with Placido Basili, *maestro di cappella* at Cortona Cathedral, and probably made his operatic début in Basili's *La forza per amore*. He first appeared in Venice in Antonio Sartorio's *I duo tiranni al soglio* in 1679, and was in the service of the empress in Vienna by 1681. In the 1680s he sang throughout northern Italy (in Venice, Modena, Mantua and Turin) and in Munich. In 1689 he made his début in Milan (Teatro Ducale), and on

25 May 1690 he sang the lead in the sumptuous production of Sabadini's *Il favore degli dei*, mounted for a royal marriage in Parma.

The 1690s were the summit of Cecchi's illustrious career. In 1691 he sang in Rome (Tordinona) in Cardinal Ottoboni's extravagant fiasco *Il Colombo, ovvero l'India scoperta*, and in autumn 1696 he was engaged at the Teatro S Bartolomeo in Naples, where he scored a tremendous success in Scarlatti's *Comodo Antonino*.

Less is known of his last 20 years. At Christmas 1697 he sang at S Marco, Venice; he may also have appeared in Venice in operas by C.F. Pollarolo in 1698 and 1703, and he certainly performed in Scarlatti's *Turno Aricino* at Pratolino in 1704. After further engagements in Dresden, Vienna and Venice (the last in works by Albinoni, Pollarolo, Gasparini and Lotti), he returned to Vienna and was music master to the archduchesses until the death of Emperor Joseph I in 1711. He also undertook diplomatic missions for the emperor, from whom he received a pension. Algarotti considered him on a par as a singer with Siface and Buzzoleni and described him as outstanding 'nelle parti tenere e appassionate'.

COLIN TIMMS

Cecchini, Angelo (*fl* Rome, 1619–39). Italian composer. He is first heard of in 1619, as *maestro di cappella* of S Maria della Consolazione, Rome. In the 1630s he was a musician in the service of Paolo Giordano Orsini, Duke of Bracciano, but he is principally known as the composer of four operatic scores to librettos by OTTAVIANO CASTELLI, which were staged in Rome between 1635 and 1639. *Il trionfo dell'autunno*, originally written for Orsini, was given as a separate work and also broken up as *intermedi* to a play (by Theodoro Ameyden) during carnival festivities of 1644 at the house of Pietro della Valle. All Cecchini's music is lost.

WORKS

librettos by Ottaviano Castelli

MARGARET MURATA

Cecchino [Cecchini], **Tomaso** (*b* ?Soave, nr Verona, *c*1583; *d* Lesina [now Hvar, Croatia], 31 Aug 1644). Italian composer. He may be Tomaso, son of Antonello Cecchini, referred to in a Veronese notarial document of 1601; and it is possible that he attended the Scuola degli Accoliti at Verona. He first went to Dalmatia in 1603 as temporary *maestro di cappella* of Split Cathedral and stayed there probably until 1607; it is not known where he was from then until 1613, when he returned to his old post in Split. It is possible that he came back at the invitation of the bishop, Marcantonio de Dominis, who showed an interest in promoting music at the cathedral. In December 1614, coinciding with Dominis's fall from power, he left Split to become *maestro di cappella* of Lesina Cathedral and stayed there for the rest of his life. His predecessors there were organists capable of providing adequate music for the services but were out of touch with the contemporary scene in Italy; he, however, raised the standard of music in Lesina to a higher level than ever before and it has hardly been matched since.

In nearly all his works Cecchino was concise and somewhat restrained. This might have been a purely personal characteristic, but it is likely that his style was shaped by taste in Dalmatia and the size and ability of the performing bodies at his disposal. It is precisely this economy of expressive means that lends Cecchino's music a particular charm. The third book of *Amorosi concetti* contains several little masterpieces, such as *Io senza fede?* and *Luci belle e spietate*. Furthermore, the duet *O rosetta, che rosetta* is not inferior to the setting of the same text by Monteverdi. In the *Canti spirituali* Cecchino fashioned a cycle from six monodies describing the features of a portrait of the dead Christ, in effect turning it into a small cantata. His op.11 masses effectively combine the *prima* and *seconda pratica*: contrapuntal writing is reserved mainly for the outer sections, while the longer inner sections are predominantly homophonic. His five-part motets are nearly all based on the concertato principle and strongly resemble the works of his Venetian contemporaries.

Cecchino's stay in Lesina and the works that he wrote there provide an interesting illustration of the rapid spread of the monodic style into the peripheral regions of the Venetian Republic. That his works were known in Germany and elsewhere in northern Europe is testified not only by the appearance of ten of them in anthologies printed there, but also by Michael Praetorius's reference to him in the third book of his *Syntagma musicum*.

WORKS

Editions: *Iz renesanse u barok* [From the Renaissance to the Baroque], ed. L. Županović, Spomenici hrvatske glazbene prošlosti, ii (Zagreb, 1971) [Z]
Osam sonata [Eight Sonatas], ed. B. Bujić (Zagreb, 1984) [B]

It is still impossible to compile a full list of Cecchino's work, and it may be estimated that about half of his output survives. Catalogues issued in 1621 and 1649 by the Venetian publisher Alessandro Vincenti and J. van Doorn's 1639 catalogue mention a number of works by Cecchino that no longer survive, some of which cannot be closely identified, including Lamentationi a 2 con basso and Note musicali intavolatura d'organo.

BOJAN BUJIC

Cecconcelli, Pietro (*fl* 1618–25). Florentine printer. Although he was printing books by December 1618, his first printed music dates from 1623 when he issued two volumes by Filippo Vitali (including Vitali's *Il secondo libro de madrigali a cinque voci*). In 1625 he printed Francesca Caccini's *La liberazione di Ruggiero dall'isola d'Alcina*. His music fount and general presentation are more elegant than that of his competitor Zanobi Pignoni. By 1630 the press seems to have been taken over by Giovanni Battista Landini, who used Cecconcelli's fount in four editions between 1630 and 1635, including Frescobaldi's two books of *Arie musicali a una, a due, e a tre voci* (1630) and music by Antonio Gardano and Domenico Anglesi.

TIM CARTER

Cecconi-Botella, Monic (*b* Courbevoie, 30 Sept 1936). French composer. She studied at the Paris Conservatoire with Maurice Duruflé (harmony) and Jean Rivier (composition), and in 1966 received the Prix de Rome. From 1973 to 1975, as well as continuing to compose, she organized the concerts of modern music given by the ensemble L'Itinéraire. From 1978 she taught composition and musical analysis, becoming a professor at the Paris Conservatoire in 1982. She is particularly drawn to the operatic idiom; here her vocal writing owes much to the lyric tradition, while her orchestral writing is charged with dramatic tension. In *Imaginaires* (1968), for percussion and dancer, a series of explorations of the combination of the visual arts and music, she has combined this love of the theatre with a strong pictorial sensibility. Conceiving music as sound-mass, she uses *musique concrète* to widen her colour spectrum further, but in this rich and vibrant musical universe humour too has a place; this is achieved by compositional subtleties which, despite her stylistic independence, link her to identifiable traditions in French music.

WORKS
(*selective list*)

Dramatic: Il était une fois l'été (opéra-film), S, chbr orch, tape, 1976; Scoop: état de siège en Pologne (mini-opéra, Cecconi-Botella), 3 solo vv, 2 cl, b cl, 3 vc, 1982; Noctuaile (R. David), 8 female vv, chamber orch, 1983; La femme de l'ogre (opéra-conte, P. Fleutiaux), 4 solo vv, chorus, children's chorus, chbr orch, 1986–8; Il signait Vincent (opéra-passion, J. Unal), 7 solo vv, 2 actors, choir, orch, 1987–90; Opéraclown (opera for and by children, R. Pillot), 4 solo vv, 2 actors, children's choirs, 11 insts, 1992; Le triangle de cristal (op for and by children, F. Arquetout), 3 solo vv, 2 actors, inst ens, 1992

Vocal: Chansons du jour et de la nuit (P. Soupault), S, pf, 1963; Chercher le silence (Soupault), S, vn, vc, pf, 1964; 3 mélodies (Charles d'Orléans, Rutebeuf), S, pf, 1964; 3 méditations pour le temps de Pâques (Soupault), S, pf, 1965; Vocale, S, 3 perc, 1969; Instants, Mez, cl, str orch, 1970; Conte glacé (J. Sternberg), reciter + hpd, 1976; Bestiaire inimaginaire (David), haute-contre/Mez, pf, 1984

FRANÇOISE ANDRIEUX

Cecere, Carlo (*b* Naples, 7 Nov 1706; *d* Naples, 15 Feb 1761). Italian composer and instrumentalist. The only known facts of his life are that his parents were Domenico

and Antonia Cangiano and that he was buried in the chapel of the Congregazione dei Musici di S Maria la Nova. He is principally known for having written the music for a satiric comic opera by P. Trinchera, *La tavernola abentorosa*, which, by its alleged impiety, offended both church and state authorities. This work illustrates a special chapter in the history of *opera buffa*, for it was a carnival entertainment written not for a public but for a monastic audience (a Neapolitan custom of the time). Records discovered by Prota-Giurleo show that *La tavernola* was performed in February 1741 in the establishments of Monteoliveto and SS Demetrio e Bonifacio. Trinchera's plot dealt with the machinations of a hypocritical rogue disguised as a monk who, after gulling some humble Neapolitans, finally converts them all to the monastic life. Ecclesiastical dignitaries were not amused and, after an inquiry, the king ordered both the poet and his publisher arrested and copies of the libretto (which had not been authorized by the public censor) suppressed. Trinchera took sanctuary in the church of the Carmine, eventually suffered at least a month's actual imprisonment, and was not released until the following January (his death by suicide was not connected with this incarceration, as is sometimes said, but with a later one, incurred for bankruptcy). No official blame for *La tavernola* fell on the composer.

In his own time Cecere's reputation rested on his instrumental music. Napoli-Signorelli called him an 'excellent contrapuntalist' and a good violinist, although, as Mondolfi has observed, his surviving music suggests that he was a flautist. These works are characteristic of Italian chamber music about 1740–60. Thematic sections are built up in a mosaic fashion from short melodic ideas of no great lyrical distinction, with frequent repetitions, either literal or sequential. The harmonic language is narrow. The orchestral flute concertos each contain five movements, the 'concerto' for two flutes and bass only three. In the latter all three movements are in binary form without repeats, and a movement's second section returns to start again in the tonic: the two sections differ in their developmental material and in the keys emphasized; brief dynamic contrasts are a constant feature.

Cechus de Florentia. *See* LANDINI, FRANCESCO.

Cecilia. Saint of the early Christian Church, traditionally honoured as patroness of music. Until recently there seemed to be little reason for Cecilia's long association with music as its patroness. Only fleetingly is music mentioned in her Acts, the *Passio Caeciliae*, a largely fictitious document composed about 500 CE; and not until very much later was she awarded a musical emblem in art. The mystery surrounding her musicality matches the mystery surrounding her person. Late in the 5th century she suddenly appears, among the most venerated of Roman saints, yet any firm evidence that she existed is lacking. Delehaye, who called the case 'the most tangled question in Roman hagiography', suggested that the legend developed when Christians who saw the tomb of a lady called Cecilia near the popes buried in the catacomb of St Callistus concluded that only a great martyr would have been interred in so hallowed a spot. Others (e.g. Josi), with considerable justification, think it improbable that an invented saint would have been listed in the Canon of the Mass, and insist on her historicity while admitting that nothing sure is known about her.

The *Passio* tells of a Christian maiden vowed secretly to virginity who was constrained by her parents to marry a young pagan named Valerian. On their wedding night she succeeded in converting him, persuading him to join her in a celibate marriage. The document then describes the conversion of his brother, Tiburtius, and their subsequent good works – preaching, converting, helping the poor – as well as their trials and martyrdom. Cecilia was condemned to die in a scalding Roman bath, but being miraculously preserved she was executed by the sword. At her death she left her house to the Church (this was the building that preceded the present 9th-century basilica of S Cecilia in Trastevere), and was buried by the pope 'among his fellow bishops' (a reference to a crypt next to the crypt of the 3rd-century popes in the catacomb of St Callistus).

The solitary reference to music in this narrative, in the description of the wedding night, has until recently provided the only explanation for Cecilia's musical association. In her predicament, says the *Passio*, 'while instruments played [*cantantibus organis*] Cecilia sang in her heart to God alone: "May my heart and my body be kept immaculate lest I be cast into confusion"'. Adapted for Cecilia's medieval liturgy by omitting the words 'in her heart', the sentence resulted in an antiphon which, if taken literally, suggested that she actually sang, even to the accompaniment of an organ. This solution to the problem, never more than merely plausible, must now be discarded following deeper research that elaborates on the profoundly contemplative character of a saint who 'sang in her heart' and 'kept the gospel in her heart' (see Connolly, 1994).

Foremost in the evidence presented is the choice of liturgical texts for the station-day at S Cecilia in Trastevere, celebrated from early Christian times on the Wednesday after the second Sunday of Lent. On this very site there once stood a little shrine of the Bona Dea, a popular

'St Cecilia' altarpiece by Raphael, c1513–16 (Pinacoteca Nazionale, Bologna)

but enigmatic deity whose special function in Trastevere was to cure blindness. Because she restored light, she was there called 'restitutrix'. But an oration for the Mass of the station-day uniquely addressed God as 'restorer', suggesting that the Christian liturgy took note of the pagan cult. Other texts confirm this, showing a continuity of healing function and of concern with the 'restoration of light' between the pagan and Christian cults. The name Cecilia, it seems, stemmed not from a member of the Roman clan of the Caecilii, but from the cure of blindness (*caecitas*) at the shrine. Given the ancient linking of blindness and music, these facts suggest that from the very beginning there were grounds for associating Cecilia with music.

The most remarkable of the stational liturgical texts was the lesson from Esther, a book scarcely used by early Christians uneasy with its tale of oriental court intrigue. The passage selected was from the additional material in the Septuagint (*Esther* xiii.8–17 of the Vulgate), a prayer for deliverance from the pogrom threatened against the Jews by Haman. Whoever chose the passage understood Hebrew and made the selection with the Bona Dea in mind – Esther's Hebrew name (Hadassah), for instance, means 'myrtle', a plant sacred to Venus and banned from

the rites of the goddess. More startling is the fact that Esther is read in the Synagogue for the feast of Purim, which commemorates the deliverance of the Jews from this Persian pogrom; and that the station-day in question coincided with the beginning of Purim (13 Adar, counting back from Good Friday as 14 Nisan). This suggests that the lesson from Esther at S Cecilia in Trastevere was a residue of a time when Purim was observed there by a Jewish–Christian community. If Cecilia was a Jewish Christian, the long silence about her in the Gentile–Christian community would be readily explained.

The lesson's concluding words are the key to understanding Cecilia's association with music: 'Turn our mourning into joy, and do not close the mouths of those who sing thy praises'. The eventual thwarting of the pogrom and the institution of Purim fulfil Esther's prayer, and are described in the same terms, as the time when the Jews' mourning was turned into joy, to be remembered annually in feasting and rejoicing (*Esther* ix.22). Purim has always been celebrated with a worldly abandon, with noise, drinking and music. This must have been so in Trastevere, too, and most likely influenced the legend of Cecilia. But the significance of the theme of mourning and joy is much deeper and more extensive than mere merrymaking; it is founded on the ancient notion, inherited by the Middle Ages, that all change in the universe is summed up in the flux of the two Aristotelian passions of sadness and joy, operating in accordance with musical principles. Christians found biblical warrant for the idea in texts such as *Job* xxx.31 ('My harp is turned into mourning, and my organ into the voice of those who weep') and *Lamentations* v.15–16 ('The joy of our heart is fled, our singing is turned into mourning, the crown has fallen from our head; woe unto us, for we have sinned').

Such texts of mourning and joy were often cited in sermons and spiritual writings during the Middle Ages to describe the fluctuations of grace, sin and repentance in the human soul. In illuminated manuscripts images of discarded instruments were visual references to the texts, as in the harp that rests on the ground beside the kneeling king in the common miniature of David-in-Penitence (*see* DAVID, fig.2). While such images of music abandoned – 'joy turned to mourning' – are one link with Cecilia, the texts these miniatures decorate are another, for they are frequently texts that occur in the liturgy of Cecilia. The David-in-Penitence with its abandoned harp, for instance, is often found decorating the introit for the first Sunday of Advent, the text of which (Psalm xxiv.1–3) is also the offertory for the Trastevere station-day. Images of Cecilia holding a portative organ, which began to appear a little later than the images of David with instrument abandoned, are a visual answer to Esther's prayer to 'turn our mourning into joy'. Where David's sin had turned his joy into mourning and he had cast his harp to the ground, Cecilia's contemplative heart represents the reversal of this, and she has taken up the music that David had cast aside. No painting better illustrates this interpretation than Raphael's famous altarpiece of St Cecilia (*c*1515; see illustration), which draws on the tradition by showing instruments abandoned at her feet while she distractedly holds a portative organ upside-down and gazes heavenwards, where angel-choristers sing among the clouds.

The story of St Cecilia's musicality is a case-study in the loss of a tradition. That tradition's theological roots are stated clearly enough in the writings of Pietro da Lucca, director of Raphael's chief commissioner, and more eloquently by Jean Gerson, the famous theologian who was Pietro's chief authority, yet within a few years of Raphael's death the painting, though still much admired, began to baffle its viewers. The change in spiritual outlook that accompanied the Reformation, and the developing tendencies towards a more secular world-view, were most likely responsible. Purcell and Handel, Pope and Dryden would yet write their famous works in Cecilia's honour, musical societies would still place themselves under her patronage, artists would find her an even more appealing subject (though increasingly as a performing musician, an organist, singer, lutenist), but the significance of the ancient and medieval idea of the 'music of the heart', the contemplative spirit that was Cecilia's musical prerogative, had largely vanished from the human imagination.

THOMAS H. CONNOLLY

Cecilian festivals. Festivals held to commemorate St Cecilia's Day (22 November). The custom of celebrating the day by musical performances long existed in various countries, and many associations were formed for the purpose. The earliest recorded association was established in 1570 at Evreux, Normandy, under the title of 'Le Puy de musique'; various liturgical performances were followed by a banquet after mass on the feast day and prizes were awarded for the best motets, partsongs, airs and sonnets.

Not until a century later was any similar association established in England. In 1683 a body known as the Musical Society initiated a series of annual celebrations in London; their practice was to hold a service (usually at St Bride's church), at which a choral service and anthem with orchestral accompaniment were performed by a large number of musicians, and a sermon, usually in defence of cathedral music, was preached. They then moved to another place (often Stationers' Hall), where an ode in praise of music, composed for the occasion, was performed. Such odes were written by Dryden (1687 and 1697), Pope (1708), Shadwell, Congreve, D'Urfey, Hughes and others, and composers included Purcell (1683 and 1692), Blow (1684, 1691, 1695 and 1700), Draghi, Eccles, Jeremiah Clarke and other lesser figures. The celebrations were held annually (except in 1686, 1688 and 1689) until 1703, after which they were held only occasionally. In 1736 Handel reset Dryden's *Alexander's Feast*, originally composed in 1697 by Jeremiah Clarke, and in 1739 Dryden's first ode, originally set in 1687 by Draghi. Odes were later composed at various periods by Boyce, Festing, Samuel Wesley and Parry.

About the same time that the London celebrations were established similar meetings were held (until at least 1708) at Oxford, for which odes were set by Blow, Daniel

Purcell and others. Other towns followed the example, such as Winchester, Gloucester, Devizes and Salisbury. Edinburgh gave St Cecilia's concerts from 1696 and named its concert hall after Cecilia. In the early 18th century several festivals took place in St Patrick's Cathedral, Dublin.

In Paris in the 19th century and early 20th it was the custom to have a solemn mass performed in the church of St Eustache on St Cecilia's Day, in which the Conservatoire orchestra took part; a new mass was usually produced, by such composers as Niedermeyer (1849), Gounod (1855) and Thomas (1857). After the appointment of Félix Raugel as *maître de chapelle* (1910) the mass was replaced by a sacred concert and a benediction. Musical celebrations on St Cecilia's Day took place at various periods in Italy, Germany and elsewhere. In London, concerts in aid of the Musicians Benevolent Fund have continued to be held on St Cecilia's Day.

W.H. HUSK/R

Cecilian movement (Ger. *Cäcilianismus*). A 19th-century movement, centred in Germany, for the reform of Catholic church music. Reacting to the liberalization of the Enlightenment, the Cecilians sought to restore traditional religious feeling and the authority of the church. They regarded 'true, genuine church music' as being subservient to the liturgy, and intelligibility of words and music as more important than artistic individuality.

The movement took its name from St CECILIA, the legendary patron of sacred music and of the 15th-century Congregazioni Ceciliani. The latter inspired the formation of Caecilien-Bündnisse (Cecilian Leagues) in Munich, Passau, Vienna and elsewhere in the 1700s. These organizations of church musicians upheld the ideal of sacred music with little or no instrumental accompaniment; the organ was one of the few instruments accepted as liturgically correct. This line of thought extended unbroken from the Council of Trent (1545–63) through the various regional church councils (notably at Rome in 1725), and from the encyclical *Annus qui* of Pope Benedict XIV in 1749 to the *Motu proprio* of Pius X in 1903. Benedict's encyclical was cited as authority for excluding virtually all instruments from church services; they were to be admitted only to accompany the singers in a subordinate role, and in particular to reinforce small choirs.

At the beginning of the 19th century, when the Caecilien-Bündnisse were undergoing a revival, their work was carried on in the spirit of the *stile antico* in Germany by Fux, Michael Haydn, Vogler, Mastiaux, Thibaut, Ett, Aiblinger, Heimsoeth, Hauber, Proske, and J.G. and Dominicus Mettenleiter; in Italy by Casciolini, Basili, Spontini, Zingarelli, Raimondi, Mattei, Baini, Santini and Alfieri; and in France by Choron and Niedermeyer. The Cecilians' theoretical ideas were formulated by Ludwig Tieck, Friedrich and August Wilhelm Schlegel, Sailer (*Von dem Bunde der Religion mit der Kunst*, 1839), Hoffman (*Alte und neue Kirchenmusik*, 1814) and Thibaut. Cecilians wrote historical studies of Palestrina (Baini, 1828; Winterfeld, 1832) and the Netherlands masters (Kiesewetter, 1826), as well as one work of practical aesthetics (Möhler's *Die Ästhetik der katholischen Kirchenmusik*, 1910). Choron, Alfieri, Tucher, Dayton, Commer, Proske and Lück edited anthologies of early vocal polyphony, and editions and studies of Gregorian chant were produced by Schiedermeyer, Antony, Alfieri, Vilsecker, Schlecht, Nisard and Lambilotte.

Cecilianism was nurtured by the early stages of industrialization, which engendered a longing for simplicity, unworldliness and the past, and a concentration on essentials, and by the generally historicizing climate of the 19th century. Like the Nazarenes in the visual arts, the Cecilians took the old masters of the 15th and 16th centuries as models for their own compositions. They viewed Palestrina as the leading figure in church music (a complete edition of his works, under the general editorship of Haberl, was published between 1862 and 1903), and based their criteria on the music performed in the chapels of Rome rather than on the more emotional 18th-century repertory. Exaggeratedly graphic word-painting was to be avoided; expansive modulations and chromaticism – in fact all characteristics of theatrical music – were anathema. Church choirs modelled on the choir of the Cappella Sistina were founded in Regensburg, Munich and Cologne. The first practical realization of the Cecilians' reformist ideas was the revival of Allegri's *Miserere* by Ett and Schmid at St Michael in Munich on Good Friday 1816. Hauber and Aiblinger helped establish the restoration movement in Munich, and from there it spread to Regensburg, which became a centre of *a cappella* singing in the second half of the century.

In 1868, three years after calling for the reform of church music in *Der Zustand der katholischen Kirchenmusik zunächst in Altbayern*, Witt founded the Allgemeiner Deutscher Cäcilienverein on the occasion of the rally of Catholics in Bamberg. Sanctioned by Pope Pius IX in 1870, it inspired the founding of similar organizations in the Netherlands (by Diepenbrock and others), Italy (Tebaldini, Perosi, Bottazzo), Belgium (Tinel), Poland, Bohemia, Hungary, Switzerland and North America. Even the Evangelical Church was affected by Cecilianism, as the example of the Berlin Domchor shows. Journals associated with the movement include *Fliegende Blätter für katholische Kirchenmusik*, *Musica sacra*, *Cäcilienkalender* and *Kirchenmusikalisches Jahrbuch*, all founded in the late 1860s, as well as *Chorwächter* (St Gallen), *Gregoriusblatt* (Aachen), *Kirchenmusikalische Vierteljahresschrift* (Salzburg), *Wiener Blätter für katholische Kirchenmusik* (Vienna), and *Caecilia* (New York). Among the publishing houses particularly committed to the cause were Pustet in Regensburg, Schwann in Düsseldorf and Böhm in Augsburg.

In 1870 the *Cäcilienkalender* published the first catalogue of music approved for use in church services. A distinction was drawn between strictly liturgical music for the main divine service, sacred music for shorter devotional services and religious concert music. Gregorian chant headed the list of acceptable music, followed by *a cappella* polyphony, organ music and community hymns. Although Ett in his *Cantica sacra* of 1827 shortened the Gregorian melodies and J.G. Mettenleiter adulterated them with harmonizations in his *Enchiridion chorale* of 1853, from about 1850 attempts were made to revive the original versions of chant, such as those preserved in the Codex Montpellier. The Regensburg edition, prepared by Haberl under the auspices of the Cäcilienverein and based on the *Editio medicea* of 1614, was approved by Rome in 1868. It was superseded by the *Editio vaticana* (1905–23)

which resulted from the work of Guéranger, Jausions, Pothier and others of the Solesmes school. Community hymn singing was another special concern of the Cäcilienverein. Witt's *Dreihundert der schönsten geistlichen Lieder älterer Zeit*, published in about 1860, excluded the songs of the Enlightenment period, which he considered degenerate. Not until the publication of 23 standard hymns in 1916 did the Cecilian movement produce a real community hymnal.

Fierce controversies over the Cäcilienverein's recommendations led to the increasing isolation of church music from contemporary artistic development. The new polyphonic works by Cecilianist composers, being functionally tied to the liturgy, were artistically rather unassuming. The Cecilians tended to dismiss composers such as Bruckner and Liszt who only occasionally adopted Cecilian ideas, while Rheinberger rejected them altogether. In 1875 a counter-movement to the Cecilians emerged in Austria (where the orchestrally accompanied church music of the Viennese Classicists and of contemporary composers continued to be played) under the leadership of Habert, joined by Brosig and his followers in Breslau. Even within the Cecilian movement there were divisions, for instance pitting the adherents of historicism (Haller, Nekes, Koenen and Piel) against a group more receptive to contemporary music (Stehle, Greith, Mitterer and Kienle). In Munich Schafhäutl became a bitter opponent of Cecilianism, while Witt took up an intermediate position. Not until the 20th century did the movement become receptive to contemporary artistic forms. On the other hand, the founding of the Kirchenmusikschule in Regensburg (1874) and the Gregoriushaus in Aachen (1881) provided a model for the future training of church musicians.

SIEGFRIED GMEINWIESER

Cecil Sharp House. The headquarters in Camden Town, London, of the ENGLISH FOLK DANCE AND SONG SOCIETY.

Cédez (Fr.: 'yield'; imperative of *céder*). A direction used particularly by Debussy and his French contemporaries as an equivalent of the Italian RITENUTO.

See also TEMPO AND EXPRESSION MARKS.

Cefaut. The pitch *c* in the HEXACHORD system.

Céilidh (Scottish Gael.: 'a visit'; Irish Gael. *céili*). Traditionally, in Gaelic Scotland, Ireland and emigrant communities overseas, it denoted any household gathering of family and friends, pre-arranged or impromptu, including neighbourly 'dropping in'. *Céilidhean*, now anglicized in the plural to 'céilidhs', usually took place after dusk, generally between Hallowe'en and Easter, when limited daylight restricted the time for outdoor work. The long evenings were spent around the fire, which, till the 1920s was in the middle of the floor of most cottages.

Every neighbourhood had homes known as *taighean céilidh*, 'céilidh houses' (sing. *taigh céilidh*) whose occupants were tradition-bearers, storytellers, singers or custodians of traditional knowledge. The *céilidh* was not only the Gaels' main source of entertainment, but more importantly, was the setting in which every aspect of oral tradition was handed down from one generation to the next. Participants could expect songs, stories, music on the pipes, fiddle, accordion or trump and dancing; exchanges of proverbs, riddles, jokes, pranks, tongue-twisters and folk-etymology; discussions about placelore, customs, beliefs, traditional knowledge of medicine (human and veterinary), plant-lore, weather-lore, animal husbandry, hunting, fishing, navigation and craft-lore of every kind. A strict code of conduct was observed in the *taigh céilidh*: performers expected silence and complete attention, though hands were frequently occupied knitting, carding, twisting rope or any craft that could be done in dim light and restricted space.

With the migration of Gaels to cities, the *céilidh* was adopted in urban areas to mean a social gathering for songs, music and dance, and, though originally held in homes, it shifted to the more formal setting of halls. By

the 1920s *céilidhs* were re-imported to Gaeldom, denoting village-hall concerts in Scotland and dances in Ireland. The revised usage became more confused by increased movement between Scotland and Ireland, until eventually, the expectations of a *céilidh* in lowland Scotland became dancing. A new phrase 'cêilidh dancing', is rapidly replacing 'village hall dancing' (couple dances, sets of reels, strathspeys or jigs), or 'country dancing' as popular trend reclaims for 'ordinary people' their own dances which, since 1923, have been standardized by the Royal Society of Scottish Country Dancing. Today, with the advent of television, the *taigh céilidh* is virtually extinct though Gaels still use *céilidh* simply to mean a visit.

Celempung. Large zither in the Central Javanese gamelan. It has a wooden trapezoidal soundbox, about 1 metre long, which stands on two longer and two shorter legs so that it slants upwards from the performer, who sits and plucks its 10 to 13 double courses with thumbnails (or sometimes, plectra) while damping the strings with the fingers. The strings are attached to the soundboard at one end and stretched over a slanting bridge to tuning pegs, which are tightened or loosened with a key (*see* INDONESIA, fig.15). In a full gamelan there are usually separate instruments for the *sléndro* tuning and both subscales of the *pélog* tuning (*bem*, 12356 and *barang*, 72356), although there is often only one *pélog* instrument which is retuned as required.

The *celempung* is also played in smaller Javanese gamelan ensembles such as *gadhon* and *cokekan*, and can generally be substituted by the smaller, higher-pitched and brighter sounding *siter*. The street ensemble *siteran* features *celempung* together with various sizes of *siter* (*siter barung*, *siter panerus* and *siter slenthem*), *kendhang ciblon* (drum) and *gong komodhong* (box-resonated gong).

MARGARET J. KARTOMI/MARIA MENDONÇA

Celesta (Fr. *céleste*). A keyboard instrument (in the form of a small upright piano) invented by Auguste Mustel in 1886; metal plates (usually steel) suspended over resonating boxes are struck by hammers and sustained after the manner of the piano action. (It is classified as an idiophone: set of percussion plaques; such instruments of metal are known as metallophones.) Mustel's celesta was probably inspired by an instrument known as the typophone (or dulcitone), which he or his father Victor constructed some 20 years earlier. In the typophone a series of tuning-forks is operated by a keyboard (*see* TUNING-FORK INSTRUMENTS).

As an orchestral instrument the celesta has been used by a large number of composers in operas, ballets and mystic pieces where its special quality of tone is required. It is normally played by the keyboard player (the part written as for the piano, but an octave below sounding pitch), though some composers mistakenly include it in the percussion parts. Ernest Chausson was one of the first to use it (*La tempête*, 1888). Tchaikovsky was impressed by the tone of the instrument while on a visit to Paris, and included it in the Dance of the Sugar-Plum Fairy in *The Nutcracker* (1892). Bartók gave the instrument a prominent part in his Music for Strings, Percussion and Celesta (1936).

The usual compass of the modern celesta is five octaves from *c*, but Yamaha has made instruments of five and a half octaves, which are essential for some works.

JAMES BLADES/JAMES HOLLAND

Celeste. *See under* ORGAN STOP (*Unda maris* and *Voix céleste*).

Celestina. A bowed keyboard instrument patented by Adam Walker of London in 1772 (no.1720); it is occasionally confused with the CELESTINETTE in writings on the history of keyboard instruments. It was also a model of ORGANETTE. When the keys were depressed the strings were drawn against a continuous band of silk (although the patent also mentions flax, wire, gut, hair and leather) driven by a weight, spring or foot treadle. The celestina could be added to a harpsichord as a special stop; Thomas Jefferson ordered a harpsichord with a Venetian swell and a celestina (to be made by Walker) from Jacob and Abraham Kirkman in 1786, and a group of letters between Jefferson, Charles Burney, Francis Hopkinson and John Paradise concerning this instrument has been reprinted by Russell. Jefferson wrote that the stop 'suits slow movements, and as an accompaniment to the voice'. Burney noted that the example fitted to Jefferson's instrument 'is not confined to mere psalmody, as was the case at the first invention. On the degree of pressure [on the keys] depends, not only the durability of the tone but its force'. Although no celestina has survived, a restored celestina stop can be found on a 1768 Kirkman harpsichord in the private collection of Andreas Beurmann in Hamburg.

EDWIN M. RIPIN

Celestinette [coelestinette]. A bowed keyboard instrument reportedly invented by William Mason (1725–97); it is occasionally confused with the CELESTINA in writings on the history of keyboard instruments. Mason had one of Adam Walker's newly patented celestinas applied to his harpsichord in 1772, but the celestinette, of which Mason is said to have written a description in 1761, appears to have been a far simpler instrument in which a string was sounded by a hand-held bow while the other hand controlled its pitch by means of a keyboard. For further information see J.W. Draper: *William Mason: a Study in Eighteenth-Century Culture* (New York, 1924), 289.

See also SOSTENENTE PIANO, §1.

EDWIN M. RIPIN

Celestini, Giovanni (*fl* 1587–1610). Italian harpsichord and virginal maker working in Venice. His father was a barber: keyboard instruments were available in barbers' shops for the use of customers, which may explain Celestini's introduction to his trade. The signed surviving instruments comprise six virginals and two harpsichords. A further four virginals and a clavichord can also be attributed to him, and together they amount to a substantial part of the known 16th-century Venetian instruments. Celestini made most of his virginals with half projecting or fully recessed keyboards, a style which is normally associated with instruments from the Brescia-Milan area. Two of the virginals (1594, Museum für Kunst und Gewerbe, Hamburg, and unsigned, Fenton House, London) are unusual in having two 8′ registers, a design which may have been invented by Celestini. Some are highly elaborate in the decoration (1594, Donaldson Collection, Royal College of Music, London), others are relatively plain (e.g. 1608 [or 1606?], Kunsthistorisches Museum, Vienna). Only one virginal is of the common 'inner-outer' type (unsigned, no.913.4.96; Royal Ontario Museum, Toronto) with a fully projecting keyboard. His two harpsichords (1596, Royal Ontario Museum, Toronto, and 1608, Museum für Kunst und Gewerbe, Hamburg) are unusual in that the distal ends of the keylevers are 's-shaped' which permits the jacks to face each other and play a narrow-spaced pair of strings lying between the jacks (see Wraight, 1993). The pair of strings could thus be of almost exactly equal lengths, possibly with the aim of improving tuning stability. These short-scaled harpsichords (c'' = 238–54 mm) were probably intended for a high pitch (strung with iron wire) about a 4th above other 8′-pitched harpsichords made in Venice (*see* HARPSICHORD, §2(i)). The clavichord attributed him (see Wraight, 1997) was, like other 16th-century Italian clavichords, probably intended for a pitch higher than normal 8′ pitch.

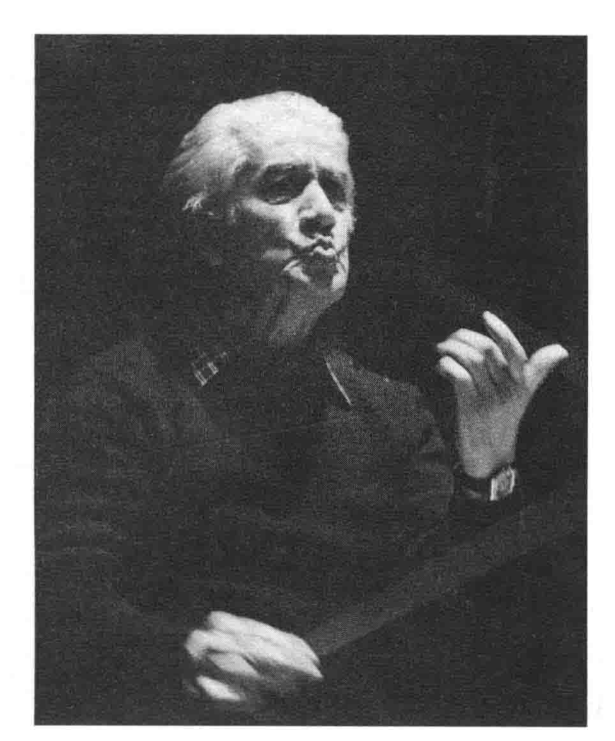
DENZIL WRAIGHT

Celestino [Celestini], **Eligio** (*b* Pisa, 20 March 1739; *d* Ludwigslust, Mecklenburg, 24 Jan 1812). Italian violinist and composer. Until the 1770s he studied and lived in Rome except when he gave concert tours. Charles Burney heard him there in the Duke of Dorset's house in 1770 and praised his playing. In 1772 he gave concerts in London, then in 1776 visited France and Germany and in the same year became a violinist in the Stuttgart court orchestra. He became leader of the court orchestra of Mecklenburg-Schwerin in Ludwigslust (1778), and his English wife, Sarah Stanton (1749–98), became a singer at that court. Apart from tours, which took him to many towns in Germany and to Sweden, Holland, Italy and England, he retained a position at Ludwigslust for the rest of his life. Because of the ill-health of the Kapellmeister Antonio Rosetti (Rösler), he had occasionally conducted the orchestra by late 1791. After Rosetti's death in 1792 he took complete charge, until in 1803, also for reasons of health, he was replaced by the assistant Louis Massonneau. He remained active as leader of the orchestra until his death.

In 1799 Celestino was hailed in London as the greatest violinist of his time. He had a decisive influence on the standard of the orchestra of the Mecklenburg-Schwerin court at a time when this ensemble, temporarily based in Ludwigslust, was one of the best in Germany. His extant works include several published chamber works for strings and (in manuscript) several arias written for his wife and an Andante for wind. The style of his delightful and skilfully written pieces in some ways resembles Mozart's, though with a popular twist.

WORKS

Inst: 6 Duettos, 3 for vn, vc, 3 for 2 vn (London, 1773); 6 Solos, vn, hpd/vc, op.2 (London, 1774); 3 Duos, vn, vc (Berlin, 1786); 6 Sonatas, vn, bc, op.9 (London, ?1797); Andante con moto, 2 ob, 2 hn, 2 tpt, bn, *D-SWl*; 5 duets, vn, vc, formerly in Königliche Hausbibliothek, Berlin, lost



Vocal: Trio, S, T, B, orch, 1787, *D-SWl*; 3 arias, S, orch, 1 each in *Bsb*, *ROmi*, *SWl*

DIETER HÄRTWIG

Celibidache, Sergiu (*b* Roman, 28 June/11 July 1912; *d* Paris, 14 Aug 1996). Romanian conductor. Raised in the town of Iaşi, Celibidache began early piano studies there. He subsequently studied music, philosophy and mathematics in Bucharest and Paris, and in 1936 entered the Hochschule für Musik in Berlin, where his teachers included Fritz Stein, Heinz Thiessen (composition), Kurt Thomas and Walter Gmeindl (conducting). In the same period he also studied musicology, aesthetics and philosophy at Berlin's Friedrich-Wilhelm University, and was introduced by Martin Steinke to the principles of Zen Buddhism, an outlook that was to influence the rest of his life. By the end of the war he had taken the doctorate at the university with a dissertation on Josquin Des Prez, conducted numerous student ensembles and won first prize in a conducting competition. By a stroke of fortune, his career started at the top. In 1945 Leo Borchardt was due to become music director of the Berlin PO. He was, however, shot at Checkpoint Charlie, and in February 1946 Celibidache was named principal conductor, sharing his duties with Furtwängler from 1947 to 1952. After

Sergiu Celibidache

working for some years as a guest conductor, he held posts as music director of the Swedish RSO (1962–71), the Stuttgart RSO (1971–7) and the Orchestre Nationale de France (1973–5). He was also involved with orchestras such as the LSO and those of La Scala, La Fenice and RAI, and frequently appeared as a guest conductor. In February 1979 Celibidache conducted his first concert series with the Munich PO and in June was appointed its music director, a position he held for life.

Celibidache's career was deeply controversial and beset by contradiction. While advocating the gentle themes of Zen, he could treat individuals with brutal contempt. Although refusing to record for most of his career (he once compared making a recording with going to bed with a picture of Brigitte Bardot), his concerts were regularly broadcast on radio and television. He demanded numerous rehearsals, often as many as 20 per concert. His philosophical and aesthetic assertions and his periods of contemplation were viewed by many colleagues as laughable self-promotion. But for others Celibidache's insights were rare and profound, and his rehearsal and concert procedures original and inspiring. He conducted without a score, his beat was expressive and supple and he could bring a lofty spiritual grandeur to the symphonies of Bruckner and a brilliant intensity and precision of detail to music by composers such as Ravel, Stravinsky, Prokofiev and Shostakovich.

CHARLES BARBER

Celimela (Lat.). *See* SHAWM.

Celis, Frits (*b* Antwerp, 11 April 1929). Belgian composer, conductor and harpist. He studied at the Antwerp Conservatory (harmony, counterpoint and fugue, piano and history of music), at the same time studying the harp and conducting at the Brussels Conservatory. He attended summer courses in conducting at the Mozarteum in Salzburg (1949–51) and at the Cologne Hochschule für Musik (1953–4). From 1946 he played the harp in the orchestra of the Royal Flemish Opera of Antwerp. In 1954 he won conducting competitions at the Théâtre de la Monnaie in Brussels and Belgian Radio, and was conductor at the Monnaie (1954–9) before returning to the Antwerp Opera House as its conductor and music director. He continued with these functions at the restructured Flanders Opera (1981–8).

As a conductor he has appeared in Belgium, France, the Netherlands, Germany, Spain and the USA, conducting first performances of operas by such Belgian composers as Legley, De Jong and Kersters, almost all Wagner's works and many Belgian premières of works by such international figures as Britten, Hindemith, Ibert, Prokofiev, Ravel, Schoenberg and Stravinsky.

From 1960 he taught solfège and from 1972 until his retirement in 1994 was professor of transposition at the Royal Flemish Conservatory of Antwerp. For five years he also gave conducting classes at the Mechelen Conservatory. He wrote extended monographs about the Flemish composers de Boeck and Keurvels and numerous articles for cultural magazines.

His conducting career forced him to give second place to composition, but since 1988 he has composed prolifically. His early works – until his op.6 – still have a tonal, Romantic conception, but his *Elegie* op.7 (1966) is in a freely atonal style. From that time he cultivated an atonal style characterized by stringent use of thematic material, and after his *Symfonische bewegingen* op.8 (1969) he strove towards a more limpid sound world. Lyricism has come to the fore in his most recent works, with their ideal balance of sonority and form.

DIANA VON VOLBORTH-DANYS

Cellarius [Hausskeller], **Simon** (*b* ?Saxony, before 1500; *d* Kohren, 1544). German composer. He was Kantor at St Marien, Zwickau, from 1521 to 1522; from then until his death he was a member of the Protestant clergy. His seven extant works are all liturgical and appeared only in publications and manuscripts associated with the services of the early Protestant Church; five were included in publications of Georg Rhau. Stylistically Cellarius belonged to the second generation of German polyphonic

composers strongly influenced by the Franco-Flemish procedures of polyphonic composition who continued to uphold tradition in a conservative manner. His psalm settings often contain fauxbourdon, and although the number of his works is small, each reveals a high mastery of polyphonic writing.

VICTOR H. MATTFELD

Cellavenia [Cillavenia], **Francesco** (*b* ?Cilavegna, nr Pavia; *fl c*1538–63). Italian composer. The tradition, stemming from Guerrini and accepted by Staehelin and Crawford, that he was a canon and perhaps *maestro di cappella* at Casale Monferrato Cathedral from 1551 to 1563 is disputed by Martinotti (1969), who believed that he was *maestro* at S Maria di Piazza. He may have been related to Giovanni Maria Cilavenia who owned a 15th-century theological manuscript (now in *I-CMs*) which contains the beginning of a madrigal (Cellavenia's only known surviving secular music); he may also have been related to, or may even have been, the 'Cell. Abb.' to whom music is ascribed in a manuscript lute tablature (*Lg* 774). All his extant sacred works survive in manuscripts (in *CMac*) which are believed to have been copied between 1538 and 1545; a number of anonymous unica in the same manuscripts have been attributed to him on stylistic grounds. His works show a skilful alliance of certain Italian characteristics with the conventional techniques of northern polyphony. Several of his works use preexisting material as tenor cantus-firmi; the *Missa 'Laetare nova Sion'* (based on Andreas de Silva's motet of the same name (1532) and his most ambitious work), and the *Missa 'Quem dicunt homines'* and the *Missa 'De playsir'*, both of which may be by Cellavenia, are based respectively on a motet and a chanson by Jean Richafort. These pieces are somewhat flawed by occasional grammatical lapses and feeble counterpoint; Cellavenia is more successful in his more modest pieces such as his *alternatim* setting of the Marian sequence *Inviolata integra*. A number of Cellavenia's motets are addressed to the local patron saint, Evasius, and are based on cantus firmi derived from chants; a curiosity, though one typical of manuscripts copied in provincial centres, is that the cantus firmus is given in chant notation in contrast to the remaining voices in mensural notation.

WORKS

Edition: Francesco Cellavenia: *Collected Works*, ed. D. Crawford, CMM, lxxx (1978) [C]
Cantuum (quos motetta vocant) liber primus, 5vv (Milan, 1565), lost (cited in *EitnerQ*)

Celles, François Bédos de. *See* BÉDOS DE CELLES, FRANÇOIS.

Celletti, Rodolfo (*b* Rome, 13 June 1917). Italian music critic. He took a degree in law from the University of Rome but was self-taught in music. He has written for various newspapers and journals such as the Milan *Il tempo* (1950–53), *La Scala* (1953–63), *Discoteca* (1963–), *La Repubblica* and *Panorama*, and was music critic for *Epoca* (1974–84). His main interest has been the voice, and the style and interpretation of Italian operatic vocal music. Besides serving as director of the section on singers for the *Enciclopedia dello spettacolo*, vols.v–x (1958–66), Celletti's knowledge of vocal styles and techniques is apparent from his dictionary, *Le grandi voci*, which is the most complete biographical and critical source on the subject. In addition to teaching singing (from 1972), he has been artistic director of the Itria Valley Festival at Martina Franca, Taranto (1980–93), and in 1984 was appointed adviser to the Teatro Comunale, Bologna. In 1992 he also became director of a course for young singers in Milan.

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Celli, Frank H. [Standing, Francis] (*b* Dalston, London, 8 April 1845; *d* London, 27 Dec 1904). English bass-baritone. He had received little vocal instruction when he made his successful début in 1862 at the Marylebone Theatre, London, as Mat of the Mint in *The Beggar's Opera*. Other stage and concert work followed, and then a period of study with Hermine Rudersdorff and a concert tour with Carlotta Patti in the late 1860s. In 1871 he joined Mapleson's provincial touring company, making his first operatic appearance as Valentin in the first Birmingham performance of Gounod's *Faust*. Celli's most important work was in English opera. He was a member of the Carl Rosa Company in its first London season at the Princess's Theatre in 1875, singing Gounod's Méphistophélès on the second night of the season. He appeared regularly with the company for several years taking part in the first performances of many new English works, after which he returned to light opera, touring the USA and Canada. His voice retained its freshness and charm throughout his career.

HAROLD ROSENTHAL/R

Celli, Joseph (*b* Bridgeport, CT, 19 March 1944). American oboist and composer. He studied at the University of Hartford's Hartt School of Music (BMEd 1967), at Northwestern University (MM 1971) and as a postgraduate at Oberlin College Conservatory; his principal teachers were Albert Goltzer, Ray Still and Grover Schiltz. He continues to study, perform and compose for double reed instruments from many parts of the world. In 1975 Celli founded with other Connecticut artists Real Art Ways, an organization to promote avant-garde events in Hartford. He was the director of that organization as well as the Artistic Director of the New Music America festivals in Hartford (1984) and Miami (1985). As a performer Celli gave the American premières of Stockhausen's *Spiral* and *Solo*. In order to extend the oboe repertory, he has commissioned more than 35 compositions from a variety of American composers, including Oliveros, Niblock, Cope, Lucier, Fulkerson and Goldstein; among the new works are pieces for the acoustic or the electric oboe combined with various instrumental ensembles, mixed-media works, directed improvisations, interactive computer performances, live satellite performances and site-specific environmentally responsive pieces. Since 1985 his works have also utilized multiple channel video with live performers.

As a composer Celli often includes improvisatory elements in his works and uses extended techniques for the oboe and the english horn. In 1981 he received a joint commission from the Wesleyan Singers and the Connecticut Council on the Arts for a work for chorus and tape entitled *To Be Announced*. He has been actively involved in developing educational programmes in South Korea and South America which integrate traditional world musics with contemporary classical performance practices. He was the recipient of a Meet the Composer commission (1996) and a Rockerfeller Foundation residency (1996).

JOAN LA BARBARA

Cellier, Alfred (*b* London, 1 Dec 1844; *d* London, 28 Dec 1891). English organist, conductor and theatrical composer. The son of a teacher of French in Hackney, he was a chorister at the Chapel Royal under Thomas Helmore at the same time as Arthur Sullivan. When his voice broke he studied the organ and in 1862 became organist at All Saints, Blackheath. From there he moved to Belfast, succeeding E.T. Chipp as organist at the Ulster Hall and acting as director of the Belfast Philharmonic Society. In 1868 he returned to London to be organist at St Alban's, Holborn; but like Sullivan, Cellier aspired to become a theatrical composer rather than an ecclesiastical musician, and one of his early productions was written for the German Reeds' Gallery of Illustration entertainment, *Charity Begins at Home* (1872). The previous year Cellier had been appointed first musical director of the Court Theatre (London), going from there to the Prince's Theatre, Manchester (1871–5), then under the management of Charles Calvert, the famous producer of Shakespeare. He later held appointments at the Opera Comique and the Criterion and St James's theatres, and for many years had close professional connections with the company set up by Richard D'Oyly Carte, who made him his representative in Australia and the USA. Cellier assisted Sullivan as conductor of Gatti's Covent Garden promenade concerts (1878–9); he also did some orchestration for Sullivan, conducted many of the 'Savoy operas' and was in charge of the first performance of Sullivan's *Ivanhoe* in 1891.

Cellier's own compositions were nearly all for the stage. From 1870 onwards he produced a succession of operas and operettas, as well as incidental music (sometimes in collaboration with his brother François). A comic opera, *The Sultan of Mocha*, was produced in Manchester (1874) and London (1876) and revived at the Strand Theatre in 1887. It was followed by *The Tower of London* (1875) and *Nell Gwynne* (1876) with a libretto by H.B. Farnie – later used for a musical comedy of the same name by Robert Planquette (1884). In 1881 a three-act grand opera on words adapted from Longfellow's dramatic poem *The Masque of Pandora* (1875) was given in Boston, Massachusetts. But Cellier's major success was *Dorothy* (1886), which was a reworking of material used in *Nell Gwynne*. This 'old English' musical comedy enjoyed

almost unprecedented popularity (931 performances in London alone) and was played in many countries. Its successor, *Doris* (1889), proved less acceptable; and Cellier did not live to witness the stage production (under Ivan Caryll) of *The Mountebanks*, for which W.S. Gilbert had provided one of his wittiest librettos. As a composer, Cellier bears comparison in many respects with Sullivan, though his music is lacking in dramatic power; and, as G.B. Shaw put it, whereas Sullivan is spontaneously vivacious, Cellier is only energetic. The charm of his melodies, however, is undeniable, and his handling of vocal ensembles is usually of a high standard.

WORKS

STAGE

first performed in London unless otherwise stated

all printed works published in London

Charity Begins at Home (musical proverb, 1, B. Rowe [B.C. Stephenson]), Gallery of Illustration, 7 Feb 1872
Dora's Dream (operetta, 1, A. Cecil), Gallery of Illustration, 3 July 1873
Topsyturveydom (2 scenes, W.S. Gilbert), Criterion, 21 March 1874
The Sultan of Mocha (comic op, 3, ? A. Jarret), Manchester, Prince's, 16 Nov 1874; rev., lib. rev. W. Lestocq, Strand, 21 Sept 1887
The Tower of London (comic op, 3), Manchester, Prince's, 4 Oct 1875; rev. as Doris, 1889
Nell Gwynne (comic op, 3, H.B. Farnie, after W.G.T. Moncrieff: *Rochester*), Manchester, Prince's, 17 Oct 1876; rev. as Dorothy, 1886
Two Foster Brothers (operetta, 1, G. a'Beckett), St George's Hall, 12 March 1877
The Spectre Knight (fanciful operetta, 1, J. Albery), Opera Comique, 9 Feb 1878
Belladonna, or The Little Beauty and the Great Beast (3, A. Thompson), Manchester, Prince's, 27 April 1878
After All (vaudeville, 1, F. Desprez), Opera Comique, 23 Dec 1878
In the Sulks (vaudeville, 1, Desprez), Opera Comique, 21 Feb 1880
The Masque of Pandora (grand op, 3, Rowe, after Longfellow), Boston, MA, Boston Theatre, 10 Jan 1881, lib pubd
The Carp (whimsicality, 1, Desprez), Savoy, 13 Feb 1886
Dorothy (comedy op, 3, B.C. Stephenson), Gaiety, 25 Sept 1886; rev. of Nell Gwynne
Mrs Jarramie's Genie (operetta, 1, Desprez), Savoy, 14 Feb 1888, collab, F. Cellier
Doris (comedy op, 3, Stephenson), Lyric, 20 April 1889; rev. of Tower of London
The Mountebanks (comic op, 2, Gilbert), Lyric, 4 Jan 1892; completed by I. Caryll

E.D. MACKERNESS

Cellier, Jacques (*b* France, mid-16th century; *d* Reims, *c*1620). French organist and calligrapher. He was organist at the cathedrals of Laon and Reims. Between 1583 and 1587 he copied out a manuscript by François Merlin, *controlleur général* for Marie Elizabeth, only daughter of Charles IX. The work, *Recherches de plusieurs singularités* (*F-Pn* fonds fr. 9152), contains drawings, diagrams and finely written texts on a number of artistic and scientific subjects, including alphabets and the Lord's Prayer in many languages, exterior and interior views of buildings (among them two showing the organs in Reims Cathedral and the Ste Chapelle in Paris), scientific diagrams and maps, music, and drawings of musical instruments. Many of the pages are signed by Cellier. The volume was prepared for presentation to Henri III. The musical section is dated 1585.

Besides tunings, canons and short compositions, a table of notes and rests, and samples of tablature, the section on music contains detailed drawings, some of them incorrect, of many instruments, including the mandore, drums, trumpet, several wind bands, musical glasses, anvil, psaltery, hurdy-gurdy, transverse flute, viol, harp, bagpipe, violin, carillon, the Turkish 'tambora', jingles sewn on to a dancer, clavichord, regals, lute, triangle, cittern, a neo-classical lyre, virginals, guitar and panpipes (some of the drawings are reproduced as plates 6 and 7 in *GSJ*, x (1957); see also pp.88–9 of that volume). Many of the same drawings appear also in the manuscript *GB-Lbl* Add.30342, apparently copied by a scribe named Mercurio Vecchio in 1588, possibly for Merlin's own use. The manuscripts are important because they offer more detail than any French source before Mersenne. Since both manuscripts show the smallest pipes of the regals at the bottom of the keyboard both may have been copied from a now lost printed work in which the engraver reversed the original image.

An even more beautiful calligraphic manuscript (*F-RS* 971), copied by Cellier between 1593 and 1597 for Claude de Lisle, governor of Laon, includes musical instruments as ornaments in its borders.

Celoniati [Celoniatti, Celoniat, Celonieti, Celonietto], **Ignazio** (*b* before 1740; *d* Turin, 1784). Italian composer and violinist. He was in the royal service at Turin from 20 December 1750. Entering the chapel orchestra as the sixth of the second violins, he won the esteem of the court and his colleagues, achieving a high salary by the end of his life in spite of a fiery temperament that led him into controversies with several other musicians. He also played for the opera at the Teatro Regio. He met Mozart on his visit to Turin in January 1771. In 1774 he was given the additional duty of playing to accompany the dancing lessons of the children of the royal family. Between 1778 and 1781 he was impresario for comic opera performances at the Teatro Carignano.

At least seven other Celoniatis, including Ignazio's brothers Carlo Lorenzo and Carlo Antonio, were active from 1737 to after 1785 as violinists or bass players at the Turin court. Of these, only Carlo Lorenzo is known to have composed, publishing six duos for two violins (Paris, n.d.).

MARIE-THÉRÈSE BOUQUET-BOYER

Celtic chant. Liturgical chant sung by the Churches of the Celtic-speaking peoples of the Middle Ages before they conformed to the *unitas catholica* of the Roman Church.

1. Historical background. 2. Liturgical structure. 3. The Divine Office. 4. Psalmody. 5. The Mass. 6. Hymns. 7. Notated sources.

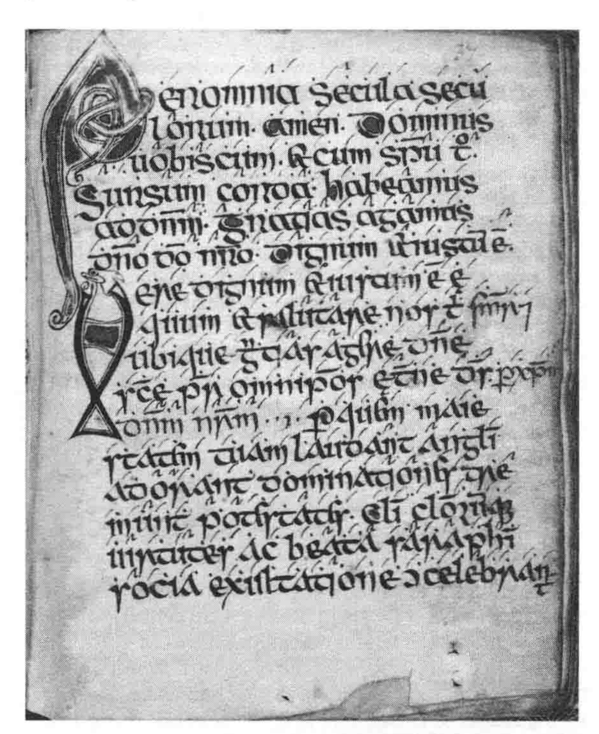
1. HISTORICAL BACKGROUND. The liturgical practices observed in Christian worship by Celtic-speaking peoples were developed in monastic communities in Ireland, Scotland, Cumbria, Wales, Devon, Cornwall and Brittany. However, Celtic influence was also evident in certain areas controlled by the Anglo-Saxons, such as Northumbria, and extended to the Continent through the efforts of Irish missionaries during the 6th and 7th centuries. Chief among these last was St Columbanus (*c*543–615), founder of monasteries of Luxeuil and Bobbio. His followers spread the customs of the Columbanian abbeys throughout centres in what are now France, Belgium, Germany, Austria, Switzerland, Italy and Spain. Several of the most important sources for the early Celtic liturgy are associated with the Columbanian foundations in Gaul.

It is somewhat misleading to refer to 'the Celtic Church', since there was no single, uniform institution under central authority, and medieval Celtic-speaking Christians never considered themselves 'Celtic' in the sense of belonging to a national group, although an awareness of common purpose may be said to have existed for a brief period during the late 6th century and the early 7th. Nonetheless, the term serves as a useful way of classifying regional and cultural distinctiveness, by identifying what was essentially a network of monastic communities that shared a similar kind of structure and between whom there was regular, sometimes close, contact.

Christianity in Celtic lands derived initially from converts in Roman Britain. Although little is known about the Romano-British Church other than that it was Gaulish in origin, it survived for several decades after the withdrawal of the Roman legions in 410, and it was from this environment that Christianity eventually spread throughout the entire Insular region. Many of the liturgical features of the Celtic Church were heavily indebted to Gallican rites – reflecting the Gaulish roots of Romano-British Christianity as well as continuing contact with Gaul from the 5th and 6th centuries – but also included elements of the Roman, Ambrosian, Visigothic, Palestinian and Egyptian Churches in the 6th and 7th centuries.

The Celtic Church in Brittany was established by British Christians fleeing the invasions of the pagan Anglo-Saxons in the 5th and 6th centuries. Ireland was traditionally converted by St Patrick (*d* 461), a British Christian, although his mission followed closely in the wake of the Roman Palladius in 431. The rapid rise of monasticism there consolidated the new religion in the 5th century, and resulted in the development of a system unique in the West in which the Irish Church was dominated by networks of powerful monastic houses rather than by diocesan bishoprics; this system explains the emphasis on the monastic liturgy in surviving sources.

In due course Gaelic-speaking monks under the leadership of Colmcille of Derry (St Columba; *c*521–97) established a church on the now Scottish island of Iona in 563. The monks of Iona engaged in a mission of conversion among the Picts of Scotland and established another in Anglo-Saxon Northumbria, founding the abbey and bishopric of Lindisfarne in 635. For some time Irish Christianity in Anglo-Saxon England co-existed with missionaries sent by the Roman church established in Kent by St Augustine of Canterbury. As the Roman mission expanded northwards, differences between the Irish and Roman traditions generated tensions, as Bede (673–735) recorded in his writings. These differences centred on the timing of the celebration of Easter, the form of the monastic tonsure and aspects of the rituals of baptism and ordination. The Northumbrian Church was eventually made to comply with Roman traditions at the Synod of Whitby in 664. Following this synod, Celtic traditions were gradually eroded in England by a series of Anglo-Saxon Church councils, in particular that held at Clovesho in 747, which decreed that the Roman liturgy and its chant should be observed throughout the province of Canterbury.



The regional practices of Celtic monks were gradually undermined elsewhere throughout Britain and Ireland, more quickly here, more slowly there, by pressure from Romanizing bishops and abbots to follow central authority (see Warren, 1881/*R*, 10ff; and Gougaud, 1911, Eng. trans., 1932/*R*). In Ireland an increasing degree of Roman influence may be assumed from the 7th century following the adoption of the Roman date for Easter in southern Ireland at the Synod of Mag Léna (*c*630) and in the northern part of the country at the Synod of Tara (692). The Easter question was also settled elsewhere in most Celtic-speaking regions over the course of the 7th and 8th centuries. But many aspects of Celtic ritual continued for much longer. Liturgical practices in Brittany, which since the 5th century had been closely connected with missions from Wales and Cornwall, were brought into line with Rome following the imposition of central authority on the monks of Landévennec in 818 by Charlemagne's son, Louis the Pious. Celtic practices in Scotland were formally suppressed through reforms introduced by Queen Margaret (*d* 1093; see Gougaud, 1911, Eng. trans., 1932/*R*, pp.329, 410–11).

The process of adaptation to Roman traditions continued in Ireland and Wales in the late 11th century and the 12th as the political and social structures of the Celtic populations were eroded by the Normans. Wales submitted to Canterbury with the election of Bernard, a Norman, to the See of St David's in 1115. In Ireland, Patrick, the second bishop of Dublin (1074–84), was consecrated at St Paul's Cathedral, London, and from then onwards the

diocese of Dublin looked to Canterbury rather than Armagh, capital of the Irish See. Even before the formal establishment of the Normans in Ireland in 1172, reforms of the Irish Church were led from within by St Malachy (1092–1148), who was also responsible for the introduction of the Cistercian Order into Ireland. Similarly, St Laurence O'Toole, archbishop of Dublin from 1162, introduced canons regular into his cathedral and brought about reforms in the rituals and the chant (ed. Messingham, 1624, pp.384–5).

Several reforms were instituted also at the Synod of Cashel in 1172, convened by Henry II of England. Although changes were called for that would bring the Irish Church into line with Canon Law as observed in the English Church, no particular rite was recommended (Brannon, 1990, pp.22–3), nor were Celtic liturgical practices specifically discarded. But soon thereafter, a decree was issued in 1186 by Bishop John Comyn at a synod in Dublin, whereby it was stated that churches in the Dublin province should adopt the English Use of Salisbury (Sarum Rite). The situation for the rest of the country, however, was undoubtedly more mixed.

2. LITURGICAL STRUCTURE. The tribal, local and territorial qualities of Celtic societies were probably accompanied by a similar sense of locality and regional variation in liturgical and other monastic practices. Liturgical forms were open to outside influences, and tended to vary from one monastery to another. Yet while this general rule is apparent from surviving sources, there is insufficient evidence to make a systematic study or to map regional distinctions in detail. The oldest and most abundant information comes from Irish sources, which is why the Irish Church, including the monastery of Iona, is given greater emphasis here.

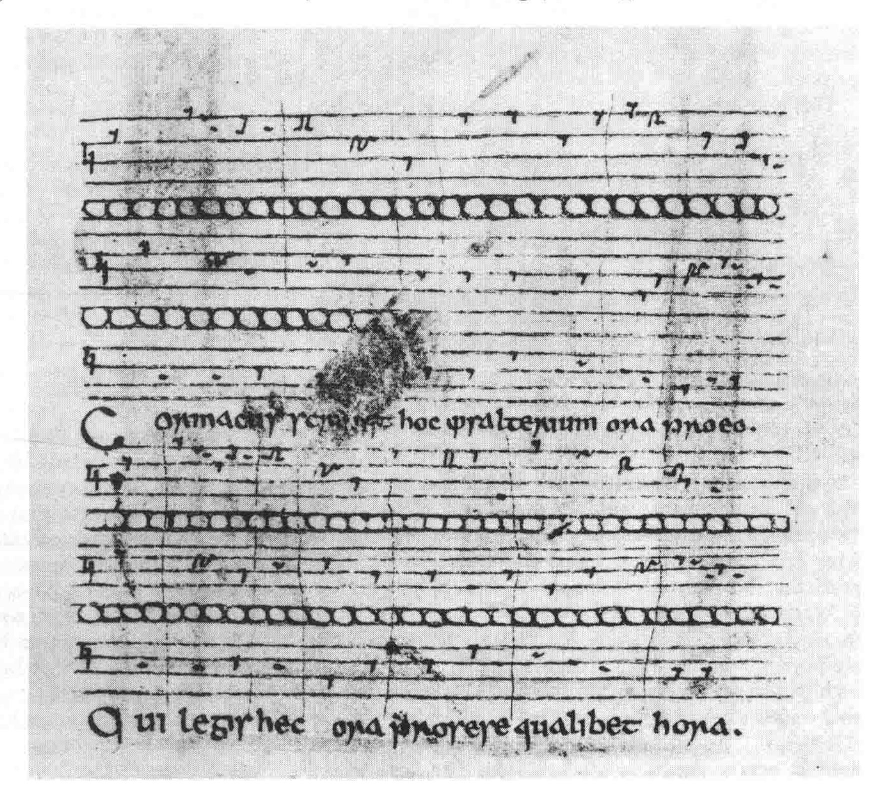
1. 'Praefatio cotidiana' from the Drummond Missal, probably first half of the 12th century (US-NYpm M 627, f.37r)

Among the main sources for Celtic liturgy are the *Cathach* ('Battler') of St Colmcille (*IRL-Da* s.n.), a Psalter written in Ireland sometime during the 6th and 7th centuries and one of the earliest examples of the Gallican type; the late 7th-century 'Antiphonary' of Bangor (*I-Ma* C.5 inf.), possibly copied at the Columbanian monastery of Bobbio, and the closely related Turin fragment (*I-Tn* F.iv.1, fasc. 9; see Meyer, 1903), although the question remains as to whether the latter is a sister manuscript or an independent witness; the Stowe 'Missal' (*IRL-Da* D.II.3), copied in 792, probably at Tallaght, Co. Dublin, from an exemplar of not later than 650; the Gallican-Roman Bobbio Missal (*F-Pn* lat.13246), written during the 8th century, possibly at Bobbio; the 'pocket' Gospel books of Dimma (*IRL-Dtc* 59; from Roscrea, Co. Tipperary) and Mulling (*Dtc* 60; from Tech Moling, Co. Kildare), both of which date from the second half of the 8th century; and additions in the Book of Deer, a 9th- or 10th-century Gospel Book whose precise origin is unknown, but which belonged to the Columban monastery of Deer in Aberdeenshire since at least the early 12th century, when a Service for the Commemoration of the Sick was added (*GB-Cu* Ii.6.32, ff.28*v*–29*r*).

The Antiphonary of Bangor is a collection of hymns, collects and canticles for the Divine Office; despite being mediated through Bobbio, it represents the most important manuscript for an Irish Office. The Stowe Missal is the only surviving Irish sacramentary; it contains elements from the Roman rite that were incorporated soon after its compilation, combines aspects of the Gallican, Visigothic, Byzantine and Coptic liturgies with Irish compositions, and shares collects and prayers with Gallican sacramentaries such as the Bobbio Missal, with Roman, Gelasian and Gregorian sacramentaries, and with the Verona Collection (or Leonine Sacramentary).

The chief collections of hymns are found in the Antiphonary of Bangor and in the two manuscripts containing the *Irish Liber hymnorum* (*IRL-Dtc* 1441, and Killiney, Franciscan House of Studies, A.2), from the late 11th and early 12th centuries respectively. The *Irish Liber hymnorum* is an antiquarian collection based on now-lost liturgical books.

Elements of the Christian liturgy peculiar to the Celtic Churches are few; they include the symbolic use of fire at Easter, the Feast of All Saints, the sung Credo (see Bieler, 1963, p.118), as well as a preference for verse collects and hymns. The blessing of the Paschal Candle may be an originally Irish contribution (compare, for example, the vivid role of fire in the account of St Patrick's challenge to the Irish High King at Tara). The Antiphonary of Bangor is the only source for *Hymnus quando cereus benedicitur* ('the hymn sung at the blessing of the candle'), which may have been intended for this rite. Also, certain forms of private prayer and prayer formulae (such as litanies and verse collects), the penitential literature as well as the promotion of relics and saints' cults (which in Ireland developed particularly early) represent distinctive regional characteristics that spread to the Anglo-Saxon Church and to continental centres of Insular influence. Devotion to saints often took on additional, extra-liturgical functions, their miraculous powers being invoked to intervene in local disputes and private quarrels. Saints' lives (*vitae*) contain many references to the power of their curses as well as of their blessings, reinforcing the impression that the supernatural influence traditionally associated with



the druids was transferred directly from pagan practice (for recent surveys, see Sharpe, 1979; and Little, 1993, pp.154–85; see also Buckley, '"And his voice swelled"', 1995, pp.42ff, for discussion of saints' use of the power of music).

There is early evidence for the existence of music in Irish rituals in the rubrics of the Stowe Missal, the Gospel Book of Dimma and the Book of Mulling. Emphasis on the Psalter rather than the lectionary was also a characteristic feature, and Columbanus is known to have established a particular form of the Divine Office in his foundation at Bobbio, although it has not survived. Chanting psalms was a central part of the Office (see Fleischmann, 1952; Fleischmann and Gleeson, 1965), and hymn-singing played an exceptionally prominent role. A tantalising comment from Jonas of Bobbio, author of a *vita* of St Columbanus between about 639 and 643, refers to a cursus set out by the saint and containing instructions for the performance of chant (ed. Krusch, 1905, p.158). As for recovering the melodies of Celtic chant, only late sources contain any clues, and research is still at a preliminary stage. Nevertheless, the evidence is sufficient to provide grounds for further development, as will be indicated below.

3. The Divine Office. Before the late 6th century, Celtic devotional sources are confined mainly to saints' *vitae* and thus do not shed much light on details of daily ritual. Sources from the 7th century include the Antiphonary of Bangor and the Turin fragment. In the 8th and 9th centuries, texts associated with the eremitic monastic movement whose followers were known as the Céli Dé ('Companions of God'), predominate and indicate a multiplicity of customs, as does the 'Rule of Tallaght' (ed. Gwynn, 1927). But it is thought that traditions became more uniform in these centuries as a result of increased communication between heads of houses.

There is considerable variation among the existing sources. The *Regula monachorum* and the *Regula coenobialis* of Columbanus, said to be based on the wisdom of his 'seniores' (predecessors), may provide a direct link with the monastery at Bangor, Co. Down, where he trained, but it reveals almost nothing of the liturgical hours or other aspects of the structure of daily life, focussing instead on the importance of self-discipline and similar principles of conduct (trans. Bieler, 1963, pp.32–9). Some information can also be gleaned from the *Vita Sancti Columbani* by Jonas of Bobbio and from the *Vita Sancti Columbae* by Adomnán, Abbot of Iona (679–704). In general, life in Irish monasteries was extremely austere in terms of food, clothing, sleep, and physical comfort of any kind. The Book of Mulling contains a directory or plan of a service, but it is unclear whether this represents the Daily Office or a Penitential Office.

Practices seem to have varied from centre to centre. For example, the *Navigatio Brendani*, a text of Irish origin probably dating to the late 9th or early 10th century and describing a voyage made by St Brendan (*c*486–575), includes a reference to perpetual singing of *Ibunt sancti* maintained by three choirs on an island where Brendan and his monks landed (Selmer, ed., 1959, p.50). The tale also includes a detailed description of a credible Irish office (Curran, 1984, pp.169–73; Stevenson, introduction in Warren, 1881/*R*, pp.xlvii–viii). The custom of *laus perennis* ('perpetual praise'), whereby a part of the monastic community sang psalms all of the time, was characteristic of the Gallican rite and was also attested in continental Columbanian monasteries (see Gindele, 1959). Jocelyn, in his 12th-century *Vita Sancti Kentigerni* (also known as Mungo; *d* 612), indicates that such a

2. *Colophon in three-part polyphony from Cormac's Psalter, second half of the 12th century (GB-Lbl Add.36929, f.59r; see ex.3 for transcription)*

practice also obtained at St Asaph's, North Wales, although Kentigern's association with that centre is now considered unlikely (D.H. Farmer: *Oxford Dictionary of Saints*, Oxford, 1997, p.286).

The injunction to sing the Kyrie hourly is attributed to St Patrick, who is said to have recommended it because it was a Roman custom (though introduced from Greece). However, it was also practised in the Gallican Church from the 6th century (Bieler and Kelly, eds., 1979, pp.124–5) and the reference to Rome, however accurate, may well be due to the particular line of persuasion being emphasised in the Patrician text (Stevenson, introduction in Warren, 1881/*R*, pp.lxviii–lxix, and note 369).

4. PSALMODY. The Celtic Psalter, like the Gallican, was divided into three groups of 50 psalms each. The influence of southern Gaulish and Eastern practice on the Celtic Office is seen in the use of Psalm lxxxix at Prime, Psalms ciii and cxii at Vespers, and in the use of canticles. According to the Rule of Columbanus, psalm singing was central to the Divine Office. Columbanus arranged the psalms for each service into groups of three, called 'chori', a custom also described by Cassian of Marseilles (*c*360–435) in his *De institutis*, in relation to the churches of Palestine, Mesopotamia and other Eastern centres (see Stevenson, introduction in Warren, 1881/*R*, pp.xli, xlv and *passim* for further discussion of Cassian's influence in Ireland and Iona). The first two psalms were sung straight through and the third antiphonally – in other words, with the singers divided into two groups, one intoning the psalm verse, the other the response. However, psalm singing in unison seems to have been the practice on Iona, whence it reached Northumbria. Stephanus's *Vita Wilfridi* (ed. and trans. Colgrave, 1985, §47.98–9), written in about 720, contains a reference to the introduction, by the Anglo-Saxon bishop Wilfrid (*d* 709), of previously unknown antiphonal singing into Northumbria (Stevenson, introduction in Warren, 1881/*R*, pp.lxxvii–viii).

This practice of alternating voices is also referred to in an 8th-century Irish explanatory tract on the psalms in the form of a series of questions and answers. It is based on the commentaries of Cassiodorus (preserved in the 15th-century source *GB-Ob* Rawl.B.502), and contains a reference to antiphonal singing of psalms and the use of a string instrument:

> This is what David did in his last days. He selected four thousand chosen men of the sons of Israel to sing and practise the psalms always without cessation. One third of them for the choir, one third for the 'crot', one third for the choir and the 'crot'. The word *psalmus* applies to what was invented for the 'crot' and is practised on it. *Canticum* applies to what is practised by the choir and is sung with the 'crot'. *Psalmus cantici* applies to what is taken from the 'crot' to the choir. *Canticum psalmi* applies to what is taken from the choir to the 'crot'.

The discussion of terminology is a paraphrase of chapters 5–8 of Cassiodorus's *Expositio psalmorum* (*PL*, lxx, 15–16), in which the scribe has used the Irish term 'crot' (a lyre, later a harp) for Cassiodorus's 'instrumentum musicum' (ed. Meyer, 1894, pp.8–9, 31 n.275, 89 n.285).

While the Irish commentary is addressed to Old Testament practice, it is likely that it also had local contemporary significance. Huglo (1976, p.193) has highlighted references in the theoretical treatise *Musica enchiriadis* to the organal voice joining with instruments (*GerbertS*, i, 166*b*), and to different instruments being used in octave doubling (ibid., 161*b*). The *Scolica* and the *Musica enchiriadis* (both from late 9th-century northern France, perhaps in an Insular milieu) contain numerous citations of the *Te Deum*, which, as seen above, occupied a special place in the Celtic liturgies. Isidore of Seville (*d* 636) attests the use of a string instrument in the accompaniment of psalmody in Visigothic liturgies (Huglo, 1976, p.192); and in continental sources the use of instruments in the course of the Office is well documented, for psalmody, the singing of tropes, textless alleluiatic sequences and subsequent proses (but not for the choral Offices). Similarly Hucbald mentioned that a six-string chordophone ('cithara') was adapted for the purpose of teaching chant (see Huglo, 1986, p.189). As in other instances, the Celtic world may therefore be viewed not as a region apart but rather as sharing common ground with liturgical practices elsewhere. Yet the evidence is sparse, hence the enormous value of the Irish sources here (for more detailed discussion see Buckley, 'Music in Ancient and Medieval Ireland', in press).

In Irish narrative literature there are references to travelling clerics who sang psalms and other sacred texts to the accompaniment of a small string instrument described as *ocht-tédach* ('eight-string instrument'), which they carried about with them attached to their girdles. Gerald of Wales (?1146–?1220) also referred to the practice by bishops and abbots and holy men in Ireland who in times past used to have a 'cithara' (undoubtedly a lyre, later probably a harp) on which they played pious music. Because of this, according to Gerald, St Kevin's 'cithara' was regarded as a sacred relic and still held in reverence in Gerald's time.

The wealth of iconographic evidence points also to the normality of these practices. Muiredach's Cross (early 10th century) at Monasterboice, Co. Louth, is a particularly detailed example in which a choir of monks is led in singing by two monks who play a lyre and some kind of wind instrument, perhaps a straight horn (for detailed discussion of this and other monuments, see Buckley, 1991, figs.7 and 40; see also Buckley, 1990, and '"A Lesson for the People"', 1995). The use of horns in Irish liturgical practice is strongly suggested by the contexts of archaeological finds and by the similarity of their decoration to other sacred objects such as bells and buckets. Bells associated with individual monks are found from all of the main Celtic regions, including Ireland, Scotland, Wales and Brittany. They had a specific form and were important objects of veneration, to the extent that shrines were constructed for bells associated with important saints (see Bourke 1980, 1982, 1983 and 1994).

5. THE MASS. As elsewhere in pre-Carolingian Europe, there was no standard Mass in the Celtic Church for all times and in all regions. Nonetheless, there is some evidence to suggest that the Mass may have become relatively standardized across Ireland in the 6th and 7th centuries. Information is scanty and is derived from the Stowe Missal, the Bobbio Missal and various fragments. The Irish Mass in these sources bears signs of significant Gallican influence, but it differs from the Gallican liturgy in its prominent use of Roman, Visigothic and, particularly, Eastern characteristics. The Gallican elements include the preparation of offerings before the entry of the celebrant; the litany preceding the Mass; the reading of diptychs (listing names of the dead) when the veil is

lifted from the chalice; the breaking of the Host before the Pater noster; the Pax (the sign of peace); and the presence of communion antiphons. The Roman elements, though often under-emphasised by some scholars, may well have been there from an early period, perhaps as far back as the mission of Palladius in the early 5th century (Gamber, 1967; and 1970, pp.87–8). As Stevenson has pointed out (introduction in Warren, 1881/*R*, pp.lxviii–xix), this places the presumed Romanizing reforms of the Irish Church in the 7th and 8th centuries in a different light, since the decrees demanding conformity with Rome may instead reflect long-standing practices (Warren, 1881/*R*, p.127). The Eastern elements seem to have been introduced into the Irish Church via the Gallican monastic centres of Lérins and Marseilles, whose traditions were described by John Cassian. The presence of Visigothic elements reflects close contact between Ireland and Spain (see Hillgarth, 1984), although in Irish monastic centres early acquaintance with Spanish authors such as Isidore of Seville may also have been via the Columbanian community of Bobbio (Curran, 1984, p.152).

The Mass was normally celebrated at dawn, although the 8th-century *Vita Sancti Galli* states that St Gallus (*c*550–*c*627), an Irish disciple of Columbanus and founder of the abbey of St Gallen, celebrated the service after Matins (Nocturns) when in other monasteries the monks would normally have returned to bed. It took place on Sundays and feast days, including saints' days which, as with other aspects of their veneration, appear to have been established at a particularly early period in Ireland. Private Masses seem also to have been customary, and on occasion priests were allowed to say Mass twice in one day (Warren, 1881/*R*, p.143). The tract in the Stowe Missal lists those items of the Mass that were sung, including the introit, prayers, Augment, lections of the Apostles, bigradual psalm, Gospel and Benediction (Fleischmann, 1952, p.46).

6. HYMNS. No hymns survive from British, Welsh or Breton sources apart from two late Breton hymns (Lapidge and Sharpe, 1985, nos.983–4; dating to the 12th and 11th centuries respectively). Collections of Hiberno-Latin and vernacular hymns represent the largest body of material from any Celtic region and are among the most particular and striking aspects of Irish liturgical practice. They were the result of a new fusion between Latin poetry and indigenous Irish verse forms, of which the chief characteristics are short lines with the extensive use of alliteration, internal rhyme and assonance.

The importance attached to hymns in the Celtic rite is made clear in a number of Irish literary tales and in references contained in liturgical books. They were a source of indulgence and grace, and in this connection the singing of the last three strophes was considered sufficient to earn a spiritual reward (see Stevenson, introduction in Warren, 1881/*R*, pp.lxxxviii–ix; Stevenson, 1996, pp.111–12 and n.56). They were also thought to give immunity against fire, poison and wild animals, and as a protection for travellers (ed. Plummer, 1910, i, p.clxxix; Fleischmann and Gleeson, 1965, pp.86–7; Buckley, '"And his voice swelled"', 1995, pp.42–3).

The main sources for hymns are the Antiphonary of Bangor and the *Irish Liber hymnorum*, but texts of Irish hymns may also be found in manuscripts from England and, in particular, the Continent where numerous Irish saints' cults grew up in the religious houses of Francia. Extant liturgical calendars from Frankish Gaul provide evidence for the active cults of over 40 Irish saints (Little, 1993, pp.180–81; Gougaud, 1911, Eng. trans., 1932/*R*, 142–58). For example, the Feast of Saint Brigid was celebrated *inter alia* at Rebais, Meaux, Nivelles, Senlis, Corbie, Marchiennes, St Amand and St Vaast. A 9th-century Bavarian litany includes invocations to Columbanus, Fursey, Patrick, Colmcille, Comgall, Adomnán and Brigid (Coens, 1959; *AH*, li).

The Hiberno-Latin hymn repertory is evidently influenced by, but nonetheless quite distinct from, other Western collections. As well as registering the influence of early Christian Roman authors, it includes, in particular, hymns from Gaulish sources, but it also displays a great deal of creativity in the composition of new hymns. Colmcille was said by Adomnán, his biographer, to have written a book of hymns for the week (*Hymnorum liber septimaniorum*), which suggests a weekly cursus of hymns on Iona with parallels with the *cursus hymnorum* of Caesarius of Arles (*c*470–543). This idea is supported also by the preface to the hymn *Altus prosator* in a manuscript of the *Irish Liber hymnorum* (*IRL-Dtc* 1441) where it is related that Gregory the Great (*d* 604) sent Colmcille a cross and 'immain na sechtmaine' ('hymns of the week').

The oldest recorded hymns of the Christian Church are the Gloria, *Te Deum* (of which the Antiphonary of Bangor represents the earliest manuscript tradition) and *Precamur patrem* (Antiphonary of Bangor, no.3), the last probably written by Colmcille at Bangor in about 580. The sources contain not only prose hymns but also rhythmic hymns and even collects, a feature that occurs only in Ireland and not in Gaul. The liturgical function of these hymns is not always clear, except for five in the Antiphonary of Bangor (nos.8–12) that bear rubrics indicating their use. Of these, *Sancti venite* (no.8) is the oldest recorded communion hymn.

The Antiphonary of Bangor contains eight unica, and ten that were certainly intended for liturgical use. Some of them are related to saints' cults, for example, Irish saints such as Patrick, Comgall and Camelac, as well as 'international' figures who were particularly venerated in Ireland, such as the Virgin Mary and Martin of Tours. *Cantemus in omni die*, dating to the late 8th century or the early 9th and attributed to the Ionan monk Cú Cuimhne, is the oldest known Latin hymn to the Virgin.

In addition to the obvious interest in hymns as sung poetry, some of their texts contain information on the ways in which they would have been performed (Fleischmann and Gleeson, 1965, pp.86ff; Stevenson, 1996, pp.113–14). For example, in the opening lines of *Cantemus in omni die* in the *Irish Liber hymnorum* the word 'varie' in the first line is glossed as 'inter duos choros' ('between two choirs'), while the third line refers explicitly to antiphonal singing:

> Cantemus in omni die / concinentes varie
> conclamantes Deo dignum / ymnum sanctae Mariae
> Bis per chorum hic et inde / collaudemus Mariam

('Let us sing every day chanting in various ways, crying out to God the worthy hymn of the holy Mary. Twice, through the chorus here and the other over there, we should praise Mary')

Ex.1 Two antiphons adapted from a 13th century breviary from Caen (*F-Pa* 279, f.214v)

And in *Ecce fulget clarissima*, a Vespers hymn from an Office for St Patrick (also in the *Irish Liber hymnorum*), reference is made in the ninth stanza to alternating voices and to stringed instruments:

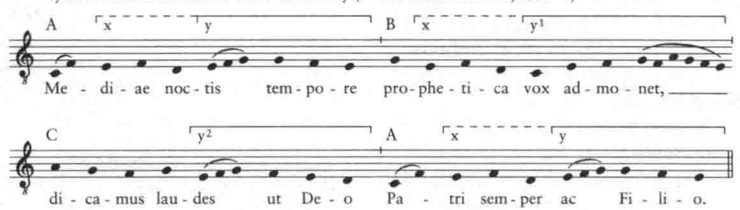
> Psallemus Christo cordibus / alternantes et vocibus

> ('We chant the psalms to Christ alternating with our strings and our voices')

Similarly, the structure of the hymn *Recordemur iustitiae* (Antiphonary of Bangor, no.3) by Comgall of Bangor implies the use of two choirs, with a subdivided congregation providing the refrain for each of the respective choirs. Each alphabetic stanza is followed by the first and second two lines of the refrain alternately.

Precamur patrem has an alleluia after the first and last strophes, perhaps indicating reponsorial singing by the congregation after each. The Matins hymn *Spiritus divinae lucis* (Antiphonary of Bangor, no.12) has a one-line refrain following each strophe, as does the 8th- or 9th-century *Celebra Iuda* with an alleluia following each pair of lines. Similarly, the *Exodus* canticle *Audite caeli quae loquor* in the Antiphonary of Bangor contains repetitions of the first verse at intervals, suggesting that it was used as a response, or possibly a refrain, sung by the congregation. Hymns without refrain are either short or confined to the last three stanzas, probably implying *cantus directaneus*.

All of this suggests the presence of a trained choir or of a soloist who took responsibility for the longer or more complex parts.



7. NOTATED SOURCES. There are no notated manuscripts from the Celtic regions dating from before the 12th century. Of those that survive, the overwhelming majority are sources of the Use of Salisbury (Sarum Rite), but not exclusively so, as in some cases their contents reveal evidence of local practice.

The Drummond Missal (*US-NYpm* M 627), an Irish manuscript dating probably to the first half of the 12th century, represents the earliest source. Its non-diastematic St Gallen-type neumes (fig.1) had long been thought indecipherable; however, recent work has shown that not only are they readable in outline, but realistic hypotheses may be put forward concerning intervallic relationships, melodic patterns and text-melody relationships. This missal was probably compiled at Glendalough, Co. Wicklow, during the period of reforms set in train by Malachy, and some of the material, including the notated chants, may have been copied in part from an exemplar that dated perhaps to as early as the 10th century – a period when Celtic chant was flourishing (see Casey, 1995).

Another link with pre-Norman Ireland is found in the hymn *Ecce fulget clarissima*. Its text is attested in several sources for the Office of St Patrick, but it survives with notation uniquely in the Kilmoone Breviary (*IRL-Dtc* 80, f.122). Most significantly, the earliest example of the text occurs in a copy of the *Irish Liber hymnorum* (*Dtc* 1441). Since there are no older sources for the melody, it is impossible to ascertain whether it too dates from an earlier period, whether it was newly composed or whether indeed it was imported from elsewhere. Its style is distinctive and shares characteristics with hymns in honour of other Irish saints that are not found in the Use of Salisbury. In view of the predominance of G-mode and tertiary rather than stepwise melodic movement, Germanic influence has been postulated (Brannon, 1990, p.283; and 1993, p.35). This is perhaps no surprise, given the concentration of Irish *peregrini* in that part of continental Europe. And while it may not be possible to establish in which direction the influence was moving, further work of a systematic and comparative nature can only help shed light on such questions.

From later, non-Insular sources, Stäblein has identified a number of melodies that are suggestive of Celtic practice. Among them are two antiphons preserved in a 13th-century breviary (of the Use of Bayeux) from Caen (*F-Pa* 279, f.214*v*). The first is a setting of *Ibunt sancti*, a chant that, according to Jonas, was sung by Theudoaldus, a monk also from Bobbio, on his deathbed after he had received the Last Rites (see Stäblein, 1973, pp.593–4). Another reference to the singing of *Ibunt sancti* in an Irish context occurs in the *Navigatio Brendani*, where it is described as being sung continuously by three choirs on

Ex.2 First strophe of the hymn *Mediae noctis tempore*, adapted from a central or south Italian hymnar of the first half of the 13th century (*D-Bsb* Hamilton 688, ff.33–4)

Ex.3 Transcription of colophon in three-part polyphony from Cormac's Psalter (*GB-Lbl* Add.36929, f.59*r*)

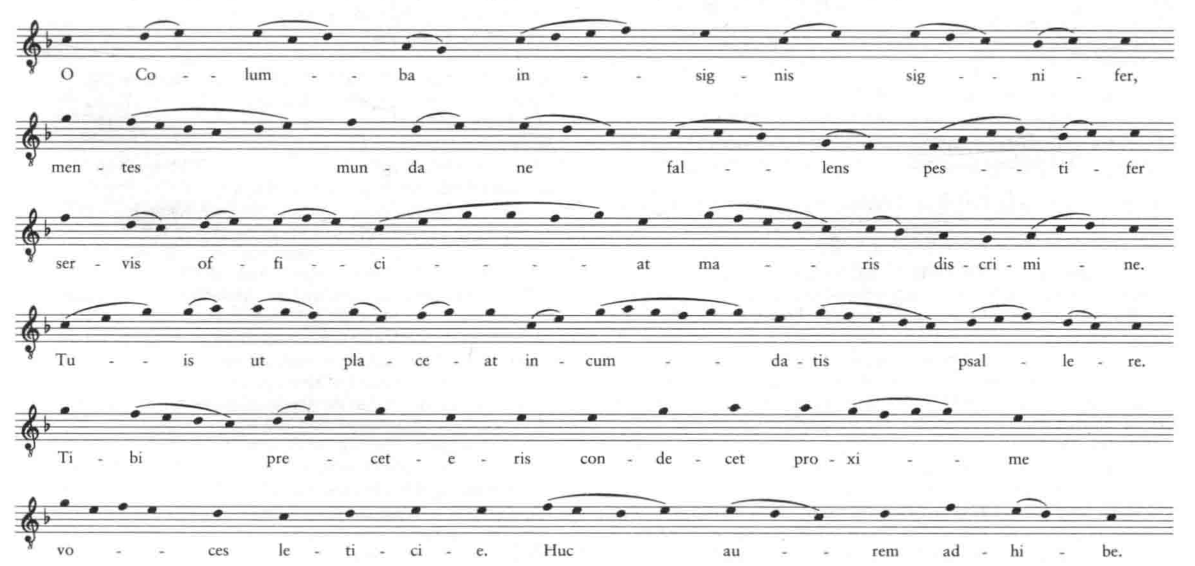
Cor - ma - cus scri - psit hoc psal - te - ri - um;
Cor - ma - cus scri - psit hoc psal - te - ri - um;
Cor - ma - cus scri - psit hoc psal - te - ri - um,

o - ra pro e - o. Qui le - gis hec,
o - ra pro e - o. Qui le - gis hec,
o - ra pro e - o. Qui le - gis hec,

o - ra pro se - se qua - li - bet ho - ra.
o - ra pro se - se qua - li - bet ho - ra.
o - ra pro se - se qua - li - bet ho - ra.

an island visited by the saint (see Selmer, ed., 1959, p.50; Curran, 1984, pp.170–71).

The Caen manuscript is the unique source of this text with its melody, though departing from Jonas's version of the words in the second line by substituting a series of alleluias. Stäblein has reconstructed the original, which conforms exactly to the surviving melody (ex.1*a*). The text features the common Irish characteristics of assonance and alliteration; its melody is formed from two simple motifs in *ABA* form for the first line, repeated exactly in the second. This parallel structure is not characteristic of Roman chant and is found elsewhere only in the more elaborate structure of sequences and lais. Similarly, the repetition of the cell within the melodic line is also decidedly un-Roman.



The other antiphon, *Crucem sanctam* (ex.1*b*), follows on the same folio in this manuscript, but unlike *Ibunt sancti* it is widely attested in sources from England, northern France, Italy, Spain and Switzerland. The four phrases are grouped in pairs, each with a different incipit (A, B, C and D) followed alternately by 'x' (with a half close) and 'x[1]' (with a full close) (for further details, see Stäblein, 1973, pp.592, 595ff).

The hymn *Mediae noctis tempore* (ex.2), found with its melody in a central or south Italian hymnary from the first half of the 13th century (*D-Bsb* Hamilton 688, ff.33–4), reveals textual and melodic characteristics similar to those of the antiphons from Caen. It is in origin a continental hymn, perhaps from Poitiers, with a text dating to at least the 6th century (see Stevenson, 1995, pp.105–06). Its use in Ireland is attested as far back as the Antiphonary of Bangor (with the alternative reading: 'Mediae noctis tempus est').

Similarly, the upper and middle voices of the finely wrought polyphonic *Cormacus scripsit* preserved in Cormac's Psalter (*GB-Lbl* Add.36929, f.59*r*; fig.2), an Irish manuscript from the second half of the 12th century, consist of two phrases repeated exactly in sequence, in which respect it too resembles the form of *Ibunt sancti* (ex.3; the reconstruction is conjectural, for in the manuscript the voices are not accurately aligned and text is supplied only for the tenor). This is a remarkably early source for a three-voice composition and may well be indicative of more widespread practice (see Buckley, 'Music in Ancient and Medieval Ireland', in press). The lowest voice is believed to be an adaptation of a Sarum *Benedicamus* melody for use 'ad secundum *Benedicamus* extra tempus paschale' (*GB-SB* 175, f.135*v*; see Harrison, 1967, p.76).

A similar construction occurs in a number of chants for the Office of Colmcille (Columba) from a 14th-century

Ex.4 Vespers responsory from the Office of St Colmcille (Columba), Inchcolm Antiphoner (*GB-Eu* 211.iv, f.2*r*; 14th century)

fragmentary antiphoner (*GB-Eu* 211.iv) believed to be from Inchcolm Abbey in the Firth of Forth, Scotland, an Augustinian foundation dedicated to the saint (ex.4).

In addition to those distinctive melodies – some of which are unica, others, with Sarum incipits, have been adapted to the recurring, more formulaic style – the remainder are from continental (Gregorian) and Sarum repertories, providing evidence that these were all used in tandem (see Woods, 1986–7). The distinction therefore suggests that the cellular, repetitive structure was a feature of an older Scottish and Irish practice that continued, at least in the veneration of local saints, for several centuries after the Romanizing reforms. As in the case of the Drummond Missal, the Inchcolm material may well represent a long history of continuous practice, dating to at least the mid-9th century when the relics of Colmcille were brought from Iona to Dunkeld, whose bishops were protectors of Inchcolm Priory (later Abbey).

Some other sources from medieval Celtic regions await further investigation. For example, the early 14th-century Sprouston Breviary (*GB-En* Adv.18.2.14B), which contains an Office for St Kentigern of Glasgow (also known as Mungo; see recording, 1997); this Office has links with that of St David in the Welsh Penpont Antiphonal (*GB-AB* 20541 E), also dating to the 14th century (Edwards, 1990), but neither appears to contain regionally distinctive chants. The earliest Breton sources are from the 9th century, but although they contain Offices for local saints, their melodies feature no regional distinctiveness (see Jordan, 1978).

Nonetheless, the examples discussed above challenge the generally received view that the music of the Celtic rite has sunk without trace. There are clear signs of a stylistically distinctive kind of melodic structure in both Irish and Scottish sources that suggest that some elements of Celtic Church practice did indeed survive long after the official imposition of Sarum.

However, only after further enquiry might it be possible to classify them specifically as Celtic chant as distinct from chant used (and perhaps not exclusively so) in the Celtic regions. But at least there is some indication of common roots, or branches of a common tree. Through renewed work of this nature and detailed comparative study, a reconstruction of some of the characteristics of pre-Norman chant usage in the Celtic regions appears increasingly possible.

Celtis [Celtes], **Conradus Protucius** [Bickel, Conrad; Pickel, Conrad] (*b* Wipfeld, 1 Feb 1459; *d* Vienna, 4 Feb 1508). German humanist and poet. Son of a vintner, he ran away from home in 1477 and studied at Cologne University for two years. After receiving the baccalaureate he travelled and studied further before matriculating in 1484 at Heidelberg University, where he received the MA within a year. When in 1487 he was crowned Poet Laureate in Nuremberg by Emperor Frederick III, he was the first German to be so honoured. During the next ten years he travelled widely through central Europe, in Italy during the period 1487–9, in Kraków, Danzig (now Gdańsk), Prague and north Germany between 1489 and 1491. In 1491–2 he lectured at Ingolstadt University for a short time. He was in Nuremberg for most of 1493, then in 1494 appointed again at Ingolstadt, where he retained his position until 1497, though spending much of that time in Heidelberg. There he founded the first of his associations of learned men for the advancement of the new humanist literary culture, the Sodalitas Litteraria Rhenana. In 1497 he was called to Vienna University by Emperor Maximilian, and he founded there the Sodalitas Litteraria Danubiana. Other sodalities on similar lines were soon founded in Germany after Celtis's example. In Vienna he lectured on the usual humanist subjects: Cicero's rhetoric, the odes of Horace, grammar, rhetoric and poetry. In 1501 he received the imperial charter to found a college of poets and mathematicians within the university. He remained in Vienna until his death.

Celtis has sometimes been called 'the German arch-humanist', and he was indeed one of the first energetic proponents of humanist thought in Germany. His direct influence on students, scholars and other associates was perhaps of more lasting significance than his literary work. His importance for music consists particularly in his encouragement of Petrus Tritonius to compose settings of Horatian odes in which the metres and quantities were strictly observed. These odes and their successors were widely used in the German Lateinschulen throughout the 16th century and afterwards for teaching classical metres. Celtis's play, *Ludus Dianae* (1501), has choruses at the end of each act similar in style to Tritonius's odes; the unknown composer of these choruses might even be Celtis himself.

PETER BERGQUIST/STEPHEN KEYL

Cembal d'amour. A keyboard instrument invented by Gottfried Silbermann of Freiberg, Lower Saxony, in about 1720. Although the name 'cembal d'amour' might appear to imply that the instrument was a harpsichord with sympathetic strings (by analogy with the viola d'amore) the instrument was not a harpsichord at all. Rather, it was a clavichord with strings of approximately twice the normal length that were struck by the tangents precisely at their mid-point. The invention of the cembal d'amour is announced in the *Sammlung von Natur- und Medicin-, wie auch hierzu gehörigen Kunst- und Literatur-Geschichten* (Breslau and Leipzig) for July 1721, where it is stated that the instrument's name derived from the sweetness of its tone, which matched that of the viola d'amore. Although no example of the instrument has survived, it is depicted in the June 1723 issue of the *Sammlung*, in a coloured drawing among the papers of Johann Mattheson (reproduced in van der Straeten, 1924) and in a Swedish manuscript of about 1750 (*S-Uu* S29b; reproduced in Helenius-Öberg, 1986, p.53). There is also a description and diagram of it in J.F. Agricola's annotations to Jacob Adlung's *Musica mechanica organoedi* (1768). J.N. Forkel in 1781 stated that the tone of the cembal d'amour sustained longer than that of an ordinary clavichord, was far louder (though not so loud as a harpsichord, but, rather, 'midway between the two') and that its dynamic range was also greater than that of an ordinary clavichord though far inferior to that of a fortepiano.

The instrument had an irregular form dictated by the presence of two bridges, each resting on its own soundboard, one behind and to the left of the keyboard and the other in the normal position to the right of the keyboard (see illustration). The two segments of the strings vibrated independently when the tangent struck and, since the segments were of equal length, they sounded in unison and produced a louder tone than that of an ordinary clavichord, in which only the right-hand segment is allowed to sound, while the left-hand segment is damped by strips of cloth woven between the strings. Since this cloth, however, also serves to damp the strings as a whole when the key of an ordinary clavichord is released, Silbermann had to compensate for its absence in the cembal d'amour by devising another means of damping. The information given in *Musica mechanica organoedi* suggests that each of the strings of the cembal d'amour rested on the forward-projecting prongs of a U-shaped block covered with cloth. The tangent rose between the prongs of this U, lifting the strings from the cloth and undamping them at the moment that they were struck by the tangent.

Because of the double length of its strings the cembal d'amour tended to be quite large, even when its range did not extend below C, as in the *Sammlung* and Mattheson's drawing. This disadvantage was partly overcome in an interesting variation on the instrument devised by the mathematician Leonhard Euler and described in the supplement to the third edition of the *Encyclopaedia Britannica* (Edinburgh, 1800) in which the string segment at the left was, for most of the range, only half the length of that at the right and sounded an octave above it, like the 4′ strings in the bass of some large clavichords or the 4′ register of a harpsichord. The author of the *Britannica* article, John Robison, praised the sound of Euler's instrument, but claimed that in the bass (where, in the interest of saving space, the length of the left-hand segment was made a small fraction of the right-hand segment and where the strings were overspun rather than plain) the tone was inferior and that 'the instrument was like the junction of a very fine one and a very bad one and made but hobbling music'.

Several other builders are known to have made cembals d'amour or variants thereof. Johann Ernst Hähnel of Meissen equipped his instruments with a device for

Cembal d'amour: engraving from 'Sammlung von Natur- und Medicin-, wie auch hierzu gehörigen Kunst- und Literatur-Geschichten' (June 1723)

silencing the strings on either side of the tangents if desired, and also a PANTALON STOP, equivalent musically to a damper-lifting stop. During a lawsuit brought by Silbermann against Hähnel for patent infringement, Pantaleon Hebenstreit testified that in the 1690s the Dresden organ builder Johann Heinrich Gräbner the Elder had made instruments which incorporated the same principle as the cembal d'amour. Several modern makers, including Hugh Gough, have made reconstructions based on 18th-century descriptions.

EDWIN M. RIPIN

Cembalo (Ger., It.). *See* HARPSICHORD.

Cembalo angelico. An Italian harpsichord provided with soft leather plectra, but otherwise typical in its construction. It is described by its anonymous Roman inventor in 1775. In its most complex version there were two sets of double-tongued jacks, each with normal quill plectra on one side and soft leather on the other. By means of a pedal, the registers could be moved so that the two sets of 8′ strings were both plucked either by quill or by leather. The Florentine maker Vincenzio Sodi applied this idea in some of his harpsichords.

Cembalo traverso (It.). (1) A term for the SPINET.

(2) The name used to describe an instrument, made by BARTOLOMEO CRISTOFORI and others, that is in effect a large benstside spinet.

Cembalo verticale (It.). *See* CLAVICYTHERIUM.

Cemino [Cimino, Cimeno], **Donato** (*fl* 1675). Italian copyist and ?composer. He was sub-deacon of the Carmelite order in Naples. It is possible that he was related to the Cimmino family of organ builders. He was the principal copyist of the so-called Cemino manuscript (*I-Nc* Mus. str. 73, olim 34.5.28), an important manuscript of 17th-century keyboard music and unique source for works by Giovanni de Macque, Ercole Pasquini and Giovanni Salvatore: it contains two marginal notes in which he is identified as the writer, with the copying dates 15 July 1675 and September 1675. He is also listed on the title-page as the composer of virtually all of the anonymous contents of the manuscript: a large number of toccatas, canzonas, ricercares, organ masses and miscellaneous little pieces, some with whimsical titles such as *Farfalla* ('Butterfly'), *Gelosia* ('Jealousy') and *Breve diletto* ('Brief pleasure'). According to Oncley the attribution of the anonymous works to Cemino has been questioned by Anna Mondolfi Bossarelli, who believed the title-page to be in the hand of the 19th-century librarian Rondinella and found the claim that he composed this music to contradict Cemino's own comments. The issue depends in part on an interpretation of the scribe's poetical Latin and cannot be regarded as settled.

ALEXANDER SILBIGER

Cencerro (Sp.: 'cattle-bell'). Clapperless animal bell of Spain and the New World, made from a sheet of copper (it is classified as an idiophone: percussion vessel). It exists under a great variety of regional labels and is frequently employed in religious or cult festivities, including the celebrations of St John the Baptist (June 24–5) and St Peter and St Paul (June 29) in various parishes of Imbabura province, northern highland Ecuador. A row of 12 bronze *cencerros* is tied with rawhide on the back of each dancer and shaken while dancing. In Cuba the *cencerro* figures in Lucumí cult music, and a large *cencerro* (or *gangária*), beaten externally with a nail or other striker, has been used for congas and rumbas. Related instruments include the Spanish *esquila* and the Afro-Brazilian *agogô* (a double cowbell struck with a metal rod; *see* AGOGO bells and *gan*. In the orchestra the term 'cencerro' is synonymous with COWBELLS.

JAMES BLADES/JAMES HOLLAND

Cenci, Giuseppe ['Giuseppino'] (*d* Rome, 21 June 1616). Italian composer and singer. 12 monodies are ascribed to 'Giuseppino' in manuscripts copied in Rome and (one) in Florence. In 1628 Vincenzo Giustiniani credited 'Giuseppino', along with Giulio Caccini, with the discovery or refinement of recitative style. In 1640 Pietro della Valle described the singing of a tenor named Giuseppino, placing his activity *c*1590–1600 and saying that he composed a large number of popular canzonettas with scandalous words. In 1635 G.B. Doni reported that 'Giuseppe Cenci detto Giuseppino' was admitted as a tenor to the papal chapel in 1598, and in 1614 'Giuseppino' contributed an aria to the pastiche opera *Amor pudico*, which celebrated the second marriage of Michele Peretti, brother of Cardinal Montalto. On 11 July 1616 Enzo Bentivoglio in Ferrara heard from his Roman agent that 'Iosepino is dead, that is, the musician'. And, indeed, on 21 June 1616 Giuseppe Cenci had died. The book of the parish where he died and that of the parish where he was buried refer to him as 'Giuseppino Cenci'. It seems reasonable to conclude, therefore, that 'Giuseppino' was Giuseppe Cenci, a tenor who entered the papal chapel in 1598. At the time of his admission he was in the service of Cardinal Odoardo Farnese; in 1608 he transferred to the household of Cardinal Scipione Borghese, nephew of Pope Paul V. Three works published under Cenci's name may therefore be added to the work-list, bringing the total to 15.

Seven of these works are strophic variations, four solo madrigals, two dialogues, one a strophic canzonetta and one a strophic duet. The most purely recitational are the

dialogue *Perche non togli o Clori i pesci ai fiumi* (in *I-Baf* and *Vc*) and the madrigal *Occhi ch'alla mia vita* (*I-Bc*); the latter was published in a four-part version in P.M. Marsolo's op.10 (1614) along with two other madrigals, *Ahi com'a un vago sol* (as a solo in *US-PHu*) and *Occhi un tempo mia vita* (as a solo in *I-Bc*). In several works, for example the strophic variations *Io che l'età solea viver nel fango* and *Anima bella che nel sen ten stai* (both in *I-Baf* and *Vc*), recitational style alternates with metrical aria style. The canzonetta *Fuggi, fuggi, fuggi da questo cielo* (in *I-Fc*; printed by Ghisi, p.58, and Aldrich, pp.180–81) became known as the *Aria di Mantova* through sonata treatments by Biagio Marini and Marco Uccellini. Its melody was used for a popular noël in 18th-century France, and it eventually emerged as the principal theme of Smetana's *Vltava*. One of Cenci's solo madrigals, *Deh dolc'anima mia* (in *I-Vc*) is on a text from Guarini's *Il pastor fido* and may have been performed, along with several other recitational settings of texts from the same pastorale which are found anonymously alongside Cenci's, when the play was staged at a country villa of his patron, Cardinal Farnese, in 1596. If so, this would help to substantiate Giustiniani's claim that Cenci played a leading role in the introduction of theatrical recitative.

Cenci's strophic duet *Più non amo più non ardo* and his strophic solo variations *Se perché voi mi tolga* were included in G.B. Robletti's *Raccolta de varii concerti musicali* (Rome, 1621[16]) and his strophic variations *Vita della mia vita* in Robletti's *Le risonanti sfere* (RISM 1629[9]). Of the remaining works, *Dunque Clorida mia* (in *I-Baf* and *Vc*), *Leggiadri occhi sereni* (in *I-Baf*, *Bc*, *MOe* and *US-PHu*) and *Se'l dolce sguardo* (in *I-Baf*) are all strophic variations; *Amorosa Licori*, a dialogue (in *I-Baf*, *Ru* and *Vc*), appeared anonymously in *Il maggio fiorito* (1623[8]).

JOHN WALTER HILL

Cenci, Lodovico (*b* Arezzo, 1615; *d* 1648). Italian composer. His *Madrigali* (Rome, 1647), for four and five voices, has a long preface (repr. in *VogelB*) in which he stoutly defended the *a cappella* madrigal and deplored the use of the continuo in chamber music for three or more voices, because he felt that voices and instruments do not blend in such ensembles. He did, however, concede the need for it in pieces for one or two voices and its usefulness in performances in large buildings such as churches and theatres. Another aspect of his conservatism is his support of Artusi's views about the treatment of dissonance. According to Fétis he published an earlier collection of madrigals, for three to five voices (Rome, 1644).

□

Censorinus (*fl* 3rd century CE). Roman grammarian and philosopher. He is known today for his *On the Day of Birth* (*De die natali*), a treatise on birthday lore and other subjects composed for the 49th birthday of his patron, Qu. Caerellius, in 238 CE. According to Cassiodorus (*Institutiones*, ii.5.10) and Priscian (*Institutiones grammaticae*, i.16–17; xiv.6, 40–41), Censorinus also composed treatises on grammar and accents. These works seem not to have survived, although some portions may appear in the so-called *Fragmentum Censorini*, which was transmitted along with *On the Day of Birth* in manuscripts and early editions until Louis Carrion separated and reorganized them in his edition of 1583. *On the Day of Birth* and the *Fragmentum* are preserved in whole or part in at least 24 manuscripts; the earliest is *D-KNd* 166 (formerly Darmstadiensis 2191), dating from the 8th century.

Censorinus states that he drew his treatise from earlier commentaries, and much of *On the Day of Birth* is commonly assumed to have been derived from the lost encyclopedic works of Marcus Terentius Varro (*fl* 1st century BCE), the author most frequently cited by Censorinus. Nevertheless, Censorinus may also have had direct knowledge of some of the works by the more than one hundred authors to whom he refers, including Anaxagoras, Aristotle, Aristoxenus, Epicurus, Eratosthenes, Heraclitus, Hippocrates, Parmenides, Philolaus, Plato, Pythagoras and Theophrastus.

The treatise has by tradition been arranged into 24 'sections', but it is written as a single concise exposition on the measures and cycles of time as manifested in days, months, years, periods of gestation and the ages and durations of life. These measures and cycles are clearly exhibited in number, planetary motions and the zodiac, and in section 10, Censorinus seeks to clarify them by briefly commenting on the 'rules of music and particularly those that have been ignored by musicians themselves'. Most of the definitions of this chapter are in fact common in earlier sources, but the definition of music itself ('musica est scientia bene modulandi') is particularly noteworthy because it also appears in the writings of Augustine of Hippo (*De musica*, i.2), Cassiodorus (*Institutiones*, ii.5, where it is specifically ascribed to Censorinus), and is paraphrased slightly in Martianus Capella (*De nuptiis Philologiae et Mercurii*, ix.930), Isidore (*Etymologiae*, iii.15) and Aurelian of Réôme (*Musica disciplina*, 2). Definitions of pitch, interval, consonance and the three primary consonant ratios (4:3, 3:2 and 2:1) measured in both Aristoxenian and Pythagorean terms lead to a review of the discovery of the Pythagorean *harmonia* (6:8:9:12), which is employed in section 11 to explain why seven and ten months were thought to be the normal periods for human gestation (cf Aristotle, *History of Animals*, vii.3–4;

ARISTIDES QUINTILIANUS draws similar associations in his treatise *On Music*, iii.18).

Section 12 briefly reviews the common associations of music with the gods and humankind, including the influence of music on the human body and soul, while section 13 describes the musical ratios discerned in the Greek planetary system. Observing that the charms of music have delayed him in his discourse, Censorinus states that even an entire book could not exhaust the subject. The balance of *On the Day of Birth* makes no further reference to music.

The *Fragmentum Censorini* is traditionally arranged in 15 sections: section 9 lists the names of various famous melic poets and later musicians; sections 10 and 13–15 provide a useful summary of Latin rhythmics and metrics, with examples; and sections 11–12 list and briefly define the traditional divisions of music (*harmonica*, *organica*, *rhythmica* and *crusmatica*), 13 of the *tonoi*, the Greek note names and terms such as *modus*, *carmen*, *tempus* and *modulatio*. Section 12 also includes brief comment on the development of the kithara by Apollo, Terpander and Timotheus (cf Boethius, *De institutione musica*, i.20).

THOMAS J. MATHIESEN

Censorship. Censorship is not readily practised on music, because music does not as a rule convey a precise statement such as persons in authority might wish to tone down or ban. Censorship has in the main affected forms that ally music to words, in particular music theatre (opera, ballad opera, musical comedy) and music with openly political associations (marches set to revolutionary or nationalistic texts, or cabaret songs). Such forms appeal directly to a large public gathering – a possible fount of subversion or violence. In dealing with them, censorship has by and large concentrated on the words; the music of some well-known marches, however, has been so bound up with the sentiments expressed by the words as to be unplayable, even on its own, after a political reversal, e.g. the *Marseillaise* after the Bourbon restoration.

1. Introduction. 2. Instrumental music. 3. Music theatre.

1. INTRODUCTION. In its dealings with instrumental music censorship must be distinguished from other forms of control, some of which may hinder or stop the performance of particular works. In societies where virtually the only fount of patronage is a monarch or a powerful institution, the likes and dislikes of persons in authority may decide whether works of a certain kind, or by a particular composer, are to be played; if those works require large forces and corresponding expenditure they may not be performable at all without authority's leave. This, however, is merely to say that for much of history the arts have depended on patrons, and individual works have been specifically produced for them.

An example is the insistence of Frederick the Great on having operas composed for his royal theatre exclusively by C.H. Graun: no other composer need try to write operas for Berlin. On a wider scale, church music down to the late 18th century was composed solely for liturgical performance: if religious orders were dissolved or cut down, as in England at the Reformation and in Austria under Joseph II, or if church choirs were suppressed, as in revolutionary France, certain kinds of music might vanish. Again, if the instructions of the Council of Trent had been fully carried out in the Catholic Church, the more elaborate kinds of polyphonic church music would have disappeared sooner than they did. These, however, cannot reasonably be called instances of censorship, which requires an intention to suppress or modify a work on grounds of its ideological or moral tendency, or of some characteristic of its author thought to be undesirable on such grounds (e.g. race or political commitment).

In our own day, radio authorities have at times been accused by a composer of 'censoring' his work by failing to broadcast it. When an art has a small audience, as is true of much modern music, a public broadcasting system may play a role not unlike that of an 18th-century

monarch: it may in effect decide which work or composer is heard. But because the taste of its officials inclines towards one rather than another it does not follow that they are practising censorship.

In exceptional circumstances, public opinion, or pressure groups claiming to speak for it, may exert censorship of a kind. An example is the unofficial ban in Israel on the music of Wagner and Richard Strauss – on Wagner's because of his virulent anti-semitism and the exploitation of his work by the Nazis, on Strauss's because of his collaboration with the Nazi regime. Zubin Mehta as conductor of the Israel PO drew back in 1982 from an attempt to reintroduce Wagner through one of his least ideological works (the Prelude to *Tristan und Isolde*). This is a borderline case: the motives for the ban are akin to those of censorship, but what enforces it is not the power of constituted authority. A determined group, say a small orchestra playing the *Siegfried Idyll*, would be free to test it at the risk of facing a riot. Censorship of music theatre is considered in §3.

2. Instrumental music. Censorship in fact requires the work of art, understood as that of an autonomous individual, to be offered on a market, however limited. So long as it is made for a patron and for a specific occasion, censorship (as against a list of the patron's requirements) has little scope. In Western instrumental music this transition came late, with Beethoven. Even then the indeterminacy of music kept off censorship until, in the 20th century, several trends came together: the attempt by totalitarian regimes to control all aspects of national life; the cult of music as emotional fulfilment, often doing duty for religious faith; and the split between popular and avant-garde art. Though some composers have suffered prison or exile because of their political commitment – and have therefore been unable to have their works performed – only in two regimes has censorship been directed systematically at music. These are Nazi Germany and the Soviet Union under Stalin.

In dealing with the arts, these two regimes often used similar methods and slogans, although in their general ideological stance they seemed opposed. Some of these methods and slogans were first devised by Italian fascists; in Italy, however, they were applied far less thoroughly. Old-fashioned reactionary governments had worked a negative censorship by suppression, but these regimes brought in positive, all-encompassing official action, organization and propaganda, enforced by fear of loss of earnings, of physical or verbal violence and of the concentration camp. Their censorship worked as much by inducing composers to write certain kinds of music as by warning them off other kinds.

In both countries, official censorship was preceded by a period of factional struggle for control of artistic life – in the Soviet Union (1928–32) between the temporarily successful 'proletarian' musicians and the 'modernists', in the dying years of the Weimar Republic (1930–33) between Nazis and Communists. In Germany the installation of the Nazi regime (January 1933) at once led to violent assaults and other intimidation by party members against Jewish, Communist and other 'non-national' musicians. A law of 7 April 1933 dismissed musicians in these categories from official posts; other laws of 22 September and 1 November 1933 put all the arts, the press and broadcasting under the control of a Reichskulturkammer (headed by the Minister of Propaganda, Josef Goebbels) and music under a Reichsmusikkammer, membership of which became compulsory for professional musicians. In the Soviet Union a resolution of the Central Committee of the Communist Party (23 April 1932) denounced the 'proletarian' faction and set up single, inclusive unions for each of the arts. Though directed in the first place at literature, this decisive step towards regimentation led in 1934 to guidelines from the Composers' Union enforcing the 'socialist realism' which Andrei Zhdanov, a leading member of the Politburo, had proclaimed that year as the standard for Soviet writing.

The establishment of conformity in music was swifter in Germany: performances in late 1935 of Mendelssohn (under Furtwängler) and Berg (under Erich Kleiber) were the last public signs of dissent. In the Soviet Union there was at first much discussion, within broad obeisance to socialist realism, until in January 1936 a violent denunciation in the party newspaper *Pravda* of Shostakovich's opera *Lady Macbeth of the Mtsensk District* – inspired by Stalin, and coinciding with the onset of the 'purges' in Soviet society – brought a first bout of censorship; a far worse episode began in September 1946 with Zhdanov's denunciation of various writers, leading on 10 February 1948 to a Central Committee decree on music and a campaign of organized vilification of leading composers, amounting to large-scale censorship.

In their ideological slogans the two censorships had much in common. The most notable difference was that in the Soviet Union anti-semitism was invoked only covertly (in the 1948–53 campaign against 'cosmopolites') and to spotty effect, whereas the Nazi regime dismissed Jewish composers or drove them into exile and forbade performances of 'Jewish' music, new or old (except, until 1941, in segregated concerts before Jewish audiences). For the rest, both regimes upheld the vital importance of folksong and of collective vocal performance, called for a return to the values of traditional German or Russian music, abused and banned both jazz and the 'decadent' or 'degenerate' works of the contemporary avant garde (seen as typical of a corrupt bourgeois society) and instilled adulation of the supreme leader, who intervened from time to time in person.

In both countries, censorship was exercised by fear and conformism as much as by decree: 'this silent exclusion of all our music', Berg wrote to Webern (8 May 1934). In both, many musicians gave the regime a wide measure of consent. This came of a shared sense that music was not for the isolated individual to work out in dialogue with a few peers, but should flow from the collective feeling of the people and in turn communicate with a broad popular audience; the break between avant-garde music and the mass of potential listeners was a genuine problem, to which some of the avant garde themselves were sensitive and which many conservatives were content to see resolved by censorship. In both countries much was explained by personal envy and greed: the upheaval forced by the regime allowed ambitious or disappointed musicians, and their works, to take the place of those driven out.

In Germany the ban on 'Jewish' music affected Mendelssohn, Meyerbeer, Mahler, Schreker and Schoenberg, as well as a wide swathe of operetta composers; Handel's *Judas Maccabaeus*, about a Jewish hero, was renamed *The General* and given a new text. Music banned as 'degenerate' included that of Berg, Webern, Hindemith,

Krenek and Stravinsky. Pedantic exceptions were made: Webern's Passacaglia op.1, written before he had become a 'servant' of Schoenberg, could be played; conversely, *Jenůfa*, approved as a 'folkish' opera, could be called in question because of ill feeling towards Czechoslovakia.

In the Soviet Union, the 1936 attack on Shostakovich and Zhdanov's ferocious 1948 onslaught on him and on Prokofiev, Khachaturian and Myaskovsky as 'the formalist and anti-people school' led each time to a short-lived, unofficial ban on performance of their works. The 1948 attack inaugurated a five-year period during which these four composers and others had to make more or less grovelling apologies for their 'shortcomings' and to try to meet the demand for 'positive' works in a simple musical language while sometimes, like Shostakovich, continuing to write (and withhold) more complex works. Even total adherence to 'socialist realism' did not save a weak opera, *From the Whole Heart* (1950), from being savaged in *Pravda* and in effect banned, or its composer, Zhukovsky, from having his Stalin Prize cancelled. (The trouble was sheer feebleness as well as an insufficiently heroic depiction of a collective farm.) After Stalin's death in 1953 came a period of liberalization with occasional tightening up; by 1972 it was possible to include in a concert programme one string quartet by a member of the Second Viennese School but not two.

3. MUSIC THEATRE. In all kinds of music theatre, sung words move more slowly than spoken ones, and are harder to grasp. The book of an opera or even of a musical comedy is shorter than a play; it cannot readily impart complex information. Hence a piece of music theatre has at times been officially permitted when the play it was based on was forbidden. A well-known example is Mozart's *Le nozze di Figaro*. Lorenzo de Ponte's preface to his libretto validly stated that one reason for his having made an 'extract' from the (topical and banned) play was the requirements of the opera form. No opera of that date could have carried the freight of information in Figaro's long soliloquy in the play (the object of the censor's objection), in which he acts as spokesman for the discontented commoners who were to make the French Revolution. In Britain, the mid-Victorian censor banned the play *La dame aux camélias* by Dumas *fils* but allowed the opera drawn from it, *La traviata*, on the grounds that in a musical version 'the story is ... subsidiary to the music and singing'; Strauss's *Salome* was allowed in 1910 (with some fudging of the text), while the Oscar Wilde play it was based on remained banned until 1931.

'Low' music theatre genres have at times been treated more indulgently than 'high' by censors who have regarded them as a safety valve. Under the French Second Empire, Offenbach got away with much naughtiness and satire, while *Madame Bovary* was prosecuted for obscenity; Bernard Shaw complained in 1895 that the censor allowed 'lewd farce' (a king in operetta listening at the keyhole of his daughter's bridal chamber) but forbade a serious discussion of sexual morals like Ibsen's *Ghosts*.

In all kinds of music theatre, censorship got to work once the genre had broken away from total dependence on patronage. It was to begin with only one among many aspects of control over theatres and theatre people, which was vested in a royal official or board (in England, in the Lord Chamberlain). Such control generally carried with it the licensing of theatres and, sometimes, exclusive legal jurisdiction and disciplinary powers over theatre people. In England, exceptionally, the latter powers fell away in the late 17th century, but the censorship and licensing powers were reasserted in a 1737 act of parliament, after the prime minister, Sir Robert Walpole, had been repeatedly attacked in ballad operas and plays. Censorship in France survived the 1789 revolution; in Germany and Italy the old arrangements were kept on, little changed, until the granting of liberal constitutions in 1848. Such constitutions, restored or established about 1860–75 after a further period of reaction, did not abolish censorship, but a new climate of opinion greatly limited its scope.

Within the official establishment, censorship until about then (in Britain until 1969) was the job of subordinate officials, often minor literary men who might impose their own views about propriety of language. The normal course was for librettists and managers to avoid subjects likely to raise difficulties, and to meet without much fuss the censor's requests for detailed changes.

Comic opera, when it developed in the early 18th century, was the first genre to run into trouble, chiefly over lampoons on clergy; the censors' reaction accounts for much that now seems anodyne and stereotyped in late 18th-century comic librettos. During the French Revolution, however, the censors at times insisted (as over Méhul's *Mélidore et Phrosine*, 1794) that the libretto should praise liberty and humanity; under the subsequent Restoration, such terms were, in contrast, banned, especially in the Italian states.

The onset of Romanticism brought uncommon trouble, coinciding as it did with Europe-wide reaction after Waterloo and with deepening concern for respectable manners and morals. Religion was a main stumbling-block. Romantic art was often drawn to it in its picturesque and historical aspects. British censors, however, would not allow biblical characters on stage. Continental states – reversing 17th-century practice, which had approved dramas about saints and, in Hamburg, had enjoined biblical opera – were equally nervous about clerical characters (hence changes in Verdi's *Attila* and *Stiffelio* and Musorgsky's *Boris Godunov*), devils (Weber's *Der Freischütz*) and saints (Donizetti's *Poliuto*, banned in Naples).

Romantic art also took a deep interest in violent moments of history. Where even the British writer Mary Russell Mitford could not in the 1820s get her play about Charles I past the censor, it is not surprising that continental despotism should have objected to letting stage monarchs be conspired against, deposed or assassinated; the problem was at its worst in the decade of reaction after the 1848 revolutions (notably affecting Verdi's *Rigoletto* and *Un ballo in maschera*). A rare example of a work that was meant to be subversive was Rimsky-Korsakov's satire on tsarist autocracy, *The Golden Cockerel* (composed 1906–7), held up for two years by the censor.

Political censorship, however, mattered less than the steady drizzle of demands for avoidance of the personal, the indecorous and the specific. In Italy, neo-classical ideals of elevated diction came together with fear of scandal and with 19th-century prudery to mangle *Rigoletto* with its deliberate justification of the 'low' and the grotesque; in some cities down to 1860 the work was denied a hunchback, a buffoon, a curse, an assignation or a sack. Suicide, multiple murder and public execution, all

staples of Romantic drama, had to be cut or soft-pedalled. German and Russian 19th-century music theatre, often 'folkish', nostalgic and socially conservative, suffered far less. Political expediency at times moved French and British censors; in 1907 *The Mikado* was temporarily banned in Britain during a visit by the Japanese crown prince. In this century, with the considerable exceptions of the Nazi and Soviet tyrannies, censorship has been a vanishing problem.

JOHN ROSSELLI

Cent. A small logarithmic unit used in the accurate description of musical intervals, based on frequency ratios. The interval, in cents, between two tones of frequency f_1 and f_2 is 3986 $\log_{10}(f_2/f_1)$. 100 cents is equal to one equally tempered semitone. *See* INTERVAL and SOUND, §4.

CLIVE GREATED

Center, Ronald (*b* Aberdeen, 1 April 1913; *d* Huntly, 18 April 1973). Scottish composer. From 1943 to 1949 he taught music at Huntly Gordon School in Aberdeenshire; he then resigned to concentrate on composition and private teaching. Although Center was highly educated with a mature intellect, as a composer he was self-taught, a circumstance which resulted in painful selfconsciousness: his was a lifelong struggle against insecurity, frustration and fears of rejection. His hypersensitive temperament meant he could assimilate subtle detail from scores by Bartók, Britten, Busoni and Vaughan Williams, who became, in effect, the teachers he never had.

Apart from songs composed for his wife, the soprano Evelyn Morrison, Center's output consists mainly of piano music. This is characterized by a wide-ranging imagination, rollicking humour and a carefree, childlike spirit, expressed by whirlwind dances, balletic sequences tinged with mystery and breathtaking filigree accompaniments. His First String Quartet, written under severe pressure during World War II, includes rough textures: anger torn to shreds. Fugues in quartal harmony contain some of his most introspective writing. Susskind, who described Center as 'the most modest composer I have ever met', conducted Center's Divertimento, performed by the strings of the Scottish National Orchestra in 1952. One of Center's last works was the valedictory *Lacrimae* for string orchestra, a work of modal simplicity, naive but disconcerting. On the initiative of James Reid Baxter, a festival of Center's music was held in Bogotá in 1979.

RUZENA WOOD

Cento (Lat.: 'patchwork'; Fr. *centon*; It. *centone*). (1) A composition in literature or music formed by piecing together excerpts from different authors or pre-existing works. Pope Gregory the Great (*d* 604), for example, is reputed to have compiled an 'antiphonarius cento', a combination and revision of earlier books containing texts for sung items of the Mass. More specifically, the term refers to poetry made up entirely of lines or refrains quoted from other works, or any artistic technique that relies on patchwork construction, citations or borrowings, such as the QUODLIBET or any of its parallel types: *see* ENSALADA; FRICASSÉE; INCATENATURA; MEDLEY; MISTICANZA. It is also used of jazz improvisation that draws on existing formulae which are rearranged into new patterns, a notable exponent being Charlie Parker.

(2) As applied to monophonic liturgical chant, a melody pieced together from pre-existing chant formulae (standard phrases) in chants of a certain group, such as graduals or responsories; *see* CENTONIZATION.

□

Centonization (from Lat. *cento*: 'patchwork'). Composition by the synthesis of pre-existing musical units. The term is modern, borrowed from poetry by Ferretti in 1934, and has been applied mainly to Gregorian and other chant. Some later studies have sought to expose weaknesses in the concept it represents.

Since the 19th century scholars have recognized the role played in some music by traditional aptness rather than originality; the notion of centonization has gradually grown out of this recognition. Gevaert (1881) wrote of 'prototype melodies' and 'melodic schemes' (*type mélodique*, *schéma mélodique*) which he claimed musicians in ancient Greece used to build up compositions (*see* NOME), as did composers of Latin chant, and musicians in ancient

and modern India. These ideas were developed by Peter Wagner (1921), who described the 'wandering melismas' of Gregorian chant: certain melodic formulae that recurred in different contexts in some of the oldest chants of the repertory, such as graduals. He attributed an archaic oriental origin to this formulaic procedure and, by contrast, saw a Latin 'drive towards order and clarity' in the 'freely composed' melodic repetition structure of the alleluias, in which formulaic structure scarcely occurs (Wagner, 417). He categorized the recurrent melismas in Gregorian graduals of the 2nd mode, and Frere similarly studied responsories of the 2nd mode.

In 1934 Ferretti published a systematic attempt to comprehend this formulaic method of composition, together with other features of the chant, in a full aesthetic of Gregorian plainchant. He used the word 'cento' for the first time to describe melodies in which formulaic procedures could be observed: chants were classified in three groups, centos, original melodies and prototype melodies (i.e. complete melodies adapted to new texts). Ferretti's concept of centonization has been immensely influential and has even been used in the construction of new chants for the Latin church.

Scholars in other areas subsequently found the concept of centonization useful. Formulaic construction is recognized even more explicitly in medieval Byzantine chant than in Latin chant (*see* BYZANTINE CHANT, §7). Schiødt has suggested a rigorous application of Ferretti's principle to the Byzantine repertory. Formulaic construction also occurs in Russian chant (*see* RUSSIAN AND SLAVONIC CHURCH MUSIC, §2) and in the oriental Christian chant repertories such as Ethiopian chant, where individual melodic cells are notated with single symbols as in ekphonetic notation. Some of these repertories display formulaic features arising from a concept of MODE as a collection of traditionally apt melodic procedures.

Throughout the period of the use of the term 'centonization', writers have attempted to overcome what they saw as pejorative overtones attaching to it. Ferretti devoted a whole chapter to defending prototype melodies and centos against those who 'denied authentic expressive value' to them; Sachs similarly wrote that 'the composer of cantillations, far from being a patcher, might better be compared to an ingenious gardener who arranges his two dozen of motley flowers in ever new bunches' (p.85).

However valid the application of the term centonization to other branches of Christian chant, its use with respect to Gregorian chant has been criticized on the grounds that there is at best an imperfect analogy between the original literary phenomenon and chants that employ formulaic melodies (see Stäblein; Treitler, 1975; Hiley). A 'cento' was in the first instance a garment sewn together from diverse pieces of cloth; and a literary cento a poem patched together with lines from a variety of other works or from different places within the same work. A formulaic chant, however, is a more organically unified creation. Some formulaic chants, for example, those of the *Alleluia, Dies sanctificatus* type, simply adapt an entire model melody to new texts. Most of them, however, such as the mode 2 graduals or mode 8 tracts, do not follow a model so strictly, but rather accommodate the different texts of each chant by a free reworking of new material together with a fund of common formulae (frequently maintaining the latter in the same order). In each case there is no juxtaposition of heterogeneous musical bits and pieces but an integral melody, one, moreover, that is homogeneous as to modal substance and liturgical destination. At the same time individual formulae can cross modal and genre boundaries (Wagner's 'wandering melismas'), but these, too, are so musically integrated into their new compositional destinations that they appear to be less the property of a particular mode or liturgical genre than part of a common Gregorian musical language.

For categories of composition constructed from pre-existing units, to which the term 'centonate' has not generally been applied, *see* FRICASSÉE; PASTICCIO; POTPOURRI; and QUODLIBET. *See also* COMPOSITION.

GEOFFREY CHEW, JAMES W. McKINNON

Central African Republic (Fr. République Centrafricaine). Country in Central Africa. It serves as a link between the Democratic Republic of the Congo (formerly Zaïre), the Congo Basin and the Sudanic-Sahelian zone. It has a surface area of 622,436 km² and a population of 3.64 million (2000 estimate). The west of the country contains the largest concentration of population, while vast regions in the east remain uninhabited. The south-west has dense equatorial forests that receive large amounts of rainfall, favouring the growth of lush vegetation, including various medicinal plants. The people of the country live by subsistence agriculture and forestry. A great many commercial plants are grown, including coffee, cocoa, cotton and rubber, and the forests have been heavily depleted as a result of the exploitation of their wood during the last two decades of the 20th century.

1. Ethnic groups and historical background. 2. Music and society. 3. Musical characteristics. 4. Music of the main linguistic regions. 5. Musical instruments. 6. Modern developments.

1. ETHNIC GROUPS AND HISTORICAL BACKGROUND. The population of the Central African Republic belongs to approximately 85 ethnic groups. Primary ethnic groups include the Banda, Manza and the Gbaya-Manza-Ngbaka in the centre and central-eastern part of the country; the Zande and Nzakara in the east; the Gbaya in the west; the Ngbaka, Bogongo, Isongo (Mbati), Kako and Mpyemo (Mpiemo) in the forested regions of the south-east; the Gbanziri and Yakoma along the banks of the Ubangi; and the Sara Kaba, Surma and Runga in the north and north-east (fig.1).

1. *Map of the Central African Republic showing the four chief musical and linguistic areas*

It is difficult to express the representation of various religions within the country in terms of percentages, but as an estimate 35% of the population practise indigenous beliefs, 50% are Christian and 15% Muslim.

In the Central African Republic several so-called pygmy groups travel through the dense forests of the administrative divisions of Lobaye (Bagandu) and the Sangha Mbaere (Nola, Bayanga Lindjombo, the Ndoki forest and Bilolo/Biguene). Today the survival of the 'pygmies' is a problem because of modernization and the destruction of their forest ecosystems. The Baaka (BaAka) of the Lobaye region and the Bankombe/Bampencele of the Sangha Mbaere are the best known of these populations.

Through the persistence of Pierre Savorgnan de Brazza (1852–1905) and the initiative of the Committee of French Africa, the French colony of Gabon-Congo had assured direct access to Chad via the Ubangi route. At the end of the 19th century, France was granted a vast territory of 2·5 million km² between the Belgian Congo, German Cameroon, British Nigeria and Anglo-Egyptian Sudan. In 1910 this territory was given the name of French Equatorial Africa. It had four regions, of which the Ubangi-Shari has become the modern Central African Republic.

In Ubangi-Shari, as in all other territories, a colonial commission distributed still unsurveyed territory to concessionary companies, called 'Colonization Societies', which were assigned property rights over all natural resources of the areas. The inhabitants were paid low rates for the time they spent gathering produce, and what payment they did receive was in kind. Searches were often organized to recruit men as workers from the indigenous people who were forced to abandon their villages. Women and children were held hostage in camps along the transport routes, serving as a guarantee that the fathers of those families would work. Within a few years, Ubangi-Shari was ruined and its people plunged into poverty. If there was music and dancing during this period, it could only have been in remote areas. Ubangi-Shari became independent in 1960. Barthélémy Boganda (1910–59) of the Indigenous Clergy had blazed the trail in 1958. The country assumed the name of the Central African Republic at this time. After independence, the tribulations of the country, now a new state, continued under an improvised government. It was an empire in 1976–9, but since 1979 it has been a republic.

In contrast to its colonial history, the history of the rediscovery of indigenous cultures and traditions of the Central African Republic, i.e. music and dancing, proceeded smoothly. The German explorer Georg Schweinfurth (1836–1925) and the Russo-German Wilhelm Junker (1840–92) were the first European observers after the Italian Piaggia to travel in this part of the continent, particularly in the state of Zande. In 1878 Schweinfurth described in detail the musical traditions, dances and musical instruments of the Kingdom of Zande. Similarly Junker's account, published in 1890, contains descriptions of various musical instruments, such as the giant Zande

drum. There are other 20th-century analyses of Central African music, for instance by Bruel (1910) and Cureau (1912).

2. Music and society. In almost all Central African societies, musical traditions are systems that emerge from ceremonies and recreation. Each ethnic group in the republic has a series of musical repertories performed in distinct social circumstances. In particular, the relationship between music and society is found in ceremonies (such as rituals and initiation ceremonies, ceremonies of divining and healing, of mourning and the end of mourning, exorcism and the stigmatization of sorcerers), unusual occasions for rejoicing (the enthronement of a traditional chieftain, a successful hunt or a good kill of game, the birth of twins etc.) and simple amusements (children's games, friendly gatherings etc.). Besides social music, there is some purely instrumental and recreational music performed by individuals generally for amusement and relaxation. The lamellophone (for instance, played on a long journey) and the harp are the primary instruments for such diversions.

The music of the Central African Republic, like its other arts, is an oral tradition handed down from older to younger practitioners by means of vocal or instrumental imitation and by verbal instruction. While instrumental virtuosos from different villages are renowned and are much admired, there are no professional musicians in Central African societies. Individuals associate themselves with the kinds of performances that stimulate them, and they make contributions according to the quality of their own impulses. However, in certain rituals and initiation ceremonies the parts of celebrant and instrumentalists are taken by well-known performers.

The musicality of the peoples of Central Africa is not governed or conditioned by rigid criteria or metonymic frameworks such as isochronism or periodicity, cadences or scales. All creative impulses that materialize as sound and all melodiously phrased tones are perceived to be music: that is, musicality is free and unconstrained by rules. In the Central African view, music (a term without an equivalent in most Central African languages) is not chronometric but is absorbed by the human body. Even magical incantations and funeral laments are music. Central African ethnic groups have similar attitudes to music, which is usually expressed by the association of vocal and instrumental expression, and in principle it is responsorial in structure, the alternation of soloist and chorus supported by instrumental playing.

In Central African terminology, allusions to 'music' are conveyed by the words designating the two typical performance contexts: singing and instrumental playing. That is to say, singing a song and playing a musical instrument (such as a harp) signifies and designates music: dance is considered only an effect of music. In recent years, terms for music (*mosoko* and *ngombi*) have been introduced in the standard Sango language spoken throughout the territory. The semantic relationship between music and language can be demonstrated by the fact that many ethnic groups in the country have tonal languages, and this tonality has a considerable influence on songs.

Music in Central Africa is performed individually or in a group, depending on circumstances and the function of the music. An example of individual music is a song sung by a mother to lull her child to sleep, or a woman yodelling as she works or brings in the harvest. In general, music played in groups implies ceremonial or entertainment contexts and involves polyphony and/or polyrhythms. Music also plays an important contextual and accompanying role in the recitation of *chantefables* and stories.

3. Musical characteristics. In European conceptual and analytic terms, vocal and instrumental music are generally performed together and interact within a rhythmic structure. However, these two musical elements can be separated, as with the playing of certain aerophones, such as the giant trumpets of the Banda (Arom, 1967).

Rhythm assumes a primary part in Central African music. The formulae of the various rhythms use proportional durations in a rigorous metric and periodic framework determined by a finite number of isochronal pulses. These pulses may be expressed by accompanying instruments (rattles, hand-clapping, percussion, bells etc.) or may be merely suggested by the dancers' steps (Dehoux, 1992). So far as pitch is concerned, pentatonic scale structures without dissonance are most often used. However, some ethnic groups use more than one type of scale simultaneously. In the east, for example, the Nzakara use a scale consisting of four whole tones, while in the south-west the Mpyemo and Kako use semitones in their scales (Arom, 1967, 1973). Timbre is of great importance in the music of Central Africa, particularly since this music is marked by the richness and wealth of meaning conveyed by instrumental sound colours.

The music performed by Central African ethnic groups consists of a vocal and instrumental plurality. This plurality respects vocal or instrumental singularity, that is, each vocal instrumental entity functions independently. At the same time, they act interdependently as they provide parallel accompaniment for each other and lead to a common rhythmic point, the physical peroration of dance.

Polyphony, or songs with several polyphonic parts, and instrumental polyrhythms employ the same principle in Central African music: the weaving together of homogeneous and heterogeneous vocal and instrumental entities. A xylophone ensemble, for instance, is polyrhythmic with different individual melodic figures assigned to each instrument. The end product is a single rhythm, however, and sometimes indicates an inherent model. The instrumental heterogeneity of a music ensemble will often (as among the Gbaya-Manza-Ngbaka) consist of three xylophones (*bezanga*: small xylophone; *rgiringba*: ancestors; *kpembe*: youngest child), a double-headed drum (*bion*) and small bells and rattles (*ngala*), in addition to hand-clapping (Dehoux, 1992). A vocal ensemble is also usually polyphonic except in a responsorial context where several homophonic voices interact (Kubik, 1994).

Polyphony and polyrhythms are of irregular distribution in Central African music. It may be said that polyrhythms are found wherever there is instrumental plurality. In Central Africa, polyphony is chiefly a tradition of the 'pygmy' peoples; this tradition does not have song with several homophonous voices. When two 'pygmies' sing, the voices intertwine, each developing an independent melody with interjections partly sung and partly spoken. Polyphony and polyrhythms are a profound reflection of the freedom of vocal and instrumental musical expression in Central African societies, a freedom

exercised through an indifferent attitude to notions of time and space.

4. MUSIC OF THE MAIN LINGUISTIC REGIONS. While music of Central African societies has the same basic characteristics, its physical production, namely rhythm with its constituent parts, instrumentation and vocalization, shows a significant correlation with linguistic elements. Characteristics of cultural rhythmic styles are closely linked to well-defined groups or families of languages. This relationship corresponds to the Central African linguistic landscape as demonstrated below:

Musical area A extends over the entire region of the east Adamawa group and is divided into three areas: Gbaya (Bouar–Baboua–Carnot in the west); Banda-/Manza (Bambari–Bria–Bangassou in the centre); Nzakara/Zande (Rafai–Zemio–Obo in the east).

Musical area B covers Benue-Congo (Niger-Congo); Mpyemo/Kako/Ngbaka/Ngundi/Bogongo/Sanga-Sanga; Pomo (the Congolese Nola–Mbaiki frontier in the south-west).

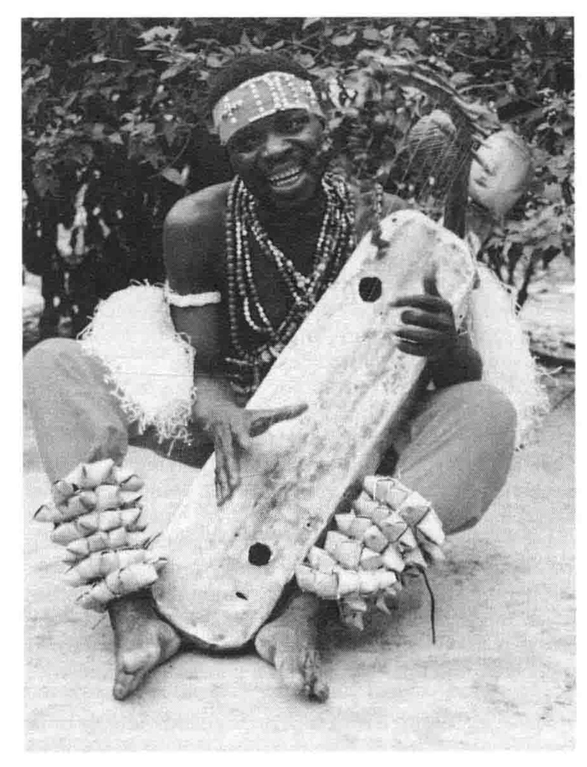
Musical Area C includes the Marban region: Runga (Ndele–Ouadda–Djallé–Birao in the north).

Musical area D includes the Benue-Congo group: 'pygmies' of the Congolese forests of Central Africa in the south-west of the country.

Rhythmic styles are among the clearly perceptible differences between these four musical areas. While the large musical area A characteristically employs a short or sequential rhythmic style, musical area C augments the same rhythmic style with rhythmic pulsations to the point where the musical rhythm literally shakes, as with the Surma people. In these two rhythmically related musical areas, instrumental ensembles consisting of xylophones and drums are often found, for instance among the Zande, Banda and Manza. The rhythmic Runga style of musical area C is heavily influenced by Islamic music.

Musical area B of the Benue-Congo group (Bantu) has a characteristically slower rhythmic style. In this musical area, only the Ngbaka ethnic group uses the harp, an instrument widespread in the region of the eastern Adamawa group (Zande), while the 'pygmies', Pomo and Sanga-Sanga play the *mvet*, a harp-zither from the bordering regions of Cameroon.

'Pygmy' music constitutes an entirely autonomous musical area in a region extending throughout the dense Congolese forests of Central Africa. Typical features of this tradition are polyphony and yodelling, and the conical single-headed drum is the predominant instrument. The 'pygmies' have a considerable musical influence on their Bantu neighbours, with whom they share the dense forests.



5. MUSICAL INSTRUMENTS. In Central African societies musical instruments have various functions linked to different musical repertories. First and foremost, instruments are used in ritual and initiation ceremonies, notably in connection with a heightened state of consciousness. The beating of musical instruments in particular, along with song, arouses that heightened state, which manifests itself in trance, auditory drive and/or music-colour synesthesia, allowing communication with the supernatural (often under the psychotropic influence of hallucinogens). Then there are such separate functions as sending messages from village to village by a slit-drum and providing entertainment for a group or an individual. The diversity of the functions of musical instruments is not, however, limited to these main contexts.

In the Central African Republic there are musical instruments that belong exclusively to a particular ethnic group, such as the ten-string *n'gombi* (harp) of the Ngbaka (fig.2) or the giant transverse trumpets of the Banda. Other musical instruments have spread throughout the Central African region as the result of migratory diffusion (the lamellophone, bells etc.). Other instruments exist within ethnic groups (skin drum with one or two heads, slit-drum, instruments for accompaniment etc.).

The instrument types found in Hornbostel and Sachs's classification of 1913–14 – idiophones, membranophones, chordophones and aerophones – are represented in Central African music. Notable among the wide distribution of instruments are the different kinds of xylophones, i.e. *mentsiang* of the Mpyemo (fig.3), *kponingbo* of the Zande (fig.4), *zanga* of the Pana and the Gbaya-Manza-Ngbaka, *kalanga* of the Banda-Mbiyi and *kangba* of the Manza, or the various forms of double-headed drums, i.e. *ntumo* of the Mpyemo, *ndumo* of the 'pygmies', *kporo* of the Banda Gbambiya, *bio* of the Gbaya and *guru* of the Zande.

Central African ethnic groups do not, however, categorize their musical instruments according to the criteria developed by Hornbostel and Sachs, particularly not by the appearance of the constituent elements of those instruments, but more usually according to function. An example of the taxonomy of musical instruments among the Mpyemo ethnic group follows:

Group (a): musical instruments particular to ceremonial dances, dances for entertainment and on specially joyous occasions (skin-head drum and slit-drum);

2. The ten string n'gombi belonging exclusively to the Ngbaka people of Benue-Congo

3. Portable xylophone of the Mpyemo people with calabash resonators that include mirlitons made from spiders' webs played by Pierre n'Dia of the Mekara village

Group (b): autonomous musical instruments (lamellophones, xylophones and musical bows);

Group (c): instruments used for accompaniment (rattles, short transverse trumpet and large and small bells);

Group (d): musical instruments for children (whistles and ground bows, such as the *korongoe* ground bow of the Gbaya-Bokoto).

6. MODERN DEVELOPMENTS. Urban dance music in the Central African Republic is a branch of modern Congolese rumba or *soukous*-like music, but it has been increasingly defined by local rhythms and vocal styles: for example, Zokela bands from the Lobaye region (1980–present) are rooted heavily in the styles of the Mbati and Ngbaka ethnic groups, and the band Negro Luamé from the Boda area (1975–87) adapted rhythms of the Gbaya and Bofi ethnic groups. The emergence of urban dance music in the 1960s resulted from the introduction of the Spanish guitar and, more importantly, from radio broadcasts of Latin American popular musics, such as the rumba, cha cha cha and *merengue*.

The early development (1963–5) of urban music in Bangui, the capital, is closely linked with well-known artists in the country, such as Jean Magale (with his song, *Pardon, chérie*), Dominique Eboma, Maître Bepka (Bekers), André Savat and Prosper Mayele, one of the founders of the band Centrafrican Jazz. More recently (1980s–90s), the late Thiery Yezo of the longstanding band Musiki and Kaida Monganga, the founder of Zokela Original, have had a significant influence on urban dance music in the republic.

One of the most compelling styles is *la musique traditionelle moderne* played by the band Zokela. Now not only the name of a band, *zokela* has become a full-fledged style. *Zokela* bands provide evenings of energetic dancing, social commentary and proverbs set to the bubbling rhythms of the Lobaye region in the south-west of the country. After paying a fee of 500 francs (about £3 in 1995) at an open-air club, one might have found musicians and patrons warmed up by about 9 p.m. Four singers standing in a row, each behind a stationary microphone, would trade lead lines and overlapped choral responses with tight harmonies. Occasionally a singer would withdraw, replaced by another waiting casually along the sidelines.

Though overshadowed internationally by neighbouring urban music styles, such as *soukous* and *makossa* from Congo and Cameroon, musicians from the Central African Republic, and the Lobaye region in particular, have developed their own electric band music since the late 1970s, and their popularity with the Central African people is high. The band Zokela captures the insistent and vital sound of Lobayan ceremonies and funeral dances on modern instruments. Accented by a trap set, the bass guitar and glass bottle tapped with a stick catches the texture of village drums. The bass guitar emphasizes high–low contrasts such as the open and muted strokes of a low-pitched drum, while the bottle adds the syncopated triplet rhythmic patterns of a matching high-pitched drum. Two lead guitars build on that rhythmic base, playing interlocking, repeating riffs (sounding brighter than in *soukous*) jumping octaves and rolling in cycles.

Though Zokela was not the first band to integrate musical elements from Lobaye into an urban sound, it was the first group to combine the melodies, harmonies, vocal quality and especially the *motengene* regional dance rhythms and energy into the music. After Thiery Yezo, the leader of Musiki, heard Zokela for the first time in 1981, he and a financially successful music lover from Lobaye invited the band to Bangui to perform

4. A Zande ensemble with xylophone (Kponingbo), split-drum and double-headed drum

several club concerts. Zokela exploded on to the Bangui cultural scene, soon playing regularly at Club Anabelle in the Fatima neighbourhood and later at other venues. Despite the increasing economic constraints of the late 1990s, they still play in Bangui, around the country and in the Democratic Republic of the Congo; they have also recorded many cassettes sold in Bangui street kiosks. As they established themselves in the capital, Zokela began singing not only about their experiences as Lobayans but also about urban life in Bangui, subjects to which people from all regions of the country could relate. In rhythm, vocal style and lyric, Zokela voiced the contemporary and complex experiences of urban Central Africans.

While Zokela remained in the capital during the early 1980s, several more established Bangui bands (including Musiki, Makembe, Cannon Stars and Cool Stars) began to tempt the Zokela singers to join them; and they often succeeded since they had instruments and more money. Fortunately, the core group of Zokela's singers and players was so large that there were musicians left to fill the places of those who moved on. Thus Zokela was not only maintained, but it had now infiltrated the sound of most of the other bands in Bangui to varying degrees.

Far from the urban centre, in the forested southern region, BaAka 'pygmies' have defined a version of modernity through their music and dance, providing a contrasting though related example of contemporary music in the Central African Republic. One of the most popular BaAka dances of the late 1980s was a hunting dance called *mabo*. *Mabo* was a relatively new dance. New dances emerge every few years, some remain for generations, while others fade away. Whereas songs for older dances (such as the spirit dance *njengi* or the hunting dance *ndambo*) have been elaborated to the point where underlying melodic themes are often dropped, with newer songs people occasionally sing basic melodic themes, while adding myriad improvisations and elaborations. One of the most common *mabo* songs is *Makala* (ex.1).

Ex.1

A new music-dance genre has recently developed among BaAka in response to the recent appearance of missionaries in the Bagandu region of the Lobaye. This developing expressive form, the 'God Dance' (*eboka ya nzapa*), is a means of addressing modernity. In an effort to reinvent themselves as competent in a changing world, BaAka claim any 'otherness' that surrounds them and usually excludes them, and in this genre they mix those elements into a form they can define and control. The dancers, mostly youths, move in a circle, using *motengene*-like steps borrowed from neighbouring ethnic groups, along with the singing style and drum rhythms of the neighbouring Bolemba 'pygmies' (who live more like Bantu villager farmers than do BaAka foragers). Bolemba recreational dances are also emulated by non-'pygmy' Bagandu youths in nearby villages, which is probably how the BaAka, in turn, first became familiar with the style.

Grace Brethren Church mission songs are preceded and followed by Bolemba-style interpretations of music from various Christian sects represented in Bagandu village, including Baptist, Apostolic and Catholic hymns. These hymns are blended into the same dance, along with Afropop snippets sung in the Lingala language (from radio tunes transmitted from the Congo and received in Bantu villages such as Bagandou).

BaAka initially argued the validity of Christian materials. But by 1992 the controversy had settled, and the 'God Dance' had just become one among many *beboka* (dance forms); they could dance their own dances and still 'pray to god', as some BaAka explained.

African 'pygmies' have been repeatedly placed in a 'timeless' cultural box by scholars, artists, journalists, missionaries, politicians and profiteers of various sorts. Each to a different purpose, and even in dialogue with each other, they have marked the forest people as utopian or backward, savage or sublime. At the same time, urban African musicians such as Zokela have been hurtled into a realm of marketable 'world beat' and now face the prospect of being stripped of regional potency. In a flourishing and ever-changing expressive world, Bagandu village youths enjoy performing the dance styles of their Bolemba 'pygmy' neighbours, and those village youths in turn inspire BaAka 'pygmies' in the forest and Zokela musicians in the city to interpret similar styles, all to different though thoroughly modern, rooted and relevant ends.

Central America. *See* LATIN AMERICA and under individual countries.

Central Asia. The musical cultures of Central Asia have been shaped by a long process of interaction between speakers of Iranian and Turkic languages, and by a longer history of interaction between settled and nomadic peoples. The present article covers the three major geographic regions of what has been called the 'Turco-Iranian world': the vast plain (including steppe, desert-steppe and desert) that falls from the Altai, Tian Shan and Pamir Mountains westwards to the Urals and the Caspian Sea; the Iranian plateau, with the Hindu Kush on the east and the Zagros mountains to the west; and the plateau of Anatolia, ringed by the Pontus Mountains along the Black Sea and the Taurus along the Mediterranean. Politically, Central Asia may be said to comprise the republics of TURKMENISTAN, UZBEKISTAN, KYRGYZSTAM, TAJIKISTAN and the southern third of KAZAKHSTAN; AFGHANISTAN north of the Hindu Kush; northern IRAN; AZERBAIJAN; and eastern TURKEY.

The major Iranian languages are Persian, Kurdish, Pashto and Baluchi. Different dialects of Persian are spoken in Iran, Afghanistan, Uzbekistan and Tajikistan; more speakers of Tajik Persian live in Afghanistan and Uzbekistan than in Tajikistan. Small groups of Pamir peoples living on both sides of the Pyandzh river in southern Tajikistan, north-east Afghanistan and the adjacent area of Pakistan speak several different eastern Iranian languages (Yaghnobi, Wakhi, Munji, Yidgha etc.). Turkic languages are spoken in much of northern Iran and Afghanistan as well as in Turkey, Azerbaijan, Turkmenistan, Uzbekistan, Kyrgyzstan and Kazakhstan. Unlike the political boundaries, the principal ethnolinguistic divisions of Central Asia have remained relatively stable since the end of the 16th century.

1. Traditions. 2. Musicians. 3. Structure and genre. 4. Instruments.

1. TRADITIONS. In the 20th century, efforts to develop musical cultures have produced somewhat similar results in the nine nations of the region, though with interesting local differences. Concerted attempts to reinterpret and modernize existing musical practices were mounted just as ethnomusicologists from inside and outside the region began to conduct fieldwork. Conflicts in the agendas of musicians, scholars and government ministries have fostered continuous debate concerning 'traditionality' (Russ. *traditsionnost'*) from the 1920s to the present.

Nationalist projects have included the establishment of conservatories and archives for traditional music, codification of 'classical' and 'folk' idioms with appropriate publications and institutions, suppression of religious

institutions where music was cultivated for centuries, creation of musical emblems of national identity and radio broadcasting policy. In Afghanistan only the last two have been significant, due perhaps to the relative weakness of central authority. Afghan nationalism in the 1930s encouraged the adoption of a national dance, the *atan-e melli*, and the *kiliwāli* music developed at Radio Afghanistan in the 1950s has had a profound impact throughout the nation. Many Afghans consider the *rubāb* (a double-chested short-necked lute) to be their national instrument.

The ideology of the founders of the Turkish Republic (established 1923) supported a sharp division between 'art' (*san'at*) and 'folk' (*halk*) music, with the latter seen as the proper basis for a secular musical practice that would (like the Latin script adopted in 1928) help to separate the new nation from its Ottoman past. The reconstructed 'folk' idiom, endowed with its own theory based on the rural long-necked lute *bağlama*, has been propagated by a vast network of institutions (conservatories, 'people's houses', clubs, Turkish Radio and Television); the instrument is now mass-produced and widely played in both cities and villages. Classical music suffered from the abolition of religious brotherhoods in 1925, although dervishes have continued to meet for 'rehearsals' (*meşk*) and other activities, some of which have been subsumed under the rubric of 'folklore'. Much of the repertory created in dervish lodges and at the Ottoman court was published as 'Classics of Turkish Music' (*Türk musikisi klasiklerinden*) beginning in the mid-1920s. When Turkish classical music was restored to the curriculum of the Istanbul Conservatory in the late 1940s, it was taught from notation according to the systematic theory of Sadettin Arel (1880–1955). Instruction at the state conservatory in Ankara (established 1936 with the assistance of Paul Hindemith) was from the outset limited to Western music. An archive of folk music to which Béla Bartók had contributed was first housed at the conservatory; in 1967 it was transferred to Turkish Radio and Television, which remains the most powerful centre for collection, notation, arrangement and diffusion of tunes in the *halk* idiom.

Whereas the officially sanctioned *halk* idiom of Turkey was defined to exclude the modes (*makamlar*) of art music, the *muqam* repertory was central to conceptions of 'people's' (*xalq*) music in Azerbaijan. *Xalq musikasi* (the equivalent of Russian *narodnaya muzïka*) likewise became a relatively comprehensive term in the other Turkic republics of the USSR, though genres with religious connotations were often excluded for ideological reasons. UZEIR HAJIBEYOV, the dominant figure in the musical life of the Azerbaijan SSR until his death, formulated an innovatory theory of the structure of the *muqam* system. First published in 1945 and subsequently refined by M.S. Ismaïlov (1960), the theory has influenced later generations of composers and improvisers without entirely displacing the orally transmitted pedagogies that organize the *muqam* system by different principles. Hajibeyov's own path as a composer led from operas that call for singers to improvise within a specified *muqam* to the fully notated opera *Kyor-oglï* (1936). He was also active as a conductor of choirs and orchestras of folk instruments that performed from notation. The creation of modern musical institutions in Azerbaijan does not seem to have diminished the great value placed on improvisation.

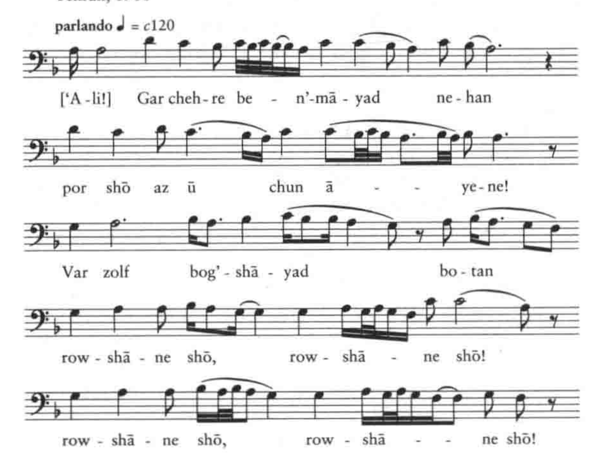
Improvisation has also retained its central importance in what is now called the 'traditional music' (*musiqi-ye sonnati*) of Iran, a high art that is closely related to the Azerbaijani *muqam* but has developed quite differently in the 20th century. One version of the Persian *radif*, a repertory of melody-types on which improvised performances are based, was published in 1963 by the Ministry of Culture and Arts, more as a cultural monument than as a teaching tool. Earlier versions published for teaching purposes were highly selective. A more rigorous version of the *radif* was assembled over many years of study by Nur 'Ali Borumand (1905–77) and taught by himself and his successors at the University of Tehran from the late 1960s. Like several of his friends Borumand performed only at private gatherings, and his teaching, which avoided notation and other gestures toward scientific 'systematization', was more conservative than that of Sadettin Arel in Turkey or of Hajibeyov in Azerbaijan. Borumand's colleague Dāryush Safvat and several of his students (among them Dāryush Talā'i, Majid Kiāni and Mohammad Rezā Lotfi) came to be recognized as authoritative exponents of *musiqi-ye sonnati*. Regional music (*musiqi-ye navāhi*) began to attract official interest in the 1990s, and major festivals were organized in 1992, 1994 and 1997. No attempt at devising a written pedagogy for a regional music has ever been made in Iran.

A major source of controversy in research conducted within the USSR was the concept of 'Professional folk music', as outlined in Klyment Kvitka's path-breaking dissertation on 'Professional folk singers and instrumentalists in the Ukraine' (1924). Kvitka's research programme offered an alternative to the equation of 'folk music' with 'peasant music' in the work of Bartók, Brăiloiu and other central European scholars. The seminal monograph on Turkmen music by V.A. Uspensky and V.M. Belyayev (1928) contains a wealth of information on the *bagşy*, a professional storyteller and entertainer who plays the *dutār* (a fretted long-necked lute with two strings). Analogous figures have long been active throughout Central Asia, but from the mid-1930s many were forced to adopt other professions in order to avoid charges of 'parasitism'. In Kazakhstan ideological considerations generated denials that any professional musicians had existed prior to the creation in the 1930s of an 'orchestra of folk instruments', and a second volume on Turkmen music by Belyayev and Uspensky remained unpublished owing to an alleged 'exaggeration of professionalism'. One strategy, adopted in Belyayev's essays on the musical history of the peoples of the USSR (1962–3), was to interpret 'professional folk music' as a transitional stage preparing the way for the creation of national schools of composition.

Studies of sung poetry in Soviet Central Asia were also hampered by nationalist concerns and by relentless efforts to suppress religion, including the Sufi orders. When Uspensky notated the Bukharan *shashmaqām*, he was not permitted to write down the Tajik texts sung by his informant, and the work was published in 1924 as a monument of Uzbek culture, with no texts in the vocal section. It was the presence of too many dervish songs that prevented the publication of Belyayev's and Uspensky's study of music in the Ferghana valley. In other cases objectionable texts were revised or replaced.

As in Turkey, the construction of cultural heritages in Soviet Central Asia made use of many institutions and media. The emphasis on training musicians for ensemble performance that left little or no room for improvisation required new canons of classical music and folklore, along with extensive modifications of instruments and performance genres. Substantial efforts were devoted to the harmonization of folk melodies, whereas in Turkey this project remains a deferred item on the nationalist agenda. Musicians in the USSR confronted a powerful system of incentives and punishments. Changes in the political climate brought about drastic revaluations of the expertise of performers, some of whom suffered years of official neglect before their services were suddenly needed. One such figure was the Bukharan Jewish musician Baruch Zirkiev, who served towards the end of his life as a major informant for Yunus Rajabi (1897–1976) as the latter notated what became the standard edition of the Bukharan *shashmaqām* (published in 1959).

Before they were transformed into 'traditions', the performing arts of Central Asia offered many avenues of communication with ancestors and contemporaries. If popular preferences in every nation have been deeply affected by the diffusion of new idioms, the resilience of older attitudes toward music and poetry (especially those associated with Sufism) has been no less evident.



2. Musicians. Acknowledgment of the power of music as a medium of communication has been one of the basic premises of Turkic-Iranian cultural interaction throughout Central Asia. In a story that has been told for over a millennium, a ruler promises to execute anyone who tells him that his favourite horse has died, and a minstrel escapes punishment by conveying the bad news through sounds drawn from a string instrument. Bārbad, the chief minstrel of Khosrow Parviz (ruled 590–628) in Sassanian Iran, accomplished this task on the short-necked lute *barbat*, and a piece in the current *dutār* repertory of Khorezm tells the same story about a different ruler. Pieces for the Kyrgyz *komuz* (an unfretted long-necked lute with three strings) and the Kazakh *dömbra* (a fretted long-necked lute with two strings) relate a similar incident, in which a khan learns of his son's death in a hunt as a minstrel depicts the sequence of events on his *komuz* or *dömbra*. Programmatic compositions that evoke such episodes have been no less significant than improvisations designed to meet the needs of a particular occasion.

Before the 20th century no court, however small, could do without the services of musicians and poets, who were often bi- or trilingual. Verses presented to the Emir of Bukhara by the Persian-speaking intellectual Ahmad Mahdum Kalla (1827–97) echo a long tradition in naming seven figures whose achievements are responsible for the honour of a state (all of which he claimed to combine in his own person): the philosopher, doctor, astrologer, singer, poet, calligrapher and painter. Praise poetry, whether sung or recited, served as a means of moral instruction; as is generally the case at courts, performers and auditors were expected to conduct themselves according to accepted norms. Throughout most of Central Asia following the advent of Islam, the basic models of decorum (*adab*) were of Persian origin. Innumerable court musicians maintained close ties with Sufi religious orders, whose meeting places remained important performance venues as the courts disappeared. Yet the diffusion of Sufi ideals and models of behaviour extended far beyond court circles, which is one reason for their longevity.

Gatherings of various kinds continue to be structured around the offering and acceptance of courtesies in the form of appropriate gestures and postures, conversation, tea, food, sweets and sometimes alcohol, tobacco and other intoxicants. Music should be produced at just the right moment, when performers and listeners have reached the appropriate state of readiness. The Arabic term *muhabbet* is used in several languages to denote the warm feelings of conviviality generated in gatherings that include well-timed musical performances (whether live or recorded). The dynamics of group interaction may induce states of ecstasy in some participants, or a group may prefer attitudes of quiet meditation. The performance idioms suited to the Sufi *majles* and to social gatherings held in private homes (variously called *mehmāni*, *ziyāfat*, *shau nishini*, *gap*, *saz söxbet* etc.) allow participants to respond to one another'sactions and gestures: a soloist may repeat segments that have elicited positive reactions; the group may join the soloist at the ends of lines or in singing refrains (ex.1); an instrumentalist may defer to a senior or more knowledgeable colleague by declining to challenge his version of a mode. An appreciation of classical poetry, notably the *ghazal*, is readily shared and transmitted in these environments. In Iran at least one such well-established circle of connoisseurs and amateurs has continued to meet every week for six decades. Private homes often have a special wing in which male guests are entertained (called *dîwexan* or *diwanxand* in Kurdistan, *mehmānkhāne* in Transoxania and Afghanistan).

Amateur music-making at informal gatherings may attain the very highest levels of technical expertise and spiritual insight. Knowledgeable amateurs often take pains to distance themselves from musicians who receive compensation for public performances, and it is possible to distinguish 'voluntary gifts' from 'fees for services rendered'. The honorific title of 'master' (Persian *ustād*, Kurdish *westa*, Turkic *ustâ*) may be applied to musicians who are not professionally active, and titles that designate types of degrees or mastery do not necessarily imply professionalism. A Tajik or Uzbek singer who commands a large repertory of poetry deserves to be called a *hāfez* ('preserver', normally conferred on a person who has memorized the Qur'an). In north-eastern Iran some

Ex.1 One line of a *ghazal* by Mowlānā Jalāl al-Din Rumi, sung in a Sufi lodge, Tehran, 1968

connoisseurs reserve the title *bakhshi* for singers who have made noteworthy additions to the repertory of Turkic and Kurdish verses, but popular usage is less restrictive and extends the title to singers whose repertories include the main Turkic narratives. The *âşık* of eastern Anatolia earns the right to this title both by composing new verses and melodies and by maintaining a high moral standard in his daily life and in the content of his performances. In Kars, the title of *ustâ* ('master') *âşık* is conferred on performers who control the full repertory of melody types (*sesler*, 'tones'), said to contain 72 entities. The same number of melody types (*nameler*) is supposedly available to the Khorezmian *bakhshi*, but in both cases the number has been chosen for its symbolic value and does not match the musical system.

The fact that such titles as *bakhshi* and *âşık* are not easily acquired points to the continuing prestige of the many figures descended from the *ozan* of the Oghuz Turks, who acted as both bard and soothsayer. Most singers of tales take pride in their vocation (sometimes received in a dream) and in the antiquity of their repertory. In the tales of the legendary *ozan* Dede Qorqut, which survive in two 16th-century manuscripts (at Dresden and the Vatican), verses interpolated within the prose narratives represent the speech of protagonists; they were sung or declaimed to the accompaniment of a *qopuz* (a long-necked lute with three strings). The storytellers of eastern Anatolia, Azerbaijan, north-eastern Iran, Turkmenistan and Khorezm continue to use a modified version of this format: the narrative relates the events that impelled the protagonists to speak, and their emotionally heightened speech takes the form of strophes sung to the accompaniment of a fretted long-necked lute (*sāz* or *dutār*), which is joined by the cylindrical oboe *bālabān* and the frame drum *qavāl* in western Azerbaijan, by the spike fiddle *gyjak* in parts of Turkmenistan and by *gyjak*, *bulaman* and frame drum in one Khorezmian style. The subject matter of the strophes covers a wide range of topics: the protagonists, who are often represented as experienced singers, may quote maxims, threaten their enemies, tell of their journeys and battles, or express the anguish of separation from a lover. Far the most celebrated example of a singing warrior is *Kyor-oglï*, mentioned as such in historical chronicles of the Caucasus in the early 17th century and subsequently the main protagonist of narrative cycles in Anatolia, Azerbaijan, Turkmenistan, southern Uzbekistan, northern Afghanistan and Badakhshan (where the verses are in Tajik Persian).

Sequences of strophes are often detached from their narratives and performed as songs. Among the Turkmen, the *tirmeçy-bagşy* sings lyrics taken from various narratives as well as verses of the classical Turkmen poets, whereas the *dessançy-bagşy* performs entire narratives. The *bakhshi* of the Surkhandarya region in Uzbekistan, whose instrument is the unfretted lute *dömbra*, also distinguishes between short strophic poems called *terme* (which are often improvised, unlike the Turkmen *tirme*) and long narratives (*dāstān*), without classifying performers as specialists in one or the other genre.

The Kyrgyz *manaschi* differs from all descendants of the *ozan*in confining himself to portions of one epic: the vast *Manas* cycle, a compendium of genres sung without instrumental accompaniment. The *manaschi* combines a number of performing styles according to his perception of his listeners' desires. The Kazakh *zhïrau* or *zhïrshi* performs individual items from a large repertory of epic song (*zhïr*), accompanying himself on the *dömbra* (a fretted long-necked lute with two strings). Sung verse need not be attributed to protagonists in the *zhïr* but may have narrative content. The Karakalpak *zhïrau* is one of the few Turkic bards outside Siberia who accompanies himself on a fiddle (*qopïz*, with two horsehair strings) rather than on a long-necked lute. Among the Karakalpaks, Kazakhs and Kyrgyz, the *qopïz* (or its Kyrgyz equivalent, *kiak*) is strongly associated with healer-diviners called *baqsy*, though some Kyrgyz healers play the unfretted lute *komuz* instead. The functions of bard and healer, originally united in the figure of the *baqsy* or *bakhshi*, were separated as more specialized performance roles developed. The process of specialization has made certain roles available to women in particular regions, e.g. the role of *bakhshi*-healer in northern Tajikistan, where a frame drum (*dāyre*) rather than a fiddle is used in divination. Though the role of bard and the playing of chordophones have been largely monopolized by men, there are significant exceptions: in the Ferghana valley women have long played *dutār* (smaller and with a softer tone than the men's instrument), and since the 1930s a small number of Turkmen women have followed the *bakhshi*'s vocation (singing in the same register as the male *bakhshi*, with less constricted voices). A Turkish woman who has gained considerable recognition as an *âşık*, Şah Turna (*b* 1953), did so as an exile in Germany.

In both Kyrgyz and Kazakh, *aqïn* is an honorific term for a professional minstrel who sings several different genres to his own instrumental accompaniment (on the Kyrgyz *komuz* or the Kazakh *dömbra*). An *aqïn* is expected to be a gifted improviser (Kyrgyz *tökmö*), capable of holding his own in the competitions known as *aytïs*, where strict rules were devised for evaluating performances in the various genres. Like the Turkmen *bagşy*, the *aqïn* offers moral counsel, eulogizes actual or potential patrons and laments fallen heroes, functions that were easily redirected to incorporate official propaganda during the Soviet period. The Kazakh *aqïn* Jambul Jabayev (1845–1945) and the Kyrgyz *aqïn* Toktogul (1864–1933) were extolled throughout the former USSR as exemplary 'people's artists'.

The full range of specialized performance roles in Central Asia allows for the co-existence of several attitudes toward existing repertories. In many cases, pre-composed verses have priority, and the performer's task is to make effective use of conventional musical resources in presenting the verses, which may be considered 'texts' even when memorized by illiterate singers. Mastery of a large repertory of sung poetry generally entails a deep familiarity with historical lore associated with the texts; this is one reason why long periods of apprenticeship are common. Poets are exemplary figures whose names and meritorious deeds must be remembered. A poet–musician is occasionally credited with the invention of a mode or melody type (e.g. the *Navā'i* mode attributed by some Turkmen and Iranian musicians to Mir Ali-Sher Navā'i of Herat (*d* 1501)). The distinction between 'composer' (*sal*) and 'performer' (*sere*) of a lyric song is firmly embedded in Kazakh musical culture, which stands out for the large number of musicians whose names remain attached to their compositions. These include composers of the instrumental genre *küy*, such as Qurmangazï

(1806–79) and Dauletkerei (1820–87), as well as song-composers such as Birzhansal (1831–94).

Music that marks major stages in the life-cycle may or may not require specialized skills. Baluchi culture is exceptional in the importance of songs offered to the mother of a new-born child by her female relatives, friends and neighbours over a period that may last up to 40 days after the child's birth. Antiphonal singing during the *shaptāgi* ceremony prevents mother and child from being left alone and possibly victimized by evil spirits. Any member of the group may participate in singing *sepat*, whereas vocal dexterity above the norm is needed for singing *vazbat* ('praise'); the verses of both genres praise God, the Prophet and important religious figures. Another genre, *lāro*, is sung responsorially or antiphonally on the sixth evening after a child's birth, and as a bridegroom is carried back from his bath on the day of his wedding. Other wedding genres are restricted to that context (e.g. *hālo*, sung as a bridegroom is carried to the bath and as he bathes).

In most regions marriages provide the main occasions for women's musical activities. The events surrounding a marriage in Herat (western Afghanistan) move from avoidance of music during initial visits between the two families, to the betrothal party where women of the groom's family sing and dance to *dāyre* (frame drum) accompaniment, then the engagement party where a group of female musicians is hired to entertain women, and finally the wedding itself, where a female group entertains women and a male group entertains men. The female *sāzande* (professional musician) plays essentially the same segregated role in Bukhara as in Herat, though elsewhere in Uzbekistan and Tajikistan men and women often attend the same festive gathering (*bazm*). The Bukharan *sāzande* was most often Jewish prior to the massive emigration of Bukharan Jews, but the analogous *xalfa sāzi* of Khorezm is necessarily a Muslim, since her role presupposes some familiarity with religious law. One corollary of sexually segregated gatherings has been the long-term popularity, in Afghanistan and Uzbekistan, of dancing-boys (*bache*) dressed as women and performing for men. In Bukhara, women have also entertained themselves by dressing as men and enacting such male roles as 'dervish' and 'bridegroom' with appropriate songs and gestures.

The intricate relationships between gender and musicality in Central Asia are an area greatly in need of further investigation. Religious ceremonies for women are often conducted differently from men's ceremonies, as in the case of recitals of *mevlûd* (sung poetry in praise of Muhammad) in Turkey. The texts of some performance genres, such as the Pashto *landai* (*see* AFGHANISTAN, §II, 1), suggest that they are more often than not composed by women. Baluchi musicians describe such genres as *motk* and *zahirok* (*see* IRAN, §III, 2(iv) and 4(i)) as 'originally' the property of women. Imagined dialogues between a man and a woman are prominent in many performance genres, not least the Turkic *dāstān* and *hekāyat*. Singers who group together sequences of Pashto *landai*, Persian *dobeiti* or Turkish *türkü* can easily create or reproduce similar dialogues. As in the rest of the world, debate concerning gender roles is prominent in oral and written commentary on artists and styles of popular music (e.g. the intense controversies surrounding the Turkish genre *arabesk*, analysed by Stokes, 1992)

3. STRUCTURE AND GENRE. Conceptions of narratives, modes or modal systems with two or more 'branches' are found throughout Central Asia. Related conceptions are evident in the social organization of tribes and in the plans of encyclopedias such as the *Ashjā wa athmār* ('Trees and fruits', 1288) of al-Bukhāri, which reviews all the 'trees' in the orchard of knowledge and all the 'fruits' on each tree. Yet, although it was sometimes possible for one ruler to exercise authority over all of a tribe's divisions and for one scholar to compile an encyclopedia, the branches of some great narratives (e.g. the 32 or 64 branches of the Uzbek *Göroğly* cycle in southern Tajikistan) are so extensive that no performer can master them all. Enumerating a number of branches serves either to situate one master's knowledge within a larger whole or to codify a set of options from which every competent musician makes appropriate selections and combinations.

An itinerary adopted for all or part of a performance is sometimes called a 'road' or 'way' (Turkic *yol*, Persian *rāh* and *tariq*). Some itineraries offer a greater range of options than others; performers decide where to diverge from and where to rejoin a well-travelled path on the basis of various considerations, often including their perceptions of the emotional states of listeners. A healer–diviner (or 'shaman') is obliged to undertake journeys, the precise course of which cannot be predicted. Important musical terms refer to well-defined itineraries (e.g. Turkish *seyir*, a melodic progression characteristic of one *makam*) as well as to improvisational 'strolling' (Azerbaijani *gezişme*).

A roster of different 'ways' may amount to an inventory of performance styles, though a single itinerary may easily pass through a number of styles. The Persian poet Manuchehri, active at the court of the Ghaznavid ruler Mas'ud (ruled 1030–42 in what is now Afghanistan), referred to a mode of performance that could accommodate verses in two groups of Turkic languages, the 'eastern' dialect of the Qarluq and Uighur Turks and the 'western' dialect of the Oghuz and Qipchak Turks:

> Be rāh-e torkī mānā ke khūb-tar gū'ī
> To she'r-e torkī bar-khwān marā o she'r-e ghuzī.
>
> (In the Turkic mode, 'so that you might speak better,
> sing [or declaim] for me verses in both Turki and Ghuzzi'.)

From the 11th century onwards, theoretical writings in Persian posit affinities between one *rāh*, *tariq* or *parde* (literally 'fret', by extension 'mode') and one class of listeners, defined by some combination of physical characteristics, ethnicity, age, profession and social status. Such doctrines, which must also have been transmitted orally, served to admonish performers not to ignore the needs and preferences of listeners, though these cannot have been as predictable as the doctrines claim.

The term *maqām*, which passed from Arabic into Persian, Kurdish and Turkic languages, designates an entity that belongs to a larger repertory or system and has its own proper name. The term has served to enumerate and classify entities within many repertories, which have included finished compositions as well as generative devices. The proper names are helpful in teaching how to pass from one *maqām* to another and how to combine them in appropriate sequences. The names also facilitate reference to other collections of named entities (seasons, times of day, humours etc.). One *maqām* may consist of

(a) a suite with several branches (Arabic *shuʿab* (sing. *shuʿba*), also used in Persian, Azerbaijani and Uzbek), some portion of which is performed on a particular occasion; (b) a scale implying certain melodic progressions and modulatory possibilities; (c) a melody type; or (d) a relatively fixed melody, particularly an instrumental composition (as in Kurdish *meqam* and Turkmen *mukam*). Specific uses of the term often exploit its multiple meanings and associations.

The identity of a *maqām* depends on how its contrasting tonal registers are projected in compositions and performances; a musician who has mastered a *maqām* repertory knows several ways of moving from one register to another. The most typical melodic progressions ascend in several stages to higher registers, then return to the point of departure as extended melodic spans of unequal length are replaced by shorter melodies with equal phrase-lengths and the tempo becomes quicker. The underlying dramaturgy is sometimes described as 'flight' followed by 'descent' or 'return'. Such progressions may be completed quickly, or they may be extended through an entire ceremony or performance. Numerous terms designate refrains or refrain-like elements that confirm returns to the lower register and to straightforward rhythms. There are also many verbs for the actions of respondents in responsorial and antiphonal genres. Yet musicians often create an intricate interweaving of structural levels that eludes the available terminology.

The Turkmen *dutār* compositions called *mukam* are said to form a cycle of five units that gradually ascends from the lowest to the highest register, though the five pieces are usually played separately. Songs in the Turkmen *bagşy* repertory are also classified according to register and are performed at the appropriate point in a concert, which begins with songs in the low register, gradually gains intensity during the long middle section and reaches its peak with a smaller number of songs in the high register.

A musician's verbal description of one *maqām* may point simply to three phases. According to the *âşık*, Murat Çobanoğlu (*b* 1938) the Turkish *Garibi makam* begins in a high register (*tiz*) and makes a descent (*inmek*, analogous to Persian *forud*) to a low register (*pest*; see Reinhard and de Oliveira Pinto, 1989, pp.88–9). The entire progression is completed in the first line of each quatrain that Çobanoğlu sings in an exchange of strophes with a second *âşık*, Şeref Taşlıova (*b* 1938). Each singer treats the descent in a strikingly different manner (ex.2) but both agree on the relationship between the *makam* and the syllabic poetic metre (11 syllables, divided as 6 + 5 in the first quatrain, as 4 + 4 + 3 in the second): the descent begins on or immediately following the sixth syllable, and the next three syllables are sung to the notes B♭, A and G before the descent continues.

No variable is more significant than the coordination of melodic progressions with specific poetic metres and rhythmic cycles. The presence of a poetic metre (either syllabic or quantitative) need not entail adherence to a rhythmic cycle (*usul* in the Turkic languages, from the Arabic word for 'elements'). Avoidance of a musical (as opposed to a poetic) metre, or its introduction at a specific point in the performance, is an essential feature of many performance genres. The Bukharan genre *mavrigi*, sung by a soloist to the accompaniment of a frame drum, begins with an 'unmetred', highly ornamented section

Ex.2 Initial lines of the quatrains sung in *Garibi makam* (from a cassette with Reinhard and de Oliveira Pinto, 1989)

(*shahd*, 'honey') followed by a sequence of songs in contrasting metres, with one change of tempo in each song. *Mavrigi* (also called *gharibi*, 'homelessness') is associated with descendants of Persian-speaking slaves captured in Khorasan by Uzbek invaders and transported to Bukhara via Merv (from which its name derives). With the introduction of metre after the *shahd*, the persona portrayed by the singer turns from introspection to a renewed sociability.

Singers of *mavrigi* have several options with respect to selection and ordering of the metric songs, but the *shahd* cannot stand by itself. Such compound genres differ in this respect from conventional pairings of genres in which the second member of the pair, but not the first, adheres to a constant metre or rhythmic cycle. This arrangement may be considered a minimal 'suite', moving from phrases of variable duration in parlando rubato style to phrases of more equal length in *tempo giusto*. The shift to *tempo giusto* is sometimes optional, as in performances of the Kurdish genres *lawik*, *qetar*, *heyran* and *beyt*, which may or may not conclude with a metric *paşbend* ('after-verse'). In other words, musicians are not always obliged to resolve the tension they have sustained through several asymmetrical phrases sung or played parlando rubato. This holds true as well for the Turkish *uzun hava* ('long air'). For what is presumably a variety of reasons, 'long song' has proven to be an apt name for several Eurasian vocal genres, including the Mongolian *urtyn duu*, Kalmyk *ut dun*, Tatar *özen küi*, Bashkir *uzun küi*, Russian *protyazhnaya pesnya* and Romanian HORA LUNGA. In most of these the absence of a fixed grouping of pulses increases the singer's options for prolonging and ornamenting a melodic descent, not least through the interpolation of 'extra' syllables at the beginning, middle or end of lines (cf 'aman' in ex.2). Most *uzun hava* melodies are not long enough to accommodate an entire strophe, and singers generally have several opportunities to vary the skeletal progression as they string together a sequence of strophes. Singers are also free to choose the melodic progressions best suited to particular texts.

If a minimal 'suite' moves only once from parlando rubato to *tempo giusto*, frequent shifts from one to the other occur in more extended formats, such as those used

in the classical traditions of Iran and Azerbaijan. In Azerbaijani music a *räng* (in a dance metre, often 6/8) separates each of the major subdivisions of a performance, and a *täsnif* (pre-composed metric song) may be introduced at a number of points. The standard sequence of movements in 20th-century Persian music places the *tasnif* and *reng* at the very end of the performance, which usually lasts between 30 and 60 minutes. In both traditions the central portion of a performance is devoted to improvised singing of the *ghazal*, where the singer's rhythmic options are constrained by the quantitative metres of the poems.

As these examples indicate, the performance information conveyed by names of genres pertains to the ordering of items as well as to style and content. The options available to performers have been codified in a number of different ways, which commonly permit more liberties in the middle than at the beginning or end (often called *baş*, 'head' and *ayaq*, 'foot' in Turkic languages). The Turkish concert-suite *fasıl* begins and ends with instrumental genres, first an improvised *taksim* and a composed *peşrev* (from Persian *pishrow*, 'prelude'), at the end a *saz semaî*. In between come pieces in several vocal genres, which are differentiated by the rhythmic cycles and the types of refrain appropriate to each genre: *beste*, *ağırsemaî*, more than one *şarkı*, *yürüksemaî* and perhaps an improvised *gazel* at some point in the sequence. The choice of pieces and to some extent their ordering is left to the performers, who also decide where to modulate to a new *makam* by means of a modulatory *taksim*. Modulation followed by a return to the original *makam* also occurs within each composed piece. Each of the main types of religious ceremonial music in Turkey (*ayin*, *namaz* and *zikir*) has its own procedures for coordinating a sequence of genres with a *makam* progression.

The *radif* ('row') of Persian classical music is a particularly ingenious device for teaching the art of making connections and transitions within each modal entity (*gushe*) and within larger sequences (*see* IRAN, §II, 3). Students cannot learn the *radif* in less than a decade. The distinctive identity of each *gushe* has several facets: its scope and importance, its pitch-range and the function of each pitch, in many cases an optional or obligatory association with a specific poetic metre, rhythmic or melodic figures that are appropriate at the beginning or at a later point in the *gushe* etc. The distinctive features of individual units in the Azerbaijani *muqam* system are similar (and also require a minimum of ten years' study), although it is not organized into a single *radif*.

The most highly determined genre-sequences are the canonical suites known as the *chahār* ('four') *maqām* of the Tashkent-Ferghana region, the Bukharan *shash* ('six') *maqām*, the *alti-yarim* ('six-and-a-half') *maqām* of Khorezm and the *on iki* ('twelve') *muqām* of the Uighurs in Xinjiang and adjacent areas of Uzbekistan and Kazakhstan. The Bukharan and Khorezmian suites are divided into instrumental and vocal sections; the seventh Khorezmian suite is only 'half a *maqām*', since it lacks a vocal section. In each movement of the instrumental section a short refrain (*bāzgu'i*) is played in alternation with one or more variable phrases (*khāne*), which gradually move to higher registers. The length of the variable phrases gradually expands in the first three movements (*tasnif*, *tarje* and *gardun*), but in the *mukhammas* and *saqil* all phrases have the same length as the refrain. Each movement has its own characteristic rhythmic cycle (*usul*). The vocal section has several 'branches', each in a distinctive register and tonality; the various segments of each branch (*sho'be*) are distinguished by their rhythmic cycles and characteristic melodic figures. A connecting passage (*supāresh*) effects a smooth transition from one *sho'be* to the next.

4. INSTRUMENTS. For thousands of years the peoples of Central Asia have participated in extensive trade between Europe and the Mediterranean and East Asia, which has included exchange of musical instruments and of ideas about music (Picken, 1975). While the mouth organ (*mushtaq*) represented on the grotto reliefs at Taq-i Bustan, Iran (late 6th century CE), is evidently based on a Chinese model, the idea of using pegs turned with keys to adjust the tension of strings may have been transmitted to China from the West, inasmuch as figuration on Chinese tuning keys of the 2nd century BCE resembles Iranian motifs of the Achaemenid period (*c*550–331 BCE).

No exchange had more far-reaching consequences than the eastwards diffusion of Middle Eastern and Central Asian chordophones that accompanied the spread of Buddhism along the Silk Road in the middle of the 1st millennium CE. Early Buddhist orchestras of harps, lutes, flutes, cylindrical oboes and drums produced audible representations of the musical delights of the 'Western Paradise'. Five of the ten court orchestras of the Tang dynasty (618–907) bore the names of Central Asian oases and city-states: Turfan, Kucha, Kashgar, Samarkand and Bukhara. In turn, the development of multi-movement suites at the Tang court is likely to have affected Central Asian conceptions of musical structure down to the present day.

An idea that seems to have arisen in Central Asia and spread in all directions is the use of an ensemble including long brass trumpets (*karnā*, *nafir*, *boru*), conical oboes (*sornā*) and kettledrums (one large *kus* and a pair of *naqqāra*) as an emblem of power. Among the instruments that have been added to this core group, in Central Asia and elsewhere, are smaller trumpets or horns, cymbals, bells, jingles and double-headed drums. The latter are prominent in the ceremonial music of Hausa and Fulani courts (*see* HAUSA MUSIC, §2, and CAMEROON, §2(iv)) and in the Turkish *mehter* (*see* TURKEY, fig.4). The Persian and Central Asian *naqqāra-khāne*) played at sunrise, sunset and other times of day, hence the most common names for similar ensembles in South Asia (Persian *nawbat*, 'watch') and South-east Asia (*nobat*). 18th-century European adaptations of the Turkish *mehter* (*see* JANISSARY MUSIC) eliminated one of the most distinctive features, the long trumpets.

The vertical angular harp (Persian *chang*), invented *c*1900 BCE, remained one of the principal instruments of court ensembles in much of Central Asia until the 17th century. A major technological improvement is evident in harps pictured on the Taq-i Bustan reliefs and in Chinese images of the mid-6th century CE: a short pin or fulcrum is inserted between the box and the perpendicular rod attached to a slim tail that descends from the box. We do not know whether this design, which prevents the instrument collapsing as string tensions are increased, was invented in China, Iran or some intermediary point.

The vertical angular harp was the only instrument of western Central Asia whose prestige over a long period of time approximated that of the various plucked and bowed lutes. The Pahlavi (Middle Persian) terms for

short-necked and long-necked lutes were, respectively, *barbat* and *tunbur*; as a loan-word in Arabic the latter term (pl. *tanābīr*) came to denote lyres as well as long-necked lutes. The four silk strings of the *barbat* were tuned in 4ths and plucked with a plectrum. It was the instrument of the great Sassanian musician Bārbad, who richly exploited its possibilities through his system of seven royal modes and their derivatives. One of its descendants, the *'ud*, played the same role in Arabic music theory that the monochord was to assume in the Latin West. The *pipa*, likewise derived from the *barbat* or from its prototype, was employed by Sujīva (*fl* 570), a musician from Kucha, in demonstrating to Chinese musicians a system of seven heptatonic 'Western' modes that evidently had Sanskrit names.

AL-FĀRĀBĪ, who was born in Transoxania but spent most of his life in Baghdad and Aleppo, famously described the fretting of two types of *tunbur*: those of Baghdad and of Khorasan, each with two strings (*see* ARAB MUSIC, §I, 3(ii)). He noted but did not analyse regional variation in the size and shape of the Khorasani *tunbur*, which was also played in Transoxania. Its successor, the *dutār*, is no less subject to morphological variation in the vast region between Khorasan and Xinjiang; the length of its vibrating strings, for example, ranges from 60 to 105 cm. A fuller list of pertinent variables in the construction of long-necked lutes and other chordophones can be extracted from three treatises of 'Abd al-Qāder Marāghi (*d* 1435): the shape of the sound cavity and its size relative to the length of the neck; the material used for the soundtable (wood or skin) and strings (silk, gut or brass); the number, relative thickness and tuning of the strings; where pertinent, the arrangement of strings in double or triple courses; the presence of frets, drone or sympathetic strings; and so on.

The concept of bowing is generally thought to have originated in Central Asia and to have spread rapidly throughout the Muslim world and the Byzantine empire, where it is widely attested by the 10th century (*see* BOW, §I, 1,). Al-Fārābi provides the earliest account of the bowed *rabāb*, which in his view was well suited to accompanying the *tunbur* of Khorasan. Similar pairings of plucked and bowed lutes in current use include the Turkmen duo of *dutār* and *gijak* (spike fiddle) and the standard trio of Azerbaijani classical music, consisting of Caucasian *tār*, *kemānche* (spike fiddle) and a singer who also plays the *def* (frame drum). Marāghi discussed two types of *tanbur* that were normally plucked but might also be bowed, and this is still the case with the 'great *tanbur*' of Turkish art music, the Tajik-Uzbek *tanbur* (the bowed version of which is called *sato*, from Persian *setār*, 'three strings') and the larger Uighur *tanbur* (the bowed version of which is likewise *satar*).

Tanbur and its derivatives (e.g. *dömbra*, *dambura*) are still the most common names for Central Asian long-necked lutes. One playing technique, used for the *tanbur* of the Ahl-e Haqq order (*see* IRAN, §II, 2(iv)), the *dutār*, the Kazakh *dömbra*, the Kyrgyz *komuz* and the *dambura* of northern Afghanistan, is for one or more fingers to strike the strings in a continuous series of down-and-up motions. Otherwise the strings are plucked with the nail of the index finger, with a plectrum attached to the index finger or with a plectrum held between thumb and index finger. The technique of striking two or three strings with several fingers is well suited to the polyphonic styles preferred by most Turkic peoples. Long-necked lutes on which the strings are plucked individually are effectively used in teaching Turkic and Iranian *maqām* systems. A notation showing each plucked note on the Khorezmian *tanbur* was developed in the mid-19th century after unsuccessful attempts at notating the strokes of the more prestigious *dutār*. The *tanbur* is also the central instrument of the Bukharan *shashmaqām*, and in Turkey the 'great *tanbur*', with up to 48 movable frets on its very long neck, enjoys a more prominent position in art music than does the short-necked, unfretted *'ud*. Two long-necked plucked lutes, the *setār* and *tār*, are the main instruments used in teaching the Persian *radif*.

Various forms of the Turkic word *qopuz* and its Mongolian cognate *khugur* or *khuur* have been applied to both plucked and bowed lutes; with or without a modifier (e.g. Kyrgyz *temir komuz*, 'iron *komuz*'; Mongol *tömör khuur*, 'iron *khuur*') they may also refer to jew's harps. According to Marāghi, the *qopuz* of the Oghuz *ozan* had a skin soundtable over half the surface of its elongated cavity, and its three strings were plucked with a wooden plectrum. The bowed *qobïz* of the Kazakhs and Karakalpaks, like the Kyrgyz *kiak*, has two horsehair strings and is associated with shamanism; the lower portion of its ladle-shaped body is covered with a camelskin soundtable. The *qobïz* may have served as the prototype for the double-chested fiddle known in Baluchestan and southern Afghanistan as *qeychek*, *sorud* or *sārindā* and in north India by other names as well. On all fiddles of this large family, the fingerboard extends down the middle of the upper and wider cavity, which is open; only the lower cavity is covered with a skin soundtable. Like the *qobïz*, the Baluchi instrument is essential to the performance of healing ceremonies.

One type of double-chested plucked lute, the *rubāb* of Afghanistan and Tajikistan, is first described in the 14th-century Persian treatise *Kanz al-tuhaf*. A wooden lid covers the narrower upper cavity and is extended to become the fingerboard of the short, hollow neck; the wider lower chamber is covered with a goatskin membrane. The most refined design among double-chested lutes is that of the Iranian *tār* and its Azerbaijani cousin, which are usually carved from a single block of mulberry wood so that the narrow end of the smaller upper chamber meets the narrow end of the larger lower chamber in an elongated figure eight. A skin soundtable covers both surfaces, and the fingerboard of the long neck is covered with bone.

Assessing the relative faults and merits of instruments is a well-established literary *topos*, not least in the *munāzere* (poetic dispute). In a 15th-century Chaghatay example by the poet Ahmadi, seven chordophones (including the Mongolian half-tube zither *yatugan* and the Hindustani stick zither *kingra*) boast in turn of their expressive capacities and adaptability to various milieux, only to be mocked by the *tanbur*, which in the end is obliged to apologise for its malicious remarks but does not retract the claim that its own 'lamenting' sound can melt stone. Six instruments of festivity (*bazm*) are interrogated by the poet in a *munāzere* by Fuzuli (1498–1556), who concludes by advising musicians not to trust instruments. All the same, this particular group of six (*tanbur*, *'ud*, *chang*, *qānun*, *ney* and *def*) would have formed an ensemble in which each mode of sound production was distinctly audible. This sound-ideal has

remained influential. An opposing sound-ideal favouring more complex sounds, the components of which are not easily distinguished, is evident in certain uses of aerophones and in the construction of chordophones with numerous drone strings and sympathetic strings (a process that was well under way in the 15th century). Production of complex vocal sounds, rich in upper partials, is also highly valued in certain specialized roles. Al-Fārābī's 10th-century list of contrasting sound-qualities included 'clarity' (*safā'*) vs. 'muddiness' (*kudra*) and 'smoothness' (*malāsa*) vs. 'coarseness' (*khushūna*); the vocabulary of the Turkmen *bakhshi* is particularly rich in terms for different types of vocal production that are neither 'clear' nor 'smooth'.

Players of end-blown flutes often hum a fundamental tone beneath the melody, sometimes shifting to a new fundamental during a performance. By overblowing, some players of the Turkish *kaval* simultaneously sound the 2nd and (less often) the 3rd partials with the fundamental. The two chanters of the Turkish *tulum* (bagpipe) allow for various combinations of two melodies within a range of a 4th to a 6th. The double clarinets of Turkey (*çifte*), Kurdistan (*duzele*), south-western Iran (*ney-jofti*), north-western Iran (*qoshme*) and Uzbekistan (*qoshnay*) are often tuned slightly off unison, so as to produce beats; one of the pipes may be used to sound a drone above or below the principal melody. In Azerbaijan (and to a lesser extent in Turkey) both the conical oboe *zurna* and the cylindrical oboe *bālābān* (*mey* in Turkey) are commonly played in pairs, one performer (*dam-kesh*) providing a supporting drone for the *usta* ('master').

Drums are virtually absent from Kyrgyz, Kazakh and Turkmen musical cultures. Elsewhere no instrument is more widely played by women than the frame drum, which often has a central role in life-cycle ceremonies. Manufacture and sale of frame drums is one of the main economic activities of certain marginal groups of itinerants, such as the Ghorbat of Afghanistan. Musical patterns played on frame drums exploit the contrast between sounds produced by striking the centre and the rim. Some open goblet-shaped drums take their name from the fundamental opposition of centre and rim sounds (e.g. Turkish *dümbelek*, Persian *tombak*). Double-headed drums (Turkish *davul*, Persian *dohol* (see illustration)) are invariably constructed and played in order to obtain a distinctive sound (or sounds) from each surface. A pair of kettledrums can be tuned to produce two different pitches (*see* NAQQĀRA).

STEPHEN BLUM

Central City. Town in Colorado, USA, near Denver. The Central City Opera House, one of America's oldest theatres, opened in 1878. Initially its offerings ranged from touring Shakespeare productions to Buffalo Bill's Wild West Show. The Opera House was greatly admired up to 1881, when its popularity was eclipsed by Horace Tabor's Grand Opera House in Denver. Declared unsafe in 1890, it closed for extensive repairs but eventually functioned as a cinema before closing again in 1927. Five years later, the newly formed Central City Opera House Association, under founding president Anne Evans (daughter of Colorado's second territorial governor), launched a summer festival at the Opera House. It opened with *Camille* starring Lillian Gish (production of plays continued until 1980). Lehár's *Die lustige Witwe* was heard at the festival in 1933 and *The Bartered Bride* in

1940, since when its repertory has embraced Mozart, Verdi, Strauss and American works, including several world premières, notably Douglas Moore's *The Ballad of Baby Doe* (1956, recorded in the festival's production four decades later). Among Central City's artists have been Regina Resnik, Norman Treigle, Sherrill Milnes, Beverly Sills (her only Aida was sung there in 1960), Samuel Ramey (a chorus member in 1963) and Catherine Malfitano. Conductor John Moriarty, artistic director since 1982, has maintained Central City's high performance standards. The festival runs a prestigious apprentice programme as well as a year-round education and outreach programme. The theatre was restored to its original pristine condition during the late 1980s.

Centro per le Iniziative Musicale in Sicilia. Organization based in PALERMO, founded in 1982; it maintains archives of contemporary music and of folk music recordings.

Centro Rossiniano di Studi. Research centre set up in PESARO in 1955 by the Fondazione Rossini.

Centrum Nederlandse Muziek. A non-profit organization promoting the work of Dutch composers and musicians. Although there are other promoters of Dutch music in the Netherlands, CNM is unique in the range of its support. It concerns itself with contemporary and older music, with improvised and amateur music; it produces CDs and books, organizes concerts in the Netherlands, stimulates educational projects and collaborates extensively with Dutch public radio stations.

CNM started its activities in the mid-1970s as Bumafonds (BFO), a subsidiary of the Dutch composers' rights organization BUMA. During a major reorganization in 1991 it acquired its present name. Since then its activities have become both more intense and more diverse. 1992 saw the introduction of the record label NM Classics, in close cooperation with Radio Netherlands, to release recordings of Dutch music of all periods, played mainly by Dutch musicians. In the same year the Bibliotheek Nederlandse Muziek (Netherlands Music Archives) was initiated. This series of books includes monographs on Ton de Leeuw and Unico Wilhelm van Wassenaer, and the correspondence (1958–61) between Peter Schat and Rudolf Escher. In 1994 CNM was behind the creation of a special professorship for Dutch music at the University of Utrecht.

MICHAEL H.S. VAN EEKEREN

Cephalicus (from Gk. *kephalē*: 'head'). In Western chant notations a neume signifying two notes, the second lower than the first and semi-vocalized. The name probably derives from the neume's resemblance, in some notations, to a round head on a short neck. The *cephalicus* is the LIQUESCENT form of the CLIVIS. Liquescence occurs on the consonants *l*, *m*, *n*, *r*, *d*, *s* and *t*, when these are succeeded by another consonant; on the double consonant *gn*; on *i* and *j*, when these follow another consonant; on *m* and *g*, when these have a vowel on either side; and on the diphthongs *au*, *ei* and *eu*. The second note of the *cephalicus* is sung to the consonant or vowel in these circumstances as a semi-vocalized passing note to the next (lower) note. (For illustration *see* NOTATION, Table 1.)

Cerato, Il. *See* GIULIANI, FRANCESCO.

Cercar della nota (It.: 'seek the note'). In the 17th and early 18th centuries, an indication for a singer to approach an initial pitch from below, sliding up to the principal tone. Bovicelli (1594) instructs singers to begin 'a third or a fourth below according to the consonance of the other parts, especially the contralto, where the soprano may easily find the unison'. Caccini (1601) writes that some singers begin a phrase a 3rd below the notated pitch ('l'intonazione della voce') but advises against it as the practice is discordant with many harmonies; however, he frequently notates this approach in his songs. Bernhard (1649) may be the first to use the term 'cercar della nota', defining it as 'a searching out of notes ... used either at the beginning or during the course of a phrase. At the beginning of a phrase, one sings the note immediately beneath the initial note very briefly and softly, then glides from this quite imperceptibly to the initial note'. Later theorists to define this term include W.M. Mylius (*Rudimenta musices*, 1686) and J.G. Walther (*Praecepta*, 1708). When 'cercar della nota' is used in the middle of a phrase there can be overlap with 'anticipatione della nota', where in passages moving by step a fraction of one note is given over to an anticipation of the next, and 'anticipatione della syllaba', where one note is divided in order to take on the syllable that belongs to the following one. *See also* PORTAMENTO.

Ceremonial (from Lat. *ceremoniale*). A liturgical book of the Western Church that regulates in precise detail the roles of participants in the annual cycle of liturgical observances. Its retricted purpose required the concurrent use of other books with the appropriate texts and chants. *See also* LITURGY AND LITURGICAL BOOKS, §II, 4(iii).

Cererols, Joan (*b* Martorell, Catalonia, 9 Sept 1618; *d* Montserrat, 28 Aug 1676). Spanish composer. The little that is known about Cererols comes from the manuscript *Catálogo de los monges que siendo niños, servieron de escolanes y pages, a la Reina del Cielo la Virgen de Montserrat en esta su casa* (*E-MO*). From boyhood he spent his whole life at the monastery of Montserrat, first as a choirboy, then from 6 September 1636 as a novice and finally as a monk, probably responsible during most of his service for directing the musical life of the monastery. He was not only a fine and prolific composer but also played the organ, harp, violin and bass string instruments. He was also a dedicated student of moral theology and a

skilled Latin versifier. He was held in such high regard that for some years a responsory was sung in his honour on the anniversary of his death – a unique tribute in the history of the monastery.

Cererols wrote a few works for four voices using traditional counterpoint, but chiefly he excelled as a composer of music for double chorus, usually with continuo and occasionally with sections for solo voices as well. His rhythms are often bold, with much syncopation and hemiola prompted by the rhythms of the words. He was a master of contrast between simple polyphony and homophony and between different vocal groupings, for instance solo voices and opposed four-part choirs or combinations of such forces. His most characteristic works are the Spanish villancicos, most of which are in refrain forms with engaging, lively rhythms, usually in triple time.

BARTON HUDSON

Ceresini, Giovanni (*b* Cesena, 1 May 1584; *d* ?Ferrara, after 1659). Italian composer. He was described as 'Accademico Etereo' in Cesena in 1607, but by 1612 he had moved to Ferrara to become *maestro di cappella* and chaplain to the Accademia della Morte, a charitable confraternity; he remained there until 1620 and also became a chaplain at Ferrara Cathedral. He led a body of musicians on a pilgrimage to the Santa Casa at Loreto in 1620. In 1627 he was again connected with the Accademia della Morte, and he was organist of Ferrara Cathedral in 1659. He was one of many north Italian church composers of the period who wrote in the new concertato style, and his output also includes madrigals, likewise with basso continuo. The duets in his volume of motets of 1617 lack sustained melody, though there is some thematic integration; the main interest of this collection is not the music itself, which is on the whole undistinguished, but the use of refrain structures. Not all the refrains are (as one might expect) settings of the word 'alleluia'; and one piece has the curious rondo plan *ABCCA*. Ceresini was also fond of texts from the *Song of Songs*, as were several other motet composers of the time. (J. Roche: *North Italian Church Music in the Age of Monteverdi*, Oxford, 1984)

JEROME ROCHE

Cerha, Friedrich (*b* Vienna, 17 Feb 1926). Austrian composer and conductor. He studied at the Vienna Music Academy, where his teachers included Uhl (composition) and Prihoda (violin), and later, on the recommendation of Schiske, attended the Darmstadt summer courses (1956, 1958, 1959); he also studied philosophy and German studies at the University of Vienna (DPhil 1950). In 1958 he co-founded the ensemble Die Reihe with Schwertsik. Its regular concerts from 1959 gave a platform not only to a wide range of new compositions, but also to the work of the Second Viennese School, especially Webern. After the ensemble's first foreign tour in 1962, Cerha embarked on an international conducting career. He has also been an active champion of early music, founding the ensemble Camerata Frescobaldiana in 1960 and producing several editions of 16th- and 17th-century Italian music. He is perhaps best known for completing the orchestration of the third act of Berg's *Lulu* (1962–78). In 1959 he was appointed to teach at the Vienna Academy (later the Vienna Hochschule), where he later became reader (1969–76) and professor (1976–88).

Influenced by musicians and theorists active in the ISCM who carried on the inheritance of the Second Viennese School in postwar Vienna, Cerha also associated with artists and literary figures who regarded themselves as a kind of avant-garde opposition to the 'official' conservative cultural life of Vienna. While many of his compositions of the late 1940s and early 50s, such as the *Divertimento 'Hommage à Strawinsky'* (1954), owe something to neo-classicism, others, such as *Ein Buch von der Minne* (1946–64), are characterized by an extreme reduction of materials and an avoidance of traditional developmental processes. Although impressed by serial

procedures, particularly their way of 'eliminating the old experience of time' (Cerha, 1969), he was critical of the tendency for isolated events to lose their individual significance in serial music. As a conductor under the influence of Josef Polnauer, he kept his distance from Webern's anti-expressive, pointillist interpretations.

Cerha's compositions of the mid- to late 1950s, such as *Deux éclats en reflexion* (1956), *Formation et solution* (1956) and *Espressioni fondamentali* (1957), develop serial ideas, but assume individualized forms through distinctive expressive content and audible developmental procedures. In *Relazioni fragili* (1956–7) and *Intersecazioni* (1959) sound-aggregates produce a static effect, while colour and complexity of sonority occasionally take on form-determining functions. In 1959, with *Mouvement I–III*, Cerha began to compose using planes (or areas) of sound (*Klangflächenkomposition*). Each of these three pieces is restricted to a single characteristic sonority; musical interest results from changes or events that take place within that otherwise constant sound-configuration. He pursued this technique on a larger scale in the orchestral cycle *Spiegel I–VII* (1960–61), in which musical development derives primarily from the combination of sound blocks.

Expansion of parts of an earlier work (*Exercises*) led to the composition of *Netzwerk* (1962–7), a stage work that introduced a new phase in Cerha's compositional style. Its intermediate sections, called 'Regresse' ('reversions'), abandon the musical language characteristic of Cerha's previous works, with its conscious avoidance of stylistic reminiscence, in favour of more conventional structures. This return to more traditional means of musical expression, at times involving the combination of quite disparate styles, became more pronounced in the compositions that followed. Both *Curriculum* (1972–3) and the Double Concerto for violin and cello (1975–6) combine a wide range of heterogeneous materials, and this synthesis of diverse idioms is taken even further in *Baal* (1974–80), Cerha's first opera in the conventional sense. Its portrayal of fate of the poet Baal reflects the fundamental theme of all Cerha's stage works, namely the relationship between the desires of the individual and the demands of social order. The highly expressive character of the music is often cited as reminiscent of Berg's style.

Beginning in 1980, Cerha frequently returned to earlier projects, resuming work on them from a new perspective. He has remarked that for him innovation does not lie in the creation of the material itself as much as in the act of shaping it. His wish to expand his musical language and exploit a wide range of musical possibilities has led to the increasing influence of non-European music on his style, especially in such works as *Der Rattenfänger* (1984–6) and the string quartets (1989–90).

MARKUS GRASSL

Cerilli, Francesco. *See* CIRILLO, FRANCESCO.

Cernay [Pointu], **Germaine** (*b* Le Havre, 1900; *d* Paris, 1943). French mezzo-soprano. At the Paris Opéra in 1925 she sang Eurycleia in Fauré's *Pénélope* but for most of her career was at the Opéra-Comique, where she made her début in Alfano's *Risurrezione* with Mary Garden in 1927. She appeared there in the French stage première of Pierre de Bréville's *Eros vainqueur* (1932) and also sang Charlotte in *Werther*, Mignon and Carmen as well as many secondary parts such as Suzuki in *Madama Butterfly* and Mallika in *Lakmé*. She enjoyed some success at the Monnaie in Brussels and had a special reputation as a singer of Bach. Her strong, bright-toned voice and forthright rather than subtle style can be heard in recordings which include the roles of Mignon and Geneviève (*Pelléas et Mélisande*).

J.B. STEANE

Černík, Josef (*b* Stařič u Frýdku-Místku, 24 Jan 1880; *d* Brno, 24 Nov 1969). Czech composer and ethnomusicologist. He studied at the Brno Organ School, under Novák

in Prague (1906–7) and in Janáček's masterclasses at Brno (1919–20). While working in Brno as a grammar school teacher, professor at the teachers' institute and lecturer at the academy, he devoted much of his time to the study of Moravian folksong. He published *Česká píseň lidová* ('Czech Folksong', Prague and Brno, 1938) and an important article on Slovak folk music in *Moravské Slovensko* (Prague, 1922). His modest compositional output is mainly vocal, drawing on peasant music, and is closely linked to the style of Janáček.

JAN TROJAN

Cernitz [Cerniz], **Ulrich** (*b* Dömitz, 1598; *d* Hamburg, 31 Dec 1654). German organist. He was taught by his father, organist at Dömitz, and by the age of 16 was active as an organist at the Schwerin court chapel. By February 1619 he had been sent to Sweelinck in Amsterdam for further tuition, paid for by the court at Schwerin, and in 1722 succeeded J.C. Augustin as court organist at Schwerin. In 1627, having received no salary for over 18 months, he felt obliged to take up employment in Wallenstein. According to his own account, he then went to Italy, and he perhaps met Frescobaldi there.

Subsequently, Cernitz worked in Lübeck and in Hamburg, where he was appointed organist and clerk at the Jacobikirche in 1632, a condition of the appointment being that he marry the widow of his predecessor, Joachim Möring; together they had a son and four daughters. When Jacob Praetorius (ii), organist at the Petrikirche, died in 1651 Cernitz was given additional duties at the Gertrundenkapelle.

No organ music by Cernitz survives, and only two occasional compositions by him are known: from his Schwerin period a five-part *Hochzeitliches Ehren Lied* for the wedding of Duke Adolph Friedrich of Mecklenburg (Rostock, 1622, text only; Eitner's copy of MS version in *D-Hs*, now lost, in *D-Bsb*) and from his Hamburg period a *Christlicher Hochzeit Wunsch und Dancklied* for three voices, two violins and continuo, composed in 1651 for the wedding of the chief minister of his church, Johann Balthasar Schupp (*D-JE*, inc.).

ULF GRAPENTHIN

Černohorský [Czernohorsky], **Bohuslav Matěj** (*b* Nymburk, bap. 16 Feb 1684; *d* Graz, Feb 1742). Bohemian composer and organist. His first music teacher was his father, a schoolmaster and organist, and his secondary education was evidently provided by the Jesuits as the younger of his two brothers, Hypolit, was a music prefect in the order. From 1700 to 1702 he studied philosophy at Prague University, where he met Tomáš Baltazar Janovka, a prominent music theorist and lexicographer, and organist of the Týn Church, the university's official place of worship. This is probably the basis of the legend that Černohorský worked with the Týn Church choir, not as *regens chori* in a Franciscan habit but as a Prague student and already a proficient organist. It is possible that Janovka deepened Černohorský's understanding of music theory, introduced him to the latest Czech and foreign music and turned his attention to their neighbours, the Franciscans at St Jakub in the Old Town of Prague. An active figure there at the time was the composer Bernard Artophaeus (1651–1721), a great artistic and monastic authority. This may partly explain why Černohorský left the university immediately upon gaining his bachelor degree in 1702 and joined the Franciscans. He was admitted to the Order in 1704 and ordained priest in 1708. His *Vesperae minus solennes*, which show Artophaeus's influence, were written in Most, northern Bohemia, where Artophaeus served as a Franciscan guardian in 1704.

Černohorský's determination to go the way of the great masters, something rarely done by artists in Bohemia, is evident from a decision by his superiors in 1710 to expel him for ten years and strip him of all titles for having gone to Italy, without permission, in pursuit of education. He had, however, received an invitation from the Order's general in Rome, who restored his titles and appointed him chief organist in the basilica of S Francesco in Assisi (1710–15). Černohorský left behind him in Assisi the manuscript of a *Regina coeli* (1712) signed 'Padre Boemo di Praga, primo organista'. This has been compared to Handel's most effective choral works (Frasson), and Černohorský was in fact one of the few Czech composers who got to known Handel's music, which he did through his *maestro di cappella* F.A. Urio. When his student stipendium ran out he moved from Assisi, where Giuseppe Tartini had secretly been his pupil, to Padua where he was appointed third organist at S Antonio, known as Il Santo (1715–20). During Carnival 1717 he visited nearby Venice, where Felice Novelli and Antonia Laurenti were singing in Vivaldi's operas; ten years later he was to officiate at their wedding in Prague. Another *Regina coeli*, for soprano solo, an ardent work of worldly character, owes something perhaps to the Venetian experience. In Padua Černohorský made a name for himself not only as an organist and trombonist but also as a poet.

At the end of his ten-year sentence, Černohorský went back to Prague with a written assurance that he could return to Il Santo at any time. The centenary of the Battle of the White Mountain (1620) was being celebrated at the time and was apparently commemorated in Černohorský's *Litaniae Lauretanae de Beatae Virginis Maria Victoriosa*. From the dedication to Our Lady of Victory, to whom the Catholics ascribed their victory at the White Mountain, one can infer that Černohorský wished to remind Prague that he was a composer. The perfect mastery of high Baroque polyphony and the fugue, its

most distinctive form, testifies to his compositional genius. Two years later he was awarded a master's degree in theology for 'outstanding achievements in music', and was thus prized as a composer, organist and theorist. However, if one wants to speak of a Černohorský school of counterpoint, the term should be used cautiously and should be restricted to the influence exerted by specific pieces of music. If, as Dlabač claimed, Seger belongs to that school, then he is a key figure not only of the Czech Baroque but also of Czech Classical music, since the path leads through Seger to his pupils F.X. Brixi, J.E. Koželuh and Mysliveček.

Černohorský's career was suddenly interrupted at the height of his creativity. No doubt an uncomfortable critic of his superiors, he was officially ostracized for three years (1727–30). He was sent to Horažďovice to be 'tormented by fasting' and stripped of his titles as bachelor and master for, 'among other things', denying the convent his family inheritance. His approach to his profession throughout his life, and particularly his preference for uncertainty over the constraints of subservience, suggest that the historical process of the emancipation of the artist was already under way in Bohemia. His residence at the tranquil Horažďovice convent, where his exacting character and artistry won him admiration and respect, seems to have been the most peacefully creative period of his life. It was there that he wrote one of the most important works of Czech polyphony, the offertory *Laudetur Jesus Christus*, inspired by a new salutation introduced to the church on 16 January 1739. The work appeared in print the same year, no doubt with financial support from his friends. German musicologists (notably Kretzschmar) have praised the work as 'unique among all the older fugues' and lauded the composer as the 'Czech Bach'. The motet *Precatus est Moyses* dates from the same year. It is a setting of the complete offertory text for the 12th Sunday after Pentecost, while the motet *Quare Domine irrasceris* sets only the central section of it. Both works have the same instrumentation and both include the fugue 'Memento Abraham' musically unchanged; the fugue, an excellent example of Černohorský's contrapuntal mastery, is the peak of both compositions. His last extant vocal work with instruments is the fugue *Quem lapidaverunt*, a highly descriptive setting of the central section of the offertory for St Stephen's Day which, on account of its artistic maturity, may be dated to the Horažďovice period. The offertory was completed by F.X. Brixi, who added the opening and closing sections using the same instrumentation. In the 'Zelenka cabinet' of the Sächsische Landesbibliothek, Dresden, there are two *a cappella* choral works, *Hymnus de S Norberto* and *Veni creator Spiritus*, with the note 'both pieces probably by Čzernohorský'. What casts doubt on their authenticity is the celebration of St Norbert, who was the founder of the Premonstratensian Order.

The Horažďovice period shows Černohorský to have been an adroit composer whose erudition and intellect transcended the circumstances of the time. His merit was that, with the certainty of a great talent, he took from the multiplicity of styles he encountered in Italy those things that would be viable and fertile in the Czech environment, and that also corresponded to his own inclinations. Thanks to this, he was able to create authentically Czech music which has both a European validity and a specifically Czech sound. The works he composed in Horažďovice survived because they escaped both the attention of his superiors in Prague and a dreadful fire at the church of St Jakub (1754), in which the greater part of his works appear to have been destroyed.

When Černohorský returned to Prague in 1730 the general of the Order fully rehabilitated him and one year later enabled him to travel to Padua, as he had requested. There he took up again the position of third organist and had to wait five years before becoming first organist. But in spite of his humiliating pleas and a heavy work schedule he still received only the salary of a third organist. Dejection over his suffering can be read in a line from the poem *Orphaeus omnians* which he wrote at the very end of his life: 'A rent breast without a heart seest thou here'. On 18 August 1741 Černohorský's request to return to the Czech lands was granted; he received his remuneration on 31 August and left Padua some time in September. Probably for reasons of ill health, he broke off the arduous journey and took refuge in the minorite monastery of Maria Hilf in Graz. It was there that he died, after a long illness; a requiem was held for him on 15 February 1742. News of his death reached Prague only in July. The date of his death was unknown; in the register it was entered as 1 July.

WORKS

Laudetur Jesus Christus, sive Offertorium pro omni tempore, SATB, str, org (Prague, 1729); ed. in *Česká hudba*, xxxvi (1933)
Litaniae Lauretanae de BVM Victoriosa, SATB, 2 vn, 2 tpt, 4 trbn, timp, org, *CZ-Pnm*

KATEŘINA ŠULCOVÁ

Černušák, Gracian (*b* Ptení, nr Prostějov, Moravia, 19 Dec 1882; *d* Brno, 13 Oct 1961). Czech musicologist and critic. He studied history at the universities of Prague and Kraków (1901–5); he also attended music lectures at Prague University. At first he taught in a school in Hradec Králové (1905–8), where he was also active as accompanist and choir conductor. In 1918 he moved to Brno where, in addition to his school post, he taught music history at the conservatory (1919–39). After the war he continued to teach at the conservatory until his retirement. He also lectured at the Janáček Academy and at the university. He wrote two standard Czech histories of music. His *Dějepis hudby* continued to be used in revised editions for over 60 years.

Between the wars Černušák was music critic of the influential *Lidové noviny* and was a frequent broadcaster and lecturer. His most lasting contribution, however, was his dictionary work. He wrote the music articles for general Czech encyclopedias such as *B. Kočího Malý slovník naučný* [Kočí's concise encyclopedia] (Prague, 1925–9) and *Ottův slovník naučný nové doby* [Otto's encyclopedia of modern times] (Prague, 1930–43). Abroad he was responsible for the Czech and many Slavonic entries in Frank and Altman's *Kurzgefasste Tonkünstler-Lexikon* (Regensburg, 14/1936) and for 200 new articles and revisions of many older ones for the fifth edition of *Grove's Dictionary of Music* (London, 1954). His *Grove* articles were written at a politically sensitive time but were bravely outspoken in their reasoned criticisms of figures such as Zdeněk Nejedlý. The Nazi occupation stopped work on the new *Ottův slovník* and also on *Pazdírkův hudební slovník naučný*. For the latter Černušák edited a *Sachteil* (1929) and with Helfert two biographical volumes (1933–41; up to 'M'). This work, however, laid the foundation for the *Československý hudební slovník osob a institucí* (1963–5), of which Černušák was the senior editor.

JOHN TYRRELL

Černý, Jaromír (*b* Hradec Králové, 24 March 1939). Czech musicologist. He studied music history under Očadlík and Mužík at Prague University (1959–64), where he took the doctorate in 1967 with a dissertation comprising a catalogue of the music manuscripts in Hradec Králové Museum. He joined the Institute of Musicology at the University as a lecturer (1964), becoming assistant professor (1967), and associate professor and head of the Institute (1989). His main research has been on the history and theory of medieval and Renaissance music, especially in Bohemia, and on the composer Petrus Wilhelmi de Grudencz, a contemporary of Du Fay.

EDITIONS

Petrus Wilhelmi de Grudenz, magister cracoviensis: opera musica (Kraków, 1993) □

Černý [Czerny], **Jiří** [Nigrin, Nygryn, Georg] (*fl* Prague, 1572–1606). Czech printer. He served his apprenticeship under Kozel, probably before 1566. Between 1572 and 1606 he published many religious, philosophical, legal, medical and astronomical books, as well as sermons,

felicitations and poems; he had begun printing music by 1578. He printed a series of works by the Slovenian composer Jacob Handl, as well as music by members of the Prague royal chapel (e.g. Carl Luython and Franz Sales), Johannes Nucius and such composers as Lomnický, Mitis z Limuz, Jevíčský, Barion, Knöfel and Benedikt-Nudožerský. In both volume and quality of production, Černý was one of the foremost printers of the time.

ZDENĚK CULKA

Černý, Ladislav (*b* Plzeň, 13 April 1891; *d* Dobříš, 13 July 1975). Czech viola player. He studied the violin at the Prague Conservatory and after posts in Prague and Ljubljana he became the viola player in the Zik Quartet on its foundation in 1920. In 1929 this became the Prague Quartet; Černý was its moving spirit for 46 years. The group performed over 3000 concerts, mainly of music by Debussy, Ravel, Hindemith, Honegger, Schulhoff and modern Czech composers, in the major European centres as well as in South America and Morocco. Hindemith dedicated his solo Viola Sonata op.25 no.1 to Černý; contemporary music figured largely in his solo repertory. His playing, on an instrument by Giovanni Battista Grancino, excelled in virtuosity, intensity of tone and poetry. He taught at the Prague Conservatory (1940–46) and at the Academy of Musical Arts (1946–73) and continued to give concerts. In 1955 he was made Artist of Merit and in 1971 National Artist.

ALENA NĚMCOVÁ

Černý, Miroslav K(arel) (*b* Prague, 11 Dec 1924). Czech musicologist. He studied music education at the Prague Conservatory (1945–9) and musicology and music education under Sychra and Plavec at Prague University, where he took the doctorate in 1951 with a dissertation on questions of party allegiance and scientific truth in the concept of music education. After working as an assistant lecturer in music history in the music department of the education faculty of Prague University (1949–53) he became a research student and later research fellow in musicology at the music faculty of the academy under Sychra (1953–62). He later joined the Institute for Musicology (later the Institute for the Theory and History of Art) of the Czechoslovak Academy of Sciences as a research fellow. He gained the CSc in 1962 with a work on Dvořák. He left the academy in 1990 and has taught at Olomouc University since 1991.

With Sychra, Jiránek, Jaroslav Volek and others he worked vigorously for a Marxist interpretation of music criticism and musicology. Starting from a broad concept evolved in response to current needs he gradually began to concentrate on 19th-century music history and in particular on the development of a Marxist methodology of music historiography, in which he has done his most successful work. Although he has gradually given up reviewing concerts he has continued to review many books, particularly Soviet musicological works, and to maintain his work as a music popularizer. Since the 1980s he has focussed on the study of the music of antiquity.

JOSEF BEK

Cerone, Pietro (*b* Bergamo, 1566; *d* Naples, 1625). Italian theorist, singer and priest. From his early years Cerone associated himself with the music of Spain and the Spanish-owned Kingdom of Naples. In 1592, after singing for a time at the cathedral at Oristano, Sardinia, he went to Spain, where he served Philip II and later Philip III in their chapel; Italian musicians were rare at that time in Madrid. While in Spain Cerone made detailed studies of Spanish music and theory that later played a large part in his own great treatise. He apparently left Spain in 1603 and became a priest and singer at the church of SS Annunziata, Naples. In 1609 he also began to teach plainchant to the deacons of the church, for whom he probably wrote *Le regole più necessarie per l'introduttione del canto fermo* (Naples, 1609). From 1610 until his death he was a singer in the royal chapel.

Cerone's other published work is by far the more important: *El melopeo y maestro: tractado de música theorica y pratica; en que se pone por extenso; lo que uno para hazerse perfecto musico ha menester saber* (Naples, 1613/*R*); it was an enormous treatise of 849 chapters, covering 1160 pages, which he wrote in Spanish partly in order to curry favour with Philip III and his patron in Naples, the Spanish viceroy. The book has been subjected to much abuse, beginning with Antonio Eximeno's novel *Don Lazarillo Vizcardi* (1802), which lampooned it as a 'musical monster'. The theme was taken up by Fétis (*Biographie universelle*, 2/1860), who in an inaccurate and intemperate criticism suggested that the valuable portions constituted a 'lost' treatise by Zarlino while Cerone supplied the remaining nonsense. Pedrell later lamented the stultifying influence it had exerted on Spanish musical thought for nearly two centuries. Such assessments can no longer be accepted. It is true that the book contains much of doubtful value, but it is nevertheless a compendium of valuable information and insights into composition and other musical practices in the 16th century.

Cerone's work, which is extremely well planned, is basically a didactic introduction to musical theory, dealing chiefly with Zarlino but also with Nicola Vicentino, Juan Bermudo, Tapia Numentano and Francisco de Montanos. He was contemptuous of learned counterpoint as such; he discussed it as a necessary preliminary to the art of composition, with frequent reminders that its rules were arbitrary, not 'legal', and that the sensitive composer must adjust them to his needs. He was at his best in his detailed descriptions of the expressive and technical means appropriate to various widely used forms: motets, masses, psalms, canticles, hymns, lamentations, ricercares, tientos, madrigals, canzonettas, frottolas and *strambotti*. He illustrated his points with examples that show both his own compositional skill and his deep familiarity with the 16th-century repertory. His ideal was Palestrina, although he also cited Ingegneri, Josquin, Lassus, Phinot, Rore and Pietro Vinci; among Spaniards he was most familiar with Morales but also spoke highly of Francisco Guerrero, Alonso Lobo, Mateo Romero and Victoria. His taste was conservative: he never mentioned such contemporary composers as Monteverdi or Marco da Gagliano, or even Gesualdo, who can hardly have been unknown to him.

Although his treatise was addressed to a Spanish-reading audience, Cerone wrote contemptuously of the Spanish. He found Italian teachers more industrious and their students more patient, and that Italians generally had a special love of music, a natural aptitude for it and a desire to learn more about it. In Madrid, on the other hand, he found no member of the nobility who held music in high esteem, and no academies for its support. Nevertheless *El melopeo* exerted a profound influence on Spanish theory throughout the 17th century and during much of the 18th; it was cited by, among others, Andrés de Monseratte (1614), Andrés Lorente (1672), the Portuguese Manuel Nunes da Silva (1685), José Salado (1730), Bernardo Comes (1739), Antonio Roel de Rio (1760 and 1764), Diego de Roxas (1760) and Antonio Soler (1765 and 1766). In 1769 Jorge Guzman of Cádiz Cathedral, who thought Cerone the finest of all theorists, published a selection from his writings under the title *Curiosidades del cantollano*.

BARTON HUDSON

Cerqueira, Fernando (Barbosa de) (*b* Ilhéus, 8 Sept 1941). Brazilian composer, singer and instrumentalist. He studied

composition in Salvador, Bahia, under Ernst Widmer, the clarinet with W. Endress and Wilfred Beck and singing with Sonia Born and Adriana Lys. He graduated in composition from the School of Music of the Federal University of Bahia in 1969. He also earned a master's degree (1994) in literary theory from the Instituto de Letras of the same university. He taught at the University of Bahia (1968–70), at the University of Brasilia (1970–75), and again at Bahia (1975–94), where he retired from teaching. In addition he was principal clarinettist of the Symphony Orchestras of the University of Bahia and of the State of Bahia from 1982 to 1988, and was a member of the Woodwind Trio and Quintet of the University of Bahia. A founding member of the Grupo de Compositores da Bahia and of the Sociedade Brasileira de Música Contemporânea, Cerqueira has had several of his works published and recorded in Brazil, the USA and Europe, and won various prizes in national and international festivals and contests.

His output includes numerous instrumental and vocal works in which he attempts to integrate structures characteristic of contemporary music with materials and subjects typical of popular culture, as well as to uncover new ideas and sound sources originating in various artistic idioms.

GERARD BÉHAGUE

Cerreto, Scipione (*b* Naples, *c*1551; *d* Naples, *c*1633). Italian theorist, composer and lutenist. He spent his life in Naples. According to Nicolò Tagliaferro (*L'esercitio*, *I-Nf*) he was head of a Neapolitan music confraternity, the Congregazione della Madonna degli Angeli, around 1600. Because so few of his compositions have survived, he is known today only as a theorist. As such he was not an innovator, but his writings are important because they throw light on many aspects of musical practice in the early 17th century. He followed a conservative path, presenting the rules of strict, *osservato* counterpoint and stressing two aspects that were to be important in later contrapuntal treatises: the improvising of choral counterpoint and the invention of ingenious types of canon and invertible counterpoint.

Cerreto subscribed to the traditional religious and philosophic approach to theory but also expanded the scope of this theory by fitting a number of new practices into its framework. For him, instrumental music was as valid as vocal. In *Dell'arbore musicale* (Naples, 1608/*R*) he presented practical music as a tree growing out of the roots of theory, with the branches on one side representing voices and those on the other side instruments. This wider scope is also evident in *Della prattica musica vocale et strumentale* (Naples, 1601/*R*, 2/1611): in its final chapters he described several instrumental tablatures and gave information about the manner of performance. His conservatism is likewise shown in his rejection of the new 12-mode system proposed by Glarean and in his reaffirmation of the validity of the centuries-old eight-mode system. Yet when he discussed the old hexachord system of Guido of Arezzo he gave it not only in the traditional locations but also transposed it so that it starts on *A* and *B*.

In his discussions of practical music in *Dell'arbore musicale* his opinions coincide with those of many of his contemporaries, thus reinforcing the impression that many changes were taking place. The bass voice, rather than the tenor, ranks first because it is fundamental to the texture. The organ now takes first place among instruments because a whole work can be played on it, whereas in earlier periods woodwind instruments were most admired because they most closely resembled the human voice.

In addition to *Della pratica musicale* Cerreto left two manuscript treatises teaching counterpoint: *Dialoghi armonici pel contrapunto e per la compositione* (1626; *I-Nc*) and *Dialogo armonico ove si tratta. . .di tutte le regole del contrappunto et anco della compositione de più voci, de' canoni, delle proportioni, et d'altri* (1631; *I-Bc*). The latter provides an illuminating illustration of the use of parody techniques for teaching the student to construct his first polyphonic compositions. It is interesting that the madrigal used, *Fammi pur guerra amor*, is taken from Arcadelt's first book of four-part madrigals, for the only four-part madrigals we have by Cerreto were included in a reprint in Naples of that collection (RISM 1608[14]). This reprint survives incomplete, as do Cerreto's other extant publications, *Il primo libro di canzonelle a tre voci* (Naples, 1606) and *L'Amarillide a tre voci con alcuni a due soprani, Il terzo libro, Opera 18* (Naples, 1621). Works now lost mentioned by the composer in his theoretical writings or in various catalogues include at least four books of spiritual madrigals for four voices and three books of madrigals for five voices, all printed before 1601; a book of two-voice ricercares (1604); a volume of madrigals for two voices 'sopra madrigali d'Arcadelt' (before 1616); a book of 'Canoni enigmatici' for two voices (before 1631) and a volume of 'Responsori di Natale' for four voices (*MischiatiXII*:104; before 1676).

IMOGENE HORSLEY/DAVID NUTTER

Cerrito, Fanny [Francesca] (*b* Naples, 11 May 1817; *d* Paris, 6 May 1909). Italian dancer. *See* BALLET, §2(ii).

Cerro, Luigi (*b* Genoa, *c*1740–50; *d* after 1815). Italian organist and composer. Between about 1760 and 1762 he studied composition with Padre Martini in Bologna, and from the early 1760s he was active in Genoa as *maestro di cappella* of the city's leading churches, including the cathedral of S Lorenzo. Between 1778 and 1781 he was *maestro al cembalo* at the Teatro S Agostino,

Genoa. On 13 October 1779 he became a member of the Accademia Filarmonica in Bologna. In 1787 he was in Madrid, as *maestro al cembalo* for the performance of Giuseppe Sarti's *Medonte*, which inaugurated the Teatro de los Caños del Peral. On returning to Genoa he continued his activity as a *maestro di cappella* and teacher. For S Filippo Neri in Genoa he wrote the oratorio *S Francesco di Sales*, probably performed in 1793 (music lost). Between 1803 and at least 1806 his presence is documented in Alassio, as *maestro di cappella* of S Ambrogio, with responsibility for education, composition and directing the music. In 1815 he was appointed organist of S Michele Arcangelo in Celle Ligure, on a two-year contract. In 1821 there is a report of a performance in Diano of one his masses, but it is not known whether he was still alive at this date. Cerro's musical output embraces both the sacred and secular, and vocal, chamber and instrumental genres. His vocal writing is ornate, and the instrumental writing and orchestration carefully judged. Characteristics of his compositional style include variety of rhythm and timbre, and a tendency to write passages of contrasting rhythmic and metrical character.

CARMELA BONGIOVANNI

Certain, Marie-Françoise (*b* Paris, 1661/2; *d* Paris, 1 Feb 1711). French harpsichordist. As a child she was taught by Pierre de Nyert and introduced to Lully, who became a friend. She had a son by Louis de Mailly, also named Louis, but lived and died alone except for two servants. She was known as a brilliant player of both composed pieces and figured bass. Her solo repertory, the only one known for a French harpsichordist in this period, included the music of Louis Couperin, Chambonnières, Louis Marchand, D'Anglebert, Jacquet de la Guerre and especially *symphonies* from the works of Lully. Her salon attracted the most important composers of the late 17th century, and she also gave harpsichord lessons. At her death she owned two double harpsichords, one by Dumont and a sumptuous Ruckers painted by Rubens, as well as a *clavecin brisé* by Marius. She also had four viols, a guitar, a theorbo and a flute. Her library was dominated by the works of Lully. Both Lainez and La Fontaine wrote verses celebrating her moving and brilliant playing.

BRUCE GUSTAFSON

Certon, Pierre (*d* Paris, 23 Feb 1572). French composer. He may have been a native of Melun, where in 1527 'Jehan Certon' was documented as 'fermier du fourrage' to the king. Certon was appointed matins clerk at Notre Dame, Paris, on 29 October 1529. On 26 September 1530 he was summoned before the chapter for playing ball in the square of Notre Dame and refusing to attend the service; only his youth saved him from a prison sentence. On 8 May 1532 he became clerk at the Ste Chapelle under Canon Odon de Colligny, son of Gaspard de Colligny and brother of the Admiral of France. On 15 November 1536, while still merely a clerk, he was appointed Master of the Choristers. He held that post, adding to it benefices within the diocese, until his death.

In a document of 1567 he is accorded the title, doubtless purely honorary, of 'chantre de la chapelle du Roy'. Three years later, on the title-page of his chanson collection *Les meslanges*, he was described as 'compositeur de musique de la chapelle du Roy'. This title, whose significance is not fully understood, was given to only two other composers before him: Pierre Sandrin in 1547 and Janequin in 1557. Without abandoning his duties at the Ste Chapelle, Certon took part in other activities towards the end of his life. He undoubtedly participated in the musical entertainments organized by Nicolas Le Gendre, Provost of the Guilds and King's Counsellor, in Le Gendre's castle near Corbeil, and in 1570 he dedicated *Les meslanges* to Le Gendre. He held a canonry at Notre Dame, Melun, where he had established a mass sung every year at the Feast of the Annunciation; in 1560 he had a meeting with the chapter to draw up the Melun rite. He may have been buried at Notre Dame.

Certon seems to have been friendly with several musicians of his day. In 1538 he composed a 'fricassée', *Vivre ne puis content sans ma maistresse* (RISM 1538[14]), on some of Sermisy's chanson incipits. In the dedication of his second book of motets (1542), he addressed Sermisy as a faithful friend and well-wisher. When Sermisy died in 1562, Certon composed a six-voice *déploration*, published in *Les meslanges*, with the same form and expression as Josquin's in homage to Ockeghem. Certon was godfather to one of the daughters of Hubert Jullet, Attaingnant's partner, to a child of Pierre Lavocat, singer to the King of Navarre, and to a son of Thomas Champion, spinet player and royal organist. The names on the baptismal certificate for this last, as well as on another dated 11 August 1554, suggest that Certon may have had some connection with the Scottish contingent at court.

Of the eight masses by Certon that survive complete (three isolated movements published in 1553 may indicate the existence of other masses), six use parody technique. The other two are paraphrases, of a chanson (*Sus le pont d'Avignon*) and of plainchant (*Missa pro defunctis*). In these longer works, as in the *Magnificat*, Certon used contrasting sections and different vocal combinations to sustain interest. In the *Missa pro defunctis* he varied the modes to express the text. The introit that opens the mass and the closing communion are of extreme simplicity while the central movements are more elaborate. A conventional view of Certon's sacred music held that it derived closely from the stylistic model of the French chanson, stressing declamatory rhythms and homorhythmic textures. But careful study of a fuller range of works, especially the two dozen motets issued by Pierre Attaingnant in the *Recens modulorum editio* of 1542, reveals that Certon's motets are less like Parisian chansons than are the sacred works of his predecessor Sermisy, and as such should be viewed in a less isolated context of models and influences. Certon plainly acknowledged Sermisy's concern for the syntactic organization of his Latin texts. But in other respects, Certon's contrapuntal idiom is closer to that of northern masters like Lupi and Manchicourt than to the lyrical superius-tenor duets of the Parisian chanson. His motets embrace a wide range

of musical procedures and textures, making frequent use of five- and six-part ensembles, relying on canons and ostinatos, and especially using plainchant paraphrase as a source of melodic material. It is worth noting that Certon does not seem in any of his music to have been a very inventive composer of melodies.

Certon's settings of the short texts of such contemporary poets as Saint-Gelais, Marot, Jamet, Scève and Chappuys skilfully transmit the rhythmic nuances of the poetry and the meaning of the words: in *Ung laboureur* (RISM 1538[11]) the rapid altercation of dialogue is suggested by repeated short notes. The melodies of the early chansons, published 1533–51, appear to be patchworks of motifs corresponding to individual fragments of the text; seldom is a whole phrase set to one continuous melodic line. These early chansons, such as *Ho le vilain* (1536[5]), show the influence of Sermisy and Janequin; later he adopted the syllabic style of Sandrin (e.g. *Si par desir*, 1544[7]). During the middle years of the 16th century Certon embraced a syllabic and homorhythmic kind of strophic song (especially in the form of the *voix de ville*) that enjoyed a particular vogue at the French royal court and among allied élites. His *Premier livre de chansons*, issued by Le Roy & Ballard in 1552, was devoted almost exclusively to this type of chanson, and as such enjoyed good success. Similar concern for a schematic approach to poetic form and prosody is evident in Certon's contributions to the musical supplement to Ronsard's *Amours*, published by Du Chemin in the same year. Certon's *Meslanges* (1570), published in the last years of his life, attempts a special kind of historical selfconsciousness. This book, as Kovarik has recently shown, assiduously avoids reprinting music already in circulation (as such it differs from the great *Meslanges* collections of Lassus, 1570/1576, and Le Jeune, 1585, which draw on works published throughout the career of each composer), but rather offers only chansons never before seen in print. Yet 84 of these 96 apparently 'new' chansons are themselves polyphonic reworkings (for four, five, six and eight voices) of three- and four-voice chansons from the first half of the 16th century. His 'models' in this book range widely over the entire early history of the French chanson, and include monophonic tunes from the *chanson rustique* repertory, as well as polyphonic chansons by composers such as Sermisy, Janequin, Gombert, Manchicourt, Arcadelt and even Certon himself. The *Meslanges* also contains a number of works on spiritual texts. Introduced by an eloquent (but at times rambling) preface by the composer about the means and effects of musical expression, the *Meslanges* reveals much about how Certon understood his art, and how he saw his place in the history of the French chanson.

AIMÉ AGNEL/RICHARD FREEDMAN

Ceruti. Italian family of violin makers. They were active in Cremona and Mantua in the late 18th century and the 19th.

(1) Giovanni Battista Ceruti (*b* Sesto Cremonese, nr Cremona, 21 Nov 1756; *d* Cremona, 3 April 1817). He left his native village in 1786 for Cremona, where he first worked as a weaver. It was long believed that Ceruti's master was Lorenzo Storioni, but according to notes made by Count Cozio di Salabue around 1804 he in fact learnt to make violins from Count Alessandro Maggi, an amateur violin maker and collector. After Storioni's departure from Cremona about 1802, Ceruti assumed a dominant position in the city's trade in bowed string instruments, completely eclipsing his contemporary Carlo Bergonzi (ii).

In Ceruti's style there is little sign of respect for the work of his great Cremonese predecessors, though his work is altogether neater than Storioni's and the details are more sharply defined and carefully executed. Almost all of his considerable output dates from the period 1800–15. For the last three years of his life Ceruti worked on the Contrada Coltellai, the traditional violin makers' quarter in Cremona.

(2) Giuseppe Ceruti (*b* Sesto Cremonese, 20 Aug 1785; *d* Mantua, 31 Aug 1860). Son of (1) Giovanni Battista Ceruti. By 1805 he was assisting his father, and later succeeded him in the business. His independently signed violins are almost always made of native Italian woods and the stylistic impress is often similar to his father's, though usually with a less attractive varnish. In 1853 he moved to the province of Mantua. He exhibited two violins at the Exposition Universelle in Paris in 1855. His work is rare, perhaps because he alternated the professions of instrument maker and wood turner for much of his life.

(3) Enrico (Riccardo Fabio) Ceruti (*b* Cremona, 4 May 1806; *d* Cremona, 21 Oct 1883). Son of (2) Giuseppe Ceruti. He was a more prolific maker than his father, and was also a repairer and a professional double bass player. The seals found on some of his labels carry different combinations of his initials: E, R, F and C. His work has great individuality while still retaining a faint link with the old Cremonese school. The materials were often handsome, and his violins usually made on a broad model, which at times was rather flat. Enrico entered instruments in many exhibitions, often faring poorly, though he was awarded a medal at London in 1870. He was also apparently a conduit in the northward migration of old master instruments and collaborated with various dealers, including Tarisio and Vuillaume. A collection of his workshop tools and drawings was donated to the city of Cremona by his son-in-law in 1893; they are now in the Museo Stradivario, Cremona.

CHARLES BEARE/DUANE ROSENGARD

Ceruti, Roque (*b* Milan, *c*1683; *d* Lima, Peru, 7 Dec 1760). Italian composer, active in Peru. He arrived in Lima in 1707 and entered the service of the viceroy Manuel de Oms y Santa Pau, the Marquis de Castelldosríus. It seems likely that Ceruti accompanied the viceroy to France, and that he was ambassador to the King of Spain at Versailles. The mythological opera *El mejor escudo de Perseo*, performed in 1708 and printed in Lima in the same year, is attributed to Ceruti, the viceroy having written the libretto. Other minor dramatic works for the court, now lost, are attributed to Ceruti, including a serenata, a pastorale and incidental music for plays by Pedro Peralta. Ceruti left the court in 1720 and from 1721 to 1728 he held the post of *maestro de capilla* at Trujillo Cathedral, Peru. After the death of Torrejón y Velasco in 1728 he was invited by the authorities of Lima Cathedral to replace Torrejón y Velasco as *maestro de capilla*. He was appointed on 1 August 1728 and continued to work at the cathedral until old age and ill-health forced him to retire in 1757. While there he instigated an increase in the salaries of the musicians and created the post of violinist in 1732. He married on 8 April 1736 and had four children. In 1743 he returned to the royal chapel on his appointment as special musician by the viceroy, the Marquis de Villagarcía. He made his will in Lima on 6 December 1760 and died the next day. As well as his musical activities he published the Latin poem *Carmen Panegyricum* in honour of Viceroy Caraccioli (Bermudez, 1717).

Ceruti was responsible for the introduction of Italian musical traditions to Peru: the use of obbligato violins, *recitativo secco*, the da capo aria and functional tonality. A source of 1792 describes him as a composer for whom the harmonic line took precedence over the melody.

WORKS

DRAMATIC

all lost

El mejor de Perseo (op, M. de Oms y Santa Pau), Lima, 1708

JUAN CARLOS ESTENSSORO

Cervantes (Kawanag), Ignacio (*b* Havana, 31 July 1847; *d* Havana, 29 April 1905). Cuban composer and pianist. He studied with Gottschalk (1859–61) and with the Cuban composer and pianist Nicolás Ruiz Espadero, and later at the Paris Conservatoire with Alkan and Marmontel. In 1870 he returned to Cuba, where he conducted operas, and later gave concerts in the USA (1875–9). From 1898 to 1900 he lived in Mexico. Together with Manuel Saumell (1817–70), Laureano Fuentes (1825–98), Espadero and José Manuel ('Lico') Jiménez (1855–1917), he was one of the pioneers of native Cuban concert music, strongly influenced by Gottschalk's piano style and musical ideas. While adhering to European Romantic pianistic and harmonic procedures he employed Cuban rhythms and melodic and cadential devices in an effective and sophisticated salon manner. His music, like that of most Cuban composers of the 19th and early 20th centuries, explored Spanish- (mainly Andalusian-) derived traditional music (*zapateo, danza, canción, punto guajiro, criolla*), as opposed to the Roldán-Caturla style (mainly concerned with Afro-Cuban rhythm and melody and couched in dissonant harmonic procedures) that became prevalent in Cuban music of about 1925 to 1955. His best-known works are several elegant *Danzas cubanas* for piano.

AURELIO DE LA VEGA

Cervantes (Saavedra), Miguel de (*b* Alcalá de Henares, ?29 Sept 1547; *d* Madrid, 22 April 1616). Spanish writer. He was brought up in Valladolid, Seville and Madrid, and in about 1569 he went to Rome in the service of Cardinal Acquaviva. He distinguished himself as a soldier and was wounded at the Battle of Lepanto in 1571. He was captured by corsairs in 1575 and taken as a slave to Algiers, where he was held captive by the Moors for five years (1575–80). After his return to Spain he made an unhappy marriage, fell frequently into trouble with the law over his accounts and other incidents, and was several times imprisoned. Despite the success of *Don Quixote* (1605–15) he lived in straitened circumstances to the end of his life.

Cervantes's references to music-making have been scrutinized by scholars, notably Roda, Salazar and Querol, and it is generally agreed that the descriptions in his plays, novels and *Don Quixote* of popular songs and especially dances were based on first-hand observation (some arrangements of songs and dances mentioned by Cervantes ed. M. Querol Gavaldá, *La música en las obras de Cervantes: romances, canciones y danzas tradicionales a tres y cuatro voces y para canto y piano*, Madrid, 1971). There is less agreement about Roda's suggestion that the tunes named by Cervantes were those in vogue only in his day and were unrelated melodically to those found in cancioneros before 1550. Querol and others saw Cervantes's references to music as an almost deliberate effort to sustain a tradition of Spanish music stretching unbroken from before the Renaissance to the 17th century and beyond. But evidence indicates that the music Cervantes had in mind was of a new kind found in cancioneros of about 1550 onwards and was quite different from the *romances* and villancicos in earlier collections. The prologue to his *Ocho comedias y ocho entremeses* (1615) contains a convincing description of rudimentary music in mid-16th-century Spanish plays. According to Salazar he lacked musical expertise and referred to some instruments in the vague way characteristic of pastoral writings; even in his more realistic works such as the *entremeses* and *novelas ejemplares* he was not always more discriminating. Although surprisingly little is revealed about musical activities in aristocratic households, few writers of the Spanish Golden Age wrote more illuminatingly about the practice of music among the common people. (For editions of Cervantes's works see *Obras completas de Cervantes*, ed. R. Schevill and A. Bonilla y San Martín, Madrid, 1914–31.)

Cervantes's works and life have stimulated many composers from the 17th century onwards. *Don Quixote* alone has served as the basis for over 100 pieces; the first (see Espinós) seems to have been an anonymous *Ballet de Don Quichot* performed only nine years after the publication of the first part of the book. The first opera was probably *Il Don Chisciot della Mancia* by Carlo Sajon, performed in Venice in 1680. This was followed by J.P. Förtsch's opera *Der irrende Ritter Don Quixotte de la Mancia* (Hamburg, 1690) and the engaging *Comical History of Don Quixote*, a play by Thomas D'Urfey with music by Purcell and others (London, 1694–6). The first Spanish opera was *Las bodas de Camacho* (1784) by Pablo Esteve y Grimau. Other composers who have based operas on episodes from *Don Quixote* include Antonio Caldara (1727 and 1730), Paisiello (1769), Niccolò Piccinni (1770), Mendelssohn (1825), Donizetti (1833),

Ruperto Chapí (1902), Massenet (1909), Falla (1923) and Ernesto Halffter (1944). Ibert composed music for a film about Quixote (1932) and Roberto Gerhard wrote both ballet music (1940–41) and incidental music for a radio play based on the story (1940). Among the many songs inspired by *Don Quixote* Ravel's *Don Quichotte à Dulcinée* (1932–3) and Ibert's *Chansons de Don Quichotte* (1932) have met with more success than those by Spanish composers. In the same way Telemann's suite (*c*1761), Anton Rubinstein's humoresque (1871) and, in particular, Strauss's tone poem (1896–7) have outshone programme pieces by Ruperto Chapí (1869), Jesús Guridi (1915), Oscar Esplá (1929) and G. Gombau (1947). Other works by Cervantes that have inspired a number of musical works include the short story *La gitanilla* from the *Novelas ejemplares* (1613) and the farce *La cueva de Salamanca* from *Ocho comedias y ocho entremeses* (1615).

For further details of works based on Cervantes's writings, see Haywood (1947), Esquival-Heinemann (1993) and *MGG2*.

JACK SAGE/ALVARO ZALDÍVAR

Cerveau, Pierre (*b* Anjou; *fl* 1573–1604). French composer. His name appears in 1573 in the list of 'temporary lay clerks' from the chapter register of Ste Croix Cathedral in Orléans. After 1589 he was probably in the service of Charles Myron, Bishop of Angers, to whom he dedicated his book of *Airs mis en musique à quatre parties* (Paris, 1599) after his arrival in the capital. In 1604 he was in Troyes, and with other musicians, including Jacques Mauduit, set to music French translations in measured verse of the Latin hymns of Lorenzo Strozzi. Other *airs* by him are in collections as follows: one in one of Jacques Mangeant's songbooks (RISM 1608[9]), four in three of Bataille's collections of *Airs de differents autheurs mis en tablature de luth* (one in 1609[13], two in 1611[10] and one in 1615[11]) and one in Muguet's *Amphion sacré* (1615[7]; for 4 voices). His own collection – of which only the superius is known – has the composite character of *air de cour* collections of this period; it contains many pieces influenced by *musique mesurée à l'antique*, dance-songs and tunes for masquerades or ballets. The *airs*, like many others of their kind, were intended to be sung not by four voices but by one voice and three instruments. Some of the melodies are settings of poems by Jean Bertaut, Baïf, Jacques Davy du Perron, S.G. de La Roque and Philippe Desportes. Five *airs* are in T. Gérold: *Chansons populaires des XVe et XVIe siècles avec leurs mélodies* (Strasbourg, 1913/*R*).

ANDRÉ VERCHALY

Cerveira, António Machado e. *See* MACHADO E CERVEIRA, ANTÓNIO.

Cervelas (Fr.). *See* RACKET.

Cervelló (i Garriga), Jordi (*b* Barcelona, 18 Oct 1935). Spanish composer. He studied the violin in Barcelona, Milan and Salzburg, but his career as a violinist was ended by a car accident in Rome (1960). He studied composition with Josep María Roma (1952–70) and in 1982 was appointed as a teacher at the Barcelona Conservatory. Cervelló has received various prizes and participated in international festivals, having particularly strong relations with Israel. He has also written numerous articles for *Música y arte*, *L'avenç* and other publications.

Cervelló has been influenced by all the great currents of music history, with Bartók and Shostakovich especially significant among 20th-century composers. Several works have as their point of departure meditations on a wide variety of matters, among them moral themes. Thus the descriptive tendency is not purely exterior but rooted in the composer's concern for the human condition. Some of his works, such as the *Meditación* for piano (1980), show a deep intimacy, while the *Fantasía concertante* for violin and orchestra, composed between 1969 and 1976, is a wide-ranging and emotionally well-balanced essay in the instrument's possibilities.

ANGEL MEDINA

Červený, Václav František (*b* Dubeč, 27 Sept 1819; *d* Königgrätz [now Hradec Králové], 19 Jan 1896). Bohemian maker and inventor of brass instruments. Having gained experience as apprentice and journeyman in various Austro-Hungarian workshops, he established himself as brass maker in the garrison town of Königgrätz in 1842. Starting with four employees, by 1859 his workforce totalled 80. By 1867 he had opened a branch factory in Kiev, managed later by his eldest son with Russia later becoming an important export market. From 1876, now as 'V.F. Červený & Sons', he was joined by four of his sons and in 1880 the factory, by now employing over 100 workers, was honoured with a state visit by Emperor Franz Joseph. In 1895 no fewer than 6000 brass instruments were supplied to the Russian army. In 1907 the firm became a limited liability company and in 1928 the maker Karl Schamal took over as manager. The firm was nationalized in 1946 under the 'Amati' label, but the Czech Republic the factory after the formation has once more resumed its identity.

Červený's innovations, many of which (in spite of patent) were plagiarized by other makers (especially in France), included a process to draw conical brass tubes from the solid, the *Tonwechselmaschine* (transposing valve) of 1846 and the non-flared 'Königgrätz' bell. On the occasion of his 50th anniversary as maker, his son Jaroslav published a commemorative account of his inventions (1883), which also included percussion instruments. These include the CORNON (1844), a french horn with vertical bell for military use from which the Wagner-tuba later derived; the *Phonikon* (also known as the *Zvukoroh*), a euphonium with a d'amore-type bell; the *Glycleide* (1846), a tenor horn in B♭; the *Baroxyton* (1853), a type of euphonium; the *Primhorn* or *primovka* (1867), a french horn in F alto; the *Armee-Posaune* family (1867), upright valved trombone for cavalry; the *cornett* family (1876), circular wide-bore instruments. Notable too was his *tritonikon*, a metal double bassoon in E♭; (1856, followed in 1872 with the even deeper *Subkontrafagott* in B♭) and the family of *Kaiser* instruments (1882–5) of particularly wide bore. His parents for percussion instruments include the *Glocken-Akkordion* (type of altar bell) and the *Votiv-timpani*.

Červený was acknowledged as the leading Austrian brass maker of his time and may be considered responsible for the adoption of wide-bore instruments in German-speaking lands. The Munich exhibition jury in 1854 praised him for introducing system into brass manufacture, hitherto empirically designed. Recognition elsewhere was slow. In both the 1855 and 1867 Paris exhibitions the jury awarded him merely the silver medal, while Sax won gold, which aroused widespread protest (in his *Denkschrift* he convincingly vindicated himself). He was duly awarded the gold medal in 1889. The highest award was to follow at Chicago in 1893. By the time of his death he had been decorated by many crowned heads of Europe. His was an impressive funeral, with cortège accompanied by three brass bands, their silent instruments wrapped in crape.

WILLIAM WATERHOUSE

Cervera, Juan Francisco (*b* Valencia, *c*1575; *d* after *c*1592). Spanish theorist. Incidental remarks in his single publication give us the only information known about him: that he taught chant in Zaragoza and elsewhere in Spain, that his book was completed before his 18th birthday and that he was little older when it was published. He promised a more ambitious work on 'canto de órgano y contrapunto', delayed, he said, by the lack of printing materials; there is no evidence that it ever appeared, although Ruiz de Lihory mentioned a manuscript of a later treatise. The *Arte y summa de canto llano compuesta y ordenada de algunas curiosidades* (Valencia, 1595) is a modest octavo volume. Prefatory matter includes an *aprobación* by the composer Philippe Rogier and a laudatory sonnet by Lope de Vega. Cervera cited a number of authorities, often with marginal references, although occasionally he confused their names and works; Spanish writers include Francisco Tovar, Guillermo de Podio, Gonzalo Martínez de Bizcargui, Martín de Tapia and the author of *Lux bella*. His treatment of Gregorian chant contains nothing unusual, but the last half of the volume is liberally illustrated with examples of the modes, the psalm tones, and the main intonations of Office and Mass. Pietro Cerone and certain later minor Spanish theorists of plainchant cited Cervera. Fétis's attribution to him of a *Declaración del canto llano* (Alcalá de Henares, 1593) is undoubtedly erroneous.

ALMONTE HOWELL/F.J. LEÓN TELLO

Cervetti, Sergio (*b* Dolores, 9 Nov 1941). Uruguayan composer, active in the USA. After piano lessons with José-María Martino-Rodas and Hugo Balzo he entered the Montevideo National Conservatory, where he studied composition with Carlos Estrada, also taking composition

lessons with Santórsola. Thereafter he attended the Peabody Institute, Baltimore, where he won the first prize for composition in three consecutive years and graduated in 1967. He had instruction from Grové and from Krenek, and he began to experiment in electronics. He won first prize at the 1966 Caracas Festival for his work *Cinco episodios*. In 1969–70 he was composer-in-residence at the Berlin Akademie der Künste, and there he co-founded the Berlin Dance Ensemble before returning to the USA as professor at Brooklyn College, New York. *Prisons II* was written for the 1972 Donaueschingen Festival. Cervetti's avant-garde style comprises serialism, Expressionism, minimalism and nationalism; he has also experimented with electronic media techniques. He has written works for the Brooklyn Academy of Music Next Wave Festivals and the Alicante Contemporary Music Festival, where in 1991 he presented his Harpsichord Concerto. Several of his works have been recorded. In 1972 he began teaching advanced courses in electronic composition and 20th-century music at the Tisch School of the Arts, New York University. In 1978 he was director of the summer electronic music workshop at McGill University and became a US citizen.

SUSANA SALGADO

Cervetto, Giacobbe Basevi (*b* ?Venice, ? Nov 1680; *d* London,14 Jan 1783). Italian cellist and composer. He was of Sephardi Jewish origin. Nothing is known about his life in Italy, though Burney referred to him as a Venetian. He arrived in England probably in early 1738, when he became a member of the Royal Society of Musicians: he was an important member of a group of London-based Italians who brought the solo cello into favour in England. Although his playing was technically brilliant, his tone, according to Burney, was 'raw, crude and uninteresting'. The first reliable record of his playing is of a concerto at Drury Lane (22 November 1742); he continued to play there regularly until about 1774/5. According to his son James's obituary, Cervetto 'led the band' there. He played in numerous subscription concerts at Hickford's Room, the Great Room, the King's Theatre and the New Theatre in the Haymarket. He also played in the orchestra at Vauxhall and took part in private

Giacobbe Cervetto: portrait by Johan Zoffany, c1768–70 (private collection)

concerts, for example in the Burney household. At some point in the early 1760s Cervetto seems to have relinquished his solo career in order to make way for his son, also a cellist. Marsh recorded Cervetto's presence at a concert at the Salisbury Festival in September 1781; according to James Cervetto, his father was still playing his cello at that time. Cervetto, known as 'Nosey' among his colleagues and theatre-goers (owing to the size of his nose), was a popular and colourful character and the subject of many anecdotes, including a prologue by Garrick.

Cervetto's compositions, which represent an important contribution to the cello repertory, belong to the period of transition from the Baroque to the Classical style. The pieces range from binary dances and fugues to early versions of sonata form. The op.2 solos are arranged in ascending order of difficulty, the last including a three-voice fugue with variations. Some of the music here, as well as in op.4, is technically demanding, with fast, broken-chord figurations, complex rhythms and large registral leaps. Cervetto employed a variety of compositional techniques (e.g. rhythmic alteration in pitch sequences) in order to maintain melodies and rhythmic interest. Furthermore, many of his solo sonatas include either implied or written-out cadenzas, an unusual feature. His cello concerto is one of the few surviving 18th-century English works in this genre. It is a short and unremarkable (though attractive) work scored for ripieno and concertino.

MARIJA ĐURIĆSPEARE

Cervetto, James (*b* London, 8 Jan 1748; *d* London, 5 Feb 1837). English cellist and composer, son of GIACOBBE BASEVI CERVETTO and Elizabeth Cervetto. His father taught him the cello. He first appeared in a concert of child prodigies at the Little Theatre in the Haymarket on 23 April 1760. Between 1763 and 1770 he is said to have travelled abroad, playing in most European capitals, although he was in London at a concert given by Parry the harpist in 1765. In 1771 he became a member of the queen's private band, and he joined Lord Abingdon's orchestra in 1780, taking part in the Professional Concert from 1783 to 1794. He was a member of the Concert of Ancient Music and a principal in the orchestra at Handel's Commemoration (1784). Between 1773 and 1781 he took part in various concerts at the Salisbury Festival. From about 1774 he played at the King's Theatre and was admired for his skilful accompaniment of recitatives: Banvard records 'It was his [the Prince of Wales] delight to attend the Italian opera merely to hear Cervetto's accompaniments of the recitatives which were acknowledged to be unrivalled'. Although he inherited £20,000 in 1783, he remained an active performer in London and the provinces, participating in concerts with some of the best musicians of his day, the last recorded being that at which Haydn was introduced to King George III (2 March 1795).

Burney, describing him as 'the matchless Cervetto', stated that while still a child he played 'in a manner much more *chantant* than his father. Arrived at manhood, his tone and expression were equal to those of the best tenor voices'. He and John Crosdill were the foremost cellists of their generation in Britain. They were often compared with one another, and J.-L. Duport's playing was reported to have been inferior to theirs (*Morning Herald*, 20 February 1783). According to the press, Cervetto lost his favourite cello, worth 300 guineas, in the King's Theatre fire of 17 June 1789. His will mentions many people by the name of Basevi, who were probably members of his family.

Cervetto's op.1 solos differ little in style from his father's works: they have a figured bass for harpsichord, some have cadenzas, and the last has a minuet and variations. His other solos are for cello and 'a bass', and so may be considered to be duets, though without equality of the parts: arrangements of three of the solos by Robert Lindley, whom Cervetto taught (gratis) in the early 1790s, do in fact transform them into duets proper, by changing the parts around on alternate phrases. Cervetto's op.3 solos are different from those of op.1, their melodic lines being more direct and the rhythms more four-square. They include much rapid passagework and are more demanding for the player than the op.4 sonatinas, which were obviously intended for amateur use. The divertiments for two cellos are all in two movements, generally slow–fast, with the second either a rondo or a minuet, and appear to have had a didactic purpose. Opp.5 and 6 are much more advanced. All are in three or four movements, and two have slow introductions. Sonata form is handled with more assurance, the development of thematic material is less predictable, and the two-part texture resourcefully varied. Cervetto here makes great technical demands on the cello, reaching *f*♯″ and employing more double stopping.

For illustration *see* MARCHESI, LUIGI.

GRAHAM SADLER/MARIJA ĐURIĆ SPEARE

Cervo, Barnaba (*b* Parma; *fl* 1574). Italian composer. His only known work, *Il primo libro de madrigali a cinque voci* (Venice, 1574), contains 30 compositions dedicated to Ottavio Farnese, Duke of Parma. Cervo claimed in the dedication that the publication was inspired 'by the fond memory of M. Cipriano Rore, my most famous teacher, who died servant to Your Excellency by whom he was so loved and honoured'. One of the madrigals, *Amor da te conosco*, is composed 'as an imitation of Cipriano'. Cervo's style is rich in madrigalisms; his individual style is well represented by *Anima ingrata* and the second part of *Caugia viaggio*.

Cesana, Bartolomeo Mutis, Count of. *See* MUTIS, BARTOLOMEO.

Cesare, Giovanni [Gian] **Martino** [Caesar, Johann Martin] (*b* Udine, ?*c*1590; *d* Munich, 6 Feb 1667). Italian composer and cornettist. He and his brother, Giovanni Francesco, were employed in Austria around 1600. On returning to Udine in 1603, they were engaged as trombonists at the cathedral; however, in 1605 Giovanni Martino left the post to return abroad. At the time of his first publication, in 1611, he was a cornettist and a member of the household of the Margrave of Burgau at Günzburg, near Augsburg. In 1610 he was paid by Duke Maximilian of Bavaria for teaching the cornett, and in 1612 he played in the duke's chapel in Munich (it was not uncommon for Augsburg instrumentalists to be called into service there from time to time). In 1615 he entered Maximilian's service in Munich as a cornettist and in 1622 became a member of his household. That he dedicated his last publication (1621) to various members of the FUGGER family suggests that he still maintained his connections with Augsburg.

Cesare composed both sacred works and instrumental canzonas. His large-scale Magnificat settings and Marian antiphons follow the style of Hans Leo Hassler in the antiphonal treatment of vocal groups and the combination of contrapuntal and homophonic passages. The few-voice motets, which enjoyed considerable popularity and were included in several of the most important anthologies of the time, were more forward-looking: they alternate between duple- and dance-like triple-time sections, make frequent use of melismas to underscore important parts of the text, and several contain parts for obbligato instruments. The *Musicali melodie*, Cesare's last published collection, contains 14 instrumental canzonas in one to six parts with continuo alongside 14 motets. The canzonas have colourful programmatic titles, many of them honouring patrons, including the Fugger family and members of the Bavarian court. While the cornetto is usually given a leading role, Cesare also includes parts for trombone, violin and viola. His instrumental canzonas present an interesting mix of old and new: nearly all begin with an imitative section based on the canzona rhythm, yet there are a number of newer effects, including symmetrical triple-time sections, concertato interplay, echo effects and idiomatically conceived virtuoso writing. 'La Hieronyma' for solo trombone and continuo is an example of the *canzona all bastarda*, a piece in which a basic melodic line is richly ornamented in the style associated with the viola bastarda.

A. LINDSEY KIRWAN/STEVEN SAUNDERS

Cesari, Gaetano (*b* Cremona, 24 June 1870; *d* Sale Marasino, Brescia, 21 Oct 1934). Italian musicologist, critic and double bass player. Besides the double bass, he studied the violin, cello and flute at the Milan Conservatory (1888–91); while visiting Hamburg on tour with the Bimboni orchestra in 1894 he attended the lectures of Julius Bernuth and Arnold Krug at the conservatory there. After taking up his education again in 1903, he took the doctorate in 1908 at Munich University under Sandberger, Kroyer and Lipps, concurrently taking an MA in music under Felix Mottl at the Munich Akademie der Tonkunst. From 1910 he contributed to the newspaper *Il secolo*, the *Rivista musicale italiana* and the *Revue de pays latins*, subsequently working as music critic of the *Corriere della sera* (1920–34) and correspondent of the *Revue de musicologie* (1929–34). He was also librarian of the Milan Conservatory (1917–23) and the first professor of music history at the Milan State University (1924–34). He served on the permanent government commission on musical and dramatic art (1915–21), directed the reorganization of the theatrical museum at La Scala and was a member of its committee of directors (1918–24); he also reorganized the musical archives of Milan Cathedral and the Scala museum and the collection of original manuscript scores belonging to the Ricordi publishing house.

With the publication of his dissertation on the origins of the Italian madrigal Cesari began a series of studies designed particularly to make known the musical heritage of the 17th century, which he regarded as 'a century of Italian domination and glory'. The thorough musicological grounding he had acquired in Germany enabled him to describe the convergence of foreign influences on Italy during this period without any narrow preconceptions or nationalist bias. During his years in Munich he began to collect and transcribe the works of Monteverdi, then virtually unrecognized, and inaugurated the publication of a 'series of national masterpieces' of the Italian musical renaissance; although the project was not completed, mainly because of the outbreak of World War I, his scrupulous work for it prepared for later studies and publications of Monteverdi's music. His ability as a scholar led the city of Milan to commission him to edit (with Alessandro Luzio) Verdi's *Copialettere*, published during the composer's centenary. Cesari was responsible for much of the work on the series Istituzioni e Monumenti dell'Arte Musicale Italiana and helped to found the Scuola di Paleografia Musicale at Cremona.

FERRUCCIO TAMMARO

Cesarini, Carlo Francesco (*b* San Martino-Sassocorvaro, nr Urbino, 1666; *d* after 2 Sept 1741). Italian composer. The earliest of his many settings of texts by Cardinal Benedetto Pamphili might be a dramatic cantata of 1688 that is tentatively attributed to him. He was on Pamphili's payroll from July 1690, and conjecturally remained there until the cardinal died in 1730; he is listed among the 'gentlemen' from November 1690, after which he served as Pamphili's *maestro di cappella*. He apparently worked exclusively in and around Rome except during 1690–93, when he served the cardinal (who was the papal legate) in Bologna. He was *maestro di cappella* at the church of Il Gesù from 1 September 1704 until 31 August 1741 and a member of the musicians' Congregazione di S Cecilia from 22 September 1706 to 5 October 1731. He served the Congregazione as *guardiano* of its *maestri* in 1711, and directed (and perhaps composed) a mass for it in 1719. His income must have made him a wealthy man, since his two daughters were given large gifts in 1735. When he retired from Il Gesù the prefect asked him to leave the church a copy of each of his works because their excellence was 'rarely matched by composers of the present day'. In other words, he was a gifted composer who retained the contrapuntal fabric of mid-Baroque style. His compositions were almost all for the church and the oratory or for private performances. Indeed, his only work for a public theatre was one act of the opera *Clearco in Negroponte* (1695). Ghezzi drew a fine caricature of him (in *I-Rvat* Ott.lat.3118, f.158, reproduced in Montalto, 337). His mellifluous cantatas, dated 1690–1718, must have been highly prized; incipits are known for more than 80, and at least 55 are extant.

WORKS

lost unless otherwise stated

OPERAS

Il Clearco in Negroponte [Act 3] (dramma, 3, after A. Arcoleo), Rome, Capranica, 18 Jan 1695, arias *D-MÜs*, *I-Rmalvezzi*, *Rc*, *US-NYlibin* [Act 1 by B. Gaffi, Act 2 by G. Lulier]

L'amore eroico fra pastori [Act 1] (favola pastorale for puppets, 3, P. Ottoboni), Rome, Palazzo della Cancelleria, Feb 1696 [Act 2 by G. Lulier, Act 3 by G. Bononcini]; rev. A. Scarlatti as La pastorella, also for puppets, Venetian embassy, 5 Feb 1705, arias *GB-Lbl*; rev. P.A. Motteux and V. Urbani as Love's Triumph, London, Queen's, 26 Feb 1708, arias (London, 1708)

[untitled] (commedia, ?3, G. Buonaccorsi), Rome, Casino Tassi, carn. 1701

Giunio Bruto, overo La caduta de' Tarquinii [Act 1] (dramma 3, ?G. Sinibaldi), intended for Vienna, 1711, unperf., *A-Wn* [Act 2 by A. Caldara, Act 3 by A. Scarlatti]

La finta rapita [Act 3] (favola boscareccia, 3, D. Renda), Cisterna, Prince of Caserta's residence, 17 Jan 1714 [Act 1 by Giuseppe Valentini, Act 2 by N. Romaldi]

DRAMATIC CANTATAS

Cantata, 5vv, on the birth of the Prince of Wales (B. Pamphili), Rome, ? Palazzo Pamphili or Collegio Clementino, ? July 1688 (doubtful)

Augelli et arboscelli (Filli, Tirsi, Lico); Clori, Silvio, Mirtillo; Notte oscura (Fileno, Clori), all 1706 (see Marx, 1983)

CHAMBER CANTATAS

dates are of earliest known copy

A Silvio Nisa è destinata in sorte (B. Pamphili), 1690, *I-Rvat* (text only); Alle sponde del Tebro, S, bc, *US-NH*; Anzio un tempo fastosa (Anzio distrutto dagl'anni) (Pamphili), 1694, *I-Rvat* (text only); Avrei ben folle il cor se al mensogniero, S, bc, *D-MÜs*, *E-Mn*, *F-Pn*; Bell'onda che mormori (Pamphili), 1694, *I-Rvat* (text only); Canace nata appena (Canace) (Pamphili), S, bc, 1699, *D-MÜs*, *GB-Cfm*; Cor prigioniero e vaneggiando, *B-Lc*; Della mia bella Clori quella bocca adorata, S, bc, *D-MÜs*, *F-Pn*, *GB-Cfm*, *Lbl* (attrib. LOWELL LINDGREN

Cesaris, Johannes (*fl* 1406–17). French composer. The earliest known documentation of his life is from the court of Jean, Duke of Berry, at Bourges, where he was a *clerc* from 1406 and *maître des enfants* from 1407 to 1409, when he left the post (a Pierre Cesaris is also documented at Bourges between 1406 and 1443). It is assumed that he is the same man who, as organist of Angers Cathedral, received a small organ from Yolande of Aragon in 1417. Furthermore, the poet Martin le Franc, in his *Le champion des dames* (1440–42), stated that Cesaris, along with Carmen and Tapissier, had amazed Paris with their music: both the latter composers were active at the court of the duke of Burgundy in the early 15th century.

His works are mostly found in manuscripts from the early to mid-15th century, although one, *Le dieus d'amours*, is found in the Chantilly manuscript (*F-CH* 564), which may be slightly earlier. It has been argued

that *Le dieus d'amours* is an early work since it contains some archaic notational devices, but these may be conscious archaisms, given the nature of many other works in the manuscript (however, see also Günther, 285–7). Most of his compositions are in *GB-Ob* Can.misc.213, with one further ballade, *Bonté, bialté*, ascribed to him in *I-Fn* Panciatichiano 26 and also included in *F-Sm* 222 (now lost). The rondeau *Se vous scaviés*, ascribed to Cesaris in *Sm* 222 and to Passet in *I-Bc* Q15, seems more likely to be by Passet, since the ascription in the Strasbourg manuscript may not be trustworthy and the work is not of the quality of the remainder of Cesaris's output. A further work, *Medée*, was copied in *I-Fn* 26 by the same scribe who copied *Bonté, bialté*. It has been suggested that *Medée* was also the work of Cesaris, but this has not been generally accepted (see G. Reaney: Introduction to CMM, xi/1). An inventory dated 1467 suggests that Cesaris's one surviving motet was contained in a manuscript (now lost) belonging to the Burgundian court (see F. Ludwig, ed.: *Guillaume de Machaut: musikalische Werke*, ii, Leipzig, 1928/*R*, p.41*b*; the reference in *Grove6* to a Burgundian manuscript of 1367 is spurious).

Cesaris's works show that he was well abreast of the major trends of his time, or indeed may have been at the forefront of some of them. Of his rondeaux, three are double-texted and make use of textless interludes; in the remainder only the upper voice is texted. The rhythmic complexity characteristic of music at the turn of the 14th century is seen in several works, for example in *Je ris, je chant, je m'esbas*, in which a three-against-two relationship is maintained between the contratenor and the other voices; in *Se par plour/Se par plour* the voice-parts are stylistically complex even in isolation; the textless ballade *Bonté, bialté* is unique among Cesaris's work for its use of duple metre. The motet *A virtutis/Ergo beata/Benedicta filia* is isorhythmic in all voices. However, in *A l'aventure va Gauvain* rhythmic complexities are completely absent, and the lower voices have generally slower rhythmic movement than the upper voice, with imitation at the unison between the parts at the end of the refrain. This texture is characteristic of music of a slightly later generation, and it may be that this work is later than his other compositions.

WORKS

Edition: *Early Fifteenth-century Music*, ed. G. Reaney, CMM, xi/1 (1955) [edn of all pieces]

MOTET

A virtutis ignicio/Ergo beata nascio/Benedicta filia tua, 4vv

BALLADES

Le dieus d'amours, 3vv; also ed. in PMFC, xix (1982)
Bonté, bialté, 3vv

RONDEAUX

A l'aventure va Gauvain, 3vv
Je ris, je chant, je m'esbas, 3vv
Mon seul vouloir/Certes m'amour, 3vv
Pour la douleur/Qui dolente, 2vv
Se par plour/Se par plour, 3vv

Se vous scaviés, 3vv (probably by Passet)

TOM R. WARD/R

Cesena, Giovanni Battista. *See* BIONDI, GIOVANNI BATTISTA.

Cesena, Peregrinus [Veronensis, Peregrinus Cesena] (*fl* 1494–1508). Italian composer. He was a priest who from 1494 to 1497 was *maestro di cappella* at Padua Cathedral. His known compositions consist of ten frottolas which appeared in Petrucci's frottola books 2–9. One of these is also in his second book of intabulated frottolas for lute and voice of 1511. Stylistically indistinguishable from many of the frottola composers who contributed to Petrucci's earlier books, Cesena typically favoured the popular forms of the *barzelletta* and *oda*, setting verse of a light and amorous nature.

WORKS

10 frottolas, 1505[3], 1505[4], 1505[6], 1506[3], 1507[4], 1509[2] (1 repr. for v and lute, 1511); 7 ed. G. Cesari and others, *Le frottole nell'edizione principe di Ottaviano Petrucci* (Cremona, 1954); 1 ed. *IMa*, 2nd ser., iii (1964)

JOAN WESS

Ceses (Ger.). C♭♭. *See* PITCH NOMENCLATURE.

Cesi, Pietro (*fl* Rome, 1653–60). Italian composer. He was a member of the order of Patres Scolopi. Though there is no documentary evidence of his activities in Rome, his published work suggests from its scoring that he was *maestro di cappella* of one of the smaller musical foundations. His surviving music is all sacred, composed in styles that show the influence of both *prima* and *seconda pratica*. The contrapuntal writing, particularly in the masses, is careful and expressive, and the music with continuo shows considerable understanding of the secular monodic style in the structure of the melodic lines and the capable handling of the accompaniment.

WORKS

Lamentationes Jeremiae prophetae, 3vv (Rome, 1653)
Motetti, 1–3vv, con una messa e Salve, 5vv, liber I, op.2 (Rome, 1654)
Messa, 4vv, con altre sacre canzoni, 1–3, 5vv, liber II, op.3 (Rome, 1660)
O dulcissime Jesu, motet, 2vv, bc (org), 1668[1]

JOHN HARPER

Cesis, Sulpitia (*fl* 1619). Italian composer. She was a nun at the convent of S Agostino, Modena, and is known only by her volume of eight-part *Motetti spirituali* (Modena, 1619).

České Budějovice (Ger. Budweis). Czech town. A royal town in the 13th century, it is now the industrial and cultural centre of Bohemia. In 1753 Adalbert Gyrowetz was born in the town, and Emmy Destinn died there in 1930; an annual singing competition is devoted to her memory.

The first theatre (1764–1817) stood in the oldest part of the town. The Town Theatre was erected in 1817–19 on the same site and has been rebuilt many times, notably after its destruction in World War II. The last general reconstruction was completed in 1990 (260 seats). There was originally a German theatre, but Czech companies, playing operas and operettas, had seasons here from the end of the 19th century onwards. On Czechoslovak independence, in 1918, a Czech professional company was established in the same house, which was renamed the Jihočeské Národní Divadlo (South Bohemian National Theatre). Operas and operettas were performed from 1919 to 1929, and numerous tours were made to neighbouring areas and to North Bohemian towns. Between 1929 and 1940, only plays and operettas were staged, and under German occupation (1940–45) the theatre reverted to German plays. After 1945 productions of Czech plays and operettas were resumed, and after various organizational changes the theatre was renamed the Jihočeské Divadlo (South Bohemian Theatre). Regular opera performances started in 1959, and the company gained a particular reputation for chamber opera (Haydn, Paisiello, Rossini, Mozart, Otmar Mácha, Evžen Zámečník etc.). Performances have been given in the Baroque theatre and other rooms of the nearby castle Český Krumlov.

In 1957 the opera orchestra began giving concerts as the Regional SO; its leading musicians also play as the Jihočeské Smyčcové Kvarteto (South Bohemian String Quartet). An earlier quartet of that name (1929) became in 1932 the Suk Quartet. In 1981 the Jihočeská Kormorní Filharmonie (South Bohemian Chamber Philharmonic) was founded.

There is a great tradition of choirs, notably the Pěvecké Sdružení Jihočeských Učitelů (Singing Association of South Bohemian Teachers), founded in 1911, and the children's choir Jitřenka (Morning Star). In 1959 a department of musical education was set up at the South Bohemian University, and in 1990 a conservatory. In 1945 a regional radio station was established with an independent musical section.

Cesolfaut. The pitch *c′* (middle C) in the HEXACHORD system.

Cesti, Antonio [Pietro] (*b* Arezzo, bap. 5 Aug 1623; *d* Florence, 14 Oct 1669). Italian composer and singer. He was the most celebrated Italian musician of his generation.

1. LIFE. Cesti's baptismal name was Pietro; he took the name Antonio on joining the Franciscan order. The name 'Marc' Antonio', which has often been applied to him, is an error. He has often been associated with Venice, where a number of his operas were produced with great success, but his formation as a musician in Rome, though not satisfactorily documented, seems clear in his music. The two musicians cited in his cantata *Aspettate* were the leading figures in Roman music of the previous generation, Luigi Rossi and Giacomo Carissimi (rather than Monteverdi and Cavalli, the biggest names in Venice); and in 1688 G.A. Perti, in the preface to his *Cantate morali e spirituali*, linked Cesti's name with the same two, calling them 'the three luminaries of the musical profession'.

Baini wrote that Cesti was a pupil of Abbatini without giving any details of their association, and Coradini later suggested that he studied with him at Città di Castello from 1637 to 1640. This could have been his decisive formative experience as a musician, for Abbatini was a versatile musician of Roman background alert to current developments (it may have been Cesti's influence that led to the performance of Abbatini's opera *Ione* at Vienna in 1666). In 1640 Abbatini became *maestro di cappella* of S Maria Maggiore, Rome. Coradini's suggestion that Cesti followed him there and remained until 1645 would fit in with the tradition, recorded by Caffi, that he studied with Carissimi but does not entirely agree with other biographical information.

After serving as a choirboy at Arezzo, Cesti joined the Franciscan order at the provincial congregation at Volterra in 1637. He served his novitiate at S Croce, Florence, and was then assigned to the monastery at his birthplace. The archives of the Convento di S Francesco, Arezzo, record his presence there in 1640, 1642 and (for the last time) June 1643 but make no mention of unusual travels, nor indeed of exceptional activity of any kind. On 10 September 1643 he was elected organist of Volterra Cathedral; a minute of the decision notes that he was organist at S Croce, which was clearly a very modest position. His appointment took effect on 8 March 1644, and on 27 February 1645 he was confirmed as *magister musices* of the Franciscan seminary at Volterra; he also served as *maestro di cappella* of the cathedral throughout the following period. On 5 April 1645 he ceased to be organist and managed to have his brother, a priest whose name was also Antonio (from birth), installed in the post in January 1648.

During his stay at Volterra, and perhaps before, Cesti enjoyed the patronage of the Medici family. In 1647 he sang in an opera given to inaugurate the new theatre of Prince Matthias at Siena. He turned to the prince for help in the matter of the organist's position for his brother and also for support of his (unsuccessful) application to become *maestro di cappella* of Pisa Cathedral in 1648. He was a favourite of Cardinal Gian Carlo de' Medici and the Grand Duke of Tuscany, Ferdinando II (see Cinelli Calvoli). Between 1645 and 1648 he must have become acquainted with the members of a Florentine literary circle later known as the Accademia dei Percossi. One member of the group, Giulio Maffei, owned property near Volterra, where he received visits from some of the others, including G.A. Cicognini and G.F. Apolloni, both of whom later supplied him with librettos. The painter and writer Salvator Rosa, the circle's most distinguished member, became a close friend of Cesti, providing the poetry for at least three cantatas that may date from Cesti's years at Volterra; from 27 March 1649 onwards his letters are a major source of biographical information about the composer.

Cesti's career as an opera composer is generally dated from the supposed production of *Orontea* at the Teatro di SS Apostoli, Venice, in 1649. This assertion, made by Ivanovich in the late 17th century, has been seriously challenged by Bianconi and Walker (1975). Evidence now suggests that Cesti composed his *Orontea* for Innsbruck in 1656. Although details about his activities before *Alessandro vincitor di se stesso* (Venice, Carnival 1651) are sketchy, he may have sung in the Florentine première of Cavalli's *Giasone* (dedication, 15 May 1650); Bianconi suggests that Cesti, a tenor, sang either Aegeus or Demo. Rosa, in a letter of 3 July 1650, described him as 'the glory and splendour of the secular stage'. Despite his reappointment at Volterra on 9 July 1649 and his later connection with the papal choir, opera was to be the centre of Cesti's professional life, and the conflict between sacred duty and secular inclination one of its principal themes. Referring to some episode now unknown, Rosa wrote to Maffei on 24 August 1650: 'But let us speak of melancholy subjects: how did the chromatic cantata in B major [*duro*] of our poor Father Cesti turn out? Before God I am sorry about this, but it is ever thus with anyone who would behave as though he were neither friar nor layman'. The 'chromatic cantata' may have been an affair with a certain Signora Anna Maria referred to by Rosa in an earlier letter; she was undoubtedly the singer Anna Maria Sardelli, who took the part of Campaspe in Cesti's *Alessandro vincitor di se stesso* (see Osthoff, 1960). Cesti may well have sung with one or more touring opera companies about this time. On 30 October 1650 the superior-general of his order addressed an official rebuke to his monastery at Arezzo, citing his 'dishonourable and irregular life' and in particular a stage performance at Lucca (perhaps of *Orontea*). It was during this period that Cesti met Francesco Sbarra, who became his most frequent librettist.

In his satire on music Rosa deplored the easy and ample success that a musician could achieve in his time. Italians had in fact established musical hegemony over Europe in a period of serious economic decline. Cesti's career affords an ideal instance. Two new operas, *Alessandro vincitor di se stesso* and *Il Cesare amante*, were performed in Venice in 1651, and on 30 November 1652 Rosa could write to Maffei: 'I have news of our Father Cesti, who has become immortal in Venice and is esteemed first among composers of our day'. In a letter to G.B. Ricciardi, Rosa also wrote that Cesti had begged him 'to compose the verses for a *drammetto musicale* to be performed in that city next year' (12 May 1651). When Rosa refused, Cesti set *Il Cesare amante*, a scenario by M. Bisaccioni versified by D. Varotari. Although the libretto is dated 1651, the opera was probably performed early in 1652 (*more veneto*).

In 1652 Cesti gained the security of a regular position at the court of Archduke Ferdinand Karl at Innsbruck, and he remained there for some five years. He made occasional journeys to Italy, some of them, perhaps, in order to recruit singers, though when he was in Venice in 1655 he helped to recruit the scene painter G.D. Cerusi for the Innsbruck court. During 1654 a new Komödienhaus was completed at Innsbruck and inaugurated with *La Cleopatra*, actually Cesti's *Il Cesare amante* retitled and furnished with a new prologue and with ballets to conclude the acts. On 4 and 7 November 1655 *L'Argia* was performed at Innsbruck to celebrate the visit of the recently abdicated Queen Christina of Sweden, then on her way to Rome. Accounts indicate that the opera lasted more than six hours and that 'her Majesty ... beheld it with great pleasures, and attention'. Whether or not Cesti wrote the music for *Marte placata*, a 'componimento scenico per musica' given on 3 November 1655, is uncertain. However, Cesti's next two operas, *Orontea* (1656) and *La Dori* (1657), are among the most famous of the 17th century, each having revivals into the 1680s.

Cesti's personality is elusive, and no portrait is known to survive. His success as performer and courtier suggests a certain personal charm and magnetism, and he was apparently capable of loyalty to those close to him, as witness performances in Vienna in the 1660s of operas by Abbatini and Remigio Cesti. That he also had a manipulative streak and could disregard completely the interests of others where his own were concerned can be inferred from a complex manoeuvre he undertook in 1658. He had gone to Rome by 4 January 1658, possibly by way of Venice in July 1657 (see Pirrotta, 1953), with the apparent intention of securing release from his monastic vows. This he apparently achieved by ingratiating himself with Pope Alexander VII. Rosa reported that Cesti, a tenor, sang before the pope on four occasions. Although his initial attempt to join the papal choir as a supernumerary was turned down on 1 November 1659, he replaced a deceased regular member on 21 December; a letter of Rosa dated 1 March 1659 reports that Cesti had just been released from his vows and would remain a secular priest. Then, his apparent purpose accomplished, he broke faith with the pope and returned to Ferdinand Karl at Innsbruck, despite a threat of excommunication. He did so at the end of a year, 1661, largely spent in Florence on leave from Rome, in connection with the festivities for the wedding of the future Grand Duke Cosimo III and Marguerite Louise d'Orléans. Cesti's failure to return to Rome greatly angered the papal authorities, and only the combined influence of Ferdinand Karl, Cosimo III and the Emperor Leopold I secured his official release from the papal choir late in 1661 or early in 1662. In 1659 he had been made a knight of the Order of Santo Spirito, thanks to the influence of Leopold I and Cardinal Giovanni de' Medici. It must also have been about this time that the archduke awarded him an abbotship (see Cinelli Calvoli); and the cast of Jacopo Melani's *Ercole in Tebe* (Florence, 1661) included an 'Abbate Cesti'. When Queen Christina passed through Innsbruck again in 1662, Cesti's opera *La magnanimità d'Alessandro* was performed in her honour. Meanwhile he had not cut his ties with the commercial theatres in Venice. His lengthy correspondence with the impresario Marco Faustini and the librettist Nicolò Beregan (in *I-Vas*; fig.1; see also Giazotto, 1969) concerning *Il Tito*, performed there in February 1666, is an important source of information about the state of opera in general and the composition of *Il Tito* in particular.

Cesti's second stay at Innsbruck was cut short by the death of Ferdinand Karl's successor, Siegmund Franz, on 24 June 1665. Plans to mount *La Semirami* for Sigmund Franz's wedding had to be cancelled, and most of the musical establishment was transferred to the Habsburg court at Vienna. Cesti arrived there on 22 April 1666 and was named 'Capelan d'honore und intendenta delle musiche theatrali'. Once settled he began a period of intensified activity, at least in the composition of opera, that presumably reflected the difference in scale between

1. Autograph letter from Cesti (in Innsbruck) to Marco Faustini, 20 September 1665 (I-Vas Busta 188, f.57r)

the patronage of an imperial court and that of a ducal one. *Nettunno e Flora* was performed in July, work was begun on *Il pomo d'oro*, there was a new Venetian commission from Faustini (*Il tiranno humiliato d'amore, overo Il Meraspe*, eventually set by Carlo Pallavicino), and several short compositions, probably cantatas, were commissioned by the Contestabile Colonna for performance in Milan when the future Empress Margherita passed through on her way to Vienna. Cesti's remaining years in Vienna saw the production of *Le disgrazie d'Amore* on 19 February 1667, *La Semirami* (originally composed for Innsbruck) on 9 July 1667, the equestrian ballet *La Germania esultante* on 12 July 1667 and finally the colossal *Il pomo d'oro* on 13 and 14 July 1668 (fig.2). Pressure from such heightened activity took its toll on Cesti, who had already served notice in late 1667 of his intention to leave the imperial court.

In 1668 Cesti made plans to go once more to Venice, but Rosa wrote to a common friend that he should avoid that city 'more than the plague'. On several earlier occasions Cesti had aroused bitter personal resentment in other musicians. In 1652 Rosa wrote of a bass in Venice who was jealous of Cesti's success there (Henry Prunières, in *Cavalli et l'opéra vénitien au XVIIe siècle*, Paris, 1931, p.87, suggested that this must have been Cavalli, who, however, was a tenor); at Innsbruck in 1653 Cesti came into conflict with the castrato Atto Melani over the issue of employment (see Bianconi and Walker, 1975); and a certain P. Perozzi was involved in a sharp disagreement with him in 1663. Cesti may never have returned to Venice but he was definitely in Florence in the last year of his life. On 20 November 1666 he transferred the large sum of 250 scudi to the Florentine singer Filippo Melani, perhaps to pave the way for his return. A salary list for the Tuscan court of 1669 names Cesti as *maestro di cappella* with an annual salary of 25 scudi (see Hill). Farulli stated that he died at Florence, 'poisoned by his

2. Prologue of Cesti's 'Il pomo d'oro', Hoftheater auf der Cortina, Vienna, 12–13 July 1668: engraving by Matthäus Küsel after a design by Ludovico Burnacini

rivals', but his earliest biographer, Cinelli Calvoli, made no reference to a violent death.

2. WORKS. Writing of one of Cesti's contemporaries, the painter Luca Giordano, Michael Levey (*Rococo to Revolution*, London, 1966) has said: 'He took the Baroque and painlessly squeezed the profundity out of it, twisting the style to make effects by economical means, astonishing and delighting but never imposing, and himself always producing a virtuoso solution … . His paintings express a wish above all to please – whatever their destination'. The student of Cesti reads this with a sense of recognition. Cesti flourished at a time of stylistic retrenchment that followed the intensity and experiment of the Monteverdi years. He used a comparatively restricted range of melodic and harmonic patterns in the smaller dimensions, and in the large his music was more loosely structured. The earlier energetic feeling for contrast had faded, leaving a prevailing impression of softly focussed melancholy, with occasional comic relief.

Cesti's early Venetian operas represented the first significant competition for Cavalli, who had virtually ruled the stage since Monteverdi's death. Cesti excelled at setting comic situations to music; he was at his best dealing with servants like Gelone in *Orontea*, Bleso in *Alessandro vincitor di se stesso*, Golo in *La Dori* and Gobbo in *La magnanimità d'Alessandro*. Gelone, for example, has entire scenes to himself, and his arias are among the best in the opera. As a group Cesti's Venetian operas exhibit the fast-developing contrast between arias and ariosos, used for moments of reflection, and declamatory recitative, used for narrative action. There are more continuo arias than accompanied arias, and the forms are simpler than those Cesti was to use in his operas for Innsbruck and Vienna. The scarcity of ensembles probably owed more to Venetian taste (and perhaps to the budgets of theatres) than to Cesti's own inclinations; when *L'Argia* was revived at Venice in 1669 most of the choruses were omitted. Instrumental pieces are consistently scored for two violins and continuo, and ritornellos are linked to either a preceding or a subsequent aria, a progressive trait that Cesti further developed in his later operas and that was to be particularly prominent in such works as Antonio Sartorio's *Orfeo* (Venice, 1672). Cesti generally avoided the descending chromatic ostinato basses so effectively used by Cavalli in his earlier operas. He reserved chromaticism for emotionally charged words and scenes. Examples involving three-part parallel movement and leaps of a diminished 3rd, 4th or 5th occur in, for example, *Orontea* (Act 1 scene xiv) and *Alessandro vincitor di se stesso* (Act 1 scenes vi and xii). Diatonic arias in triple metre, with lyrical flowing melodies, appear with increasing frequency. They are often interrupted by hemiola cadential figures using 4-2 chords.

Cesti composed all his later operas except *Il Tito* as private court entertainments rather than for public theatres, and they were often conceived for larger resources than the earlier works. *L'Argia*, for example, depends heavily on stage machinery, many supernumeraries and four separate ballet groups. Vocal ensembles for five to eight voices occur in prominent places, and there are many strophic arias in *ABA′* or *ABB′* form, where the *A′* or *B′* portion is much shortened. Most strophic arias change metre at least once and generally several times, and some attain the considerable length of 80 or more bars in each strophe. Cesti's mature operas, beginning with *La Dori* (1657), contain longer concerted pieces, including both arias and duets in 3/2 metre, while the arias in duple metre, though less frequent than those in triple metre, assume greater formal complexity. The melodies are increasingly graceful; duets make frequent use of fluid parallel 3rds and 6ths but are only occasionally imitative. Accompanied recitative is restricted to significant dramatic events such as the ghost scene in *La Dori* (Act 3 scene xii); *Il Tito* contains some instrumental music

in the *concitato* style of Monteverdi, as in Titus's fight with a tiger (Act 2 scene xx). Cesti's Viennese operas display great variety among themselves but generally differ from his earlier ones in treating allegorical or mythological plots rather than historical ones and in exploiting the larger forces available at the Emperor Leopold's resplendent court. *Nettunno e Flora*, which is the sung prologue to a ballet composed by J.H. Schmelzer, is an allegory of the Infanta Margherita's journey from Spain to Vienna to become Leopold's wife. It contains an unusually large amount of concerted vocal music, particularly duets and double choruses, and is scored for five instrumental parts. There is a remarkable bass role (Proteus) with a very low tessitura. *Le disgrazie d'Amore* dates from a year later and contains some of Cesti's finest music, especially the more contrapuntally conceived instrumental sections. *Il pomo d'oro*, the most notable Baroque court opera in the grand manner, is exceptional in many ways. It has five acts instead of the normal three and is scored for a greatly enlarged orchestra, much in the allegorical tradition of Monteverdi's *Orfeo*; the large cast includes many supernumeraries. Its 24 different stage sets were designed by Ludovico Burnacini. Cesti showed a strong interest in the individual abilities of his singers, whom he jealously protected (as is illustrated by the correspondence over *Il Tito*), and *Il pomo d'oro* gave them ample opportunity to display their virtuosity. A manuscript fragment formerly ascribed to Sacrati (*D-Mbs*) has been identified as a further fragment of the opera (see Têrey-Smith, 1990).

The cantatas – none of which is actually so called in the sources – are mostly for solo voice and continuo; only *Chi non prova, Io son la primavera* and *Non si parli* call for additional instruments, and the last two of these may be by Remigio Cesti. Of the 61 works known, only eight are duets. Most of the cantatas are for high voice, indicated by the soprano clef, but there are 11 for solo bass. No 'cantata form' is apparent in these works: they display a highly flexible approach to form, whose principle is variety and which yields a freely ordered succession of arias in a great diversity of forms and metres (the commonest is the languorous type in 3/2 time) interspersed with recitative. The predictable alternation of recitative and aria to be found in the cantatas of the next generation had not yet crystallized in Cesti's work: one aria is often followed by another of a different type. The number of sections ranges from 1 to 23; most cantatas have between 2 and 11 sections. There are cantatas by Cesti as short as 33 bars (*Vaghi fiori*) and as long as 404 (*Pria ch'adori*), though such extremes are rare.

Performances of Cesti's cantatas went unrecorded, and none is known to have been published in his lifetime; a definitive chronology is therefore impossible to establish. Some indications come from dates of manuscripts, the form of the composer's name (he ceased to be 'Padre' Cesti in 1659), the periods of his association with particular writers (in those few cases where the text is attributable), concrete references in the texts, and points of style, using for comparison Cesti's own operas and the styles of other composers. *Amanti, io vi disfido* and *Lungi dal core* are much in the manner of Carissimi, in major keys and with a strong triadic orientation, and may date from the time when Cesti is thought to have been a pupil of Carissimi or Abbatini in Rome. All the duets except *Soffrite, tacete* are similar in style and resemble music from the Viennese operas of the 1660s, both in specific passages and in the general character and design of the music – a spaciously disposed lyricism in which the 3/2 aria found its ripest realization. Some of Cesti's finest and most characteristic achievements are to be found among the cantatas: witness the sustained and gently contoured lyricism of *Mia tiranna* and *Pose in fronte* and the theatricality of *Rimbombava d'intorno*.

Cesti's surviving contributions to sacred music are negligible, but *Natura et quatuor elementa* is interesting as an early example of the *sepolcro*.

WORKS

STAGE

drammi musicali in a prologue and three acts unless otherwise stated

Alessandro vincitor di se stesso (F. Sbarra), Venice, SS Giovanni e Paolo, ded. 20 Jan 1651, *I-Rvat*; Lucca, 1654, some music by M. Bigongiari

Il Cesare amante (A. Rivarota [D. Varotari], after M. Bisaccioni), Venice, SS Giovanni e Paolo, 1651–2, lib and 2 arias *Vmc*, 1 aria *US-SFsc*; rev. as La Cleopatra (Varotari, with addns by G.F. Apolloni), Innsbruck, Komödienhaus, 5 July 1654

L'Argia (Apolloni), Innsbruck, 4 Nov 1655, *Nc* (2 copies), *Vlevi*, *Vnm* (facs. in IOB, iii, 1978)

Orontea (G.A. Cicognini, rec. Apolloni), Innsbruck, Sala, 19 Feb 1656, *GB-Cmc*, *I-PAc*, *Rsc*, *Rvat*; ed. in WE, xi (1973)

La Dori (Apolloni), Innsbruck, 'Hof-Saales', 1657, *A-Wn* (facs. in IOB, lxiii, 1981), *D-MÜs*, *GB-Lbl*, *I-MOe*, *Vnm*, excerpts in PÄMw, xii, Jg.xi, 86–177; ed. in Schmidt (1973)

La magnanimità d'Alessandro (Sbarra), Innsbruck, 4 and 11 June 1662, *A-Wn*, excerpts in PÄMw, xii, Jg.xi (1883/*R*), 195–206

Il Tito (melodramma, prol., 3, N. Beregan), Venice, SS Giovanni e Paolo, ded. 13 Feb 1666, *I-Nc*, *Rvat*, *Vnm*; 3 arias (Amsterdam, 1691)

Nettunno e Flora festeggianti (drama musicale per introduttione al gran balletto, Sbarra), Vienna, 12 July 1666, *A-Wn* [aria beginning Act 2.iii by Leopold I; ballet music by J.H. Schmelzer in *CZ-KRa*, ed. in DTÖ, lvi, Jg.xxviii/2 (1921/*R*)]

Le disgrazie d'Amore (dramma giocosomorale, prol., 3, Sbarra), Vienna, 19 Feb 1667, *A-Wn*; excerpts in PÄMw, xii, Jg.xi (1883/*R*), 178–87; inst music by Schmelzer; music for licenza by Leopold I

La Semirami (dramma musicale, 3, G.A. Moniglia, rev. ?Sbarra), Vienna, Nuovo Teatro nella gran Sala di Palazzo, 9 July 1667, *Wn* [ballet music by Schmelzer in *Wn*]; as La schiava fortunata, Modena, 1674; with addl music by P.A. Ziani, Venice, S. Moisè, 1674, *I-MOe*, *Vnm*; excerpts in PÄMw, xii, Jg.xi (1883/*R*), 188–95

La Germania esultante (festa a cavallo, Sbarra), Vienna, Imperial giardino della Favorita, 12 July 1667; ballet music by Schmelzer in *A-Wn*

Il pomo d'oro (festa teatrale, prol., 5, Sbarra), Vienna, Hoftheater auf der Cortina, 13 and 14 July 1668, *Wn* (prol., Acts 1, 2 and 4 only), arias *I-Moe*; ed. in DTÖ, vi, Jg.iii/2 (1896/*R*); ix, Jg.iv/2 (1897/*R*); extant music for Acts 3 and 5 ed. in RRMBE, xlii (1982) [Acts 2.ix and 5.v by Leopold I; ballet music by Schmelzer in *A-Wn*, *CZ-KRa*, ballets for Acts 1 and 5 ed. in DTÖ, lvi, Jg.xxviii/2 (1921/*R*)]

Doubtful: Marte placata [Marte und Adonis] (componimento scenico per musica, Apolloni), Innsbruck, 3 Nov 1655, lib *I-Rn*; Venice cacciatrice (Sbarra), Innsburck, Maggiore d'Insprugg, 27 Feb 1659, lib *A-Imf*, *US-Wc*; Genserico, Venice, SS Giovanni e Paolo, 1669, *I-MOe*

DAVID L. BURROWS, CARL B. SCHMIDT/R

Cesti, Remigio (*b* Arezzo, *c*1635; *d* Florence, 1710–17). Italian composer and organist, nephew of ANTONIO CESTI. He entered the Dominican order on 2 November 1649 and is consistently referred to in subsequent documents as 'Don Remigio'. In 1663 he was organist to the Cavalieri di S Stefano at Pisa, but no dates are known for other musical positions he held: *maestro di cappella* at Pisa, Volterra, Arezzo and Faenza. He was with his uncle in Florence in 1661 for the musical events attendant on the wedding of Prince Cosimo de' Medici and Marguerite Louise d'Orléans. His association with the Medici family may have been quite close, for ten years later he wrote several pieces for a concert held at Pisa in commemoration of the death of Ferdinand II. Wellesz suggested on stylistic grounds that the serenata *Io son la primavera*, composed for Cosimo's birthday in 1662, may be by him rather than by his uncle (to whom it is usually attributed). The peak of his musical career came in 1665 with the performance in Innsbruck of his opera *Il principe generoso*, presumably under his uncle's sponsorship. If he experienced any of the conflict between the claims of music and the religious life such as troubled his uncle's career, he resolved it very differently, for after 1671 the known dates in his biography all relate to ecclesiastical administration. He became secretary to Procurator-General Ricci, who held office from 1684 to 1703, and later he was abbot at Arezzo and Siena. Gregorio Farulli (1710) referred to him in the present tense, Pietro Farulli (1717) in the past. At his death he was titular abbot at the convent of S Maria degli Angeli, Florence.

Judging by *Il principe generoso* (manuscript in *A-Wn*) Cesti was more progressive than his uncle in the degree of emphasis he placed on instrumental writing (Wellesz relied partly on this in suggesting that he wrote the 1662 serenata) and in the relative importance he gave to the aria and to closed scenes. Other progressive features differentiate three of the cantatas attributed in manuscripts to 'Abbate Cesti' from the rest, and these can thus tentatively be considered as being by him rather than by ANTONIO CESTI. There is one extant motet by him (in RISM 1663[3]), and other sacred music survives in manuscript (in *I-FZac*).

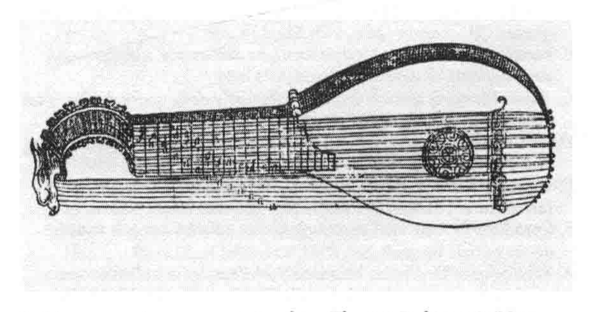
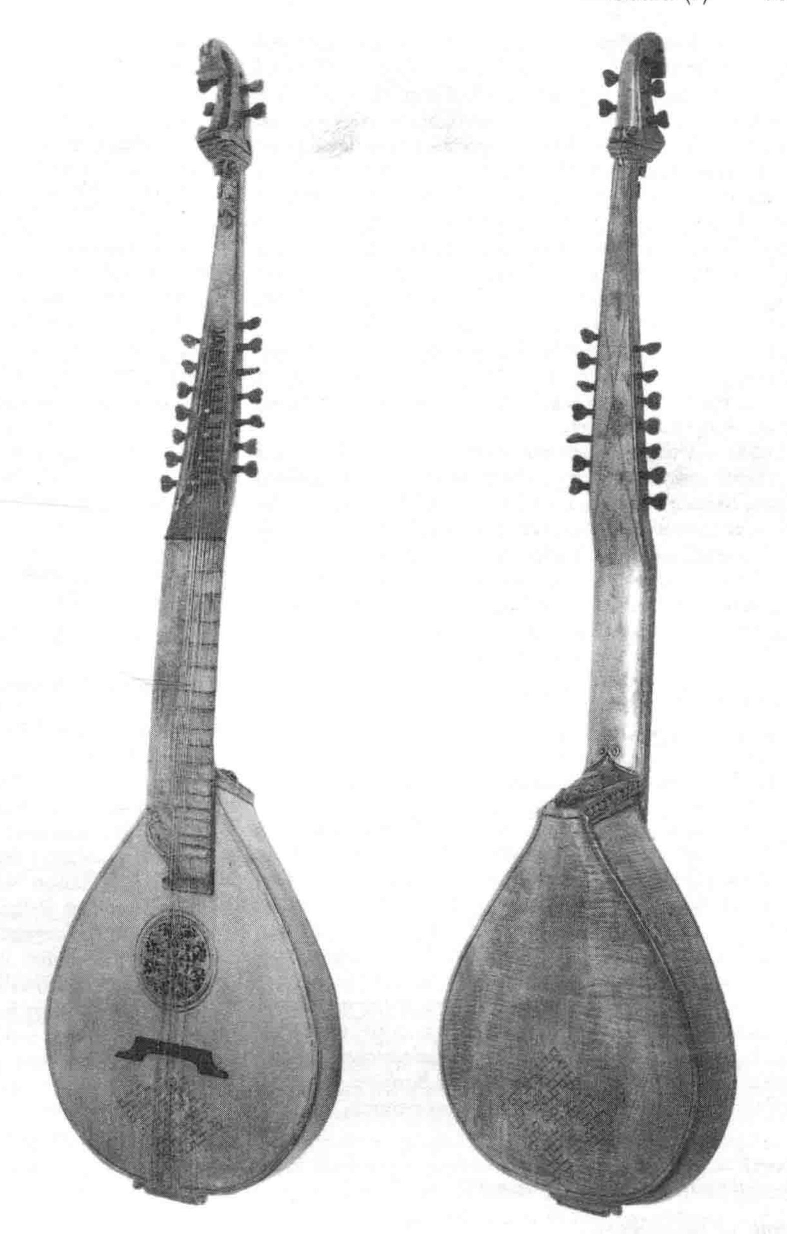
Cetara [cetera] (It.). *See* CITTERN.



Cetera (It.). (1) *See* CITOLE.
(2) *See* CITTERN.

Ceterone [citara tiorbata] (It.; Fr. *cisteron*; Ger. *gross Zittern*, *gross Cither*). A large Italian CITTERN with several extra bass strings usually attached to a second, extended peg box, in the manner of a THEORBO or chitarrone (in the Hornbostel-Sachs classification system it is classified as a lute). It was in use during the late 16th century and throughout the 17th. Like all citterns, it was designed for wire strings (brass and low-temper steel) and thus usually had a strong construction. The extra bass strings made the instrument suitable for playing continuo.



An early reference to the ceterone may be the 'alchuni citaruni' ordered by the Duke of Mantua in 1524, but nothing is known about these instruments, nor is anything known about the instrument that Zarlino (1558) calls *ceterone* in reference to its use by the Spanish.

Although Italian citterns commonly had six double courses, there was a tendency (as with lutes in the late 16th century) to expand the bass range downwards. Paolo Virchi (1574), for example, mentions a seventh course, and Simone Balsamino (*Novellette*, 1594) describes his own invention: a seven-course *cetarissima*, with steel and brass strings played with a combination of thumb and plectrum, 19 frets and the following tuning: *A–d–g–c′–e′–g′–c″*. This tuning is unlike the typical re-entrant tunings of other citterns, and its very wide open string range suggests a separate peg box for at least the lowest two courses.

Agazzari (1607) mentioned the ceterone as a useful instrument for a continuo ensemble, and Monteverdi listed 'ceteroni' as well as 'chitaroni' among the instruments used in *Orfeo* (1609). Mersenne (1636–7) described the 'cisteron' as having 14 single courses and a flat back. Several tunings were given for the ceterone, most of them using the cittern's traditional re-entrant pattern. Robinson (1609), for example, included some pieces for a 14-course instrument tuned *G′–A′–B♭′–C–D–E–F/G–d–f–b♭–g–d′–e′*, and gave an illustration of an instrument with seven double courses on the fingerboard and seven single bass strings (fig.1). Melli (1616) gave a tablature ensemble part for a 'citara tiorbata' that had at least nine courses tuned *A–B–c–d–f/b–g–d′–e′*; it is not known if the courses were double. Praetorius (2/1619), however, gave the following tuning for a 12-course cittern: *e♭–B♭–f–c–g–d–a–e/b–g–d′–e′*, which has an unusual rising and falling arrangement from the 5th to the 12th courses similar to that of the LIRONE. Mersenne's tuning also seems to imply a similar arrangement, although it is difficult to be certain

1. *14-course ceterone: engraving from Thomas Robinson's 'New Citharen Lessons' (London, 1609)*

2. *Ceterone by Gironimo Campi, Florence, c1600 (Museo Bardini, Florence)*

since the printing of his tuning table (1636, ii, f.98*v* is corrupt. Very few ceteroni have survived, but there is an excellent example by the cittern maker Gironimo Campi (fig.2) in the Museo Bardini (no.137), Florence.

Several late 19th- and early 20th-century works on instruments (e.g. Galpin and Sachs) use terms, such as *syron*, *sirene*, *bijuga cither* etc., in reference to extended bass citterns, but there is little historical basis for this usage. Commonly, the German term *Erzcister* and the French *archisistre* are used incorrectly as well. They relate to south German and French wire-strung, finger-plucked instruments with open strings tuned typically to a major chord (with extra basses), dating from the late 18th century to the 20th. These instruments are not true citterns at all, but are akin to the ENGLISH GUITAR.

Cetra (ii). Italian record company. The name is an acronym for Compagnia per Edizioni, Teatro, Registrazioni ed Affini. The firm was founded in Turin in 1932 as a competitor to the Voce del Padrone/Columbia group and issued predominantly Italian opera. There was close artistic co-operation with Italian radio which provided capital and, in turn, looked for a reduction in its copyright costs. At first, pressing was put out to contract, but shortly before the war in-house facilities were acquired by buying into Fonodisco: hence the Fonit-Cetra label. The Cetra label was used in Italy and its colonies; elsewhere, marketing was by interchange of material with, especially, Parlophone. During World War II access to Parlophone ceased, to be replaced by an alliance with Polydor. After the war the Soria series was instituted, with great success, for the American market.

Leading artists include such singers as Maria Callas (her first records, issued in 1949), Maria Caniglia, Gina Cigna, Magda Olivero, Lina Pagliughi, Ebe Stignani, Pia Tassinari, Carlo Bergonzi, Ferruccio Tagliavini (36 discs), Paolo Silveri, Giuseppe Taddei, Carlo Tagliabue, Bruscantini, Nicola Rossi-Lemeni, Cesare Siepi and Italo Tajo; conductors include De Sabata, Erede, Giulini, Gui, Markevich, Mitropoulos and Schuricht.

Cevenini, Camillo (*b* Bologna, 1607/8; *d* Bologna, 22 Aug 1676). Italian composer and singer. He appears to have spent the whole of his life at Bologna. From April 1633 to September 1648 he was a singer at S Petronio, and in 1649 he was appointed *maestro di cappella* of S Pietro. He was a member of the Accademia dei Filomusi, with the name 'L'Operoso'. According to the records, he was 68 when he died. He published *Concerti notturni espressi in musica* (Bologna, 1636; there is a copy in *F-Pn*). Another printed volume by him, *Epitalamiche serenate nelle nozze d'Annibale Marescotti e di Barbara Rangoni: applausi musicali* (Bologna, 1638), is apparently lost.

Cezar, Corneliu (*b* Bucharest, 22 Dec 1937; *d* 13 Feb 1997). Romanian composer. He studied composition with Jora and Negrea at the Bucharest Academy (1957–62). From 1966 he taught at a music school and worked as a consultant for Romanian Opera; in 1994 he started teaching at the Academy. In 1996 he obtained the doctorate in musicology after studying with Gheorghe Firca. Cezar's preoccupation with paranormal phenomena proved an influence on his music, which demonstrates an unquenchable thirst for the unusual and original. An intellectual and an experimenter, he applied his technique of 'spectral music', conceived as a counter to serialism, to the orchestral piece *AUM* (1965). The letters of this work's title symbolize light, descent and sacrifice.

WORKS
(*selective list*)

Stage: Galileo Galilei (op, 1, Cezar, after B. Brecht), 1962, Bucharest, Opera, 16 Dec 1964; Pinocchio (children's musical theatre, 2, after C. Collodi), 1983; Marioneta fără sfori [The Stringless Marionette] (op, 2, Cezar), 1985

Choral: Cant. I (Cezar), Bar, chorus, orch, 1960; Cant. II (Cezar), Bar, chorus, orch, 1961; Circuite (Cezar), Bar, chorus, orch, 1961; Cant. III (Cezar), Bar, chorus, orch, 1965; Flăcări şi roţi [Flames and Wheels], chorus

Solo vocal: Aforism, Fântâni albastre, Cremene, Vis [Aphorism, Blue Fountains, Flint, Dream] (Cezar), Bar, 2 cl, hn, hp, 2 vn, vc, xyl, cel, perc, 1961; Casa mea, Sentimentul timpului, Frumoasa noapte [My House, The Feeling of Time, The Beautiful Night] (G. Ungaretti), Bar, pf, 1963; Alpha Lyrae, S, orch, 1983

Orch: Cronika, 1964; AUM, 1965; Taaora (Polynesian text), cl, orch, tape, 1968; Ziua fără sfârşit [The Day without End], variable orch group, tape, 1972; Rota, rec, gui, synth, variable orch group, 1977

Other works: chbr music; film scores; collage music; elec music incl. Ideograme, 1978; folk music incl. Ţara lumii [The Country of the World], 1978; rock music incl. Oedipus, 1978

Chabanceau de la Barre. *See* LA BARRE family.

Chabanon, Michel-Paul-Guy de (*b* Santo Domingo, West Indies, 1729/30; *d* Paris, 10 July 1792). French writer on music, violinist and composer. His early rigorous Jesuit education was supplemented by violin lessons. He played in chamber and orchestral groups and composed works including sonatas for harpsichord with accompanying violin. Chabanon was admitted to the Académie des Inscriptions et Belles-Lettres in 1759. He participated actively in the current opera controversies and continued to play the violin: in 1769 he joined the Concert des Amateurs, led initially by Gossec. These diverse experiences set him apart from other French men of letters, who had little direct experience of instrumental music, and they impelled him to advocate stronger associations between authors and professional musicians. His early mentors included Rameau, with whom he maintained close friendship, and Voltaire, with whom he exchanged information about the writing of plays and opera librettos. Voltaire praised his *Eloge de Rameau* (Paris, 1764) in which Chabanon hailed the importance of Rameau's theoretical system as well as his operatic instrumental music.

In his early writings Chabanon asserted that music, as instrumental or vocal *chant* (song), must touch the heart, being a 'language in itself, apart from others'. He was progressive in emphasizing the independence of music from verbal language as well as from other arts, which were lauded for their imitation of nature in the French critical tradition. In his *Observations sur la musique* (Paris, 1779) he described the significance of the use of motif to form the foundation of musical character, whether in instrumental or vocal music. He also accounted for differences in intrinsic expressivity with his theory of four fundamental musical characters (*tendre*, *gracieuse*, *gaie*, *vive*). Following his election to the Académie Française in 1780, Chabanon placed the *Observations* as the first part of an augmented and revised major work on musical aesthetics, *De la musique considérée en elle-même et dans ses rapports avec la parole, les langues, la poésie,*

et le théâtre (Paris, 1785). Explaining that the first obligation of music is not to paint but to sing, Chabanon extended the meaning of song to include instrumental as well as vocal music. He acknowledged the traditional sovereignty of melody but, as a supporter of Rameau, he strongly defended the essential role of harmony. His recognition of generalized expressivity in purely instrumental music was innovative in France at that time.

In his writings on poetry and the theatre, as in his celebrated 'Lettre' of 1773 and the aesthetic treatises, Chabanon revealed a relatively flexible approach towards conventional rules. He stressed that when music and words combine in opera, contrast and variety result from the privileging of intrinsically musical procedures: in operatic *airs*, for example, musical processes govern the setting of text and determine the large-scale structures. In his early justification of Gluck's operas, as in his arguments against ideas asserted by Rousseau and Chastellux, among others, Chabanon consistently avowed the priority of independent and specifically musical prerogatives.

Chabanon wrote several opera librettos including *Sabinus*, set to music by Gossec and performed at Versailles in 1773, and *La toison d'or* (1785), admired by Voltaire but never set to music. It was his brother, Chabanon de Maugris (*b* Santo Domingo, 1735; *d* Paris, 19 Nov 1780), who wrote the librettos *Philémon et Baucis* and *Alexis et Daphné*. Gossec composed the music for both, which were produced at the Opéra in 1775.

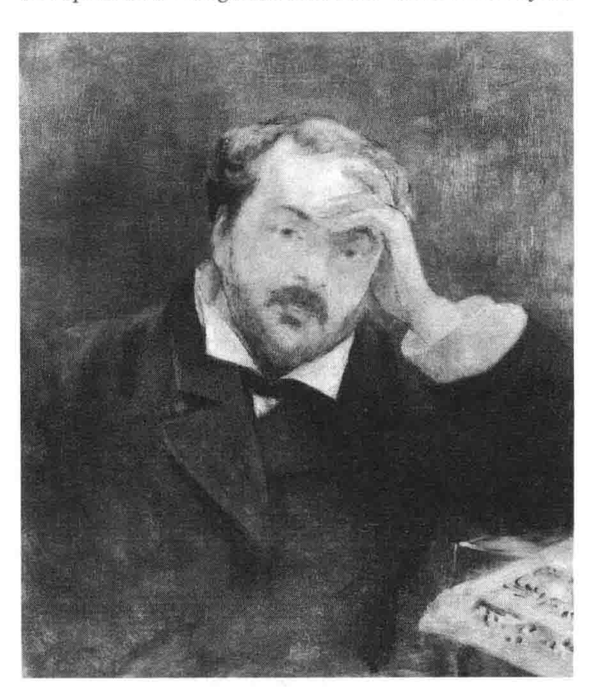
Chabran, Charles. *See* CHIABRANO, CARLO.

Chabran, Gaetano. *See* CHIABRANO, GAETANO.

Chabrier, (Alexis-)Emmanuel (*b* Ambert, Puy-de-Dôme, 18 Jan 1841; *d* Paris, 13 Sept 1894). French composer. Best known today for the orchestral showpiece *España*, Chabrier principally wrote songs, piano pieces and stage works. Though he composed a relatively small body of work, it was of consistently high quality and very influential on French composers in the first quarter of the 20th century.



1. LIFE. He was born into a family of jurists and tradesmen in Ambert, a small village in the Auvergne. Although he attended a lycée in the regional capital Clermont Ferrand and then, in 1856, moved with his family to Paris, Chabrier stayed close to his ancestral origins. He began piano lessons in Ambert at age six and soon started composing short dances for the instrument. At 14 he published a work entitled *Aïka*, whose generic designation as a *polka-mazurka arabe* already underlines Chabrier's wit. In 1857, after the move to Paris, he designated his *grande valse*, *Julia*, as his opus 1. At this time Chabrier studied harmony and composition privately with a number of teachers, the best known of whom was Thomas Semet, and piano with the virtuoso Edward Wolff. He developed an impressive degree of keyboard virtuosity and d'Indy would one day compare him favourably to Liszt and Anton Rubinstein. In salon performances, the rapid displacements and abrupt transitions characteristic of his piano style were given a comical, fiery edge by the aspect of a stout performer whose short arms had to move with lightning speed to extremes of register.

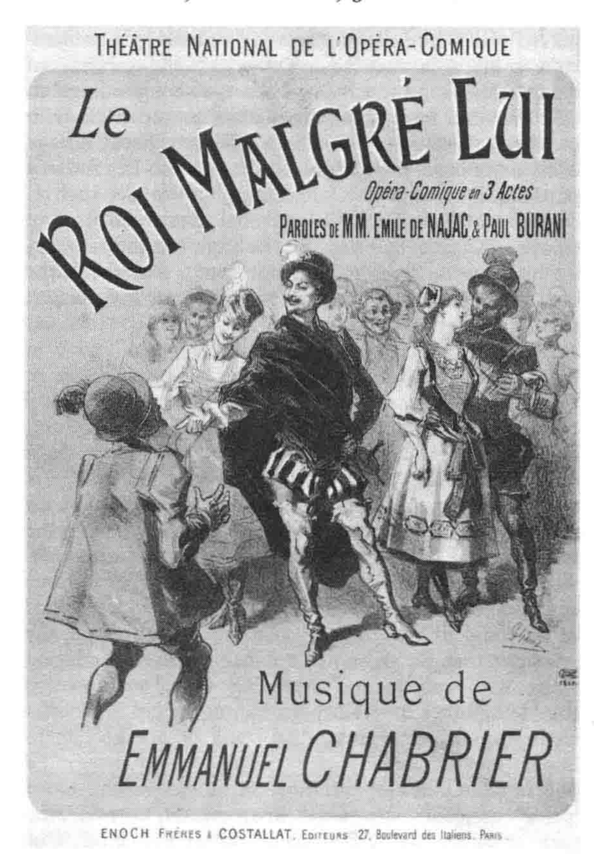
But despite manifestations of musical precocity and initiative, Chabrier was destined by family tradition for law studies. He began these in 1858 and within three years obtained a position in the Ministry of the Interior through a family connection. He remained a civil servant for the next 19 years. That he was valued by his superiors for clerical meticulousness and accuracy is especially easy to appreciate in light of the neat appearance of his musical scores, his calligraphic hand in correspondence and his attention to detail in the publication of his works. From the start of his employment at the ministry Chabrier continued his musical activities, studying scores and branching out into song composition by writing nine *mélodies* in 1862. His interest in the *mélodie* was doubtless sparked by the contacts he developed during the early 1860s in the literary entourage of the Parnassian poets, which included Villiers de l'Isle Adam, Jean Richepin, Paul Verlaine and Catulle Mendès. Chabrier was appreciated by literati for his adroitness with puns, animated personality and keen powers of observation. With Verlaine and a friend named Lucien Viotti, he collaborated on two small operettas in 1864: *Vaucochard et fils 1er*, unperformed in Chabrier's lifetime and from which orchestrated fragments of only four numbers survive, and a *chinoiserie* called *Fisch-Ton-Kan* (a pun on a French vulgarity), performed once in 1873 (as a more innocuous ornithological *Peh-li-kan*) at the Cercle de l'Union Artistique with the composer at the piano, and from which

four complete numbers are currently extant in a piano version. Although Verlaine and Chabrier grew apart, in his sonnet 'A Emmanuel Chabrier' the poet later remembered the 'glowing ring of attraction and amiable comfort' that surrounded the improvising composer among his circle of friends. Chabrier's association with Mendès endured much longer and resulted in the librettos for *Gwendoline* and *Briséïs*. Jean Richepin also became a partner in later work, as the librettist for *La sulamite* and as a ghost writer to improve the libretto of *Le roi malgré lui*.

All of these friendships began in the wake of the *Tannhäuser* débâcle at the Opéra in 1861 and Baudelaire's defence of Wagner which glowed as a beacon for modernity among Parisian writers and artists for years to come. Villiers and Mendès were prominent early French Wagnerians, and Chabrier's copying of the *Tannhäuser* full score in 1862 suggests that he shared this enthusiasm at the first hour. From early in his career he was closely identified with the avant garde. To sound modern remained a lifelong concern, but he also repeatedly expressed his wariness at the toll avant-garde dogmatism might extract from compositional individuality and freedom. Chabrier's friendship with Edouard Manet a few years later also served to align him with progressives. He posed three times for Manet (fig.1); Madame Manet, an accomplished pianist, received the dedication of his Impromptu upon its publication in 1873. In that year Chabrier married Alice Dejean. Soon afterwards Edouard Manet served as a witness for the civil registration of the birth of their first son Marcel. It was partly owing to the capital from the Dejean family that, shortly after Manet's death in 1883, the Chabriers acquired 'Un bal aux Folies bergères', among other well-known paintings.

Work at the ministry severely restricted Chabrier's compositional activities. Furthermore, a large-scale serious opera on a Hungarian historical theme entitled *Jean Hunyade* foundered after Chabrier had completed four numbers in 1867. Although the score disappeared into private collections after Chabrier's death, Poulenc did once see it and wrote approvingly of an imaginative orchestration. Chabrier himself acknowledged that he extracted leitmotifs for *Gwendoline* and *Briséïs* from the torso. Additional piano pieces and songs emerged periodically (including a remarkable setting of Baudelaire's 'L'invitation au voyage' in 1870, around the same time as Henri Duparc's more famous one), as well as a Larghetto for horn and orchestra (1878). Chabrier's biggest musical opportunity during the ministry years came in the commission for the operetta *L'étoile* by the Bouffes-Parisiens.

1. Emmanuel Chabrier: portrait by Edouard Manet, 1881 (Fogg Art Museum, Cambridge, MA)



Characteristically, the project owed its inception to his wider contacts in the world of arts and letters: Chabrier met librettists Albert Vanloo and Eugène Leterrier through the painter Alphonse Hirsch whom, in turn, he had come across in the circle of Manet. Despite a brief run in 1877 it was not until the 20th century that *L'étoile* was produced again and valued as a comic gem on a par with the best of Offenbach. Following its première, however, the operetta did at least give him more press exposure than he had ever received and, importantly, it attracted the publishers Enoch & Costallat, who represented him for the remainder of his life. Chabrier's sense of musical professionalism was also enhanced in this period by his admission as a full member to the Société Nationale de Musique in 1876; his work and pianistic abilities were well known to the younger generation of French musicians, including Duparc, d'Indy, Massenet and Fauré. In 1879 Mendès, who by this time had advanced much higher on the ladder of fame than Chabrier, quickly drafted the libretto of *Gwendoline*, a serious opera with many Wagnerian overtones that Chabrier began to set almost immediately.

In March 1880 Chabrier was enthralled by his first *Tristan* in Munich. His spontaneous sobbing upon hearing the initial cello A became generally recognized as a *locus classicus* of *fin-de-siècle* infatuation with Wagner. Although his resignation from the ministry later that year may have resulted from this cathartic moment, it is also important to recognize other factors behind this decision: the growing momentum of his musical career in the second half of the 1870s, his high hopes for the *Gwendoline* project, and the first signs of a nervous disorder, probably the result of a syphilitic condition, that would claim his life 14 years later. The summer of 1880 saw Chabrier compose most of the *10 pièces pittoresques* for piano, one of the monuments of the 19th-century French piano repertory. The Chabrier family was comfortably off and he supplemented his income by working as a secretary, choir master and répétiteur for a new concert series that the Wagnerian conductor Charles Lamoureux founded in 1881. This was important for Chabrier's compositional career in at least two respects. First, Lamoureux naturally became well disposed to programming some of Chabrier's own compositions at his Sunday concerts and gave the premières of *España*, fragments of *Gwendoline*, and *La sulamite*. Second, Chabrier befriended the tenor Ernest Van Dyck, whom he coached for Lamoureux's frequent performances of Wagner excerpts. In turn, Van Dyck soon became a darling of Bayreuth and an important advocate for Chabrier with conductors and impresarios, smoothing

the way for productions of his operas in Germany later that decade. The image of Chabrier at the piano with a Wagner score soon went much further afield than Van Dyck's rehearsal room: Henry Fantin-Latour made that image the centrepiece of his large portrait of French Wagner supporters entitled *Autour du piano* (Salon, 1885). At over two metres in breadth this painting was one of the most impressive icons of *fin-de-siècle Wagnérisme*. As his voluminous correspondence amply demonstrates, Chabrier could also step back and poke fun at himself; it is surely in this light that his famous piano four-hand quadrille on themes from *Tristan und Isolde* entitled *Souvenirs de Munich* should be understood.

Chabrier's initial optimism about *Gwendoline* dwindled when theatre directors showed little interest. With that project in limbo and other attempts to write a large and serious opera thwarted by what Chabrier perceived as the indifference of librettists towards him, he made an abrupt volte-face to light comedy by starting *Le roi malgré lui* in 1884. Meanwhile, *España* began to appear in drawing-rooms in multifarious arrangements and transcriptions, bringing Chabrier's name before a wider public and thereby increasing his prospects for an operatic production. Around May 1885 he received a commitment from Henry Verdhurt of the Théâtre de la Monnaie in Brussels to stage *Gwendoline*, just the incentive he needed to finish the opera. Unfortunately, Verdhurt went bankrupt shortly after the première on 10 April 1886 and Chabrier's opera did not find a place in the new administrative arrangement to keep the theatre going. A month later, however, Léon Carvalho lifted Chabrier's spirits by agreeing to produce *Le roi malgré lui* at the Opéra-Comique. The work had been conceived fundamentally as an operetta and Carvalho required a different tone in accordance with the generic traditions of his house and its position in the Parisian market. As a consequence, Chabrier and his librettists Emile de Najac and Paul Burani rewrote large parts of *Le roi*, but did not completely suppress all of its broad comedy (fig.2). A tragic fire at the Opéra-Comique a week after the 18 May première was less of an impediment to the Parisian fortunes of *Le roi* than has sometimes been suggested since the new administration of the theatre did take up the work again in November, and then again in 1888. Generic confusion in the press and among the public, the departure of a cast star, and the great popularity of Edouard Lalo's *Le roi d'Ys* in 1888 go much further to account for the disappearance of *Le roi* from Parisian playbills until an influential new production overseen by Albert Carré in 1929.

In 1888 Chabrier turned to serious opera once again in *Briséïs*, extracted loosely from Goethe's *Die Braut von Korinth* by Mendès and the young symbolist poet Ephraïm Mikhaël. After some initial foot-dragging by Mikhaël, Chabrier was able to draft the first act by 1890. Among the songs he wrote at the same time were the farcical rustications *Villanelle des petits canards*, *Ballade des gros dindons*, and *Pastorale des cochons roses*. It is difficult to imagine two sides of musical personality further apart: on the one hand, Chabrier set music for an operatic heroine caught between erotic love and her mother's directive to pursue a Christian evangelical mission; on the other, he composed a song about little ducks marching like country gentlemen. Even its dedicatee, the operetta star Mily-Meyer, took it all too seriously and 'tightened her little

2. *Poster for Chabrier's 'Le roi malgré lui' printed at the time of the original production at the Opéra-Comique, Paris, 1887: colour lithograph by Jules Chéret*

buttocks' when she sang it, Chabrier once complained. He orchestrated the first act of *Briséïs* before continuing his draft, undoubtedly the result of a premonition that he might not live to complete the work. Chabrier's condition steadily worsened after 1890, to which concerns were added reduced financial stability, the death of his childhood nurse and friend Nanine, and his wife's own precarious health. The only substantial composition of 1891 was the piano piece *Bourée fantasque*, an orchestration of which he left incomplete; Felix Mottl, the German conductor and proponent of Chabrier's music, soon produced an orchestration that had wide public success. Chabrier was gratified when the Opéra at long last announced it would stage *Gwendoline*, but at the première on 27 December 1893 he did not recognize the music as his own. Struck by general paralysis, he died on 13 September 1894; his collection of Impressionist masterpieces was sold at auction in 1896; Richard Strauss conducted the stage première of *Briséïs* in Berlin on 14 January 1899.

2. WORKS. The music of Chabrier was celebrated a great deal more after his death than during his lifetime. The critic Gustave Samazeuilh noted that Debussy often told him that he could not have written certain passages in *La damoiselle élue* without Chabrier's *La sulamite* (also for female chorus) as a model. Echoes of Chabrier's *Habanera* for piano surface in Debussy's 'La soirée dans Grenade' (*Estampes*) and his piano prelude 'Général Lavine – excentric' also has a distinctly Chabrian flavour. Ravel

played clever homage to Chabrier's piano piece *Mélancolie* in his 'A la manière de Chabrier'. The operettas of André Messager and Charles Lecocq owe a good deal to Chabrier and Poulenc admitted that he had *L'étoile* in mind as he wrote *Les mamelles de Tirésias*. In the lineage of French music, the filiation of Chabrier to Les Six was particularly strong. But Poulenc and colleagues such as Milhaud and Auric privileged only certain aspects of Chabrier's musical personality: the humorist, the parodist, the brilliant transposer of popular idioms to high art, the composer who once admitted that 'I shape my musical rhythms with my Auvergnat clogs'.

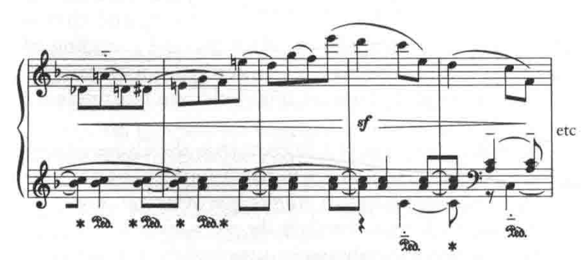
Chabrier's remark pertains particularly to moments in his piano music such as the insistent off-beat accents in *Danse villageoise*, the *molto pesante* bass augmentation of the rapid-fire main motif in the *Bourée fantasque*, and the hammered-out chords in *Joyeuse marche* (one passage in the latter work is even marked *très rude* and another is triggered by a tone cluster in the bass). One need look no further than the famous *couplets du pal* in *L'étoile* for the full scope of Chabrier's humour, as well as its earthy side, which so captivated Les Six and subsequent generations of critics. At the end of Act 1 King Ouf, the feckless tyrant of an unidentified oriental regime, has cornered the peddler Lazuli for an annual public execution. In a lilting waltz with rubato and sweeping vocal portamentos suggesting mock amiability, he invites the lad to sit on a chair from which a stake ('pal') will be cranked up to impale him ('Donnez vous la peine de vous asseoir', a phrase that plays on multiple meanings of the word 'peine': pain/sorrow/trouble). In an instant, however, the tune does service for genuine amiability after Ouf discovers from his astrologer that his own death will necessarily follow Lazuli's: now the king invites him to his palace on a litter (a 'palanquin' instead of a 'pal'). In the orchestral entr'acte following the intermission – a moment when audience members are just settling into their places – Chabrier brings back the lilting waltz of the stake, a reminder of where the plot left off, to be sure, but also cause for playful discomfort about seats in the theatre.

In the same work, Chabrier's knack for parody sounds in the chromatic passing tones of Lazuli's *romance* to the 'little star' of Destiny, à la Wolfram's 'O du mein holder Abendstern' from *Tannhäuser*, as well as the fioritura imitating Italian opera about 1825 in the 'Duetto de la chartreuse verte'. Such skill would resurface often in his comic works. In between the stanzas of the late song *Ballade des gros dindons*, Chabrier alludes to Don Giovanni's mandoline serenade, a comic disjunction associating large turkeys burdened by their pendulous wattles to an archetypal seducer. Such passages give full meaning to d'Indy's baptism of Chabrier as the 'Ange du cocasse' (the angel of irreverent, often ribald, humour).

To see Chabrier's musical personality entirely in this light, however, would be a mistake. Following the death of Nanine, Chabrier wrote to Mottl that 'Unfortunately for me, despite my jovial appearance, I belong to that group of people who feel very deeply'. To be sure, Chabrier's colleagues, as well as subsequent generations, recognized his fundamental generosity of spirit. But whether Chabrier was able to translate this empathy into deeply emotive music became entwined for many critics with the questions having to do with the alleged irreconcilability of Wagner with Gallic temperament. In short, reverberations of Wagner in *Gwendoline* and *Briséïs* have often been described as an ill-chosen path. This, in turn, has caused the denigration of some very fine music. Apologists have gone to the other extreme and suggested that the impact of Wagner on these scores was minimal because Chabrier's style does not really sound Wagnerian. That is to have a limited understanding of the manifold dimensions of Wagner's influence: *Gwendoline*, after all, contains a *légende* for the heroine dramaturgically reminiscent of Senta's Ballad, a series of interrupted songs (as in any number of Wagner operas), and a *Liebestod* conclusion in which an orchestral peroration carries the feminine leitmotif, once again as in *Der fliegende Holländer* (with its revised conclusion). Chabrier's reharmonizations of his main leitmotifs in different contrapuntal contexts surely owe a great deal to *Tristan*. These are carried out with un-Wagnerian concision, the occasional surfacing of conventional number types, a real gift for cantabile phrases, and, in *Briséïs*, great sensitivity to orchestral colour (for which *España* had marked a seminal moment in Chabrier's development). *Le roi malgré lui* has fared poorly at the hands of critics because of its complicated libretto. Had the work been styled an operetta and provided with a less elaborate score, it seems doubtful whether the same objection would have been raised as strenuously: wild, almost incomprehensible, intrigue passes better in lower genres. *Le roi* awaits re-evaluation as a work where eclecticism – including sharp juxtapositions of high and low styles – is the paramount critical category: its variegated mix includes patter singing, an italianate canon of confusion, show-stopping roulades, serious love music in post-Wagnerian chromatic language, an elegiac modal pavane and a driving choral waltz. That eclectic musical approach should breed greater tolerance for the Byzantine twists and turns of the story.

Chabrier developed many features of his own language as early as the *mélodies* of 1862. His melodies in instrumental and vocal music alike are frequently marked by a wide range negotiated with large leaps combined with chromatic decoration, as in ex.1, extracted from the song 'Ivresses!' (later incorporated into the piano piece *Suite de valses*; like much of Chabrier's waltz music, this work has very much the air of the café-concert about it.) Another distinctive feature of

Chabrier's style is the frequent doubling of the melody by the bass. In later piano works this is extended into variegated octave doublings among different voices of the texture (soprano-bass, tenor-alto and so forth) accompanied by ever changing figuration and chromatic foils. Such writing demonstrates a superb sense of keyboard colour over virtuosity *per se*. From his youth Chabrier was fond of embellishing ordinary progressions with orthodox and unorthodox chromatic decorations, and even parallel chords. The locus classicus of the latter in his oeuvre is



the first progression in *Le roi malgré lui*: modulation from C to E is embellished by a parallel 7th chord that prolongs the C, and by a chromatic link in which the dominant 7th of E is approached not by an expected augmented 6th, but by a parallel 7th chord in second inversion. Chabrier also savoured the richness of full 9th harmonies. These are unprepared as early as the *mélodie L'invitation au voyage* in which the phrase 'D'aller là-bas vivre ensemble' is set to a succession of 9th chords with root movement by 5th. Indeed, the whole song is a study in such harmonies where Chabrier pays particular attention to the colour of the 9th in different registers of the keyboard and even the voice. In the choral waltz of *Le roi*, 9th chords are strung out in parallel fashion along a chromatically rising bass.

Chabrier also loved to deploy all manner of appoggiaturas, from fleeting expressive gestures to prolonged and unexpected clashes. In the *Pastorale des cochons roses* naive pastoral open 5ths underpin long dissonant chords in the right hand. An appoggiatura is the starting point of the middle section in the *Bourée fantasque* (ex.2), a quintessential Chabrien moment. Here the F♯ is not only unexpected in light of C, the key of the first section, but also in light of F, the key of the middle episode. It is held over three bars before finally slipping up to the G that fills out the dominant harmony of the new section. Later, he raises the F♯ appoggiatura to structural significance by pursuing the implications of its enharmonic spelling as G♭.

Ex.2

Ex.2 also illustrates Chabrier's penchant for cross rhythms and syncopations. The F♯ is resolved with a *sforzando* on the second beat of the bar, with syncopations below. The rhythmic organization of the right hand then takes its cue from the syncopations only to break out with a strong downbeat at the climax of a typically wide-arching Chabrien phrase. Compound time in particular often provides Chabrier with a feast of varied divisions. In the piano piece *Improvisation*, for example, the typical hemiola of 3/4 and 6/8 abuts on quadruple division of the bar. In Harald's lovely phrase 'Laisse moi respirer le miel de tes cheveux!' from the second act of *Gwendoline*, 9/8 metre in the voice is set against displaced duple division in the orchestra. All of these techniques appear in Chabrier's serious and comic works; his characteristic style is not more perceptible – nor necessarily more appropriate – in the latter, as has sometimes been claimed. Indeed, the consensus about Chabrier's vital role in expanding the tonal and orchestral palette of French music in general at the end of the 19th century is unassailable.

WORKS

all printed works published in Paris

STAGE

Fisch-Ton-Kan (operetta, P. Verlaine and L. Viotti), 1863–4, Paris, Cercle de l'Union Artistique, 31 March 1873 [as Peh-li-kan, with pf]

Vaucochard et fils 1er (operetta, Verlaine and Viotti), 1864, inc., Paris, Salle de l'Ancien Conservatoire, 22 April 1941

Jean Hunyade (opéra, H. Fouquier), 1867, inc.

L'étoile (opéra bouffe, 3, E. Leterrier and A. Vanloo), Paris, Bouffes-Parisiens, 28 Nov 1877 (1877)

Le Sabbat (oc, 1, A. Silvestre), 1877, inc.

Une éducation manquée (operetta, 1, Leterrier and Vanloo), Paris, Cercle International, 1 May 1879 [with pf]; Monaco, 1910; Paris, Arts, 1911 (1879)

Gwendoline (opéra, 3, C. Mendès), 1879–85, Brussels, Monnaie, 10 April 1886 (1886)

Les muscadins (opéra, 4, J. Clarétie and Silvestre), 1880–81, inc.

Le roi malgré lui (oc, 3, E. de Najac and P. Burani, rev. J. Richepin, after A. and M. Ancelot), 1884–7, Paris (Favart), 18 May 1887 (1887)

La femme de Tabarin (incid music, Mendès), Paris, Libre, 11 Nov 1887

Briséïs, ou Les amants de Corinthe (drame lyrique, 3, Mendès and E. Mikhaël, after Goethe: *Die Braut von Korinthe*), 1888–91, acts 2 and 3 inc., Paris, Concerts Lamoureux, 31 Jan 1897 [concert perf.]; Berlin, Royal Opera, 14 Jan 1899 (1897)

SONGS

9 songs, 1862: Couplets de Mariette (V. de Laprade), L'enfant (de Laprade), Ronde gauloise, Le sentier sombre (de La Renaudière), Lied (T. de Banville), Chants d'oiseaux (de Laprade), Sérénade (F.J.A. de Châtillon), Adieux à Suzon (A. de Musset), Ah petit démon! (de Musset) (1995); Sérénade de Ruy Blas (Hugo), 1863 (1913); Les pas d'armes du roi Jean (Hugo), 1866 (1995), also with text Le soldat du roy (Brillant); Ivresses! (Labarre), grande valse, 1869 (1995), music incl. in suite de valses, pf; L'invitation au voyage (C. Baudelaire), bn ad lib, 1870 (1913); Sommation irrespectueuse (Hugo), 1880 (1913)

Credo d'amour (Silvestre) (1883); Tes yeux bleus (M. Rollinat), 1883, in Album du Gaulois (1 Feb 1885); Chanson pour Jeanne (Mendès) (1886); Lied: Nez au vent (Mendès), ?1886 (1897); Villanelle des petits canards (R. Gérard), 1889 (1890); Ballade des gros dindons (Rostand), 1889 (1890); Pastorale des cochons roses (Rostand), 1889 (1890); L'île heureuse (Mikhaël), 1889 (1890); Les cigales (Gérard), 1889 (1890); Toutes les fleurs (Rostand); 1889 (1890)

OTHER VOCAL

Cocodette et Cocorico, comic duet, 2vv, orch, 1878

Monsieur et Madame Orchestre, comic duet, 2vv, orch, 1878

La sulamite (scène lyrique, Richepin), Mez, female vv, orch, 1884, Paris, Concerts Lamoureux, 15 March 1885 (1885)

Duo de l'ouvreuse de l'Opéra-Comique et de l'employé du Bon Marché, perf. privately, Paris, April 1888; in *Figaro musical* (April, 1893)

Ode à la musique (E. Rostand), S, female vv, orch/pf, 1890, perf. privately, 1890; Paris, Concerts colonne, 22 March 1891 (1891)

ORCHESTRAL

Andante, Paris, Cercle de l'Union Artistique, 1874

Lamento, 1874, Paris, Société Nationale de Musique, 1878 (1994)

Larghetto, hn, orch, 1875, Paris, Société des Compositeurs, 1878 (1913)
España, rhapsody, Paris, Société des Nouveaux Concerts, 4 Nov 1883 (1883), arr. song, 1v (1886)
Habanera, Angers, Association Artistique, 1888 (1889) [orch. of Habenera, pf]
Joyeuse marche [Marche française], Angers, Association Artistique, 1888 (1890), orch. of Rondo, pf, 4 hands

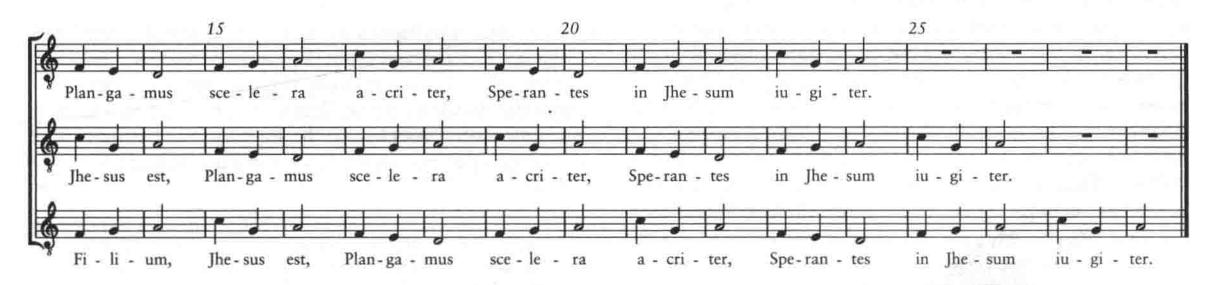
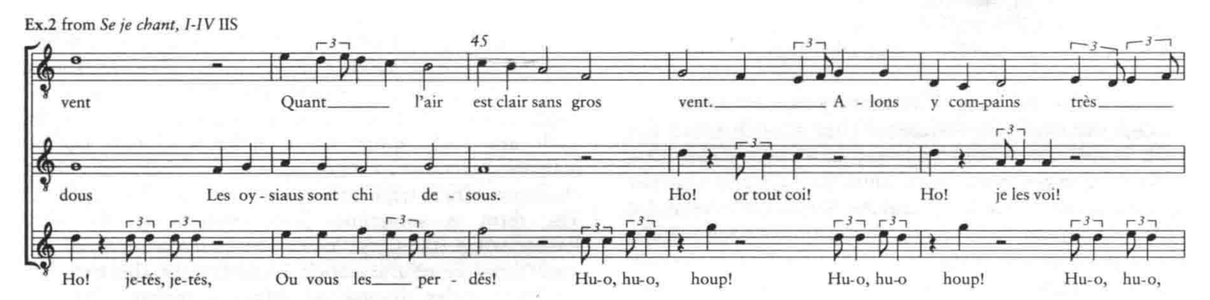
STEVEN HUEBNER



Chace [chasse] (Fr.; Sp. *caça*). A 14th-century term for canon (*see* CANON (i)). It is generally applied by modern writers to a small number of 14th-century French-texted, three-voice canons at the unison employing onomatopoeia and word-painting. Various forms of the verb 'chacer' (e.g. 'chasser') also appear in the sources, indicating that a given melody is to be realized canonically.

Apparently unknown before 1300, the term 'chace' is not included in Johannes de Grocheio's compendium of secular genres (*Ars musice*, *c*1300). 'Chaches' are listed, however, along with 'motes', 'rondiaux', 'hoques', 'estampies' and 'balades', in an anonymous mid-14th-century translation and adaptation of the 13th-century *Ludus super Anticlaudianum* by Adam de la Bassée. The chace was mentioned again in Don Pedro Niño's list of French polyphonic genres sung at the residence of Regnauld de Trie, Amiral de France, in 1406. The chronicler Mathieu d'Escouchy reported that a 'chasse' was performed during the Feast of the Pheasant at Lille in 1454, and that it 'imitated the barking of little dogs and the sounding of trumpets, just as if we were in a forest'; although canonic realization is not mentioned, this could be a late reference to the mimetic chace.



While literary allusions suggest that the chace constituted a distinct genre, in the musical sources the designation 'chace', like its Italian counterpart CACCIA, seems to have been understood primarily as a clue to canonic realization, without reference to textual or musical style. The textless 'chace' for two voices that Jehan Lebeuf d'Abbeville en Pontieu added in 1362 to a late 11th-century plainchant manuscript (*F-CHRm* 130, f.50*v*) appears to be an extremely simple circular canon, and the pilgrims' songs labelled 'caça' in the late 14th-century 'Llibre vermell' (*E-MO* 1, ff.21*v*–23; ed. in PMFC, xxiiiB, 1991) are round canons for two or three voices that untrained singers might easily have learnt without the benefit of notation (ex.1).

Ex.1 *Laudemus virginem* from the 'Llibre vermell'; *E-MO* 1

Ex.2 from *Se je chant, I-IV* IIS

Four chaces survive in the late 14th-century Ivrea manuscript (*I-IV* 115; ed. in CMM, liii/3, 1972, and PMFC, xx, 1982). *Talent m'est pris*, identified as a 'chasse de septem temporibus fugando et revertendo', is a round canon with imitations of cuckoo calls. It appeared in early 15th-century sources with two new German texts, *Der sumer kumt* (*CZ-Pu* XI.E.9; *F-Sm* C.22, now lost) and *Die minne füget niemand* (*A-Wn* 2777 and *Iu* Wo, by Oswald von Wolkenstein). The other three chaces in the Ivrea manuscript are extended, continuous canons. Although they are not identified as chaces, realization in canon at the unison for three voices at a time interval of five longs is inherent in their melodic and rhythmic structure. Another chace, known only by its explicit … *et belle amie a mon talent*, survives incomplete in two sources (*F-Pn* 67 and *US-R* 44). *Hareu, hareu, je la voy*, listed in the index (*F-Pn* 23190) of the lost Tremoïlle manuscript, is identified as a 'cantus trium vocum cum fuga 9 temporum' in Coussemaker's inventory of the lost Strasbourg manuscript *F-Sm* C.22; it too seems to be a mimetic chace on a hunting theme.

In all three of the extended Ivrea chaces, opening and closing sections in slow *modus* rhythm frame a more animated middle section, in which short onomatopoeic exclamations are employed in hocket. *Se je chant*, probably composed by Denis le Grant, Bishop of Senlis (*d* 1352), depicts a hunt as a metaphor for the technique of canonic imitation (ex.2); *Tres dous compains levez sus* parodies a dawn song with its lively imitations of musical instruments (as does the closely related virelai *Or sus vous dormes trop*), while *Humblemens vos pri merchi* is a comic dispute between two rustic suitors.

The texts of these chaces, loosely organized in rhymed heptasyllabic lines, draw heavily on the imagery and language of the pastourelle. In contrast to the Italian caccia, the basis of musical organization in the chaces is

primarily rhythmic and harmonic rather than melodic, a feature they share with the Ars Nova motet. That chace and motet were thought of as related genres is suggested by the index (*F-Pn* 23190) of the lost Tremoïlle manuscript, where three chaces (two of them concordant with Ivrea) were listed in the motet section. The restricted circulation of the mimetic chaces and the close interrelationship of their sources suggest that they originated in a courtly ecclesiastical milieu, where they were cultivated from the 1320s until late in the century.

None of Machaut's canonic works employs onomatopoeia or word-painting, and while he assigned the lais, rondeaux, virelais and ballades to separate sections in his manuscripts, he apparently did not consider the canon as an independent genre. In one of the lais, *Je ne cesse de prier*, canonic realization of alternate strophes is indicated by the term 'chace', while the rubric 'iterum et sine pausa' calls for circular repetition of the melody for the second half of the stanza. By analogy, 'statim et sine pausa dicitur secundus versus ... et sic de omnibus aliis' at the end of the first strophe of *S'onques douleureusement* indicates canonic realization of all 12 stanzas. The clue to canonic interpretation of the triple-texted ballade *Sanz cuer m'envois/Amis dolens/Dame, par vous* is provided by initial rests in the second voice, rather than by a label or rubric.

Late 14th- and early 15th-century canonic chansons, though not explicitly designated chaces, often retain the verb forms 'chacer' and 'chassant' in a canonic rubric or embedded in the poetic text. Thus the rubric in rondeau form that accompanies Jacob de Senleches' virelai *La harpe de melodie* instructs the second voice to read from the first, 'chassant deux temps sans fourvoiier'; Baude Cordier's rondeau *Tout par compas suy composés* contains the clue 'trois temps entiers chacer me pues joyeusement'; and an anonymous canon from the manuscript *I-TRmp* 87 opens with the line 'Casse moy, je vais devant' (ed. in CMM, xxxviii, 1967). By the early 15th century, the term 'fuga', implying flight rather than pursuit, had begun to replace 'chace' in musical sources. Jacobus of Liège had already (*c*1330) listed *fuga* without comment as a category of discant, along with conductus, motet, cantilena and rondellus, in his *Speculum musice*, book 7.

VIRGINIA E. NEWES

Cha cha cha. A ballroom dance that originated about 1953 in Cuba. It is derived from the mambo, and its characteristic rhythm – two crotchets, three quavers, quaver rest – gives the dance its name. The steps are done in a gliding motion, with a rocking of the hips as in the rumba. The dance was popular in the USA and Europe from the mid-1950s.

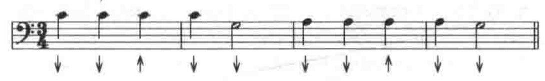
Chaconne (Fr., also *chacony*; It. *ciaccona*, *ciacona*; Sp. *chacona*). Before 1800, a dance, often performed at a quite brisk tempo, that generally used variation techniques, though not necessarily ground-bass variation; in 19th- and 20th-century music, a set of ground-bass or ostinato variations, usually of a severe character. Most chaconnes are in triple metre, with occasional exceptions. The term is sometimes used interchangeably with PASSACAGLIA (the terms 'chaconne' and 'passacaglia' are used throughout this article regardless of the national tradition under discussion). Many composers drew a distinction between the chaconne and the passacaglia, the nature of which depended on local tradition and to some extent on individual preference. The only common denominator among the chaconnes and passacaglias is that they are built up of an arbitrary number of comparatively brief units, usually of two, four, eight or 16 bars, each terminating with a cadence that leads without a break into the next unit. This almost limitless extendibility allows for the creation of a momentum sustainable over an appreciable length of time, a quality that contributes much to the special character of the genres as well as to their usefulness in certain contexts (for example, as the concluding number in an instrumental suite or stage work). Large-scale articulation by means of temporary shifts of mode or key is not uncommon in either early or more recent works.



1. BEGINNINGS IN SPAIN AND ITALY. The chaconne appears to have originated in Spanish popular culture during the last years of the 16th century, most likely in the New World. No examples are extant from this period, but references by Cervantes, Lope de Vega, Quevedo and other writers indicate that the *chacona* was a dance-song associated with servants, slaves and Amerindians. It was often condemned for its suggestive movements and mocking texts, which spared not even the clergy, and was said to have been invented by the devil. Its high spirits were expressed in the refrains that punctuated its often

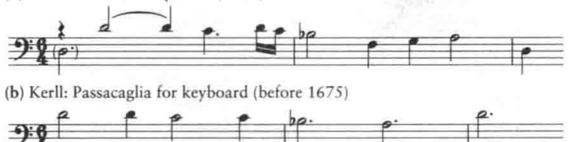
(g) François Couperin: Chaconne from *L'impériale* (1726)

(h) J.S. Bach: *Ciaccona* for unaccompanied violin (1720)



lengthy texts, usually beginning with some variant of 'Vida, vida, vida bona!/Vida, vámonos á Chacona!' (which can be freely translated as: 'Let's live the good life; let's go to Chacona!'). Few could reportedly resist the call to join the dance, regardless of their station in life. The chaconne was traditionally accompanied by guitars, tambourines and castanets; among the less far-fetched of numerous proposed etymologies is a derivation from 'chac', the sound of the castanets. The theory that it was named after an as yet unidentified place (perhaps near Tampico, Mexico, referred to in some texts) is considered more plausible, however.

During the early 1600s the chaconne rapidly became established as Spain's most popular dance, overshadowing its older (but equally 'immoral') rival, the *zarabanda*, with which it was often associated. For the earliest musical notations of chaconnes, however, one must turn to Italy, to the *alfabeto* (chord) tablatures of the newly popular five-course or 'Spanish' guitar, beginning with Montesardo's *Nuova inventione d'intavolatura* (1606). The notations take the form of chord-strumming formulae, presumably based on the dance, which appear along with other formulae of Spanish origin such as the folía and *zarabanda*. They are usually presented in several keys and were no doubt intended as pedagogical examples and exercises. Although these tablatures do not provide tunes for the dances, they offer at least some indication of their harmonies and rhythms (Montesardo's rhythmic notation is, however, not without ambiguity). The most common progression for the chaconne was I–V–vi–V, with a metric pattern of four groups of three beats (ex.1*b*); in later variants the final dominant was often extended by a standard cadential formula. Assuming that these formulae reflect to some extent the original Spanish chaconnes, one could reconstruct a hypothetical *chacona* song along the lines of ex.2*a*. Both in Spain and in Italy, especially in Naples, chaconnes were often incorporated into theatrical presentations and *commedia dell'arte* routines, which sometimes resulted in their being banned from the stage. The association with *commedia dell'arte* characters, particularly Harlequin, became long-lasting and widespread throughout Europe.

Ex.2 Passacaglia bass patterns (transposed to D and reduced to equivalent note values)

(a) Frescobaldi: *Cento partite* (1637)

(b) Kerll: Passacaglia for keyboard (before 1675)

2. Italy after 1615. With a few isolated exceptions, the fully notated chaconnes that survive from the first half of the 17th century are almost exclusively from Italy. In addition to the chord-strumming guitar examples there are others calling for plucked playing or a combination of the two techniques, as well as chaconnes scored for different musical forces. Among the earliest are those by Domenico Visconti (1616) for violin (as a ritornello to an aria); by Falconieri (1616) for two voices with guitar continuo (*alfabeto* tablature); by Piccinini (1623) for chitarrone; and by Frescobaldi (1627) for harpsichord. Whereas the first *alfabeto* tablatures generally present only a single statement of a formula terminating in a cadence, the later examples, whether for guitar or other instruments, are almost always in the form of a chain of units incorporating variations of some sort. The near universality of these variation chains during the early years of the *ciaccona* (they are even found in a unique north European *chacona* published in 1618 by Nicolas Vallet) suggests that the improvisation of strings of variations on chaconne formulae was a common practice among Spanish guitar players, which by the second decade of the century had become sufficiently well known to be emulated elsewhere.

In Italian chaconnes, successive variations usually follow each other without a break, sometimes even overlapping beginnings and ends, a technique that had a long history in both Italy and Spain. The term 'variation' should be understood very loosely, however, as in chaconnes there is generally no underlying melodic theme tying the variations together but at most a harmonic-rhythmic or bass formula, which tends to be treated rather freely or may even be abandoned altogether. In ensemble chaconnes, the continuo bass, by defining the chord formula, often takes the form of an ostinato, but Italian

solo chaconnes (and passacaglias for solo guitar, lute or keyboard) are almost never strict ground-bass pieces. The characteristic chaconne formulae, echoing the original *battute* progressions, commence with I–V–VI, and then return to V, either directly or by way of intermediary harmonies such as IV–V or I^6–IV–V (ex.1*c*). The associated rhythmic formula often starts after the downbeat and tends to hover between two bars in compound triple metre (e.g. 2 × 3/2) and four bars in simple triple metre (e.g. 4 × 3/4); the *Zefiro torna* formula popularized by Monteverdi's setting derives much of its charm from the conflict between a surface 3/4 metre with the background 3/2 (ex.1*d*). But as central to the Italian chaconne as any of these formal properties were its cheerful, often jocular spirit and its strong dance feeling, reflected, for instance, in the several joyful texts, both secular and sacred, set by Monteverdi to his chaconne bass (Ossi, 1988, p.251). Monteverdi also quoted this bass as a topical allusion in *L'incoronazione di Poppea* (1642; Act 1 scene vi); further evidence of the chaconne's connotations is provided by Salvator Rosa's comment in his satire *La Musica* that everyone was scandalized by 'the singing of the Miserere on the *Ciaccona*'.

Frescobaldi appears to have been the first to draw the chaconne and the passacaglia together as a pair. When in 1627 he published the earliest known keyboard chaconne, the *Partite sopra ciaccona*, he followed it with another variation set, the *Partite sopra passacagli*, the first known appearance of the passacaglia as an independent musical genre (as opposed to an improvisation formula; *see* PASSACAGLIA, §2). From this time onwards the histories of the chaconne and the passacaglia remained closely intertwined. Frescobaldi maintained his interest in the two genres, which were similar in many ways and yet to him clearly different, and in the ensuing decade he refined his conception of the pair, which reached its culmination in the chaconnes and passacaglias added to the 1637 edition of his *Primo libro di toccate* (ex.1*c* and ex.2*a*). Although the chaconne shared with the passacaglia features such as the linking of variations, cadential articulation and the use of triple metre, Frescobaldi's chaconnes also show some distinctions (not necessarily in every instance), such as a more exuberant, less restrained character, faster tempo, major rather than minor key, more disjunct melodic motion and fewer dissonant suspensions. In the metric patterns of his later chaconnes he favoured two compound triple-beat groups, whereas his passacaglias were usually based on four simple triple-beat groups. Having two rather than four strong beats per variation tends to give the chaconne stronger forward impetus; however, accent shifts in either genre often produced ambiguity in their patterns. Further ambiguity arose when, as was not uncommon, the chaconne was in the minor or the passacaglia in the major, or when the chaconne bass did not move immediately to a root-position dominant (I–V–VI ...) but to its first inversion, resulting in the bass pattern that descends by step (I–V^6–VI ...) associated with the passacaglia. The similarities, differences and ambiguities between the genres are explored to the fullest in Frescobaldi's extraordinary *Cento partite sopra passacaglie* (1637), with its alternating sections marked 'passacaglie' and '*ciaccona*', and sometimes a gradual, subtle metamorphosis from one into the other (see Silbiger, 1996).

Some of these distinctions between the two genres remained in the works of later composers in Italy and elsewhere, particularly when a chaconne and a passacaglia appear side by side or in the same collection; however, when one or the other appears by itself, the distinctive features may be less evident or altogether absent. Italian composers who published chaconne-passacaglia pairs differentiated along these lines include Piccinini (1639), Falconieri (1650), Bernardo Storace (1664), G.B. Vitali (1682; not the well-known 'Chaconne by Vitali', which is not by Vitali and not called 'chaconne' in its source) and Mazzella (1689). Some composers also followed in Frescobaldi's footsteps by introducing shifts in key and tempo, including, for example, Corelli in his one-movement Sonata op.2 no.12 (1685). This work, surely one of the peaks of Italian chaconne production, is also notable for incorporating ingenious contrapuntal development of its bass formula (ex.1*f*).

In vocal settings, Italian chaconnes were sometimes interrupted by recitatives (e.g. Frescobaldi's *Deh, vien da me pastorella*, 1630, and Monteverdi's *Zefiro torna*, 1632). Sections that resemble a chaconne without being identified as such are found in operas, cantatas and sacred works. However, the present-day tendency to identify any ostinato aria with the chaconne or passacaglia does not appear to have historical precedence unless the piece also shows the characteristic dance rhythms and other genre markings. By the beginning of the 18th century the chaconne was rapidly losing ground in Italy, but it continued to flourish in France, Germany and elsewhere for some time.

3. SPAIN AFTER 1630. In Spain the chaconne's popularity began to decline by the 1630s, but it maintained a presence as a popular dance and a folkdance. According to one report it was still danced in Portugal in the 19th-century during Corpus Christi processions. Only a small number of notated examples survive in Spanish guitar, harp and keyboard tablatures from the later 17th century (for example by Sanz, 1674; Ruiz de Ribayaz, 1677; Martín y Coll, 1708); the few that do survive suggest that the chaconne continued to be a subject for instrumental improvisation. (For the busier and artistically more significant passacaglia tradition that persisted in Spain throughout the 17th century and beyond, *see* PASSACAGLIA, §3.)

4. FRANCE. In France the Hispanic-Italian chaconne, like the passacaglia, was transformed during the mid-17th century into a distinctive native genre that in turn became a model for emulation elsewhere. Before this, however, the genre had already had some impact as an exotic Spanish import. In 1623 the Spanish expatriate Luis de Briçeño published in Paris a guitar method that included in chord tablature brief chaconnes and passacaglias similar to the early Italian examples. A ballet presented in 1625 at the royal court included an 'Entrée des chaconistes espagnols', danced to the sound of guitars. During the 1640s the promotion of Italian music and musicians by Cardinal Mazarin brought wider familiarity with the two genres in their newer incarnations. Luigi Rossi's *Orfeo*, performed in Paris in 1647 to great acclaim, contains a dramatically positioned chaconne, 'A l'imperio d'Amore', in its second act. Francesco Corbetta, who settled in Paris about 1648 and became guitar teacher to the future Louis XIV, was perhaps the greatest Italian

guitar virtuoso of his time, and the composer of numerous chaconnes and passacaglias.

By the late 1650s the French chaconne tradition was firmly in place, already showing many of the characteristics that would mark the genre during the later 17th century and the 18th. Many elements were borrowed from the Italian tradition, but differences in both affect and design are evident at the outset. The playful, volatile Italian chaconne became in France a more controlled, stately dance, suggestive of pomp and circumstance; whereas the Italian pieces often proceed capriciously, in the vein of a spontaneous improvisation, the French ones exhibit a well-planned, orderly structure. The repetition of units, often with alternating half and full cadences, and the recurrence of earlier units, sometimes with variations superimposed, became important structural techniques. Rondeau schemes were common in the instrumental chaconnes (although not in the operatic ones), along with variation schemes and combinations of the two. Typically the refrains were of four- or eight-bar phrases, usually repeated, and ended on strong cadences; the couplets could modulate to related keys or provide contrast by other means.

The French chaconne, like the passacaglia, was cultivated both in chamber music, especially by guitarists, lutenists and keyboard players, and on the musical stage. Among the earliest surviving examples from before 1661 are those for harpsichord by Louis Couperin. His chaconnes are built on rondeau forms; the refrains are marked by a distinctive stop-and-go rhythm reinforced by colourful, richly textured chords; the couplets often bring thinner, more soloistic textures and faster-flowing rhythmic activity.

Lully was without doubt the primary architect of the theatrical chaconne and its much less common passacaglia counterpart. In his *tragédies lyriques* chaconnes assume a central place in the form of extended, lavish production numbers celebrating a hero's triumph or apotheosis; in some of his last works (such as *Roland*, 1685, and *Armide*, 1686) they support and provide continuity for an entire scene. Several include chains of well over 100 units, which may include vocal and instrumental segments, sections in the relative minor, units without bass instruments or for solo wind, and other forms of contrast and variation. Following Lully, the grand, festive chaconne became established as a set piece in the French *tragédie lyrique*, with notable examples appearing in Charpentier's *Médée* (1693), Marais' *Alcyone* (1706) and Rameau's *Hippolyte et Aricie* (1733) and *Castor et Pollux* (1737).

In France the chaconne and passacaglia served mostly as stage dances rather than as ballroom dances, although a dividing-line between the two functions cannot always be clearly drawn. Surviving choreographies for dances by Lully (all dating from after his death) show those for chaconnes and passacaglias to be quite similar, even if in passacaglias the details of gesture may have been more deliberate. Existing side by side with the noble theatre pieces, a lighter type of chaconne kept alive the dance's Spanish roots and its *commedia dell'arte* associations, both on the stage and during entertainments at masked balls. Such dances were often on Spanish themes and danced with castanets (in fact, it seems castanets were used when dancing any type of chaconne), or the dancers represented Harlequin characters (Harris-Warrick, 1986; Hilton, 1986). Lully's ballet for *Le bourgeois gentilhomme* (1670) contains a 'Chaconne des Scaramouches, Trivelins et Arlequins', and early 18th-century dance manuals still provided Harlequin choreographies for the chaconne (fig.1).

In France, as in Italy, the distinction between chaconne and passacaglia is most evident when the two appear in the same context. According to theorists such as Brossard (1703) and Rousseau (1767), the chaconne was ordinarily in the major (a 'rule' often violated), the passacaglia in the minor; furthermore, chaconnes were performed at brisker tempos. Several 18th-century reports of precise tempo measurements indicate crotchet = *c*120–160 for chaconnes and *c*60–105 for passacaglias; the slower chaconne tempo range is probably more suitable for later pieces with frequent semiquaver subdivisions (such as those of Rameau) and the faster range more appropriate for the earlier type (such as Lully's) with mostly quaver subdivisions (Miehling, 1993). Louis Couperin's association of rondeau forms with chaconnes and ground-bass variations with passacaglias is observed occasionally in the keyboard works of other composers (e.g. D'Anglebert's *Pièces de clavecin*, 1689) but never became a general rule, and versions of the characteristic bass formulae are sometimes encountered, but also without consistency.

The works of François Couperin include a variety of chaconne and passacaglia types that show the composer's awareness of their ancient traditions; among them are a 'Chaconne ou Passacaille' (1726; ex.1g) and a 'Passacaille ou Chaconne' (1728), both of which play with the opposing qualities of the two genres, somewhat in the

1. Harlequin dancing the 'cicona': engraving from Gregorio Lambranzi's 'Neue und curieuse theatrialische Tantz-Schul' (Nuremberg, 1716)

manner of Frescobaldi's *Cento partite*. Couperin even wrote a chaconne in duple metre, something he considered remarkable enough to mention in his score. In addition to chaconnes and passacaglias in the grand French manner (often marked 'noblement'), Couperin wrote two chaconnes of the lighter type, designated 'chaconne leger' (1722 and 1724); both are notated in 3/8.

After 1740 the chaconne fell largely out of fashion in instrumental solo and chamber music, but (to a much greater extent than the passacaglia) maintained a place on the musical stage throughout the final decades of the century, particularly in serious musical presentations at the Paris Opéra and elsewhere (less often in comedies). Chaconnes were still included, for example, in most of Gluck's Parisian productions, as well as in J.C. Bach's *Amadis de Gaule* (1779), Mozart's *Idomeneo* (1781), Méhul's *Le jugement de Paris* (1793) and Cherubini's *Anacréon* (1803). These late examples are rarely cast in ostinato-variation form (Burney in 1789 considered the ground bass a 'Gothic' practice) and bear little resemblance to the old Lullian chaconnes, but they continued the tradition, being extended, triple-time dance numbers usually positioned at the conclusion of a divertissement. Whether the 19th-century dance step the *pas de chacone* preserved any elements of the earlier chaconne has not been determined.

5. GERMANY. The earlier German chaconnes (usually spelled '*ciaccona*' or ciacona', even as late as J.S. Bach) were closely modelled on foreign works, notably the closing section of Schütz's *Es steh Gott auf* (1647), which by the composer's own admission was based on Monteverdi's *Zefiro torna*, but with a modulating ostinato pattern. Schütz's work may in turn have inspired the impressive chaconne that concludes his pupil Matthias Weckmann's *Weine nicht* (1663), in which the pattern is transformed several times. Distinct German forms of the chaconne developed only in the later years of the century, most strikingly in solo organ music. The German organists, drawing on traditions of cantus-firmus improvisation and ground-bass divisions, created a series of majestic ostinato compositions, shaped by increasingly brilliant figurations. A passacaglia and chaconne pair from well before 1675 by J.C. Kerll (who had studied in Rome) still used traditional ground-bass formulae, if treated rather loosely (ex.1*e* andEx.2*b*; in the sources the chaconne is notated with three semibreves per bar, but the passacaglia with three breves, presumably to emphasize the slower tempo); and forms of both formulae also appear together in Poglietti's *Compendium* (*A-KR* L.146, 1676), the only known example of the specific basses being cited in a early treatise (fig.2). However, later composers such as Buxtehude and Pachelbel introduced bass formulae of their own devising, which were treated during at least the first part of the composition as rigorous ostinatos; they assume a thematic significance not present in the traditional formulae, as various techniques borrowed from chorale improvisation were brought to bear on them. The busy passage-work and contrapuntal density largely obliterated any dance feeling (except, some might hold, on a cosmic plane), and links with the genres' origins became increasingly tenuous.

Chaconnes written during the same period for instrumental ensemble (for example by Biber, Georg Muffat and J.C.F. Fischer) followed French models more closely or combined the French and Germanic approaches, as did

2. *Alessandro Poglietti's chaconne and passacaglia formulae from his 'Compendium', 1676 (A-KR L.146)*

those conceived primarily for harpsichord (e.g. by Fischer, Georg Böhm and Fux). The hybrid type was pushed to its limits by J.S. Bach in his Chaconne in D minor from the fourth Partita for unaccompanied violin (ex.1*h*), a work in which several international chaconne and passacaglia traditions (including the virtuoso solo divisions of composers such as Biber and Marais) may be traced, and which in turn spawned its own tradition of adaptation (e.g. by Mendelssohn, Schumann, Brahms and Busoni) and emulation (e.g. by Reger, Bartók and Walton).

6. ENGLAND. Although during the last few decades of the 17th century the chaconne also gained considerable popularity in England, it is difficult to identify uniquely English forms. Italian and especially French examples continue to be followed, even if as a rule the results were unmistakably English. There was a special fondness for ground-bass variations – not surprising in view of the age-old English predilection for this technique. Pieces called 'passacaglia' are much rarer, but some compositions entitled 'ground' resemble those called either chaconne or passacaglia on the Continent.

Among the finest chaconnes produced by any 17th-century composer are those of Purcell. *King Arthur* (1691) includes a grand instrumental chaconne in the 'First Musick' (used earlier in the 1687 ode *Sound the trumpet*), as well as an extended vocal passacaglia in the Lullian manner in Act 3. The 'Chaconne: two in one upon a Ground' in *Dioclesian* (1690), a canon for two recorders on a descending ostinato, is a true tour de force; the concluding number in the same work, 'Triumph, victorious love', is a chaconne in all but name and includes passages curiously reminiscent of Monteverdi's *Zefiro torna*. Some of Purcell's chaconnes for instrumental ensemble, notably the Sonata in Four Parts no.6 (as in Corelli's op.2 no.12, the chaconne forms the entire sonata) and the marvellous *Chacony* (z730), well deserve their frequent performances.

7. THE CHACONNE AND PASSACAGLIA AFTER 1800. When 19th- and 20th-century composers returned to writing chaconnes and passacaglias, they did not take as their models the most recent examples from the late-flowering French operatic tradition, nor the once paradigmatic works of Frescobaldi or Lully; they turned rather to a handful of 'rediscovered' pieces by the German masters, especially Bach's Passacaglia for organ and his Chaconne for unaccompanied violin, and perhaps also the passacaglia from Handel's Suite no.7 in G minor. While these impressive works are certainly deserving of their canonic status, they are atypical of the earlier mainstream genre

traditions (Handel's passacaglia was in fact in duple metre). From Bach's passacaglia they took what now became the defining feature: the ostinato bass. The theme-and-variation idea, often incidental to earlier chaconnes and passacaglias (if present at all), became central to the revived genres. As with Bach, the ostinato theme is usually stated at the outset in bare form and in a low register. The association with Bach (and therefore the past) and with the organ also contributed to a mood of gravity: most post-1800 examples call for a slowish tempo. Some writers attempted to define a distinction between the chaconne and the passacaglia, based primarily on the examples by Bach, but no consensus was ever reached and for the most part the terms continued to be used interchangeably.

Already during the earlier 19th century several leading composers had found themselves inspired by the chained ostinato-variation idea, without necessarily calling the resulting works 'chaconne' or 'passacaglia'. Notable examples are Beethoven's 32 Variations in C minor (WoO80), Liszt's praeludium on 'Weinen, Klagen, Zorgen, Zagen' (based on a chromatically descending ostinato from Bach's Cantata no.12) and, perhaps the most famous latter-day example, the final movement of Brahms's Fourth Symphony, modelled on ostinato-variations by several earlier composers, in particular Buxtehude's Chaconne in E minor and the final chorus of Bach's Cantata no.150 (Knapp, 1989).

Works specifically called 'passacaglia' or (not nearly as often) 'chaconne' became more common in the 20th century, both as independent compositions and as movements in larger works. Almost all are of the cantus-firmus ostinato type, although treated with varying degrees of flexibility (as in the early German models, the first group of statements of the ground are usually strict, but later ones may be varied). In view of the antecedents by Bach it is hardly surprising that dense contrapuntal settings for keyboard (mainly organ, but also piano) and virtuoso settings for solo strings (violin as well as cello) are especially popular, but there are also works for chamber ensemble and for large orchestra, and even a few operatic scenes. Certain composers such as Reger, Hindemith and Britten showed a special fondness for the genres, incorporating them into several works. Other major figures who contributed to the genres include: Ravel (Piano Trio), Schoenberg (*Pierrot Lunaire*), Berg (Orchestral Songs, *Wozzeck*), Webern, Bartók, Vaughan Williams, Walton, Copland, Wolpe and Ligeti (*Hungarian Rock (Chaconne)* and *Passacaglia ungherese*, both for harpsichord) – a list that could be much expanded, especially if one includes 19th- and 20th-century works that are chaconnes and passacaglias in all but name.

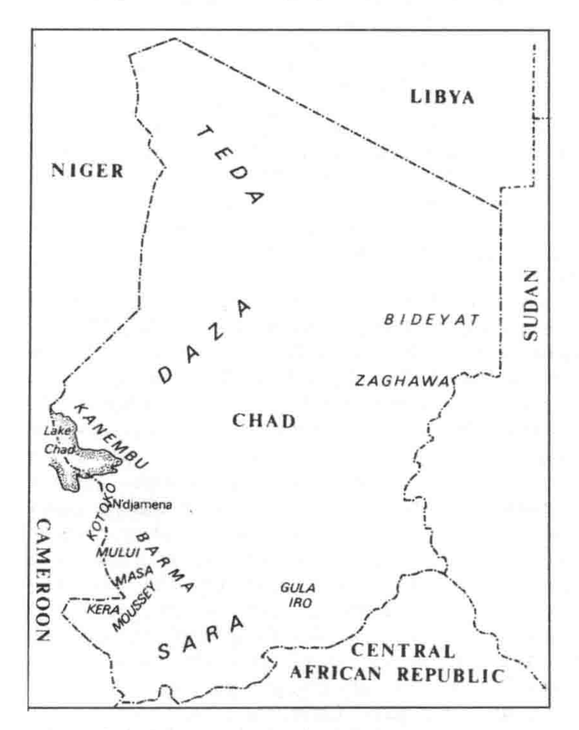
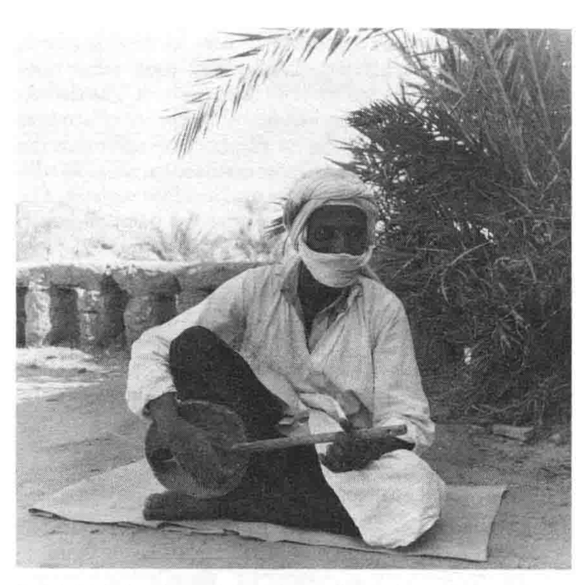
ALEXANDER SILBIGER

Chad (Fr. République du Tchad). Country in Central Africa. A former French colony, it has been independent since 1960. Its territory extends over 1,284,000 km², from the Tropic of Cancer in the north to beyond the 10th parallel in the south, i.e. from the desert zone to that of the forest. The population of 7·27 million (2000 estimate) thus lives in areas of great climatic and geographical contrast. Since in addition the inhabitants are descended from different ethnic groups, it is not surprising that their ways of life and socio-religious traditions vary considerably, as do their musical traditions. Knowledge of the music is superficial since there have been few specialized studies. The only information available is dispersed in general ethnological and anthropological studies and in the printed commentaries accompanying musical recordings, so that the discussion below focusses especially on the organological aspect of the traditional musics of Chad. The various peoples north of the 15th parallel are Saharan and mostly semi-nomadic



livestock breeders who have been converted to Islam. In contrast, the southern inhabitants are principally sedentary cultivators, largely animist, some of whom have been converted to Christianity or Islam only comparatively recently.

Everywhere, from the north to the south, a common feature is the presence of many drums and a wealth of rhythmic musics that are most often bound to dance. Recordings of the music of Chad are published from the archives of the Musée Royal de l'Afrique Centrale, Tervuren, and in the UNESCO, OCORA, CNRS–Musée de l'Homme and Ethnic Folkways collections.



1. The north. 2. The south.

1. THE NORTH. The principal peoples of this area are shown in the map (fig.1). Sometimes the term 'Tubu' is applied to the Teda and the Daza, whose languages are related. The music of the other ethnic groups, although not identical, has a certain number of features in common with that of the Teda, notably in the principal types of instrument used and in the distinctions between the music of professionals and non-professionals, and the music of men and women.

Traditional Teda musical instruments (two kinds of chordophone and three kinds of drum) are played only by men. The most common chordophone is the *keleli*, a plucked lute (fig.2). The resonator is hemispherical and made of gourd, wood or an enamel bowl about 20 cm in diameter with a soundboard of camel skin fixed by lacing. The neck is inserted through a slot in the skin, its lower end reappearing under a circular hole so that the strings can be tied on easily. Strips of skin are used in place of tuning-pegs to fasten the strings to the neck. The strings were traditionally made of animal sinew but are now often made of nylon thread; two or three are used according to the music played. The second kind of chordophone is the *kiiki*, a one-string bowed fiddle. The body of the instrument is the same as that of the *keleli*, but the sinew or nylon strings are replaced by a string of horsehair attached to the neck by leather straps. The string passes over a small wooden bridge placed on the skin soundboard. The bow is also made of horsehair fixed to a supple rod, which is strongly arched to secure its tension.

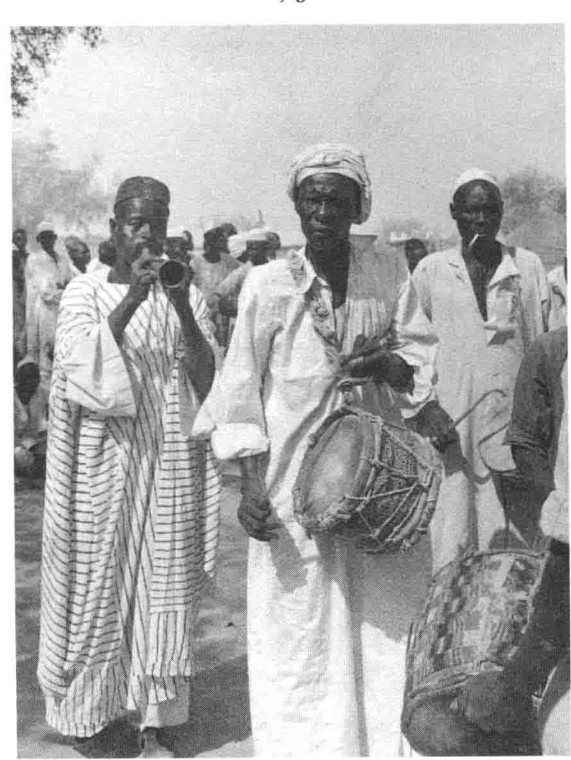
1. *Map of Chad showing the distribution of principal cultural groups*

2. *Keleli (plucked lute) of the Teda people, northern Chad*

The three kinds of drum differ from one another only in their dimensions. The largest, the *nangara*, is approximately twice the size of the *kwelli*, with which it is often paired. The *nangara* is approximately 50 cm high, and the diameter of the struck skin is between 30 and 42 cm. Both drums – which may be played by any adult male – are quite bulky, and the two skins on each are attached by lacing to the wooden body, which is ovoid in shape. They are struck with straight sticks, by two drummers if only the *nangara* is used, and by three if both instruments are played as a pair.

The third kind of drum, the *kidi*, is used only by professional musicians belonging to the group of blacksmiths. This drum also has two laced skins, but the body is tapered and its maximum diameter is only about 20 cm. The body-shell is carved from a light wood since the blacksmith carries the instrument suspended from his neck while he is playing. He strikes the two skins with his hands while singing to accompany recreational dances, an activity for which he is paid. It would be shameful for a young Teda who is not a blacksmith to play the *kidi* while singing in public; only the girls sing when the two other drums are played, even at dances. In addition, the *nangara* and the *kwelli* are used for signalling and may punctuate proclamations, a use forbidden to the blacksmith's drum.

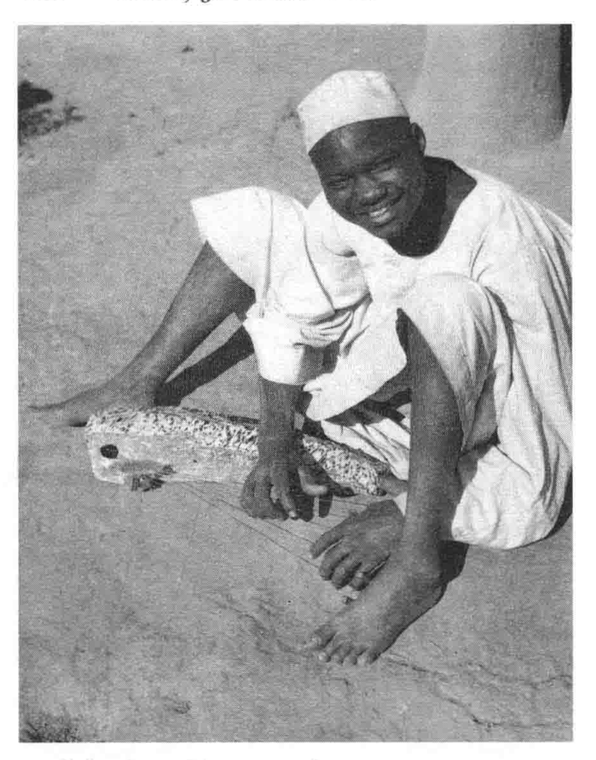
This use of drums also occurs in Kanem, the province on the borders of Lake Chad, but two large paired drums are used, one 'male', the other 'female'. The Kanembu use some instruments not found among the Teda. Small double-headed laced drums are struck with the hands solely by the descendants of slaves. Professional musicians use two kinds of double-headed laced drums of different sizes, but both with cylindrical wooden bodies. One head



is struck with a bent stick, the other with two straight sticks. They also use single-headed drums, some of which are hourglass drums with wooden bodies played in pairs and struck with the hands, while others are made of pottery or wood and struck with large plaits of vegetable fibre (fig.3). All drums used by professionals are fitted with snares. They are generally grouped in pairs, sometimes in threes, together with a shawm or oboe of Arab origin, the ALGAITA (fig.4).

Small idioglot clarinets made of reed are played solely by young uncircumcised boys. In addition to the instruments listed, everyday objects such as bowls, spoons or bottles are struck or knocked against one another to serve as rhythm instruments. In regions where there are sultanates, as among the Kanembu, the Bulala (Bilala) or the Zaghawa, as well as among people in the Wadai area, the possession of certain musical instruments is linked with traditional authority, e.g. the long metal trumpets in Kanem and the copper kettledrums of the Zaghawa sultans.

2. THE SOUTH. The settled life of the people in the south has led to the development of local characteristics, although exchanges and reciprocal influences have led to the formation of larger cultural areas embracing several different ethnic groups. Thus the Sara have influenced the institutions of several of their neighbours with corresponding effects on their music. The Sara and related groups use a variety of instruments frequently organized in ensembles. The xylophone, unknown in the north, is used widely. There are several types, which differ in the number of keys (13, 14 or 15) and in the gourd resonators with which they are fitted. These resonators may be straight or curved, and may have a hole covered by a membrane of fish bladder or bat's wing that serves as a mirliton and modifies the sonority of the instrument. Drums, including kettledrums, are of different shapes and sizes with one or two skins. Bow harps, with a varying number of strings, are generally used to accompany singing.



3. Paired hourglass drums and pottery drum of the Kanembu people, northern Chad

4. Drum and algaita (shawm) ensemble of the Kanembu people, northern Chad

The Masa (Masana) and their neighbours, the Moundang (Mundang), Toupouri (Tupuri), Kim and Gor, form another important cultural group distributed throughout the south-west of the country. They have numerous wind instruments, including end-blown flutes and various end-blown or side-blown trumpets, with or without a mirliton, and made of gourd, wood or horn, or of a combination of these three materials. Thus, a wooden trumpet may have a bell made of animal horn or gourd. Whistles and flutes are used in highly elaborate music. Some of them have finger-holes. They are made of horn, wood or clay (dried or baked) and have a variety of shapes. The Mului (Mulwi) use an ensemble of 18 carefully tuned globular whistles of unbaked clay. Their playing technique consists of alternating the sounds of the whistles with that of the musicians' voices in order to produce effects similar to yodelling. Other ensembles of whistles occur particularly among the Kera, the Moussey (Musey), the Tumak and the Gula Iro. The Gula Iro use instruments made of baked clay with double bulbs and several finger-holes. The Masa and the Barma (Bagirmi) use drums with one or two skins, and five-string bow harps that are played horizontally on the ground as shown in fig.5, in contrast to the Sara and many other peoples who hold them vertically against the body. Gourd percussion tubes that are struck against the thigh are used exclusively by women. All these instruments are generally fitted with metal jingles or are accompanied by wickerwork rattles or rattles made from large fruit-stones containing various small grains. Some instruments are used principally for rituals, such as the bullroarer and the water-drum. The water-drum is made

5. Dilli (bow harp) of the Masa people

from a hemispherical gourd inverted in a large container of water and struck like a drum. It is indispensable in ceremonies devoted to the spirits, especially among the Barma, the Kotoko and the Gula Iro.

The musics of the different cultural areas of the country differ in some major characteristic features. In the regions of the Sahara and the Sahel, the music is always monophonic. The melodic part (vocal or instrumental) develops five or six conjoined pitches, but the ambitus does not approach the octave typically reached in the music of the Tuareg of Niger. In the southern region bordering Sudan, it is the opposite: polyphony dominates. Nearly everywhere the melodies follow a pentatonic system and the musicians may have several octaves at their disposal due to the use of instrumental ensembles (xylophones, arched harps and flutes). The musicians also create complex sonorities using various accessories: resonators, noise-makers, cow-bells and buzzing resonators.

MONIQUE BRANDILY

Chadabe, Joel (*b* New York, 12 Dec 1938). American composer. He studied at the University of North Carolina, Chapel Hill (BA 1959), and Yale University (MM 1962), where his teachers included Elliott Carter. Earle Brown and John Cage were also significant influences. He has taught at SUNY, Albany (1965–98), where he established an electronic music studio, and Bennington College. His development of interactive composition, a significant innovation in electronic music, began in 1966 with a plan for a completely automated synthesizer (realized by Moog). The CEMS (Coordinated Electronic Music System) allowed a composer to sequence an entire composition by first programming a pseudo-random chain of musical events and then manipulating discrete segments where appropriate. From 1970 this approach, which Chadabe has referred to as algorithmic composition, was his principal mode of composition.

In 1972 Chadabe started to compose for acoustic instruments and electronics; he coined the phrase 'interactive composition' in 1981 to describe these works. To allow for international performances of interactive music, frequently undertaken by Chadabe and percussionist Jan Williams, Chadabe and Roger Meyers developed computer software (the PLAY Program) to control a small, analogue, travel synthesizer. Realizing that an actual interactive musical instrument in the form of a completely independent computer software application was needed, Chadabe began to build a model in 1984 using a Synclavier II. Early in 1986 he joined forces with software engineer David Zicarelli, and together they constructed the first version of the MIDI instrument 'M', designed to operate through a Macintosh computer. All of Chadabe's compositions from 1987 to 1994 use this software.

Stylistically, Chadabe's works range from rhythmically complex timbral kaleidoscopes to catchy melodies in jaunty rhythms. His love for American popular music (1920–50) is reflected in many of his compositions. He has lectured widely on electronic music and served as co-founder and president of the Electronic Music Foundation, an organization devoted to archiving and propagating all aspects of electronic and computer music.

WORKS
(selective list)

El-ac (tape – elec sounds on tape): Street Scene, eng hn, tape, slide projections, 1967; Ideas of Movt at Bolton Landing, tape, 1971; Echoes, solo insts, elecs, 1972; Shadows and Lines, tape, 1972; Flowers, solo str, tape, 1975; Settings for Spirituals, cptr, 1977; Playthings, installation, interactive cptr, 1978; Solo, cptr + synth, 1978, rev. 1981; Scenes from Stevens, cptr + synth, 1979; Rhythms, perc, cptr + synth, 1980; Rhythms 'Variation VI', fl, vn, vib, tape, 1982; Follow Me Softly, perc, cptr + synth, 1984; Bar Music, cptr + synth, 1985; Several Views of an Elusive Lady, S, tape, 1985; After Some Songs, solo insts, cptr + synth, 1987–94; Many Mornings, Many Moods, perc, orch, cptr + synth, 1988;

Jam and Slow Dance, various insts, cptr + synth, 1990; Round Trip, perc, cptr + synth, 1992 [after a painting by H. Frankenthaler]; Echoes of Echoes, solo insts, elecs, 1995; 1 With Pierre's Words, spkr, a fl, conga, elecs, 1997

Other works: Prelude to Naples, 4 insts, 1965; Variation, pf, 1983; The Long Ago and Far Away Tango, pf, 1984

BURT J. LEVY

Chadwick, George Whitefield (*b* Lowell, MA, 13 Nov 1854; *d* Boston, MA, 4 April 1931). American composer, teacher, conductor, pianist and organist. He was a leading figure of the Second School of New England composers. Highly regarded in his lifetime as a composer, he was also largely responsible for the effective reorganization of the New England Conservatory and was one of the most influential teachers in American music.

1. Early years up to 1880. 2. 1880–97. 3. 1897–1931. 4. Style.

1. EARLY YEARS UP TO 1880. Because of his mother's early death and his father's remarriage, Chadwick was left to his own resources at an early age. He thus developed the self-reliance and independence that were to characterize his music as well as his academic life. He learned music from his older brother and by the age of 15 was active as an organist. From this time on he had to pay for his own musical instruction, as his father, a businessman, was opposed to his pursuing a career in music. He did not complete high school, but went to work as a clerk in his father's insurance office. By 1872 he had become the regular organist of a Congregational church, while continuing his studies as a special student at the New England Conservatory, where his organ teachers were Dudley Buck and Eugene Thayer.

In 1876 Chadwick accepted a temporary post as professor of music at Olivet College in Michigan. While at Olivet he became a founding member of the Music Teachers National Association and read a paper on popular music at its first convention. Determined to receive a more systematic musical education, Chadwick travelled in the autumn of 1877 to Leipzig where, after three months of private study with Jadassohn, he enrolled at the conservatory. His success as a composer was as surprising as it was rapid. The first two movements of his String Quartet no.1 were played in a concert of student works in May and favourably received. In the spring of 1879 his String Quartet no.2 and the concert overture *Rip Van Winkle* were judged the best compositions at the annual conservatory concerts. *Rip Van Winkle* quickly received further performances in Dresden and Boston. Greatly encouraged, Chadwick decided to gain additional training in Munich with Rheinberger; but before studying with him he joined a group of young, vagabond American painters under the informal tutelage of Frank Duveneck (1848–1919). He journeyed with the 'Duveneck boys' to Giverny, France, and in the autumn he entered the Königliche Musikschule, Munich. The impromptu excursion contributed to the francophile attitudes which are noticeable in his later compositions.

2. 1880–97. Chadwick returned to Boston in May 1880; he began a career as an organist, teacher and conductor, and quickly made his mark as a composer in virtually every genre. He was not a virtuoso keyboard performer, and though he held organ posts for many years, they were secondary to his other interests.

In Boston there were many active choral organizations; Chadwick composed a number of choral works, including *The Viking's Last Voyage* for the Apollo Club, and directed the Arlington Club men's chorus. He also directed an amateur orchestral ensemble, the Boston Orchestral Club, for several years. The presence of such major orchestras as the Boston SO and the Philharmonic Society during the 1880s spurred Chadwick's contributions to the orchestral medium, in which he felt especially at home. The Philharmonic Society played his waltz *Beautiful Munich* (1881), the Harvard Musical Association orchestra performed the Symphony no.1 (1882), and the Boston SO played the 'overture to an imaginary comedy' *Thalia* (1883). This opened the way for the first performance of the Scherzo from the as yet incomplete Symphony no.2 in March 1884; the audience demanded an immediate repetition, the first ever granted in the history of the Boston SO. By the time the symphony received its first complete performance in 1886, Chadwick was regarded especially as a masterly composer of lighter movements. But the piece most often performed, the 'overture to an imaginary tragedy' *Melpomene* (1887), was considered finer simply because the composer was at last writing music deemed entirely 'serious'.

Chadwick's earliest works for the theatre were composed for private clubs to which he belonged. They were strongly influenced by the Gilbert and Sullivan operettas then making their first appearance in the USA. *Tabasco* (1893–4), commissioned by an amateur troupe for a fund-raising benefit, was sufficiently popular to justify a professional revival by the Seabrooke Opera Co., and it toured extensively.

Immediately after his return from Munich in 1881 Chadwick had set himself up as a private teacher. By the spring of the following year he had joined the faculty of the New England Conservatory, with which he remained affiliated until his death, becoming director in 1897. His leadership brought the growth and modernization of the conservatory from its original form (essentially a school of piano playing for training teachers) to a fully-fledged conservatory on the European model. Chadwick's innovations included an opera workshop, a student repertory orchestra, and courses in orchestration and harmony based on the study of actual music rather than abstract principles. His textbook *Harmony: a Course of Study* (1897/*R*) was printed in many editions and became a standard text.

Chadwick had become a prominent figure in American music by the early 1890s; in 1892 he was commissioned to compose an ode for the opening festivities of the

World's Columbian Exposition in Chicago. His grandiose score in three movements, for large chorus and orchestra with three additional brass bands, was performed by a chorus of 5000 and an orchestra of 500. Two years later, Chadwick's third symphony was awarded a prize by the National Conservatory of Music, during the directorship of Dvořák, a composer with whom Chadwick shared a remarkable similarity of musical outlook. Dvořák's String Quartet in F op.96 ('The American'), which received its first performance by the Kneisel Quartet in Boston in 1894, seems to have directly inspired Chadwick's Fourth Quartet, first performed by the same ensemble in 1896.

For some years Chadwick was the director and conductor of the Springfield Festival (1890–99) and the Worcester Festival (1897–1901). As well as championing such composers as Berlioz, Glazunov and Saint-Saëns, these festivals led to his own cantata *Phoenix expirans*, a colourful setting of Scott's *Lochinvar* for baritone and orchestra (for Springfield) and his largest score, the lyric drama *Judith*, based on his own scenario adapted from the Apocrypha (for Worcester). The dramatic action and some of the orchestral sonorities are clearly inspired by *Samson et Dalila* (which Chadwick had conducted a year before beginning his own score), though the influence of Mendelssohn's choral writing is also evident. The central scene of seduction and murder is one of the most expertly constructed and tautly lyrical passages in American dramatic music, though the work has never been staged. Sections emphasizing the chorus, on the other hand, are more like oratorio scenes.

3. 1897–1931. After Chadwick assumed the directorship of the New England Conservatory in 1897 he found that the demands of the institution forced him to limit his composing largely to the summer months, which he usually spent on Martha's Vineyard. He took his responsibilities as an administrator and teacher seriously; conservatory students remembered his close attention to their progress and somewhat daunting presence at every recital. He also developed the conservatory's orchestra, which he himself usually directed. Much of his teaching was given over to advanced composition students, among them Horatio Parker, who became a lifelong friend, Converse, Edward Burlingame Hill, Daniel Gregory Mason, Farwell, Arthur Shepherd and William Grant Still.

After the turn of the century Chadwick's multi-movement orchestral works, the abstract Sinfonietta for example, were generally lighter in character. He also continued to produce works with programmatic features, such as concert overtures, symphonic poems, the *Symphonic Sketches* and *Suite symphonique*. Chadwick indeed indicated that each of the *Sketches* could be performed independently, they quickly became established as among the brightest and most 'American' orchestral compositions of the time. The *Suite Symphonique*, cast in four movements, was an attempt to repeat the success of the *Sketches*, but though it won a National Federation of Women's Clubs prize, it did not make so consistently strong an impression as the earlier score, despite a clever 'Intermezzo and humoresque' movement containing a cakewalk in 5/4 and a parody of Debussy. One other abstract score of this period, the smaller-scale Theme, Variations, and Fugue for organ and orchestra, exhibits a successful blending of the solo instrument with the orchestra, which recommended it to many organists.

Chadwick continued to write orchestral works with titles that in some way reflect classical antiquity: *Euterpe* (1903), *Cleopatra* (1904) and *Aphrodite* (1910–11) continue in the path of *Thalia* and *Melpomene*, though only *Euterpe*, an abstract concert overture, can be linked to the earlier scores (and its ebullient syncopations sound anything but classically European). *Aphrodite* was inspired by a classical head of the goddess in the Museum of Fine Arts, Boston. Chadwick's last large orchestral score, *Angel of Death*, was similarly inspired by sculpture – in this case a work of Daniel Chester French. Chadwick also wrote two orchestral tributes to deceased friends: *Adonais* (1899), a richly sombre, somewhat Wagnerian score for the pianist Frank Fay Marshall, and *Elegy* for Horatio Parker (1920).

There is little doubt that the work on which Chadwick pinned his greatest hopes was his *verismo* opera *The Padrone*. Set in an unnamed city on the American east coast (presumably Boston), the opera tells a realistic story of poor Italian immigrants whose lives are ruined by a small-time *mafioso* figure who controls them. The composer originally intended that the immigrants should sing in Italian and the 'Americans' in English, though this plan was not carried out; the entire opera is in English. It is colourfully scored and fast-paced, reflecting careful study of late Verdi and of Puccini. It is rare among American operas in that it avoids both the mythological or distant historical settings and the exotic themes of American Indians found in others of the time. *The Padrone* is an opera of modern life, reflecting the current social situation. Had it been produced, it might well have pointed the way to a new manner of operatic composition in the USA, one making the most of Americans' traditional directness and realistic outlook. Instead the score was turned down by the Metropolitan Opera and a possible production in Chicago fell through when the impresario there suddenly died. *The Padrone* was performed, fittingly, by the New England Conservatory Opera Theater under the direction of John Moriarty (Boston, 11 April 1997).

Aside from *The Padrone*, most of Chadwick's major works in the decade 1909–18 were composed for the Norfolk Festival; these include his Christmas oratorio *Noël* (1907–8), the symphonic fantasy *Aphrodite* (1910–11), *Tam O'Shanter* (1914–15) and *Anniversary Overture* (1922). Chadwick was so delighted with the rehearsal conditions and the quality of the performances of *Noel* and *Aphrodite* that he offered *Tam O'Shanter* as a gift to the festival in appreciation of its work. *Noel* was popular with choral societies for some years, and *Aphrodite* obtained several performances with American orchestras (including the Chicago SO conducted by Frederick Stock). But it is *Tam O'Shanter* that has so far showed the greatest staying power; a kind of American *Till Eulenspiegel*, it is Chadwick's homage to his own Celtic heritage, lovingly evoking the Robert Burns poem with warmth and humour.

Chadwick's creativity declined in his last years. He suffered regularly from gout, and a shipboard injury received in 1898 never healed properly, forcing him to use a cane in his later years. In the 1920s he wrote little, though he did rework *Rip Van Winkle* for publication, and his monograph on Horatio Parker appeared (1921/*R*). Chadwick received many honours; in addition to prizes for his compositions, he was a member of the National Institute and the American Academy of Arts and Letters

(elected in 1898 and 1909, respectively); the latter awarded him a gold medal in 1928. In his later years there were occasional all-Chadwick concerts and Chadwick's contribution to the creation of an American musical language was recognized.

4. STYLE. Although Chadwick has sometimes been called a 'Boston classicist', with all of its connotations of stuffiness, both his life and his music indicate the contrary. His music and his personality had indeed an academic flavour; but as an American of rural stock, a high-school dropout, and vagabond scholar he was hardly a stereotype. Numerous anecdotes testify to his sense of humour and his outspokenness, which often gave the impression of gruffness. His best works show him to have been a pioneer in freeing American musical expression from German conservatory style. Very early in his career commentators noted 'American' traits in his music, as in the String Quartet no.2 and the scherzos of his first two symphonies. Some works, such as the lyric drama *Judith*, show an interest in French sonorities, while *The Padrone*, for all its evocation of American urban life, draws on the techniques of *verismo* opera. In the scherzo of the Second Symphony he uses a pentatonic melody resembling black American song nine years before Dvořák included the better-known example in his Symphony no.9 ('From the New World'). Most movements of Chadwick's symphony use a variant of the introductory horn call, another pentatonic idea. Some melodies are related to hymnody and folksong. Chadwick's most representative works – the Symphony no.2, String Quartet no.4, *The Padrone*, *Symphonic Sketches*, *Tam O'Shanter*, and many of the songs – illustrate a recognizable American style characterized by the unique rhythms of Anglo-American psalmody, Afro-Caribbean dance syncopations, parallel voice-leading (4ths and 5ths), and virtuoso orchestration. His vocal works frequently display a sensitivity, unusual for the time, to characteristic syncopated or sprung rhythms of the English language, though there are also passages that could just as easily be settings of German or Latin.

The vagaries of Chadwick's reputation have paralleled that of the Second New England School in general. From a zenith of popularity achieved only after years of struggle for acceptance before World War I, it fell to a nadir of neglect during the postwar years. Then, after scholarly research into the roots of the present American musical establishment was begun after World War II, interest in Chadwick was again aroused, the conflict of the generations having been forgotten.

WORKS
(*selective list*)

STAGE

The Peer and the Pauper (comic operetta, 2, R. Grant), 1884, unperf.
A Quiet Lodging (operetta, 2, A. Bates), Boston, 1 April 1892
Tabasco (burlesque op, 2, R.A. Barnet), 1893–4, Boston, Tremont, 29 Jan 1894 [uses material from The Peer and The Pauper]
Judith (lyric drama, 3, W.C. Langdon, after scenario by Chadwick), concert perf., Worcester, MA, 23 Sept 1901
Everywoman (incid music, W. Browne), New York, Herald Square, 1911
The Padrone (tragic op, 2, D. Stevens, after scenario by Chadwick), 1912, unperf.
Love's Sacrifice (pastoral op, 1, Stevens), 1916–17, Chicago, 1 Feb 1923 [partly orchd by Chadwick's students]

CHORAL-ORCHESTRAL

Dedication Ode (H.B. Carpenter), S, A, T, B, SATB, orch, 1883; Noël (Boston, 1888); Lovely Rosabelle (W. Scott), S, T, SATB, orch, 1889; The Pilgrims (F.D. Hemans), SATB, orch, 1890; Phoenix expirans (cant., Lat. hymn), S, A, T, B, SATB, orch, 1891; Ode for the Opening of the Chicago World's Fair (H. Monroe), S, T, SATB, wind ens, orch, 1892; The Lily Nymph (Bates), S, T, B, B, SATB, orch, 1894–5; Ecce jam noctis (J.G. Parker, after St Gregory), male vv, org, orch, 1897; Noël (various texts), pastoral, solo vv, SATB, orch, 1907–8; 37 anthems; 19 choruses, male vv; 20 choruses, female vv

INSTRUMENTAL

Orch: Rip Van Winkle, ov., 1879; Sym. no.1, C, 1881; Thalia, ov., 1882; Sym. no.2, B♭, 1883–5; The Miller's Daughter, ov., 1886; Melpomene, dramatic ov., 1887; Pastorale Prelude, 1890; Serenade, F, str, 1890; Sym. no.3, F, 1893–4; Tabasco March, band/orch, 1894; Symphonic Sketches, suite, A, 1895–1904; Adonais, ov., 1899
Euterpe, ov., 1903; Cleopatra, sym. poem, 1904; Sinfonietta, D, 1904; Suite symphonique, E♭, 1905–9; Theme, Variations and Fugue, org, orch, 1908; Aphrodite, sym. fantasy, 1910–11; Tam O'Shanter, sym. ballad, 1914–15; Angel of Death, sym. poem, 1917–18; Elegy, 1920; Anniversary Ov., ?1922; 3 pezzi, 1923
Chbr: Str Qt no.1, g, ?1877; Str Qt no.2, C, 1878; Str Qt no.3, D, 1885; Pf Qnt, E♭, 1887; Str Qt no.4, e, 1896; Str Qt no.5, d, 1898
30 pf pieces; 8 org pieces

SONGS

1v, orch: Lochinvar (W. Scott), Bar, orch, 1896; A Ballad of Trees and the Master (S. Lanier), low/medium v, orch, 1899, version for 1v, pf; Aghadoe (ballad, J. Todhunter), A, orch, 1910; The Curfew (H. Longfellow), low/medium v, orch, ?1914; The Voice of Philomel (D. Stevens), ?1914; The Fighting Men (M.A. DeWolfe Howe) (1918); Joshua (humorous song, R.D. Ware), ?1919; Drake's Drum (H. Newbold), low/medium v, orch, ?1920
1v, pf: 128 songs incl. 6 Songs, op.14 (Boston, 1885) [incl. The Danza (A. Bates)]; 3 Ballads (Boston, 1889); Bedouin Love Song (B. Taylor) (Boston, 1890); 12 Songs of Brittany (Bates), arr. and harmonized (Boston, 1890); A Flower Cycle (Bates), 12 songs (Boston, 1892); [12] Lyrics from Told in the Gate (Boston, Bates) (1897); 4 Irish Songs (Boston, 1910); 5 Songs (Stevens) (New York, 1914); 3 Nautical Songs (Ware, H. Newbolt, A. Conan Doyle) (Boston, 1920)

Chaḡāna. Sassanian cymbals. *See* IRAN, §I, 5.

Chagas, Paulo C(ésar) (*b* Salvador, 31 Aug 1953). Brazilian composer, active in Germany and Belgium. He studied composition at the University of São Paulo (1973–9), earning a bachelor's degree. He then studied composition, orchestration and analysis at the Liège Conservatoire (1980–82), and electronic music composition at the Academy of Music in Cologne (1982–9). Since 1990 he has served as musical adviser and composer-in-residence at the electronic music studio of the WDR in Cologne, and since 1992 as musical director and composer-in-residence at the Research Centre of Computer Media in Bonn. From 1991 to 1994 he was a visiting lecturer in electronic music at the University of Liège and in 1995–6 a visiting lecturer in composition and contemporary chamber music at the Liège Conservatoire. He became a naturalized Belgian citizen in 1992.

Chagas has composed ballet music (such as *Shango-Kultmusic* and *Sodoma*), operas (such as the award-winning *Oddort*, and *Vom Kriege*), musical theatre (such as *Eshu*, *Peep Show* and *Der Fluss*), multimedia works, pieces for orchestra, instrumental and vocal ensembles, and electronic and computer music. His works resulted from numerous commissions between 1977 to 1997 and have been performed in Europe, Russia, the USA and Latin America to public and critical acclaim. At the 'Sonidos de las Américas' festival of the American Composers' Orchestra (1996), his orchestral work *Eshu* was performed at Carnegie Hall.

Chagas has stated that his music is characterized by the relationship of the musical traditions of the world to the search for new forms of expression. In his work the ritual and technological aspects of music are not viewed as oppositional. He believes 'we are at the beginning of a big change in our aesthetic perception, where the usual sensory impressions like seeing and hearing will influence each other much more than in former times'. In his music he attempts, therefore, to integrate music in other forms of art and expression. Between 1978 and 1997 he published several writings about his own works and on various aspects of Brazilian 20th-century music.

WORKS

(*selective list*)

Stage: Eshu (music theatre), 1984; Vom Kriege (trilogy of multimedia ops, 3), 1984–99; Baiser (Chagas), actor, actress, elecs, 1985; Peep Show (music theatre), 1985–7; Ellipse (mime), 1986; Oddort (chbr op), 1988–9; Shango-Kultmusik (dance score), 1989; Sodoma (ballet), 1991; Raptus (dance score), 1992; Francis Bacon, 1993; Der Fluss (chbr op/scenic orat), 1994; Observation Suite (dance score), 1996; Capivara, 1997; Artaud, 1997

GÉRARD BÉHAGUE

Chagas-Rosa, António (Manuel) (*b* Lisbon, 1 June 1960). Portuguese composer. He obtained a higher degree in the piano from the Lisbon Conservatory (1981) and a history degree from the New University of Lisbon (1983). With a grant from the Calouste Gulbenkian Foundation he went to the Netherlands, where he finished his Masters degree in the piano and 20th-century chamber music at the Amsterdam Conservatory in 1987 under Hrisanide's guidance. Later he was awarded a grant from the Portuguese ministry of culture to study for the higher degree in composition at the Rotterdam Conservatory. He obtained his diploma in 1992, having worked with Wagemans and de Vries, and attended seminars given by Tippett, Lutosławski, Berio and Birtwistle. He also worked as a pianist at the Amsterdam Muziektheater. Between 1977 and 1984 he performed as a pianist in Portugal with the Orquestra Gulbenkian and Orquestra Sinfónica of Portuguese radio. He began teaching at the University of Aveiro in 1996 and regularly performs his own compositions on the piano. Chagas-Rosa's compositions emerge from an Expressionist and chromatic tonality where the influence of Berg and Skryabin can be

detected. For his piano music scores in particular, he does not reject Lisztian ultra-Romantic flights but at the same time allows himself the use of less orthodox instrumental effects.

SÉRGIO AZEVEDO

Chagrin, Francis (*b* Bucharest, 15 Nov 1905; *d* London, 10 Nov 1972). British composer and administrator of Romanian birth. After qualifying as an engineer at Zürich in 1928, he returned to Bucharest and soon after decided to devote himself to music. In spite of family disapproval he went to Paris, where he studied at the Ecole Normale de Musique under Boulanger and Dukas while supporting himself by playing the piano in night clubs and writing light music (1933–4). Later he studied with Seiber in London, where he finally settled in 1936. During the war Chagrin served as music adviser and composer for the BBC French service, for which work he was later decorated by the French government and made an Officier d'Académie. He composed some serious and much light music, and became well known as a resourceful theatre and film composer. His concert music includes two completed symphonies, powerful and picturesque works in which a slight French accent may be detected. Chagrin also formed his own chamber ensemble, with which he presented and broadcast many new and unusual works.

In 1943 Chagrin was primarily responsible for the founding and running of the Committee for the Promotion of New Music: the organization which, for many years thereafter, provided what was almost the sole platform on which young or unknown composers living in Britain could hear their works publicly performed. Many of the most distinguished musicians of the day came to be involved in its activities, on reading panels or as performers. For nearly 30 years Chagrin devoted much of his time and energy to the committee, his skill as administrator, catholic tastes and lack of self-interest proving invaluable assets. After 27 years the committee developed into the SOCIETY FOR THE PROMOTION OF NEW MUSIC. In memory of its founder, the Francis Chagrin Fund for Young Composers was established in 1973.

Chailley, Jacques (*b* Paris, 24 March 1910; *d* Montpellier, 21 Jan 1999). French composer and musicologist. He came from a musical family and studied composition with Boulanger (1925–7), Delvincourt (1933–5) and Büsser (at the Conservatoire, 1933–5), conducting with Mengelberg (1935–6) and Monteux (1936–7) and musicology with Pirro (1930–36), Rokseth (1933–7) and Smijers (1935–6). He also attended G. Cohen's course on the history of medieval French literature at the Sorbonne (1932–6), and in 1952 obtained the doctorat d'Etat with two dissertations, one on the musical school of St Martial at Limoges to the end of the 11th century and the other on Gautier de Coinci's chansons. The range of Chailley's studies was reflected in the diversity of his career. He taught at the Lycée Pasteur (1936–7) and served as general secretary (1937–47), vice-principal (1947–8) and professor in charge of the choral class (1947–52) at the Conservatoire; he occupied the chair of music history (1952–79) and directed the Institute of Musicology (1952–73) at the University of Paris and taught at the Lycée La Fontaine (the National Centre of preparatory studies for the Diploma of Musical Education, 1951–69). From 1962 to 1981 he directed the Schola Cantorum. He gave courses abroad (University of California, Santa Barbara, 1965–6; regular courses in Canada, 1967–71), and was influential in the reform of musical education in France (notably as president of the National Committee for Music during the crucial period 1964–6).

Chailley initially devoted himself to the revival of medieval music (founding the Psallette Notre-Dame in 1933), to the restoration of university drama (at the Sorbonne he founded the Théophiliens group, 1933, and the Groupe de Théâtre Antique, 1936), and to musical education (directing the Alauda choral society from 1946 to 1961). From about 1955 his main interests were medieval music, the evolution of musical language, the music of ancient Greece and ethnomusicology, whose analytical methods he broadened by relating them to the other branches of musical history, including education.

As a composer Chailley progressed from a modal style permeated with elements of Gregorian chant and French folk music (Sonata for viola and piano, 1939–41) to a harmonic language based on the assimilation of the first 13 harmonics (*Sonata breve*, 1960). Although he was hostile towards serialism, he sometimes used dodecaphonic technique, usually for satire ('Diafoirus père et fils' in his *Suite sans prétention pour Monsieur de Molière*, 1953). He was one of the first composers to use the ondes martenot (*Cantique du soleil*, 1934) and to write unaccompanied monody (*Les perses*, 1936). In his Symphony (1942–7) and his opera *Thyl de Flandre* (Théâtre de la Monnaie, Brussels, 1954) these tendencies are synthesized, and his ballet *La dame à la licorne* (Munich, 1953) features a stylistic reincarnation of the musical ethos of the 15th and 16th centuries.

CHRISTIANE SPIETH-WEISSENBACHER/JEAN GRIBENSKI

Chaillou de Pesstain (*fl c*1310–20). French reviser and perhaps author and/or composer. He was apparently responsible for the radical reworking (*c*1317–18) of Gerves du Bus's ROMAN DE FAUVEL that survives uniquely in the manuscript *F-Pn* fr.146. He was almost certainly active in the political and administrative circles surrounding the court of King Philippe V of France and the French princes, the milieu from which that manuscript probably originated. His identity is obscure, perhaps intentionally in view of the biting satire embodied in the interpolated *Fauvel*. He is unlikely to have been either Raoul Chaillou, successively *bailli* of the Auvergne (1313–16) and Caux (1317–19), or the Jean Chaillou who became *clerc-secretaire* of Charles V in 1347. Most likely, though still not certain, is that Chaillou de Pesstain was Geoffrey Engelor, a Breton from Pesscaign (Morbihan) who was a royal *notaire* (1303–34), and who routinely signed himself 'Chalop' at the foot of official acts. He succeeded Pierre de Bourges as *notaire* of the Paris Parlement in 1314. In this position he doubtless enjoyed close contact with the other *notaires* of the French royal chancery, including Gerves de Bus and Jean Maillart.

On f.23*v* of *Pn* fr.146 appear the words 'ci s'ensivent les addicions que messire Chaillou de Pesstain ha mises en ce livre, oultre les choses dessus dites qui sont en chant' ('here follow the additions that messire Chaillou de Pesstain has put in this book, apart from the musical

pieces found above'). It is not clear whether the literary interpolations to the first book of the *Roman* (ending on f.11) were also Chaillou's work, but those for which he was responsible in the second book following this rubric almost double the length of the 'original' text. The 3000 or so lines added to book II substantially enlarge the wedding and tournament scenes, and also incorporate passages from the *Roman du Comte d'Anjou* completed in 1316 by Jean Maillart. Chaillou also manipulated conventions of 'authorial presence' in what constitute a prologue and epilogue to his interpolations in *Pn* fr.146, and modelled his own relationship with the author of the 'original' Fauvel on that created between Jean de Meun and Guillaume de Lorris in the *Roman de la Rose*. He may possibly have composed some of the 169 musical interpolations in *Pn* fr.146, but many were drawn from earlier and contemporaneous repertories. The direct testimony of this manuscript discloses only his role as an interpolator or editor working in conjunction with others.

ANDREW WATHEY

Chailly, Luciano (*b* Ferrara, 19 Jan 1920). Italian composer. He took diplomas in violin (Ferrara, 1941) and composition (Milan, 1945, under Renzo Bossi), as well as gaining a degree in literature at the University of Bologna. He took part in Votto's conducting course and attended Hindemith's postgraduate composition classes in Salzburg in 1948. In addition to being music advisor to RAI (1951–67), he has held a number of posts as advisor or artistic director in various Italian musical institutions: La Scala (1968–71; 1977), the Teatro Regio in Turin (1972), the Teatro Angelicum in Milan (1973–5), the Verona Arena (1975–6) and the Teatro Comunale dell'Opera, Genoa (1983). He has taught at the conservatories in Perugia and Milan, in the latter as lecturer in composition (1969–83). His first compositions reveal his attachment to a neo-classical idiom, somewhat influenced by Hindemith, as in the contrapuntal linearity of his *Toccata* for strings (1948) or the *Ricercare* (1950). His subsequent stylistic evolution can be easily traced in the series of *sonate tritematiche* which reveal, among other things, his movement towards 12-note composition (*Sonata tritematica* no.10, for string quartet, 1960). Although 12-note technique never became a technique which he would use automatically, it did characterize his output in the 1960s. It was in the 1950s and 60s that he began to compose music-theatre works, and this genre occupies a central position in his creative development. He collaborated with Dino Buzzati, who provided the librettos for several works written between 1955 and 1963. Buzzati's surreal poetic world proved endlessly fascinating to the composer and had a specific influence on him, right up to the one-act opera *L'aumento*, of 1996. In the 1970s his style entered a new phase, which he defined as the 'dilution of serialism', based on 'de-formalized' structures. This transformation, the aim of which is to express a kind of 'sonic hallucination', first appeared in the *Variazioni nel sogno* (1972) and the opera *Sogno (ma forse no)* based on Pirandello. Some important works belong to this fundamentally eclectic period, such as the orchestral *Contrappunti a quattro dimensioni* (1974) and *Es-Konzert* (inspired by psychoanalysis), as well as the *Missa Papae Pauli* (1966) with its archaic modalism and the *Kinder-Requiem* (1977) written in response to a massacre of children by Nazi soldiers.

RAFFAELE POZZI

Chailly, Riccardo (*b* Milan, 20 Feb 1953). Italian conductor. Son of the composer Luciano Chailly, with whom he studied composition, he attended the conservatories in Milan and Perugia, where he turned to conducting with Piero Guarino and later Franco Caracciolo and Franco Ferrara. He was a drummer in a rhythm-and-blues band before joining La Scala as assistant conductor, learning the repertory under Abbado and making his début with *Werther* in 1978, having two years earlier founded (with Henze) the Cantiere Internazionale d'Arte in Montepulciano. His American début was at the Chicago Lyric Opera in 1974 with *Madama Butterfly*; débuts followed at Covent Garden (*Don Pasquale*, 1979), the Metropolitan (*Les contes d'Hoffmann*, 1982) and the Salzburg Festival (*Macbeth*, 1984).

Chailly was principal conductor of the Berlin RSO from 1983 to 1989, with whom he made recordings of Bruckner, Mahler and Schoenberg (including a vividly theatrical *Gurrelieder*) and principal guest conductor of the LPO, 1982–5. From 1986 to 1993 he was music director at the Teatro Comunale, Bologna. He was appointed artistic director of the Royal Concertgebouw Orchestra, Amsterdam, in 1988, where his attempts to widen the orchestra's 20th-century repertory aroused early hostility and his idiosyncratic Bruckner and Mahler interpretations proved controversial. However, his contract was renewed in 1991 and his recordings with the Concertgebouw, particularly of 20th-century repertory ranging from Zemlinsky, Schoenberg and Hindemith to Schat and Schnittke, were widely admired. With the Asko Ensemble he has performed an integral cycle of Varèse's orchestral music. Chailly's opera recordings include *La Cenerentola* (with Bartoli), *Guillaume Tell* and *Andrea Chénier* (both with Pavarotti) and *The Rake's Progress*. Visually energetic, he has at times been criticized for waywardness; but at their best his performances are distinguished by their dynamism and originality of detail.

NOËL GOODWIN

Chailò [Chaiolò], **Gian Carlo.** *See* CAILÒ, GIAN CARLO.

Chair [Chaire, Choir] **organ** (Fr. *positif de dos*; Ger. *Rückpositiv*; It. *positivo tergale*). The keyboard and chest secondary to the GREAT ORGAN are correctly called Chair organ if the chest has its own case, separate from the main organ and placed behind the organist's back or chair. In England, all known second manuals were of this kind until 1631 when the Chirk Castle organ had both chests placed within the one case. Most later secondary chests were also like this, their sound discreet enough for choral accompaniment; hence the term 'Choir organ' (*see also* BRUSTWERK). Hawkins (*A General History of the Science and Practice of Music*, 1776) thus had it wrong when he said the manual was called 'Choir and by corruption the Chair Organ'. The term 'chaire', 'chayre', 'cheire', etc., is known only from the 17th century (King's College, Cambridge, 1605–6) although the manuals themselves were known much earlier. Whether such terms as 'lytell organis' (Sandwich, 1496) indicated a Chair organ is unknown.

Continental terms show much variety before *le positif* and *das Rückpositiv* were adopted as the name for the Chair organ: for example, *organum parvum* (Rouen Cathedral, 1387), *positivum tergale* (Arnaut de Zwolle, MS, *c*1450, *F-Pn* lat.7295), *positieff an die Stoel* (Oude Kerk, Delft, 1461), *positif de devant* (Rouen, 1524), *au doxal* (Hesdin, 1623), *positiff en rück* (A. Schlick, *Spiegel der Orgelmacher und Organisten*, 1511), *orgue a la cadira* (St Mathieu, Perpignan, 1516), *achter den rug* (Oude Kerk, Amsterdam, 1539–42). *In den stoel* seems to have been widely used (Antwerp, 1505; Herkenrode, 1522; Oude Kerk, Amsterdam, 1539) though this too may not always have denoted Chair organ, since *im Stuhl* could mean 'In the foot of the main case'. Usages such as *chaière* (Argentan, 1463) or *la cheyere* (Valenciennes, 1515) probably led English builders to call it Chair organ. Such manuals or departments were known at the end of the 14th century from Rouen to Utrecht, and in the 15th through from Spain to Silesia, while in Italy there was only ever a handful of examples. An example of a Spanish Chair organ (*cadireta*) exists in an instrument by Jacobus and Sebastianos Guilla (1705) at Torredembarra, near Tarragona.

PETER WILLIAMS, CHRISTOPHER KENT

Chakmakjian, Alan. *See* HOVHANESS, ALAN.

Chalabala, Zdeněk (*b* Uherské Hradiště, Moravia, 18 April 1899; *d* Prague, 4 March 1962). Czech operatic conductor. He abandoned the law at university to enter the Brno Conservatory, where he studied with Neumann (1919–22) and attended Janáček's masterclasses. In 1924, on the 100th anniversary of Smetana's birth, he founded in his home town an amateur orchestra, the Moravian-Slovak Philharmonic (Slovácká Filharmonie) with which he rehearsed *Má vlast*, and over the next two years gave some 25 concerts in Moravian towns. He taught at the Brno Conservatory (1921–36).

From 1926 he was a conductor of the Brno Opera and from 1930 its production adviser. At this time he became attracted to Czech and Slavonic opera, a preference which determined the policy of the Brno Opera in the 1930s: his most successful productions were *Prince Igor*, *Boris Godunov*, *Khovanshchina*, operas by Rimsky-Korsakov, Foerster and Novák, and Schulhoff's *Flames*. Even when he went to the Prague National Theatre in 1936, he still specialized in Czech and Russian historical and fairytale

operas, especially those with great choral scenes. He was head of opera in Ostrava (1945–7), Brno (1949–52) and Bratislava (1952–3) but returned to Prague in 1953 as first conductor of the National Theatre. He toured successfully with the company to Moscow in 1955 and Berlin in 1956, and in 1956 was engaged for three seasons at Moscow's Bol'shoy Theatre, conducting *Boris Godunov*, *The Bartered Bride*, *Jenůfa* and Shebalin's *Taming of the Shrew*; in Leningrad he conducted Dvořák's *Rusalka*. He gave the important Prague premières of Suchoň's *Svätopluk* and Prokofiev's *The Story of a Real Man*.

Chalabala was an expressive artist who worked out every phrase, almost every note in detail. To find the most effective dramatic expression he often made changes in a work, relying to the full on his instinct and temperament. He had an outstanding baton technique and a sensitive feeling for the capabilities of the voice. He made several recordings, and appeared as a guest conductor in Yugoslavia, Poland and in Venice; he conducted only occasionally in the concert hall.

ALENA NĚMCOVÁ

Chalayev, Shirvani Ramazanovich (*b* Khosrekh, Daghestan, Russia, 16 Nov 1936). Russian composer and singer. Chalayev is a Lak, one of the many tribes inhabiting Daghestan, a mountainous republic on the Caspian Sea. As a boy, he was occupied with traditional peasant labours, but nonetheless mastered the method of throat singing peculiar to Daghestan; because of his penetrating and vibrant voice, he became a favourite participant in festivities in the mountain village of Khosrekh. He later studied foreign languages at the University of Daghestan, and at the age of 18 started taking piano lessons and studying music theory with G.A. Gasanov, who is credited with the foundation of professional Western music in the republic. From 1959 to 1968 he studied at the composition faculty of the Moscow Conservatory under V.G. Fere. He lives in Moscow, spending long periods in Daghestan. He is a People's Artist of Daghestan (1971) and a People's Artist of Russia (1986).

Chalayev's music is defined by its distinctive national stamp. He has written down hundreds of melodies in his extensive travels through Daghestan; when arranging this material, he uses 20th-century techniques in the manner of Bartók or Stravinsky. His musical thought is essentially linear and frequently makes use of contrastive polyphony, ostinato figures, and polytonal and polymodal effects produced by the motion of independent voices. His often astringent harmony is achieved through the frequent use of tone clusters and non-triadic chords; he employs polyrhythms and other complex rhythmic devices. The song cycles written in the mid-1960s – *Oblaka* ('Clouds') and *Nadpisi* ('Inscriptions') (first performed by Yevgeny Nesterenko) and especially the 7 *lakskikh pesen* ('7 Lak Songs') with chamber orchestra – reveal his vivid individuality as a composer. The spiritual world and the history of the Daghestan mountain dwellers is embodied in the operas *Gortsï* ('The Mountain Dwellers'), the first Daghestan opera, and *Khadzhi-Murat*, and in the symphonies *Gorï i lyudi* ('Mountains and People') and *Sulak-svidetel* ('Sulak the Witness'). In his numerous solo concertos, which Chalayev interprets as instrumental dramas, his fascination with the ethical and the spiritual reveals itself with a similarly national character.

WORKS
(*selective list*)

STAGE

Ops: Gortsï [The Mountain Dwellers] (Chalayev and G. Fere, after R. Fatuyev), 1970; Maugli (V. Viktorov and N. Sats, after R. Kipling), 1976; Korol' Lir [King Lear] (V. Chaykovsky, after W. Shakespeare) 1982; Chitaya dnevniki poėta [Reading the Diaries of a Poet] (Chalayev, after Ye. Kapiyeva), 1984; Nasledstvo [Inheritance] (R. Sats, after A. Sofronov), 1985; Khadzhi-Murat (V. Dubrovsky and L. Tolstoy), 1991

Ballets: Kamalil Bashir (Chalayev, after Avar legend), 1975; Khan Girey (Chalayev, after A.S. Pushkin: *Bakhchisarayskiy Fontan* [The Fountain of Bakhchisaray], 1975

Musicals and operettas: Stranstviya Bakhadura [The Peregrinations of Bakhadur] (Viktorov and R. Sats, after A. Abu-Bakar), 1974; Poruchik Tenginskogo polka [Lieutenant of the Tengin Regiment] (Viktorov, after M.Yu. Lermontov), 1989

VOCAL

Vocal-orch: Ballada o materi [Ballad about a Mother] (Adallo), Mez, chorus, orch, 1967; Tseluyu zhenskiye ruki [I Kiss a Woman's Hands] (lyrical cant., R. MIKHAIL GRIGOR'YEVICH BYALIK

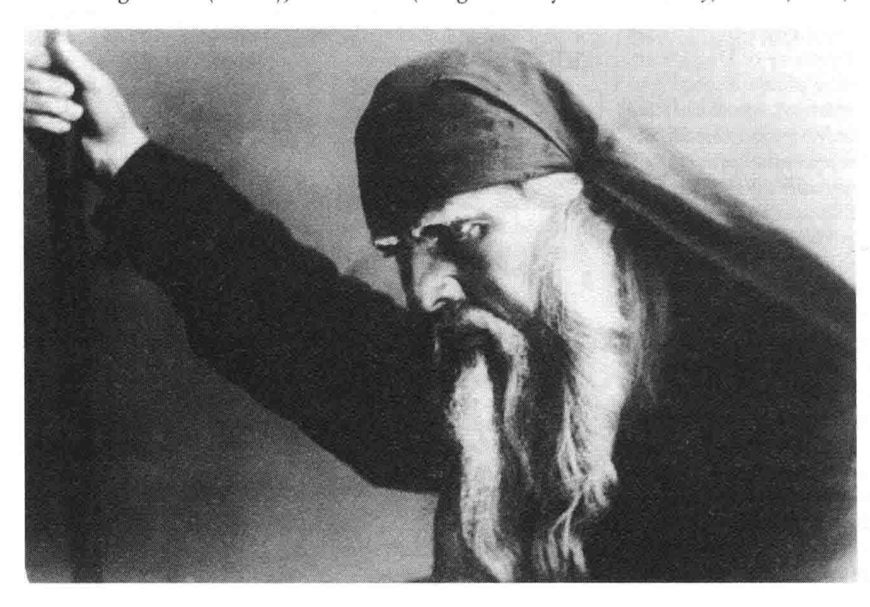
Chaldean rite, music of the. *See* SYRIAN CHURCH MUSIC.

Chalemelle [chalemie] (Fr.). *See* SHAWM.

Chaliapin [Shalyapin], **Fyodor (Ivanovich)** (*b* nr Kazan', 1/13 Feb 1873; *d* Paris, 12 April 1938). Russian bass. Widely considered the greatest singing actor of his day, he was largely self-taught and sang with small provincial companies before having any formal training. After study (1892–3) in Tbilisi he successfully sang a wide variety of roles there and in St Petersburg, where he belonged to the Imperial Opera (at the Mariinsky Theatre) (1894–6) leaving to join Mamontov's private opera in Moscow. There he became renowned for his carefully thought-out performances of such roles as Boris and Varlaam, Dosifey (*Khovanshchina*), Ivan the Terrible (*The Maid of Pskov*), the Viking Guest (*Sadko*), the Miller (Dargomïzhsky's *Rusalka*) and Holofernes (Serov's *Judith*), while creating Rimsky-Korsakov's Salieri in 1898. He was a member of the Bol'shoy Opera in Moscow (1899–1914) and made frequent guest appearances at the Mariinsky and in the provinces. Chaliapin's international career began in 1901 at La Scala, as Boito's Mefistofele. He made his Metropolitan Opera début in 1907 in the same role and during the 1907–8 season sang Don Basilio (*Il barbiere*), Leporello and Méphistophélès (*Faust*). He took part in the Diaghilev seasons in Paris (1908, 1909, 1910 and 1913), sang in London (1913–14) and rejoined the Mariinsky Theatre as soloist and artistic director (1918). In 1921 he left Russia and, on 9 December, sang Boris at the Metropolitan. He continued to sing throughout the world until his final illness. He made two films and some 200 recordings, chronicling virtually all his roles and much of his recital repertory. Live performances in London of *Faust*, *Boris Godunov* and *Mozart and Salieri* demonstrate his larger-than-life portrayals late in his stage career. The recordings of songs show the extraordinary breadth of his tonal range and his masterly inflections of Russian.



Chaliapin's voice was sufficiently flexible to allow him to sing baritone roles like Yevgeny Onegin, Valentin (*Faust*) and Rubinstein's Demon, as well as such bass roles as Oroveso (*Norma*) and Philip II (*Don Carlos*). In *Prince Igor* he sang Galitsky, Konchak and Igor. He was a perfectionist as far as his own make-up, costuming and musical and dramatic preparation were concerned, and untiringly attentive to the staging of the operas he appeared in. Those who worked with him or who knew him off stage testify to his almost superhuman vital force, warmth and fierce intolerance of artistic mediocrity.

HAROLD BARNES/ALAN BLYTH

Challen. English firm of piano makers. Thomas Butcher (*fl* 1804–47) started making pianos at 41 Great Titchfield Street, London, in 1804. William Challen (*d* London, 1861) was associated with Butcher from 1816, and by 1839 the firm had become Challen and Hollis. William's son Charles went into partnership with (?Charles) Hodgson but when C.H. Challen joined, the firm became Challen and Son. They won a reputation for good-quality pianos at moderate prices. In World War I part of the firm's woodworking machinery was commandeered and it was allowed to produce only four pianos a week. This led it to continue making relatively few models, thereby economizing in the range of machinery and raw materials required. Since the 1930s over 180 Challen pianos, from large concert grand pianos to small studio uprights have been used in BBC studios. Challen specialized in small grand pianos, and made the smallest on the market (122 cm long). The firm was acquired in 1971 by Barratt & Robinson, but, following the closure of their factory, production of Challen and Barratt & Robinson upright pianos was taken over at the end of 1993 by Mickleburgh in Bristol. In 1996 four upright models bearing either the Challen or the Barratt & Robinson name were being manufactured. Some of the parts for these instruments were imported from a factory in Malaysia, which also produces complete instruments with the same specification bearing these names.

MARGARET CRANMER

Challier. German firm of music publishers and booksellers acquired by Richard BIRNBACH.

Challis, Bill [William H.] (*b* Wilkes-Barre, PA, 8 July 1904; *d* Harvey Lake, PA, 4 Oct 1994). American arranger. He started on the piano, then took up the saxophone, and later led the student band at Bucknell University, Lewisburg, Pennsylvania. In 1926 he joined Jean Goldkette's band as staff arranger, beginning a close association with Bix Beiderbecke which continued when both men joined Paul Whiteman's band the following year. Challis wrote some of Whiteman's most jazz-orientated arrangements, including *Changes* (1927), *Lonely Melody* (1928) and *Dardanella* (1928), all recorded for the Victor label, giving Beiderbecke ample solo space and sometimes scoring his cornet improvisations for the trumpet section. He also wrote excellent scores for smaller groups formed for recording sessions from Whiteman's band and led by Frankie Trumbauer. Challis's best work of this period reveals a tasteful synthesis of jazz and dance-band elements, a sure grasp of the new jazz style and an awareness of the strengths of Whiteman's and Goldkette's musicians. After leaving Whiteman in 1930 Challis became a freelance arranger for, among others, Trumbauer, Fletcher Henderson, the Dorsey Brothers' Orchestra, the Casa Loma Orchestra, Lennie Hayton, Artie Shaw and a number of radio orchestras. In later years he turned to popular music. He remained active into the 1960s. In 1974 he arranged Beiderbecke's piano compositions (which he had notated and edited for publication in 1930) for guitar quintet.

DAN MORGENSTERN

Challis, John (*b* South Lyon, MI, 9 Jan 1907; *d* New York, 6 Sept 1974). American harpsichord maker. He began piano lessons at the age of seven and later, while at college in Michigan, studied the organ with Frederick Alexander. From his father, a skilled jeweller and watchmaker, he learnt to use precision tools and to do metalwork of great delicacy and refinement. An attempt in 1925 to build a clavichord based on his organ teacher's Dolmetsch-Chickering instrument led to his going to England in 1926 to study early keyboard instruments and their construction with Arnold Dolmetsch. He was awarded the first Dolmetsch Foundation Scholarship for craftsmen in 1928. In 1930 he returned to the USA and established his workshop at Ypsilanti, Michigan, later moving to Detroit and finally to New York.

Challis was a highly creative and innovatory builder who rejected as sterile the copying of historical instruments. The extremes of climate in large areas of North America, as compared with the moderate climatic conditions of Europe in which the harpsichord and clavichord were developed, led him to experiment continually with new materials and techniques of construction in an effort to produce instruments with a stability comparable to that of the modern piano. In this he was eminently successful. While remaining faithful to a decorative scheme in the tradition of Dolmetsch's later instruments – American walnut veneers with a matte oil finish and leaf-gilded mouldings – he based the interior structure of his instruments increasingly on components of metal and plastic. In his last years he even used metal soundboards, thereby gaining stability in tuning without sacrificing the characteristic Challis tone quality (distinctive timbres that he favoured and approved while conceding that they were not those of historical instruments). The extraordinary craftsmanship displayed in all his instruments compelled admiration even from his critics.

In addition to harpsichords of various sizes, Challis also produced clavichords and a small number of pedal harpsichords for organists. One of these pedal harpsichords, built in 1968, may well be the most complex instrument of its type ever produced, with an elaborate disposition controlled by eight hand stops and 13 registration pedals, nine for the manuals and four for the pedal keyboard (pedal: 16′, 8′, 4′, 2′; manual I: 16′, 8′, 8′, 4′; manual II: 8′, 4′). His experimental activities extended as well to the piano, resulting first in a piano (*c*1944) freely derived from the Viennese instruments of Mozart and Haydn, and then (after 1960) a hybrid instrument: iron-framed but not overstrung, double-strung throughout, with the full compass of the modern piano and a Herz-Erard repetition action. Several of Challis's apprentices have attained distinction as harpsichord makers, notably William Dowd and Frank Rutkowski.

HOWARD SCHOTT

Challoner, Neville Butler (*b* London, 1784; *d* after 1835). English violinist, harpist, composer, tenor, conductor and music seller. He studied the violin with Claude Joseph Duboeck, making his début at the age of 9 and performing a concerto at the age of 11. Articled to study with John Ashley in 1796, he became a violinist and assisted in the Oratorio orchestra at Covent Garden and at Ranelagh Gardens. He conducted the bands at the Richmond Theatre (1799), the Birmingham Theatre (1800) and Sadler's Wells (1803/4); he also studied the harp and the piano, which he played brilliantly. He became a member of the Royal Society of Musicians and published four preceptors, for the flute, harp, piano and violin.

In 1807 Challoner was the first tenor at the Harmonic City Concerts, where Mozart's *Don Giovanni* was first performed in England. From 1809 to 1829 he was the harpist at the Italian Opera in London. An associate of the newly formed Philharmonic Society, he sang principal second tenor at its concerts from 1813 to 1829, playing these regular engagements and others to support five children. His reviews (1828–31) of newly published music appeared in *The Athenaeum*, and in 1830 he taught the harp and violin in St John's Wood.

Challoner joined a son of Thomas Skillern sr, engraver and publisher, from 1777 to 1802, and formed Skillern & Challoner at 25 Greek Street, Soho (1802), which published Challoner's *New Tutor or Book of Instruction for the Violin* op.6. However in 1806 Skillern & Co. at the same Greek Street address published Challoner's *New Preceptor for the Harp* op.16. He kept the Skillern connection at least until 1822 when a London directory cites Skillern & Challoner.

Challoner composed 33 sets of sonatas, 12 duets, waltzes, airs and variations and songs in sacred and secular settings. His *Three Sonatas for the Harp* op.2 (1806) were reprinted in 1974.

ALICE LAWSON ABER-COUNT

Chalmers, John (Harvey) (*b* St Paul, MN, 5 March 1940). American theorist. He studied biology at Stanford (AB 1962) and the University of California, San Diego (PhD 1968); music theory has been his avocation since the 1950s when he was introduced to the music of Julián Carrillo and Karlheinz Stockhausen. While at UCSD he compiled with Ervin Wilson an extensive computer-generated set of tuning tables covering equal temperaments, just intonation intervals, Pythagorean and meantone tunings, exotic tunings (for instance based on roots of three), and stretched and compressed octave tunings. In 1974 he founded *Xenharmonikon*, a journal devoted to tuning systems, of which he served as editor from 1974 to 1979 and again from 1990 to 1998. He was scholar in residence at the Centro Culturale della Fondazione Rockefeller in Bellagio in 1980 and a visiting scholar at the Center for Contemporary Music, Mills College, in 1986. His monograph *Divisions of the Tetrachord* (Lebanon, NH, 1993) exhaustively details ancient Greek tunings, lists over 700 historical tetrachordal divisions of the 4:3 interval and outlines many new intonations.

CARTER SCHOLZ

Chaloff, Serge (*b* Boston, 24 Nov 1923; *d* Boston, 16 July 1957). American jazz baritone saxophonist. He studied the piano and the clarinet formally but was self-taught on the baritone saxophone, being influenced by Harry Carney and Jack Washington, a member of Count Basie's band. He worked in various minor bands from 1939 to 1944, but in 1945 he moved to Boyd Raeburn's group, then a progressive force in the definition of post-war jazz styles. In that year he also joined Georgie Auld's band and was decisively influenced by Charlie Parker, quickly absorbing the devices of melodic construction, harmonic vocabulary and rhythmic variety needed to give his swing-based style a wider range of expression. His most important lengthy engagement was with Woody Herman (1947–9), when he was a member of the famous reed section known as the Four Brothers. Persistent ill-health made Chaloff less active in the 1950s, though he continued to record almost up to his death.

Chaloff was an important figure of the bop movement and one of the most significant improvisers on the baritone saxophone. Early performances such as *The Most* (1949, Futurama) show him to have been a virtuoso, while others, for example *Gabardine and Serge* (1947, Savoy), demonstrate the logic of his improvising and its often sombre emotional content. Despite illness he continued to advance during the 1950s, adding to his style an integral use of dynamic and tonal shading and carefully varied degrees of intensity, as may be heard on the album *Blue Serge* (1956, Cap.).

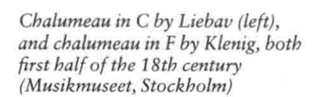
MAX HARRISON/R

Chalumeau (from Gk. *kalamos*, Lat. *calamus*: 'reed'). A single-reed instrument of predominantly cylindrical bore, related to the clarinet (it is classified as an AEROPHONE). The term originally denoted a pipe or bagpipe chanter, but from the end of the 17th century was used specifically to signify the instrument discussed below.

1. History and structure. 2. Repertory.

1. HISTORY AND STRUCTURE. It seems likely that the chalumeau evolved in the late 17th century from attempts to increase the volume of sound produced by the recorder; the retention of the latter's characteristic foot-joint is evidence of the close physical relationship between the two instruments. Two diametrically opposed keys were soon added above the seven finger-holes and thumb-hole of the chalumeau, bridging the gap between the highest note and the lowest overblown 12th. The relatively large dimensions of the vibrating reed and the mouthpiece to which it was tied, however, were principally designed to produce the fundamental register. The clarinet itself evolved when the thumb-hole was repositioned, the mouthpiece was reduced in size to facilitate overblowing, and the foot-joint was replaced by a bell to improve the projection of sound. Since the clarinet functioned rather

unsatisfactorily in its lowest register, the chalumeau was able for a time to retain its separate identity.



J.F.B.C. Majer remarked that since the technique required was broadly comparable, a recorder player could handle the chalumeau, though the latter is described as 'very hard to blow because of its difficult mouthpiece' ('ratione des schweren Ansatzes sehr hart zu blasen'). He indicated a maximum range of *f'–c'''* for the two-key soprano chalumeau, and also listed three larger sizes (alto or quart, tenor and bass), whose ranges may be deduced as *c'–f''*, *f–b♭'* and *c–f'*. Of the surviving chalumeaux, one, by Liebav (Musikmuseet, Stockholm, no.139), is in C and about 33 cm long (see illustration). Of the others, one by Denner (Bayerische Nationalmuseum, Munich, no.136 Mu K20) and two by Klenig (Musikmuseet, Stockholm, nos.141 and 142) are in F and about 50 cm long (see illustration). Philip Borkens, Jeremias Schlegel, Jan Steenbergen and Andrea Fornari also made chalumeaux, but no examples are known to survive. The relative lengths of the two keys on the Denner chalumeau indicate that it was played, like early clarinets, with the reed against the upper rather than the lower lip. While the four instruments mentioned above correspond with Majer's alto and tenor sizes, none equivalent to his bass chalumeau is known to survive; it may be presumed that a bass chalumeau was of similar length to the tenor recorder and was likewise furnished with a foot-joint key in order to make the lowest note easier to play. A quotation by Jacob Denner for the supply of instruments to the Benedictine abbey at Göttweig, near Vienna in about 1720 includes 'premier chalimou', 'secont chalimou' or 'alt-chalimou', and 'chalimou basson'. The first of these is probably equivalent to Majer's soprano chalumeau; this size of instrument was used exclusively for obbligato parts in Vienna at the time. The 'chalimou basson' may correspond to Majer's bass chalumeau, but the rather sharp difference in price between this and the smaller chalumeaux suggests an even larger instrument; several Viennese opera scores of the period specify a continuo part with 'basson di chalumeau', perhaps indicating an instrument capable of playing the bass line at pitch (and thus with a probable range of *F–c*). The three earliest known surviving instruments of bass clarinet size, which were clearly designed to be played chiefly in their chalumeau register at a time when clarinets did not, might be considered as bass chalumeaux; they were possibly made in Germany, though they bear no stamp (Brussels Conservatory, no.939, illustrated in Rendall, pl.7; Hochschule für Musik und Darstellende Kunst, Berlin, no.2810; and Museo Storico Civico, Lugano). These have angled finger-holes, like those of a bassoon, allowing them to meet the bore at intervals more widely spaced than can otherwise be attained.

The earliest documentary evidence of the chalumeau is to be found in an inventory of instruments in the Hofkapelle of Duke Heinrich of Saxe-Römhild (1687); this includes 'Ein Chor Chalimo von 4 stücken' ('a four-piece chalumeau ensemble') purchased from Nuremberg. The reference to Nuremberg lends support to J.G. Doppelmayr's assertion (1730) that J.C. Denner (1655–1707) of that city was responsible for the improvement of the chalumeau and the invention of the clarinet. Writers were long reluctant to take this statement at face value; instead they assumed that Denner rendered the chalumeau obsolete by so improving it as to make it constitute a clarinet. It is known from Nuremberg council records, however, that his son Jacob Denner made both instruments: a commission in 1710 for various instruments includes a pair of clarinets and three sizes of chalumeau. Although Denner is known to have been preoccupied with French manufacturing techniques (see Nickel, 204), the chalumeau cannot be assumed to have been French in origin, and evidence of the instrument in France is scarce – a rare reference is an important article in the *Encyclopédie* of Diderot and D'Alembert (1753). Johann Mattheson referred to 'den so-genandten Chalumeaux' ('the so-called chalumeaux') as early as 1713 (*Das neu-eröffnete Orchestre*); other sources reveal a variety of transliterations, such as 'scialumò', 'schalamaux', 'shalamo' and 'salmò' or 'salmoè'.

2. Repertory. The amount of music written for the chalumeau was for many years seriously underestimated. Among the earliest known sources is a volume *A Variety of new Trumpet Tunes Aires Marches and Minuets*, published in 1698 as for the Mock trumpet (the name by which the keyless chalumeau was apparently known in England). Chalumeaux are among the alternative instruments specified in duets by the Parisian flautist J.-P. Dreux, which are listed in a catalogue of the Amsterdam publisher Roger (1706). In the same year the instrument was first played by the oboists of the opera orchestra in Vienna; until 1725 composers such as the Hofkapellmeister Fux, Ariosti, Caldara, Conti and the brothers Bononcini wrote parts for it, generally reserving its individual tone-colour for pastoral contexts. Joseph I wrote a particularly ornate obbligato for the instrument in an aria he contributed to Ziani's *Chilonida* (1709). Although the chalumeau was rarely used as an orchestral instrument in Vienna after the mid-1730s, Gluck revived it in the original versions of *Orfeo* (1762) and *Alceste* (1767); there is an even later appearance in Gassmann's *I rovinati* (1772).

Instrumental pieces include a concerto by Hoffmeister, divertimentos by Dittersdorf, Gassmann and Pichl, and ballet music by Asplmayr and Starzer. A *Musica da camera* by Starzer was formerly attributed to Mozart as part of K187/159*c*.

In Germany one of the most prolific composers for the chalumeau was Telemann, who had played the instrument earlier in his career. He continued to include a pair of chalumeaux (alto and tenor) in a variety of works long after he had first used the clarinet (in a cantata of 1721); parts for both chalumeau and clarinet occur in a serenata of 1728, where their roles are clearly differentiated. Chalumeaux were often reserved for poignant, dramatic moments, for example in the passion oratorio *Seliges Erwägen*, where they are combined with muted horns, bassoons and muted strings at the beginning of the eighth meditation, 'Es ist vollbracht'. Another example is the Concerto in D minor for two chalumeaux, notable for an unusual degree of chromaticism in its extended passages of unaccompanied writing. The chalumeau appears in over 80 of Graupner's cantatas and in 18 of his instrumental works. He engaged a chalumeau player (who was primarily a virtuoso bassoonist) for the orchestra at Darmstadt in 1734 and subsequently became acquainted with all four sizes of the instrument. His fondness for the sonority of alto, tenor and bass together is illustrated by two suites for this combination; further examples of the use of unconventional textures involving the bass chalumeau include a trio for that instrument with

Chalumeau in C by Liebav (left), and chalumeau in F by Klenig, both first half of the 18th century (Musikmuseet, Stockholm)

viola d'amore and continuo and a triple concerto with bassoon and cello. Other German composers made less use of the chalumeau. Fasch left a single concerto; J.L. Bach, Gottlob Harrer, Hasse, Keiser, J.B. König, J.M. Molter, G.C. Schürmann, Steffani, J.H. von Wilderer and J.D. Zelenka used the instrument in one or two works. Handel composed an aria with two 'chaloumeau' parts for *Riccardo Primo*, written in London in 1727, but it is not certain whether this was included in contemporary performances.

The German oboist Ludwig Erdmann taught the chalumeau at the Ospedale della Pietà in Venice from 1706, and Vivaldi subsequently used it in a total of five works. An obbligato for the soprano instrument occurs in the oratorio *Juditha triumphans* (1716), in an aria concerning the lament of a turtle-dove. Three concertos include parts for the tenor 'salmoè', while a sonata for violin, oboe and organ has an optional chalumeau doubling the bass line throughout.

The overall delicacy of the chalumeau repertory is not reflected in contemporary criticism of the instrument. Walther (1708) observed that it sounded like a man singing through his teeth, while some five years later Mattheson referred to its 'etwas heulende Symphonie' ('somewhat raucous sound'). The *Encyclopédie* described its tone as disagreeable and savage, but conceded that this

could be improved by a good player. More favourable remarks were made by the critic Schubart, writing in 1784–5, who paid tribute to its 'individual and infinitely pleasant character', adding that 'the whole gamut of music would sustain an appreciable loss if the instrument became obsolete'. Towards the end of the 18th century, however, the term 'chalumeau' came to be used almost exclusively in its present-day sense to signify the lowest register of the clarinet.

COLIN LAWSON

Chamaterò [Chamatterò di Negri, Camaterò], **Ippolito** [Hippolito] (*b* Rome, *c*1535–40; *d* after 1592). Italian composer. He was in Padua in 1560–61, where he signed the dedications to his first books for five and four voices in 1560 and 1561 respectively. The latter book includes two works by the Paduan composer Giulio Renaldi (his earliest published works by six years). Chamaterò was elected *maestro di cappella* at the Accademia Filarmonica, Verona, on 1 January 1562, and he remained in the post until December of 1563. There followed a series of mostly short appointments at various institutions in northern Italy, including Vicenza (1565–6), Treviso (1566–7), Udine (1567–70 and again from 1574 until 1577), Padua (1578) and Bergamo (1580–81).

Chamaterò composed his sacred music in the decade following the Council of Trent, and he was keen to declare his allegiance to Tridentine ideals. On the title-page of his Introits of 1574 he declared that the works were according to the 'new missal', referring, no doubt, to the Tridentine Missal published in 1570. And the phrase 'secondo l'ordine del Concilio di Trento' on the title page of his *Salmi corista* (1573) must refer to the new breviary published in 1568. His style is largely clear textured, with attention to both the sound and sense of the text. This is true in his secular music as well and, as with much of the music of the 1560s and 70s, the degree to which musical style is really dictated by current religious politics is open to question.

Of Chamaterò's six books of madrigals, four were published in 1569, during his first period at Udine. It is unlikely that the contents of these four books were all recently composed; the relative stability of his post at Udine may have offered him the opportunity to collect and publish works composed over the previous six or seven years. The books' dedications show a continued allegiance to Veronese patrons and the Accademia. Chamaterò's preference for Petrarch, and Petrarchists like Bembo and Cassola, places him in the tradition of Willaert and Rore. More striking is his predilection for large cycles and, in particular, the sestina: four of the six books open with a setting of a complete sestina by Petrarch. None of Chamaterò's music is published in modern edition, and he has received little attention in the modern literature. That he was highly esteemed in his own day is evident from that fact that he was the dedicatee of a work by Massimo Troiano (in his *Terzo libro delle suerime e canzoni*, 1567) and by his appearance in Ludovico Balbi's *Essercitio* (1589[12]) alongside the most famous madrigalists, from Arcadelt to Marenzio. Further study of his works, in particular his cycles, would do much to fill in the sketchy picture of the madrigal of the 1560s and 70s.

LAURA MACY

Chamberlain, Houston Stewart (*b* Southsea, 9 Sept 1855; *d* Bayreuth, 9 Jan 1927). German writer of English birth. Educated first in England (Cheltenham College, 1867–9) and then in Europe, he moved to Germany in 1885, where he gradually insinuated himself into the Bayreuth circle, playing a major role in the fashioning of the cult. From 1892 to 1896 he devoted himself to propaganda on behalf of Bayreuth, helping to shape the nationalist/*völkisch* ideology with which Wagner's works became indelibly associated in the late Wilhelminian era. His study *Richard Wagner* (1896) presented, in the best tradition of Bayreuth hagiography, an idealized portrait of the composer, his political involvement diminished and the more embarrassing episodes of his life tactfully glossed over.

Chamberlain's magnum opus, however, was *Die Grundlagen des neunzehnten Jahrhunderts* (1899–1901), an idiosyncratic survey of Western history conceived in racial terms. Evincing impressive erudition but flawed methodology, not to mention a militantly nationalistic ideology of Aryan-German supremacy, the *Grundlagen* achieved bestseller status: by 1915 over 100,000 copies had been sold, by 1938 a quarter of a million. In 1908, Chamberlain returned to Bayreuth after an absence of several years. He married Wagner's daughter Eva that year and as one of the most influential ideologues of the pre-Nazi era, played a crucial role in linking the destinies of Bayreuth and the Third Reich.

BARRY MILLINGTON

Chamber music (Fr. *musique de chambre*; Ger. *Kammermusik*; It. *musica da camera*). In current usage the term 'chamber music' generally denotes music written for small instrumental ensemble, with one player to a part, and intended for performance either in private, in a domestic environment with or without listeners, or in public in a small concert hall before an audience of limited size. In essence, the term implies intimate, carefully constructed music, written and played for its own sake; and one of the most important elements in chamber music is the social and musical pleasure for musicians of playing together. In this respect, the term has close connections with the peculiarly German concept and practice of HAUSMUSIK, which refers to the playing of vocal or instrumental music in the home for family entertainment, without audience, and which was much encouraged in the 19th and 20th centuries. 'Chamber music' has also been narrowly defined (for example, by Cobbett) in terms of ensembles of specific types and sizes; but the term is best understood in a broader sense. To limit the term to instrumental ensemble repertory, for example, is to exclude such hybrid works as Schubert's *Der Hirt auf dem Felsen* and Vaughan Williams's *On Wenlock Edge* and to bypass such vocal genres as 16th-century madrigals and 19th-century lieder which share many of the characteristics of chamber music. Similarly, although chamber music is often defined as involving two or more players, much solo repertory such as Renaissance lute music, Bach's violin sonatas and partitas and cello suites and several of Beethoven's piano sonatas fulfils many of the functions and conditions of chamber music.

1. USAGE AND SCOPE OF THE TERM. From its earliest usages the term has had a variety of meanings. During the mid-16th century and the 17th, the Italian term 'musica da camera' and its German counterpart 'Kammermusik' signified ensemble music performed in private, normally by voices and instruments, either at courts or in the homes of the wealthy. In the same period, variants of the French, German and Italian terms were also used to denote the musicians engaged in the performance of private music, such as 'La Musique de la Chambre' (established *c*1530) at the French court, or the 'Cammermusici' at the court of Maximilian II (noted in the court archives, 1540–1600). In such contexts the term could often equally refer to the musical event itself.

During the early 18th century, the term 'musica da camera' was used in theoretical writings (Brossard, *Dictionaire*, 1703; Mattheson, *Das neu-eröffnete Orchestre*, 1713) to refer collectively to instrumental and vocal music whose compositional style and function differed from church and theatre works. In practice these musical distinctions were blurred. As the 18th century progressed, the term became increasingly associated with instrumental music (e.g. sonatas, trios, quartets) intended for performance in courtly or domestic surroundings. Even so, it continued to be used for small-scale secular vocal music performed in private: Burney defined chamber music as 'cantatas, single songs, solos, trios, quartets[,] concertos, and symphonies of few parts' (*BurneyH*), and Castil-Blaze referred to a host of 'agreeable pieces', both vocal and instrumental, including cantatas, madrigals, scenas, single songs, vocal quartets, romances, boleros, barcarolles and nocturnes (*Dictionnaire de musique moderne*, rev. 3/1828 by J.-H. Mees).

It was only towards the end of the 19th century that the term came predominantly to mean instrumental ensemble music for small forces, performed in either a private or a public context. By the early 20th century the term had become specifically associated with the quartets,

1. *'Allegory of Hearing' by Jan Breughel I, from the 'Five Senses' series, 1617 (Museo del Prado, Madrid), showing a table set for music-making, and a broken consort playing in the background*

quintets and piano trios of Haydn, Mozart, Beethoven, Schubert and their successors. The intimate nature of the chamber music repertory, its subtle effects and concentration of musical ideas, allied to the fact that several composers (including Beethoven, Brahms and Bartók) produced some of their most tightly wrought and intensely personal works for string quartet, meant that the term 'chamber music' also came to connote a repertory grounded in the intellect. The second half of the 20th century saw a considerable broadening of what is understood by chamber music as the performed repertory became enlarged, most significantly through the rehabilitation of large amounts of pre-Classical chamber music and its performance on 'period' instruments, though also by the inclusion of contemporary works for chamber forces, many of which conform only loosely to the traditional characteristics of chamber music.

This article defines chamber music broadly, within the context of the meanings assigned to it in different eras. It outlines the types and styles of chamber music that were composed and played from the late 15th century to the 20th and places special emphasis on the social and functional contexts in which this music flourished. However, historical practices varied from locality to locality and developed at different rates. In addition, the extent and nature of much private chamber music activity inevitably remains obscure (although lack of extant documentation does not necessarily imply lack of activity); and quantitative study of chamber music concerts, repertories and audiences, as they developed from the 19th century onwards, is hampered by the fact that concert history is still a relatively unexplored field of study. Nevertheless, surviving musical, visual and documentary sources, along with a few modern, in-depth localized studies, enable some general observations to be made, and a picture to be drawn of chamber music consumption as a changing balance of participation (i.e. playing or singing) and appreciation (listening).

2. TO 1600. At medieval courts a distinction existed between 'loud' music (*alta musica*, *haute musique*), played by such instruments as trumpets, pipes and drums, used for ceremonial and festive events, and 'soft' music (*bassa musica*, *basse musique*), performed by such instruments as harps, fiddles, chamber organs and flutes, sometimes with voices, used at banquets and on more intimate social occasions. Small-scale ensemble music-making, including

the singing and playing of chansons, formed part of the 'soft' music. Initially, music was performed by minstrels rather than courtiers, but during the 15th century this began to change, and by about 1500, partly as a consequence of the development of humanistic values and new attitudes towards music, an ability to make music had become an important social accomplishment for courtiers and aristocrats (women as well as men). Baldassare Castiglione's courtesy book, *Il libro del cortegiano* (1528), which ran to more than 20 editions and was translated into several European languages, recommended that courtiers should be able to sing, read musical notation and play several instruments; it also highlighted the social importance of being able to make music with others in private. Several European rulers developed their musical skills to a high level and greatly encouraged music-making among courtiers; one of the most notable patrons was Isabella d'Este, an accomplished singer, lutenist and player of string and keyboard instruments who enthusiastically cultivated private music-making at the Mantuan court in the early 16th century and actively encouraged the composition of frottolas. Most courts continued to maintain ensembles of players of 'soft' instruments to perform to courtiers in private chambers, though a good deal of music-making, such as the performance of madrigals by mixed groups of singers and instrumentalists, may well have involved a mixture of courtiers and musicians.

The first flowering of private music-making outside European courts dates from the mid-15th century, when the wealthiest members of what has been termed 'a new bourgeoisie' (Fenlon, 1989) began to develop their own musical culture in the home: affluent households owned instruments such as keyboards and lutes; music lessons were taken; and the advent of music printing led to wider dissemination of repertory suitable for domestic music-making. Paolo Cortese's handbook for clerics, *De cardinalatu* (book 2, 1510) includes one of the earliest known references to a specially designated music room ('cubiculum musicae'). In most cities, amateur musicians comprised a small and élite social group, typically the families of merchants, diplomats and professional men, and their musical activities were probably modelled on what they knew of court practices. In addition, a number of musical academies for educated men were established in Italy during the 16th century and imitated elsewhere; in Nuremberg, for example, a 'Krenzleingesellschaft' was set up in 1568 for informal performances of instrumental and vocal music, accompanied by a meal and, in all likelihood, serious and learned discussion.

A large proportion of the repertory heard in courtly and domestic contexts in the late 15th and 16th centuries was polyphonic vocal music, in particular madrigals. Where such music was performed by voices alone in small or medium-size rooms, it was normal to have one singer per part; however, flexible performing practices meant that instruments, such as lutes and viols, often replaced or doubled some of the voices, probably in accordance with the forces and skills that were available, producing what are commonly called 'mixed' or 'broken' consorts. Publishers often described this practice on title-pages: Antonio Gardano's *Canzoni francese* (1539) were 'buone da cantare et sonare', and Susato's 26 chansons (1543) were 'convenables tant a la voix comme aussi propices a jouer de divers instruments'. Some madrigals were intabulated for lute or keyboard, making accompanied solo singing a further performance possibility, while the distinctively English consort song provided an instrumental ensemble accompaniment for one or more singers. Throughout Europe, Latin-texted sacred music was performed in private houses as well as churches, but in England during the second half of the 16th century Latin church music (e.g. Tallis's Elizabethan motets and Byrd's masses) fell out of sacred use and was typically sung and played only in the chamber (Milsom, 1995).

Although vocal pieces could be played by instruments alone, a small amount of ensemble music ostensibly intended specifically for instruments also emerged, particularly in Italy and England. Italian composers such as Claudio Merulo and Florentino Maschera favoured instrumental ricercares and canzonas, and in England a rich and distinctive body of fantasias (or fancies), cantus-firmus pieces (especially In Nomine settings) and suites of dances was composed by Byrd, Tye and others. In Nomine and cantus firmus pieces, with their long tenor notes, would have enabled a player of limited skills to hold his or her own part, although evidence suggests that some of these works were sung rather than played (Edwards, 1970–71; similarly, some textless ricercares and canzonas may have been vocalized). Viol playing began to be widely cultivated by English amateurs only during the 1590s, and much of the contrapuntal repertory from before that date was probably originally written with more skilled players in mind.

By the late 16th century printed sources of instrumental ensemble music were widespread in most of Europe (the English repertory, however, continued to circulate largely in manuscript, suggesting that consort playing was localized around a small number of private houses). To perform a piece of ensemble music, players and/or singers sat in a circle, often round a table, and used either partbooks or a table-book; partbooks were normally laid flat on the table in front of each player (tables with built-in music stands, as shown in Jan Breughel's *Allegory of Hearing*, were probably less usual; see fig.1) and there were no particular instructions as to where people sat. In the case of table-books, there is evidence in English sources to suggest that care was taken over the physical disposition of the parts in the book, and hence around the table (Rastall, 1997).

Solo music for keyboard (such as clavichord, spinet, virginals) and lute was also performed in domestic contexts: the repertory included transcriptions of vocal works, and pieces specially composed for the instruments, including sets of dances and numerous ricercares and canzonas. Published collections were issued by Antico, Gardano, Attaingnant and others. It is unclear whether dance suites – written for either solo instruments or consorts – were intended to accompany social dancing; possibly on occasions when suites were played and listeners were present, some people may have danced to them spontaneously.

3. 17TH AND 18TH CENTURIES.

(i) 1600–1740. The emergence of the *seconda pratica* in Italy around the turn of the 16th century ushered in new musical styles and genres which affected all spheres of musical composition and practice. Stylistic developments included the spread of basso continuo; the development of monody and new, distinctive textures arising from the

polarity between bass and melody lines; heightened concern for poetic expression and intelligibility of the words in vocal music; and, as the 17th century progressed, a growing importance accorded to instrumental music and the violin family and a gradual decline in the popularity of viols. Although opera was the major innovation of the period, several other genres evolved, including some, most notably the cantata and sonata, that were particularly cultivated in private environments. A conscious distinction between vocal and instrumental genres meant that the flexibility of mixing voices and instruments that had prevailed in the 16th-century madrigal gradually disappeared; even so, pragmatic factors could still play a part in performers' choice of instruments, especially in the continuo group.

Secular duets and cantatas were the principal small-scale vocal genres to emanate from Italy in the 17th century. By the early 18th century such composers as Caldara, Alessandro Scarlatti and Handel were producing cantatas in large quantities, and the genre was taking root in Germany (Telemann, J.S. Bach), England (Pepusch, Daniel Purcell) and France (Morin, Bernier); many were written for performance at court, though some reached the domestic market through publication. Italian works for small instrumental ensemble initially carried a variety of labels (canzona, sinfonia, sonata), but by 1700 the term 'sonata' usually signified the standard instrumental genre for domestic consumption. Publishers were eager to issue this repertory, and sets of 'solo' and 'trio' sonatas for one, two or three melody instruments (normally violins but sometimes oboes or flutes) and continuo by such composers as Corelli (whose op.1, 1681, was much imitated), Albinoni and F.M. Veracini were soon available across Europe. Sonatas were also composed outside Italy: Henry Purcell, Bach, François Couperin, Handel and Telemann are the most notable exponents. The trio sonata was characterized by a sharing of contrapuntal interest between the upper melodic parts – a trait most intensely exploited by Bach – and offered musical interest to both listeners and players.

Although some late 17th-century Italian sonatas and concertos consisting of groups of dances were designated *da camera*, and others, usually in four movements and using organ continuo, were labelled *da chiesa*, in practice there was no strict differentiation of style or function (dances occur in *da chiesa* works, for example, while many church sonatas were played in chamber contexts and vice versa). Moreover, it is by no means certain that all dance movements in sonatas were intended for listening alone: some, in particular those labelled 'per ballare' or 'da ballo', may well have been designed for dancing; likewise listeners may have danced to those movements whose dance steps they knew.

French chamber music developed its own characteristics of instrumentation and style. Wind instruments (flute, oboe and bassoon) became prominent in ensemble works, and their use spread to other countries. The bass viol, which enjoyed a special status in France, maintained a vital presence in French chamber ensembles well into the 18th century. It was used in cantatas and sonatas, both as a continuo instrument and as a solo part independent of the bass line (as in Montéclair's *Ariane et Bachus*, 1728, and Rameau's *Pieces de clavecin en concerts*, 1741). Several composers, including Marais and Couperin, wrote *Pièces* for bass viol and continuo.

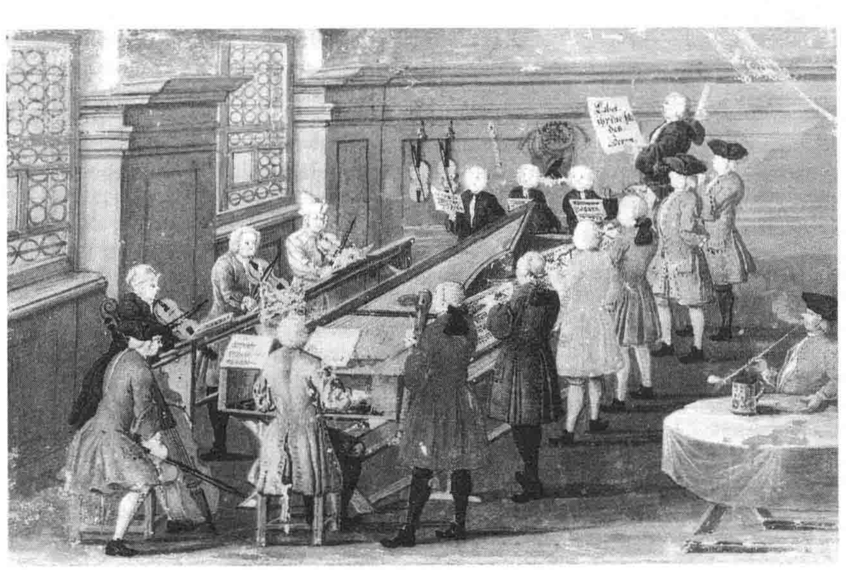
The older chamber genres did not die out overnight. Italian ensemble madrigals and instrumental music continued to be written and published until the 1630s and 40s, though *basso seguente* parts began to be added to madrigals from about 1600 (in 1621 Milanuzzi reprinted Pomponio Nenna's *Il primo libro de madrigali* with continuo bass part). At the same time, madrigals for one, two or more soloists and continuo (by such composers as Caccini, Monteverdi and Bartolomeo Barbarino) came to the fore before the madrigal ultimately gave way to the accompanied aria, chamber duet and cantata. In France, several collections of *airs* either for voice and lute or for several voices were published by Ballard in the first half of the 17th century, though from the 1640s the lute began to be replaced by continuo. The dance suite for solo instrument (most typically keyboard) survived until the mid-18th century, embracing new dances and idioms and developing a host of localized identities across Europe.

In England domestic consort-playing and composition were sustained well into the 17th century, much longer than elsewhere, perhaps partly as a consequence of the absence of court and theatrical musical entertainments during the Civil War. Most of the English repertory, from continuo songs and instrumental pieces to consort music, circulated in manuscript, as it had in the previous century, and many wealthy families owned a chest of viols, normally two trebles, two tenors and two basses. Contrapuntal genres such as fantasias and In Nomine pieces by Jenkins, Simpson, Locke, Purcell and others were essayed (some as late as the 1660s and 70s), as were works using dance forms, divisions on ground basses and fantasia-suites; eventually these genres were replaced by more modern ones such as solo or trio sonatas, as the violin began gradually to be taken up by amateur players and the availability of printed chamber music (including works from abroad) increased.

Ensemble music-making continued to thrive at European courts. Some rulers, such as Philip IV of Spain and the Elector of Bavaria, Maximilian II Emanuel, were enthusiastic amateur musicians (both were keen viol players) and participated in private chamber music; moreover, with music increasingly becoming a symbol of the ruler's political status and power, many also employed a group of chamber players to perform in small-scale, private court concerts and to play privately with members of the ruler's family. Musicians were sometimes appointed specifically to compose and oversee the performance of chamber music: thus Sigismondo d'India became *maestro di musica della camera* at the court of Carlo Emanuele I in Turin (1611), and Henry Lawes 'Composer in ye Private Musick for Lutes & Voices' in London (1660). At the opulent court of Louis XIV at Versailles, the group designated 'La Musique de la Chambre' played for *fêtes*, *tragédies en musique*, ballets and other 'public' events; private chamber music took place in the king's private apartments before a small audience of family members and distinguished guests, and was performed by a select group of musicians. Couperin wrote his *Concerts royaux* for such occasions. At many courts, small-scale vocal and instrumental music was also supplied for special banquets: at Dresden (where Schütz worked) *Tafelmusik* was one of the principal responsibilities of court musicians.

Outside the courts, private music-making was still practised only in wealthy homes – instruments such as lutes and harpsichords were expensive – though by 1700

it was becoming a socially desirable leisure pursuit in upper middle-class circles. Men typically played bowed string instruments, while women played lutes, guitars or keyboard, or sang. Publishers and instrument sellers in Paris, Amsterdam and London flourished, exporting their wares across Europe and often showing a keen awareness of the amateur market: publications such as Telemann's *Kleine Cammer-music* (1716) and *Musique de table* (1733) emphasized the domestic function of the product, and some publishers catered specifically for amateurs of limited musical abilities. Domestic music was increasingly seen as a status symbol and an integral part of home life; in Bologna, where there was no court, wealthy households are said to have employed musicians as a means of vying for social prestige.



Other sources of patronage for chamber music included the Italian *accademie*: cantatas and instrumental music, often specially composed, were included in the annual prizegiving ceremony of the Accademia del Disegno di S Luca in Rome, for example, and some composers mention the academies in the dedications to their published chamber music. Cantatas, sonatas and other small-scale genres also played an important role in the weekly *conversazioni* held in the palaces of Cardinals Ottoboni and Pamphili and of Prince Ruspoli in Rome; Antonio Caldara, who served Prince Ruspoli from 1709 to 1716, wrote dozens of chamber duets and solo cantatas for this purpose, as did Handel. In German and Dutch towns collegia musica, small groups of musicians who gathered regularly to play music, were common (fig.2). A collegium musicum under Sweelinck's direction was established in Amsterdam in the early 17th century for a small group of well-to-do amateur musicians; in Leipzig collegia were popular with students eager to read through ensemble music under the guidance of a professional musician. Telemann directed one such collegium, 1702–4, and was succeeded by Bach, who presided over meetings in Zimmermann's coffee house. Bach may well have written some instrumental works, for instance the flute sonata BWV1030 and the second volume of *Das wohltemperirte Clavier*, as well as secular cantatas, notably the 'Coffee Cantata' BWV211, for this collegium.

See also ACADEMY; COLLEGIUM MUSICUM; and TAFELMUSIK (i).

(ii) 1740–1800. By the 1740s many composers, such as J.M. Leclair and G.B. Sammartini, were writing chamber music in the simple, elegant and forward-looking idiom (characterized as *galant*) that gave graceful melody a dominant role. During the second half of the 18th century the continuo gradually disappeared from instrumental chamber music; the driving Baroque bass line went with it, to be replaced by the distinctive Classical style, typified by its translucent textures, slower harmonic change and clear structural paragraphs. At the same time, the traditional ties of composers to court patrons were loosening and commercial opportunities widening; in Paris and London in particular the prosperous and socially selfconscious middle classes were increasing in number and becoming important patrons of chamber music, purchasing instruments (especially pianos), printed music and, increasingly as the period progressed and commercial concert life developed, concert subscriptions and tickets. Most of Haydn's large chamber music output (string quartets, sonatas, songs, piano trios), for example, was written for publication and performance outside his patron Prince Nicolaus's court at Eszterháza; his baryton trios, unpublished in his lifetime, stand apart as being designed for the prince's private consumption.

The biggest centres of music publishing in the late 18th century were London, Paris and (to a lesser extent) Vienna. In these cities a large selection of chamber music was published; according to one estimate (Mongrédien, 1986) several thousand quartets by about 200 composers were published in Paris between 1770 and 1800, suggesting a market of considerable size. Some publishers cultivated contacts in foreign cities, not only to sell their own goods abroad but also to import music from foreign firms. Nevertheless, although the market for domestic music in urban centres was clearly expanding, it was – like markets for other luxury goods (such as fashionable clothes and jewellery) – still a limited one, beyond the pocket of most: in London, a set of six sonatas typically cost 10s 6d (Sadie, 1990), far more than a clerk or tradesman could then afford.

The late 18th century saw the introduction of a host of chamber genres, several of which made use of the new

2. Rehearsal by a collegium musicum for the performance of a cantata 'Lobet ihr Knechte des Herrn': painting from a family album, c1775 (Germanisches Nationalmuseum, Nuremberg); the disposition of the musicians around the harpsichord illustrates the advent of Baroque placement

piano. Sonatas for keyboard with an optional violin or flute line that could be dispensed with easily were known as accompanied sonatas. Many publishers offered an explicit choice of keyboard instrument, as in Robert Bremner's publication of Eichner's *Three Sonatas for the Harpsichord or Forte Piano with Accompanyments for a Violin and Bass ad libitum* (1771). Those that additionally included parts for cello were effectively precursors of the piano trio. The optional parts normally did little more than sustain harmonies and follow or double melody or bass lines, and were both printed and sold separately. Especially suited to amateurs of limited accomplishments, accompanied sonatas were standard items in most publishers' catalogues, particularly in Paris and London. Other keyboard genres tailored to the amateur market included variations, rondos and simple solo sonatas (by such composers as Dussek and Shield) which typically made specific reference to popular tunes. Accompanied solo songs, including arrangements of operatic arias and theatrical songs, lieder and canzonets, and keyboard duets for four hands on one instrument (as composed by Johann Christian Bach, Dussek and others) were also part of the domestic repertory. Duets for two melody instruments, typically two flutes, two violins or violin and cello, were particularly popular among amateurs; although much of the repertory was technically simple and musically lightweight, it attracted such composers as Pleyel, Mozart and Boccherini.

The quintessential genre of late 18th-century chamber music was the string quartet, particularly as it developed in Vienna in the hands of Haydn and Mozart from 1770. Intended for skilled players and connoisseur listeners, the Viennese string quartet was characterized by its balanced part-writing, imaginative textures, conversational idiom and tightly wrought musical argument. Works such as Haydn's op.20 quartets, with their contrapuntal working, typically demanded performance in an intimate environment, before a few serious-minded and attentive listeners. Michael Kelly, in his *Reminiscences* (1826), described a small social gathering in Vienna (1784) at which quartets were played by Haydn, Dittersdorf (violins), Mozart (viola) and Vanhal (cello), with Paisiello among the listeners, and remarked that a 'greater treat, or a more remarkable one, cannot be imagined'. Similar approaches to composition obtained in other chamber works (e.g. Mozart's string quintets with two violas); indeed, by the 1780s some composers were also moving towards a more democratic role for the melody instrument(s) in accompanied sonatas and piano trios: Mozart's *Sonata per il cembalo e violino* K454 (1784) is a notable example. In some works, composers tended to highlight the technical talents of particular performers for whom the works were intended, at times producing highly concertante textures: for instance, Haydn's six quartets opp.54 and 55 dedicated to the violinist Johann Tost, and Mozart's three 'Prussian' quartets K575, 589 and 590, thought to have been written with Friedrich Wilhelm II, King of Prussia and a skilled amateur cellist, in mind (Friedrich Wilhelm was also the recipient of string quartets and quintets sent to him from Spain by Boccherini).

In Paris, string quartets in which the four instruments played equal roles were routinely described by publishers as *quatuors concertants* (sometimes *quatuors dialogués* or *quatuors concertants et dialogués*); according to N.E. Framery (*Encyclopédie méthodique*, Paris 1791) this distinguished them from quartets 'where there is only one principal part while the others merely accompany'. *Quatuors concertants*, written by such composers as Vachon, Bréval and Blasius, particularly appealed to the amateur market for, unlike the quartets of Haydn and Mozart, they were relatively easy to play; the musical texture may have aped the French art of social conversation (Hanning, 1989), emphasizing thematic exchange and allowing each instrument a solo moment in turn while minimizing (though by no means suppressing) the contribution of the other parts. Some *quatuors concertants* were written for woodwind ensembles, others for combinations of strings and wind. Several quartets published in London at the same period, such as Rauzzini's six quartets op.6 (*c*1778) and J.C. Bach's op.8 (1772), blended a keyboard or wind instrument with strings, while some string quartets by English composers (e.g. Joseph Gibbs's quartets, 1778) and even a London edition of Haydn's op.33 quartets (?1799) were issued with an ad libitum figured bass part; since solo and trio sonatas continued to flourish in England well into the late 18th century, it seems likely that keyboard players were considered an essential, perhaps stabilizing, presence in English amateur ensembles. Comfortably playable arrangements of concert works and operas (often for keyboard and accompanying instrument) were also part of the domestic repertory; composers active in France, such as Cambini, arranged popular and theatrical tunes for quartet, specially designating them *quatuors d'airs variés* or *quatuors d'airs connus*.

Across Europe and in the Russian Empire and the New World, domestic music-making, both within the family group and among friends and visitors, thus became an important social activity in aristocratic and respectable middle-class circles. The ability to play a keyboard instrument and to sing were deemed important social accomplishments for women and may even have acted as catalysts to courtship and marriage. Strong associations between gender and instruments in the domestic context had begun to develop, and although boundaries were sometimes broken it was considered appropriate by the late 18th century for females to play only keyboards, plucked string instruments (harp, guitar) and to sing, and for males to play the violin, cello or flute (fig.3). Related to the mainstream traditions of domestic music-making in the late 18th century was the English predilection for glees and catches (unaccompanied partsongs for male voices), which were traditionally performed by amateurs in the home, after dinner. Not only did English composers write and publish them in large quantities, but the practice was also institutionalized by a number of London societies, including the Noblemen and Gentlemen's Catch Club (from 1761) and the Glee Club (1783–1857).

Chamber music continued to be performed by professional musicians at courts (e.g. Mannheim and Berlin) in what were effectively private concerts given to an assembly of courtiers, noblemen and visiting dignitaries. In Bohemian lands the liking for wind instruments produced a substantial repertory of Harmoniemusik, written for small ensembles of pairs of wind instruments and including such works as Haydn's divertimentos of 1759–61 (for Court Morzin's Harmonie at Lukaveč); ensembles were frequently employed to play at aristocratic houses, often during dinners and at parties.

3. Concert in the home of the Comtesse de Saint-Brisson, 1773: detail of engraving by Antoine-Jean Duclos after Augustin de Saint-Aubin; note that the keyboard player is a woman

The development of commercial concert life in the late 18th century, particularly in London, provided what was to become an additional forum for the performance of chamber music – a forum that increased the number of potential listeners and provided them with the opportunity to hear chamber music beyond their own technical capabilities performed by professional musicians. In London, from the 1770s, items of chamber music, particularly quartets and quintets, appeared regularly in mixed concerts alongside symphonies, overtures, concertos and songs. Much of the repertory, in particular several of Pleyel's quartets and quintets, exploited concertante textures and made heavy demands on virtuosity; Haydn's opp.71 and 74, written for Salomon's concerts of 1794, are a tour de force of brilliant quartet writing. In Vienna and Paris, chamber music was rarely included in public concerts before 1800, but found a regular outlet in the private concerts that formed part of the vibrant, aristocratic salon cultures in both cities. In Vienna some of Mozart's and Beethoven's works were heard at the residences of Baron van Swieten and Prince Lichnowsky, while in Paris composers frequently wrote *quatuors concertants* for salon performances and dedicated them to their host or hostess.

4. FROM 1800 TO WORLD WAR I.

(i) Concerts and repertory. During the 19th century commercial concerts devoted to chamber music became an established part of the musical calendar in many cities, and for most amateur musicians listening to concert performances of chamber music became just as important as – if not more important than – participating in it privately. Notable early developments took place in Vienna (Ignaz Schuppanzigh held subscription series of instrumental chamber concerts at Count Rasumovsky's palace from 1804–5), Berlin (Karl Möser's quartet *soirées* began in the 1813–14 season) and Paris (Pierre Baillot's quartet concerts were established in 1814) – all cities with lively musical salon cultures. By the 1840s there were chamber music concerts in many European centres, including Dresden, Pest and London. Important series founded in this period were the Gesellschaft der Musikfreunde's Musikalische Abendunterhaltungen in Vienna (1818–29, 1831–40), the series run by the Tilmant brothers (1833–49), Alard and Chevillard (1837–48) and the Dancla brothers (1838–1870) in Paris, and the Quartett Concerts (1836–59), Classical Chamber Concerts (1836–9) and the Musical Union (1845–81) in London (fig.4). The core repertory of most concerts was instrumental trios, quartets and quintets by the Viennese trinity (Haydn, Mozart and Beethoven), although there was a good deal of local variation in the content and shape of programmes. Baillot's concerts in Paris presented instrumental repertory only (typically five ensemble works and one violin solo, played by Baillot with piano accompaniment), whereas the longer programmes of many London concerts, which included piano and duo sonatas as well as works for larger instrumental ensembles, were relieved by the interspersion of songs and duets

4. String quartet, including Vieuxtemps (left) and Piatti (right), at the Musical Union, London: engraving from the 'Illustrated London News' (27 June 1846); many in the audience are seen consulting their 'analytical' programme notes; John Ella, the concerts' organizer, is in the front row, fourth from the right

between the instrumental items; the programmes of the Gesellschaft der Musikfreunde concerts offered few large-scale instrumental chamber works, being chiefly made up of small-scale instrumental and vocal pieces (including a number of Schubert's lieder), usually with a string quartet to open proceedings and a work for vocal ensemble (often one of Schubert's vocal quartets) to end.

Although the growth of chamber music concerts was clearly bound up with the general expansion of concert life in urban centres during the 19th century and with an increasing middle-class demand for music, quartet *soirées* and other types of chamber concert appear to have been a refined taste, appealing to minority groups of enthusiasts within cities. As the century progressed, the chamber music concert repertory, like the orchestral one, took on an increasingly historical dimension, centred on the Viennese classics and works that emulated them (such as Mendelssohn's quartets and Hummel's chamber music with piano). Modern works in a Romantic idiom (by composers such as Schumann and Brahms) were added gradually. At the same time a gulf was opening up in the minds of some critics between serious music – of which instrumental chamber music could be seen as the epitome – and lightweight, popular pieces (e.g. fantasias or potpourris), often designated salon music or *Trivialmusik*. (The fact that some concert-givers leavened their programmes with lighter works, presumably in an attempt to broaden their audience appeal, may well have contributed to such critical censure.) In line with this trend, many chamber concerts developed decidedly cerebral overtones: from the mid-1840s many London series (the Musical Union, the Quartett Association, the Monday Popular Concerts) provided concert-goers with analytical programme notes to help them understand the structure of the works performed and listen in a musically informed way; at about the same time miniature scores of the core Viennese repertory were published by K.F. Heckel of Mannheim, and distributed through agents in Vienna, Leipzig, London and Moscow. Familiarity with the complete Beethoven quartets, even the late works, grew, not only through the activities of bespoke organizations such as the Beethoven Quartett Society (London, 1845–52) and the Société des Derniers Quatuors de Beethoven (Paris, 1852–after 1870), but also within standard concert programmes. Intimacy and attentiveness were stressed during concerts, and some concert-givers such as John Ella, who ran the Musical Union in London, placed the performers in the centre of the room, with the audience encircling them, to encourage close listening and to draw the audience into the music.

In several cities the salon tradition continued to thrive alongside public concerts, with many central European salons (e.g. in Berlin and Paris) becoming increasingly dominated by the bourgeoisie. Some salons were given over to 'serious' chamber music, but others were built around more lightweight fare. In mid-19th-century Berlin, intellectuals, artists, philosophers, writers and businessmen gathered, often in the houses of Jewish families, for serious music and conversation. Joachim, Clara Schumann and Jenny Lind were among the leading musicians who performed at these events; composers, including Robert Schumann and Mendelssohn, presented their own music, sometimes using the occasion to try out new works.

Knowledge of the spread and nature of chamber concerts and repertories in the second half of the century is much patchier than that of the first half, but the number of public concerts seems to have continued to increase, with repertories remaining based on the emerging canon of Viennese classics, and the shapes of programmes subject to local tastes and traditions, both in established centres of concert-giving and elsewhere. Among the several concert series founded during the period were the Mason and Thomas Chamber Music Soirées (1855–68) in New York, the Société de Quatuors Armingaud et Jacquard (1856–68) in Paris, the Kammermusikverein (1876–) and Czech Society for Chamber Music (1894–) in Prague, and the South Place Sunday Popular Concerts (1887–) in London. In the 1860s and 70s chamber concerts were established in Italy and Spain, countries whose musical life had hitherto been dominated by operatic traditions. The wave of interest in instrumental music in post-unification Italy spawned a number of quartet societies, in Florence (1861), Milan (1864), Turin (1866), Rome (1874) and elsewhere; in Madrid a quartet society for the performance of classical chamber music was founded in 1863. Some concerts, for instance those of the Musical Union in London and the Quartett-Abend in Berlin, presented more modern-looking packages of three or four contrasting instrumental works (e.g. the

Quartett-Abend of 29 October 1856 opened with Haydn's quartet op.77 no.1, continued with Mendelssohn's op.44 no.2 and concluded with Beethoven's op.127), but such programming was not yet common.

Schubert's instrumental chamber music, much of which lay unpublished after his death, gradually worked its way into the repertory during the second half of the century. This was due in part to the efforts of Joseph Hellmesberger, whose chamber concerts in Vienna in the 1850s and 60s brought Schubert's string quintet and some of his quartets (notably 'Death and the Maiden' D810, the G major Quartet D887 and the *Quartettsatz* D703) to the concert platform. Among chamber works written in the later part of the century were pieces by Dvořák and Smetana, with their strong national flavour, and the classically inspired output of Brahms. In France the Société Nationale de Musique (inaugurated in 1871), a forum for young composers, fostered chamber music among other forms of composition; its legacy includes works by Saint-Saëns, Franck and Fauré. In Russia the publisher M.P. Belyayev, who set up quartet evenings in St Petersburg in 1891, encouraged Rimsky-Korsakov, Borodin and their circle (the composite quartets *Les vendredis* and *Quatuor B-La-F*, written for his musical evenings, are a notable monument to his patronage). By the first decade of the 20th century several of these new works (including Dvořák's String Quartet op.96, his Piano Quintet op.81 and 'Dumky' Piano Trio op.90, Smetana's Quartet no.1 'From my life', Fauré's Piano Quartet no.1, Tchaikovsky's Quartet no.1, Borodin's Quartet no.2 and much of Brahms's chamber music) had been assimilated into the central repertory.

Most concert series were given by regular groups of locally based players, but some promoters were keen to engage artists with drawing power on their European tours: thus many top-class artists, especially pianists such as Clara Schumann, Alfred Jaëll and Hans von Bülow, appeared in London at the Musical Union and at Chappell's Popular Concerts. Towards the end of the 19th century a small number of permanent, touring string quartets began to form, signalling the beginnings of a break with past practices and anticipating what was to become a widespread trend 50 years later. The precedent, with the attendant benefits of opportunities for intensive rehearsal and a resultant unity of ensemble and tone, had been set much earlier by the Müller brothers' quartet, active 1831–55, and followed by a few others (usually family groups). Famous ensembles include: the Joachim Quartet (1869–1907), which gave highly acclaimed performances of the late Beethoven quartets; the Czech Quartet (1892–1933), with Josef Suk (i) as second violin; the Brodsky Quartet (*fl* Leipzig, *c*1883–91, and Manchester, 1895–1921); and the Kneisel Quartet (1885–1917), the first permanent touring quartet in the USA. A number of all-female chamber groups emerged in Britain around the turn of the century, due largely to the fact that although the number of women capable of playing string instruments to an advanced level was increasing, professional orchestral openings for them were rare; one particularly successful quartet was led by Norah Clench (a pupil of Joachim) and gave concerts across Europe from about 1906 to 1913. Concerts focussing on one soloist (typically a pianist, or a singer and accompanist) became established towards the end of the 19th century, but programmes were generally quite different from what became the standard recital format in the 20th century. In London in the pre-World War I decade, programmes embraced diverse repertory (e.g. trivial piano pieces sat alongside 'serious' sonatas), and the soloist was usually 'assisted' by others.

Most 19th-century chamber music heard in concerts was written with professional players, sometimes particular instrumentalists, in mind. Indeed, the quasi-orchestral sonorities and rhetorical gestures of much chamber music, from Beethoven's op.59 quartets and 'Kreutzer' violin sonata onwards, suggest that composers were increasingly addressing the public arena of the concert room, rather than the home environment. A large amount of the piano chamber repertory of the latter part of the century, such as the piano quartets and quintets of Schumann, Brahms, Dvořák and Fauré, boasts a particularly brilliant, at times concerto-like, keyboard part. Duo sonatas (especially the violin sonatas of Brahms, Franck and Fauré) do likewise, although, as with piano quartets and quintets, musical interest is shared between the piano and the other instrument(s). The string quartet repertory similarly makes heavy demands of its players, not only in terms of individual technique (e.g. Beethoven's E♭ Quartet op.74; Smetana's Quartet no.1), but also in terms of ensemble playing (e.g. Beethoven's late quartets, Brahms's quartets). In the early part of the century, the *quatuor brillant*, an extreme example of virtuosity within chamber music, enjoyed a short-lived popularity. Characterized by a concerto-like first violin part and rudimentary accompaniments in the lower lines, it flourished in France and Germany (particularly in the hands of Rode, Kreutzer and Spohr) and proved well suited to performance by travelling violin virtuosos.

The musical language of Romanticism, with its dramatic contrasts of timbre and vivid colouring, was in many respects at odds with the intimate string quartet medium, and 19th-century composers' likings for rich resonances and chromatic colourings may have made larger string ensembles, such as quintets, sextets and even octets, or ensembles with piano and/or woodwind, intrinsically more comfortable forces to work with. Moreover, the legacy of Beethoven, the growing mystique surrounding his late quartets, and the domination of his works at the apex of the chamber music canon throughout the century may have contributed to caution on the part of late 19th-century composers in approaching the quartet genre: few composers produced more than a handful of published quartets, and Brahms's destruction of some 20 works before his op.51 is well known.

(ii) Domestic music-making. Domestic music-making continued to flourish in the 19th century, although it increasingly developed and defined its own repertory, distinct from that of the concert hall. The piano, especially later in the century, became the pre-eminent domestic instrument, emblem of female gentility and social respectability, and affordable by a broad band of the middle classes in northern and western Europe and North America. Easy solo piano pieces, piano duets (e.g. waltzes, quadrilles and marches) and piano-accompanied songs, intended specifically for the home or salon and mostly lightweight in conception, were the mainstay of 19th-century music publishers' catalogues. Most composers produced domestic music of this description, though in the hands of Schubert, Schumann, Mendelssohn and Brahms the domestic piano and vocal genres reached

notable artistic heights. Singing, like piano playing, remained an important social accomplishment for women, but men were not wholly excluded: they often sang songs and ballads and took part in family singing of hymns and sacred songs around the piano. In the early part of the century in Germany, Austria and Scandinavia, male-voice singing groups enjoyed considerable popularity. Schubert's male-voice quartets were frequently performed alongside his lieder and piano music (waltzes, duets etc.) at the informal evenings of music, eating, dancing and games (known as Schubertiads) held in the homes of his Viennese acquaintances.

Alongside piano duets, works for two melody instruments (usually violins or flutes) continued to flourish in the early 1800s, being taken up by Beethoven, Kalliwoda, Spohr and others. With new instruments came new repertory. The concertina (patented in 1829) was fashionable as a domestic instrument particularly in England and Germany until the early 1900s; the family of instruments (treble, tenor and bass) spawned its own stock of pieces (solo fantasias on operatic airs, character-pieces) but could also be used to play string quartets. The harmonium ('cottage organ') also emerged as a domestic instrument in the later 19th century, especially in the USA and central Europe (fig.5). Much of its repertory consisted of arrangements, and some publishers issued optional harmonium accompaniments to songs; the best-known bespoke chamber composition for the instrument is Dvořák's *Bagatelles* for two violins, cello and harmonium.

Although there was an ostensible gulf between the domestic and concert repertories, the public and private spheres of musical activity were in fact linked. Well-known pianists, for example, endorsed specific makes of piano, and the growth of concert-going encouraged publishers to issue a large repertory of transcriptions and arrangements of pieces from the concert hall. The practice, begun in the 18th century, of arranging large-scale concert or operatic works for small ensemble or solo keyboard flourished in the early 19th century. Thus London publishers issued arrangements of Haydn's symphonies for flute, string quartet and keyboard, and excerpts from Mozart's and Rossini's operas for string quartet or for keyboard and accompanying instrument; in France instrumental arrangements of operatic excerpts for domestic performance were particularly popular. By the mid-19th century the piano duet (usually for four hands on one piano) was becoming the standard medium for arrangements of concert works: the symphonies and chamber music of Haydn, Mozart and Beethoven were thus transported from the concert hall into the home. The player-piano, which began to come into vogue as a luxury instrument (particularly favoured by men) in America and, to some extent, Europe in the first decade of the 20th century, was a further means by which transcriptions of concert music could be consumed, and one that enabled non-playing music-lovers to enjoy concert works, including chamber music, in the home.

In domestic circles the performance of string quartets was mainly the province of skilled amateurs, and of professional musicians playing for recreation. Modern pieces, such as Brahms's and Dvořák's quartets, with their increasing technical demands, were probably usually

5. Poster by the Estey Organ Company, Brattleboro, Vermont, advertising their 'cottage organ' and 'organ method', c1890

attempted only by professionals; the same was true of the piano chamber repertory (for instance Brahms's piano trios and duo sonatas). Even the less demanding Viennese works may have been beyond the technical capabilities of most amateur players, though groups may have elected to play fast movements below tempo, to perform simple movements (slow movements and minuets) only, or to battle through regardless. Some composers and publishers catered explicitly for amateur needs: in the early 19th century Georges Onslow, an experienced amateur cellist, wrote numerous string quintets which he tried out with friends before they were published with alternative scorings (two violas or two cellos, or with double bass); nearly a century later piano-rolls of the keyboard parts of piano chamber works by Brahms, Tchaikovsky and others were being manufactured and sold, offering above-average amateur string players the opportunity of trying repertory that was beyond the technical capabilities of most amateur pianists.

See also CONCERT (ii) and RECITAL.

5. AFTER WORLD WAR I. Chamber music after World War I was characterized by a number of changes in its creation and consumption, themselves bound up with shifting aesthetic, social and economic factors.

(i) Composition. Reactions against the large forces and emotional excesses of late Romanticism led in part to a renewed interest in chamber music composition, beginning in the early 20th century. Not only did chamber music offer composers the discipline of writing for leaner forces, but also, because it required few players, rehearsals and public performances were more viable, both practically and economically. The rejection of 19th-century traditions, and the quest for individuality, contributed to increasingly imaginative combinations of instruments and to the appearance of the voice (with or without text) in instrumental pieces of chamber dimensions. Works such as Webern's Quartet op.22 (tenor saxophone, piano, clarinet and violin), Messiaen's *Quatuor pour la fin du temps* (piano, violin, clarinet and cello), Boulez's *Le marteau sans maître* (contralto voice, alto flute, guitar, vibraphone, xylorimba, percussion and viola) and Maxwell Davies's *Ave maris stella* (flute, clarinet, marimba, piano, viola, cello) broadened the instrumental spectrum, while pieces requiring electronic amplification (e.g. Crumb's *Black Angels* for electric string quartet), combining acoustic instruments or voices with tape (e.g. Berio's *Différences* for flute, clarinet, harp, violin, cello and tape or Babbitt's *Philomel* for soprano voice and tape) or with live electronics (e.g. Stockhausen's *Mikrophonie I* for tam-tam, two microphones, two filters and potentiometers, or his *Solo* for one melody instrument and manipulated tape feedback), led chamber music in new directions. In addition, some composers wrote works for small orchestra with one player per part – for example Berg's *Kammerkonzert* for piano, violin and 13 wind instruments (Schoenberg's *Kammersymphonie* op.9 for 15 instruments of 1906 set the precedent) – creating the related genres of chamber symphony and chamber concerto (*see* CHAMBER ORCHESTRA and CHAMBER SYMPHONY).

The stylistic pluralism of 20th-century music had its effect on chamber works, through such techniques as serialism (Schoenberg's String Quartet no.4), neo-classicism (Stravinsky's Octet), aleatoricism (Cowell's *Mosaic Quartet*) and minimalism (Nyman's String Quartet no.2). Traditional chamber genres (sonatas, piano trios etc.) survived to varying extents and in new conceptual guises, with only the string quartet enjoying something of a rejuvenation in the hands of Bartók (whose quartets rival those from Beethoven's late period in intellectual rigour, emotional intensity and frequency of performance), Shostakovich, Janáček, Britten, Tippett, Ligeti and Carter. Such works clearly suggest that the quartet has maintained its magnetism as a vehicle for the concentrated expression of a composer's innermost thoughts. Some composers have rejected generic labels while continuing to write for traditional forces (e.g. Terry Riley's *Salome Dances for Peace*, for string quartet). New directions in the post-World War II period include a tendency towards theatricality (e.g. Roger Reynolds's *The Emperor of Ice Cream*, which requires performers to change their positions on stage during the performance) and techniques that sit uneasily with the inwardness and communion associated with chamber music (e.g. Lutosławski's aleatory String Quartet, which requires the players to avoid coordinating with each other), thus challenging the aesthetics of the genre (Bujic, 1982).

A number of initiatives emanating from institutions and individuals have stimulated and supported 20th-century chamber music composition. In 1922 the Internationale Kammermusikaufführung Salzburg gave birth to the International Society for Contemporary Music, an important supporter of chamber music during the inter-war years. An annual festival of contemporary chamber music was established in Donaueschingen in 1921, later moving to Baden-Baden (1926) and eventually widening its scope. In the USA the benefactor ELIZABETH SPRAGUE COOLIDGE instituted a chamber music festival in Pittsfield, Massachusetts (1918–24), established a foundation (1925) to fund concerts at the Library of Congress in Washington, and commissioned a host of new chamber works from Bartók, Webern, Casella, Bloch, Martinů and others (fig.6). In England the businessman W.W. COBBETT carried out similar acts of philanthropy, commissioning new works from composers and financing several awards, including composition prizes at the RCM in the 1920s, and the competition (established 1905) for 'phantasy' chamber works (multi-section, one-movement pieces that took their inspiration from the Elizabethan viol fantasia; winners included Bridge and Howells). The years after World War II saw further direct support for the composition and performance of contemporary chamber music, including the introduction of residences for chamber ensembles in universities (especially in the USA and UK), the prevalence of chamber media in international composition competitions and the establishment of commissioning programmes by such organizations as Chamber Music America (1983). Other, more general measures, for instance the establishment of festivals and societies for the promotion of new music, and public broadcasting policies and record labels catering for minority tastes, have contributed to a continuing interest in new works of chamber proportions. However, in spite of these efforts, and with some notable exceptions (for instance the quartets of Bartók, Shostakovich, Janáček, Ravel, Barber and Tippett), most 20th-century chamber music has remained on the periphery of the mainstream concert repertory, which has become anchored around a relatively small number of canonic works, largely from the past.

Most 20th-century chamber music has been written for the increasing number of highly skilled instrumentalists

6. Recording chamber music at the NBC studios, New York, 1935: Elizabeth Sprague Coolidge and Walter Koons of NBC, with the Manhattan String Quartet

on the professional circuit and intended for use in the concert hall (and through the new format of gramophone recordings). Works such as Bartók's and Carter's quartets are well beyond the capabilities of most amateurs, requiring a group of players with virtuoso instrumental techniques who are able to cope with the difficulties of ensemble and intonation inherent in the writing.

(ii) Ensembles, sound recording and concerts. The formation of permanent ensembles of professional players, already in evidence towards the end of the 19th century, increased dramatically in the 20th, particularly after World War II when technical standards of performance were raised to unprecedented levels. Among the many groups that established significant international reputations were the Léner, Kolisch, Busch, Pro Arte, Budapest, Juilliard, Amadeus, Cleveland, Tokyo, Lindsay and Alban Berg quartets, and the Beaux Arts and Borodin trios; several ensembles, for instance the Boston Symphony Chamber Players and the Czech Philharmonic Wind Quintet, were formed from the ranks of professional orchestras. The emergence in the 1950s and 60s of the 'early music' movement, which brought large quantities of pre-1750 chamber music to the fore, gave rise to ensembles devoted to the performance of music on period instruments and in historically informed styles; by the late 20th century there were several groups specializing both in Renaissance and Baroque chamber music (e.g. Fretwork, Trio Sonnerie, Purcell Quartet) and in the Classical and early Romantic repertories (Salomon Quartet, Quatuor Mosaïques, London Fortepiano Trio). In addition, a division has emerged between ensembles that play mainly the core concert repertory of works from Haydn to Tippett on modern instruments (such as the Lindsay and Talich quartets, and the Nash Ensemble) and those that specialize in the performance of new music (such as the Arditti and Kronos quartets and the Ensemble Inter-Contemporain).

From the 1920s, broadcasts and sound recordings brought far-reaching changes to the consumption of chamber music, opening up the repertory to those who had hitherto been unable – for whatever demographic, social and/or economic reasons – to attend chamber concerts, and increasing the means by which chamber music enthusiasts were able to gain greater familiarity with the repertory through hearings in their own homes. Chamber music was, by its very nature, apt for domestic consumption in this way (listening to Schubert's String Quintet in the home is intrinsically more natural than listening to Schubert's Ninth Symphony), and even before the start of electrical recording in 1927 chamber music was able to be reproduced on recordings more successfully than, for example, orchestral works. By the mid-1930s much of the standard concert repertory (i.e. a large number of string quartets, some string quintets, violin sonatas and works for miscellaneous combinations, and a handful of piano trios, by composers from Haydn to Debussy) had been recorded by such artists as the Busch, Flonzaley, London and Léner quartets, Albert Sammons, Lionel Tertis and William Murdoch. The issuing of multiple versions on records, and repeated broadcasts of 'classic' works, served to reinforce the central canon of chamber music; at the same time certain recordings (e.g. the Casals-Thibaud-Cortot trio's performance of Schubert's B♭ Piano Trio D898 and the Busch Quartet's performance of Beethoven's 'Rasumovsky' and late string quartets) began to gain their own canonic status. Musically informed, close listening and a developing interest in comparing different recordings of the same work were encouraged by the publication of listening guides to chamber music. Chamber music still bore connotations of an 'élitist' taste, but gramophone listeners were constantly encouraged to develop an appreciation of it. Recordings of modern music formed a minor slice of the repertory, and were mainly issued by particular interest groups, for example the National Gramophone Society in the UK, which specialized in works by contemporary composers. In the late 1920s the BBC's broadcast repertory of chamber music, though built around the

accepted 'classics', included a significant amount (*c*25%; Jefferies, 1929–30) of modern works, by Schoenberg, Berg, Webern, Hindemith, Bartók, Kodály, Shostakovich, Prokofiev, Koechlin, Walton and others, played by international artists.

Alongside the new interest in recordings and broadcasting, chamber music concerts and societies continued in major cities in Europe and North America after the disruptions of World War I, with performances by professional ensembles in small concert halls, libraries, museums, art galleries and churches. Occasional concerts and/or regular series also became a feature of musical life in many small towns, often at the instigation of local music clubs. Instrumental concert programmes began to crystallize into formats of three or four contrasting works by different composers (and often including one modern work) during the 1920s and 30s, as the diversity of programming characteristic of the 19th century began to be replaced by a new homogeneity. Song recital programmes developed similar coherence. A small number of concerts or series celebrated one composer's output (most typically Beethoven's quartets), or were devoted wholly to contemporary music. Recitals for violin (with piano accompaniment), for which a large sonata repertory exists, also emerged, and as the century progressed the solo recital for melody instrument (not only the violin, but also several other instruments, including cello, viola and clarinet) and piano became a prevalent concert type.

World War II brought much concert activity to a temporary halt (the lunchtime recitals at the National Gallery, London, were one prominent exception), but the second half of the century saw a resumption and expansion of concert life, as the advent of easy international travel and communications opened up new possibilities for professional artists. A number of developments followed, among them the establishment of regular chamber concerts in cities in the southern hemisphere. Musica Viva Australia (1945–), an organization devoted to the promotion of chamber music tours by distinguished local and foreign artists, brought chamber music to several Australian cities; the New Zealand Federation of Chamber Music Societies (1945–) functioned in a similar fashion. Other initiatives included the organization of concerts on university campuses and the foundation of specialist festivals (e.g. the Santa Fe Chamber Music Festival, 1973–) and competitions (e.g. the Banff International String Quartet Competition, 1983–), the winning of which could be central to the successful launch of a young ensemble on an international career.

The growth of the early music movement in the 1950s and 60s had a significant impact on both the concert repertory and the recorded and broadcast media. In the inter-war years only a relatively small amount of chamber music from the pre-Classical eras – typically sonatas by Bach, Handel and Purcell, arrangements for violin and piano of Baroque keyboard pieces, and pieces played on modern instruments (e.g. Bach's viola da gamba sonatas on the cello and piano, or Purcell's viol fantasias played by a string quintet) – had been recorded or regularly played in concerts. From the 1950s the amount of Baroque and Renaissance music in the repertory increased steadily, as performers began to restore familiar pieces to their 'rightful' instruments and to play the unknown works that were being exhumed and edited by musicologists. In particular the recorded repertory (now on LP) mushroomed, as large amounts of chamber works by Bach, Corelli, Couperin, Handel, Locke, Rameau, Telemann, Vivaldi and others entered the catalogues. At the same time, recording companies sought to embrace the complete works of many composers in the central canon, in particular Haydn, Mozart, Beethoven and Schubert.

By the 1990s an unprecedentedly wide range of chamber music had become commercially available on CDs, reflecting the diversity of contemporary tastes and modern desires for collecting and completeness while also demonstrating the ability of the record companies to market and sell effectively 'niche' works of minority interest. The purchaser now has a large choice of repertory (from madrigals, viol fantasias and Baroque sonatas to Classical quartets, 19th-century drawing-room miniatures and works by contemporary composers), performers and performance styles; minor works of well-known composers sit beside a host of pieces by numerous lesser-known ones. The mainstream concert repertory is represented by both modern artists and remastered classic recordings of the past. The gap between popular, non-Western and classical modern repertories has been imaginatively bridged by a few chamber groups – most notably the Kronos Quartet – who have issued thematic 'crossover' albums which juxtapose different compositional idioms while presenting works that share a particular extra-musical connection (e.g. Kronos Quartet's *Black Angels*, which brings together a variety of works on a theme of war and persecution). The proliferation of chamber music on record and radio has meant that much of the repertory has become available in the environment of privacy for which it was originally intended, even though the mass use of personal stereos and in-car sound systems means that the physical surroundings for musical consumption are no longer restricted to the home. While the recorded repertory has expanded hugely, most mainstream concert programmes remain based around the central canon (which sound recordings played a vital role in creating earlier in the century), with unusual repertory, when included, surrounded by familiar works.

See also CONCERT (ii); EARLY MUSIC; RADIO; RECITAL; and RECORDED SOUND, §1.

(iii) Domestic music-making. Piano playing and singing flourished in many working- and middle-class homes in the early decades of the 20th century, but were rivalled and eventually widely replaced by listening to radio and sound recordings as the predominant mode of domestic musical entertainment. In spite of this overall shift, a small and musically sophisticated section of society – most notably music students, amateurs (many of them trained to an unprecedentedly high level) and some professional musicians playing together for pleasure – has continued to play chamber music in private. Rigid associations between instruments and gender have been largely eroded. In Germany, ensemble playing has been particularly well sustained by the *Hausmusik* tradition: instrument-playing members of the professional classes often form quartets for recreational music-making. Less able amateur players have, of necessity, confined themselves to technically easier works, such as Baroque trio sonatas, the simpler Viennese quartets and Romantic piano pieces, with difficult 19th-century works and much 20th-century chamber music remaining, for the most part, beyond their performance horizons.

Interest in ensemble playing in the home has been catered for and supported by the publication of a number

of books and articles on how to perform chamber music, and of repertory guides and bespoke periodicals; by the establishment of amateur associations, such as the Amateur Chamber Music Players, an American organization established in 1947 by Leonard Strauss and Helen Rice as a network for those who play chamber music for pleasure (in 1997 its membership stood at more than 4000); and by the increase since World War II in the number of courses, summer schools and festivals at which amateur chamber musicians can receive professional coaching. Although ensemble playing has long enjoyed a prominent role in conservatory education, its importance in developing musicianship in young players has been increasingly recognized through the publication of easy music for ensembles and the establishment of specialized youth chamber-music organizations for players of more advanced abilities.

CHRISTINA BASHFORD

Chamber Music America. Organization devoted to the advocacy and performance of chamber music in the USA, formed in 1978. Its membership (numbering over 6000 at the beginning of the 21st century) includes professional ensembles, training institutions, composers, music businesses and individuals. Chamber Music America's purposes are to coordinate and develop support for chamber music activities using government, corporate and private resources, and to provide information and advice. Its activities include performances, touring, educational programmes and the commissioning of new repertory. These goals are promoted through the publication of a journal (*Chamber Music Magazine*, which succeeded *American Ensemble* in 1984) and special directories (including *A Directory of Summer Chamber Music Workshops*). Other publications include *CMA Matters*, a quarterly technical assistance bulletin, and *Flying Together*, published three times a year, which addresses ideas and issues relating to chamber music education. The organization awards nearly $1 million each year to chamber music organizations and ensembles for project support, partnerships and grant programmes. During its annual national conference, Chamber Music America presents awards acknowledging significant contributions in the field of chamber music.

JOHN SHEPARD/GEORGE BOZIWICK

Chamber Music New Zealand. One of New Zealand's largest and most progressive arts promoters. It was founded in 1950, based in Wellington, and in 1987 changed from a federation of autonomous societies to a centralized organization. Its principal purpose is to present chamber music concerts by international and New Zealand artists. Concert series are presented in nine major centres, as well as concerts in a further 25 cities and towns, and a contemporary music series in a more limited number of venues. Since the 1960s it has produced a newsletter, *Theme*. The organization has changed its name four times to reflect the scope of its work, becoming Chamber Music New Zealand in 1992.

In 1970 it initiated an extensive programme of concerts in schools. It also runs the Westpac School Music Contest for young ensembles and composers, which has been held annually since 1965. A practice of presenting New Zealand artists as well as those from overseas was adopted from the beginning, and in 1982 a consistent policy of promoting New Zealand music was also instituted. Most New Zealand groups toured by the organization programme a work by a New Zealand composer; new music is commissioned, and a composer-in-residence scheme has operated since 1990. Chamber Music New Zealand maintains links with similar organizations worldwide, notably Australia's Musica Viva.

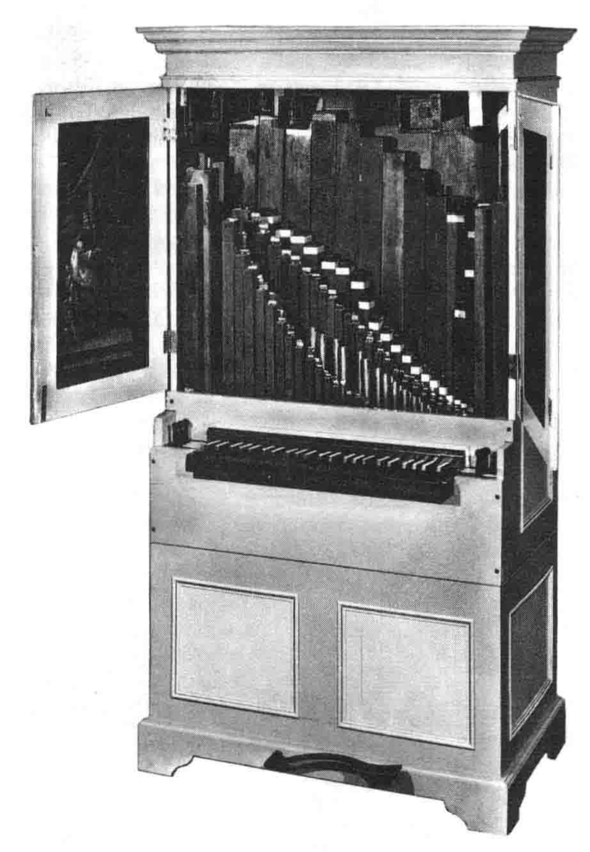
ADRIENNE SIMPSON

Chamber opera. A term used to designate 20th-century operas of small and relatively intimate proportions using a chamber orchestra. Examples include Strauss's *Ariadne auf Naxos* (1916), Hindemith's *Cardillac* (1926, revised 1952), Stravinsky's *The Rake's Progress* (1951) and Britten's *The Turn of the Screw* (1954). The term has also been applied, retrospectively, to small-scale 18th-century works such as Pergolesi's *La serva padrona* (1733).



See OPERA, §VI, 7.

□

Chamber orchestra. A small orchestra of a few strings on each part and selected woodwind and brass. *See* ORCHESTRA, §8.

Chamber organ [cabinet organ] (Fr. *cabinet d'orgue*, *orgue de chambre*, *orgue de salon*; Ger. *Hausorgel*, *Kammerorgel*; Dutch *huisorgel*). A term generally used to denote an organ intended for domestic use. Such instruments, developed from the 16th-century POSITIVE, were popular in the 17th, 18th and early 19th centuries in England and were also found throughout the Continent, particularly in Switzerland and the Netherlands, as well as in the USA during the 18th and early 19th centuries.

The typical chamber organ is housed in a compact furniture-quality cabinet, often of hardwood and sometimes elaborately ornamented, of a size suitable to the scale of domestic rooms (see illustration). It commonly has one manual and no pedals (although an additional

Chamber organ, English, 17th century, possibly made by 'Father' Smith (Russell Collection, Edinburgh University)

manual and/or pedals are sometimes found on larger specimens), and is blown using bellows operated by the player's foot. The commonest blowing arrangement consists of a single wedge-shaped feeder below a weighted reservoir, which may be either wedge-shaped or horizontal. Occasionally one finds a two-feeder system, sometimes referred to as 'cuckoo feeders', but still activated by a single pedal, attached to a rocking bar. Double blowing pedals of the REED ORGAN type are occasionally encountered in late continental examples.

Chamber organ action is usually of the 'pin' type (*see* ORGAN, fig.4), in which a sticker below the key pushes down directly on the pallet, although some larger examples may have a more complex action similar to the normal tracker action of a large organ. The stop action is often of the trundle type, with drawknobs, and one finds many ingenious variations of this made for space-saving reasons, especially in late Dutch and American examples. In very early (17th-century) instruments, stop control may be by levers located at either side of the keyboard.

Chamber organs were often made to resemble other pieces of furniture; that described by Mace (*Musick's Monument*, 1676) was in the form of a large table, around which singers and instrumentalists might sit to perform ensemble music. In the 18th century, chamber organs in the form of bureaux and desks were popular, and Snetzler is known to have made several of these. A desk organ by Adcock & Pether (*c*1760) is in the collection of Colonial Williamsburg, Virginia, and an unusual Avery organ (*c*1800), resembling a sideboard, is in the County

Museum, Truro, Cornwall. Dutch chamber organs also sometimes took this form, and a good example is found in the collection of D.A. Flentrop, Zaandam, the Netherlands. The Smithsonian Institution, Washington, DC, owns a fine bureau organ (*c*1815) by the Boston builder Ebenezer Goodrich.

Stoplists of chamber organs varied, but a typical early disposition is that of the fine instrument attributed to 'Father' Smith (*c*1670), now in the possession of N.P. Mander, London: Stopt Diapason (8′); Principal (4′); Fifteenth (2′); Mixture (12th–17th). The compass is 49 notes, *C–c‴*. The case is of oak, with speaking front pipes, and doors. Organs of this size often had only dummy front pipes, or a front of carving or cloth. A slightly larger, but also typical, scheme is that of the organ by Snetzler (1761) now in the Smithsonian Institution: Stopt Diapason (8′); Open Diapason (8′, treble, from *c*′); Flute (4′); Fifteenth (2′); Sesquialtera (II, 19th–22nd, bottom two octaves); Cornet (II, 12th–17th, from *c*′). Most of the 18th- and 19th-century chamber organs had divided stops and some were entirely divided. Many also had a foot-operated MACHINE STOP to silence the compound stop and often also the 2′ stop. These two features made the chamber organ surprisingly flexible, permitting both right-hand and left-hand solos as well as echo effects. Some late chamber organs also had swell mechanisms of various sorts, including a simple raised lid over the case, or compact sliding shutters.

While chamber organs are, by definition, instruments designed for domestic use, many have survived through being moved to small churches or chapels; today there are probably more such instruments in museums or private collections than anywhere else. In the 18th and 19th centuries the chamber organ had several uses: as a solo instrument, as an accompaniment to the voice (Mendelssohn's correspondence describes accompanying Queen Victoria on a large chamber organ in Buckingham Palace) and in chamber music. In this latter role, large chamber organs were also found in 18th-century concert rooms, pleasure gardens and theatres; the organ concertos of Handel, Stanley, Felton and others are meant for this type of instrument (rather than the larger church or concert-hall organ) and lose much of their charm and delicate character when performed on large organs and with large orchestras. The chamber organ was also often used as a CONTINUO instrument in the Italianate concerto grosso popular in the 18th century. It was, indeed, a most versatile instrument, doubtless the reason for its great popularity in the 18th century.

Outside England, centres of chamber organ making existed in the central and northern Netherlands, in the Toggenberg region of Switzerland (where the chamber organ was virtually an indigenous folk instrument) and in Boston and southern New Hampshire in the USA. Simple chamber organs were made in rural New England as late as the 1850s, when they were superseded by the smaller and less expensive reed organ.

Variants of the chamber organ, particularly in England and the USA, included the CLAVIORGAN, in which a basic chamber organ was united with a harpsichord or fortepiano, usually to be played from the same keyboard, and the 'key and finger' BARREL ORGAN, essentially a chamber organ fitted with a self-playing mechanism. Used in both homes and churches, it was less popular than either the pure chamber organ or the keyless barrel organ.

The renewal of interest in such instruments as the harpsichord, virginal and clavichord has encouraged a revival of the chamber organ. Old instruments are being restored for private domestic use and for public performance, and new ones are being built. While these latter are more often than not simply very small practice organs, with two manuals and pedal, a reproduction of a Dutch chamber organ was made during the 1970s by the Flentrop firm. Available in 'kit' form as well as fully assembled, it has proved useful both as a domestic instrument and for ensemble performance.

BARBARA OWEN

Chambers, Dennis (Milton) (*b* Baltimore, 9 May 1959). American drummer. He first came to national prominence as the drummer with various bands led by George Clinton, including the Brides of Funkenstein and Parliament-/Funkadelic, with whom he worked from 1978 to 1985, appearing on such albums as *Glory Hallastoopid*, (Casablanca, 1979) and *P-Funk All-Stars Live at the Beverly Theatre* (Westbound, 1990). In 1985 he worked and recorded with Special EFX, and in 1986 he began working with guitarist John Scofield, appearing on the albums *Blue Matter* (Gramavision, 1986) and *Loud Jazz* (Gramavision, 1987). In the early 1990s he performed and recorded with a variety of jazz artists including the trumpeter Randy Brecker (*Toe to Toe*, MCA, 1990), keyboard player Adam Holzman (*In a Loud Way*, Manhattan, 1991), guitarist Leni Stern (*Ten Songs*, Lipstick, 1991), bass player Stanley Clarke and keyboard player George Duke (3), keyboard player Tom Coster (*Let's Set the Record Straight*, JVC, 1993), saxophonist Bill Evans (*Petite Blonde*, Lipstick, 1992), the Brecker Brothers (*Return of the Brecker Brothers*, GRP, 1992), guitarist Steve Khan (*Crossings*, Polygram, 1993) and the saxophonist Bob Berg (*Enter the Spirit*, Stretch, 1993). He also appeared with the Buddy Rich big band in a series of tribute concerts to Rich. In 1994 he toured with the rock group Steely Dan and then joined the John McLaughlin band, with whom he continued to work regularly, appearing on the albums *Promise* (Verve, 1995) and *Heart of Things* (Verve, 1997). Strongly influenced by Billy Cobham, Chambers is highly regarded for his ability to play fast, intricate fills within strong, funk-based

grooves; he has also proven himself adept with bop-style phrasing that incorporates funk-like syncopation.

RICK MATTINGLY

Chambers, Stephen Alexander. *See* HAKIM, TALIB-RASUL.

Chambers, Wendy Mae (*b* Winchester, MA, 23 Jan 1953). American composer and performer. She attended Columbia University (BM 1975) and SUNY, Stony Brook (MM 1978), studying with Roussakis, Wuorinen, Beeson and Lewin; in an additional year at the University of California, San Diego (1979–80) she studied with Roger Reynolds, Pauline Oliveros and Will Ogden. Her irrepressible imagination creates ensembles of Berlioz-like grandiosity. In 1979 she produced *Music for Choreographed Rowboats* for 24 musicians in rowing boats, following it with *Ten Grand* (1983) for 10 grand pianos and laser lights, *Pluck* (1984) for 30 harps, *Marimba!* (1985) for 26 marimbas and *Mass* for 77 trombones (1993), a wordless requiem.

With such large groups of homogeneous forces at her disposal, Chambers has tended towards large-scale spatial effects; in her *Symphony of the Universe* (1989) for chorus, horn, organ, jazz band, digital tape and 100 timpani, rhythmic motives explode up and down the entire length of the Cathedral of St John the Divine, New York, a space for which the work was composed. The last movement of *Twelve Squared* (1994) for 12 percussionists, a 'voodoo tone poem in memory of John Cage', consists of four minutes and 33 seconds of solid sound. In 1990 Chambers changed her focus towards compositions for solo instruments. She has also performed widely on the toy piano.

KYLE GANN

Chamber sonata. *See* SONATA DA CAMERA.

Chamber symphony (Ger. *Kammersymphonie*; It. *sinfonia da camera*). A work in symphonic form for chamber orchestra. The title probably originated with Schoenberg's op.9 for 15 instruments (1906); his Second Chamber Symphony, begun in the same year, was not completed until 1939. Meanwhile his example had been followed by Schreker (1916) and many others. In general the title indicates a work of more 'serious' type than the sinfonietta. Analogous concertante compositions include Berg's *Kammerkonzert* (1923–5) and two pieces by Martinů with the title *Concerto da camera* (1941, 1947). For further information see G. Salvetti: 'Camerismo sinfonico e sinfonismo cameristico: alla ricerca di un approccio analitico pertinente', *Chigiana*, new ser., xxiii (1993), 337–52.

□

Chambonnières, Jacques Champion, Sieur de (*b* Paris, 1601/2; *d* Paris, 1672, before 4 May). French composer and harpsichordist. He was the founder and one of the most distinguished members of the French classical school of harpsichord playing and composition.

1. Life. 2. Character, influence and achievement. 3. Works.

1. LIFE. Chambonnières' family name was CHAMPION, and his father bore the title Sieur de La Chapelle, but posterity has always known him by the title of his maternal grandfather, which is that of a small manor about 55 km east of Paris (*see* CHAMPION, §4). Although no records have survived, he is unlikely to have been born much less than a year after his parents' marriage, the contract for which was drawn up on 31 January 1601, and if two other documents are to be trusted he can hardly have been born much later. First, on 20 June 1608 a certain 'Jacques de la Chappelle, filz de Monsieur de la Chappelle, musicien chez le Roy' was godfather to a little girl. The godmother was 'Anne Chambonniere, femme dudit La Chappelle', so there can be no doubt whose family is involved. Yet if the godfather was Chambonnières, he cannot have been much more than six – young, but not impossibly so, to have exercised the canonical duty of holding the infant. The original document having perished when the Hôtel de Ville, Paris, was destroyed in 1871, the foregoing condensed transcript by Laborde, with its reference to a father and son called La Chappelle, must be depended on; but unless the father is assumed to be Thomas Champion, long dead and never known by that name, the son and godfather must have been the child Chambonnières, whom Mersenne, when he first mentioned him, indeed referred to as 'juniorem Capellam'. The second document – the *déclaration* of 1631 – states that Chambonnières had received the reversion of his father's court position in September 1611, by which time he must have been old enough to have exhibited sufficient talent to justify it.

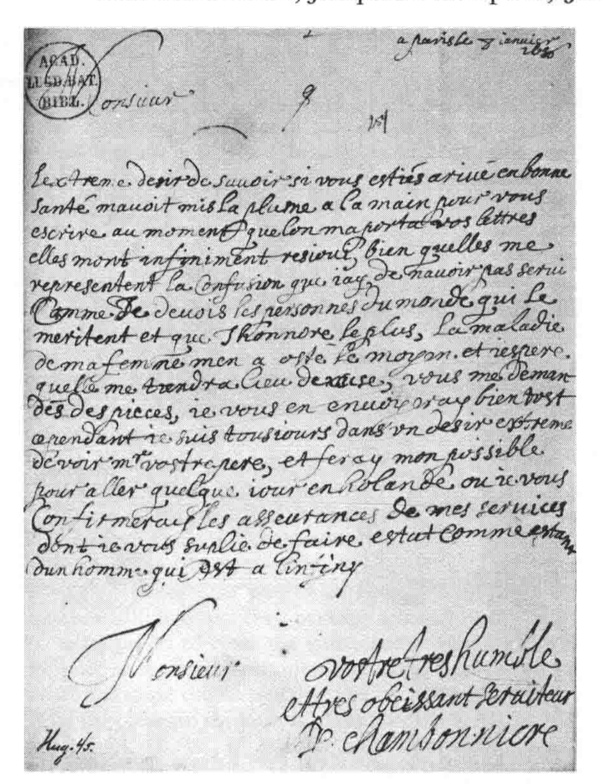
There are only oblique references to the first 20 years of Chambonnières' life. It must have been about his 20th year that he first married; nothing is known of his wife beyond her name, Marie Leclerc. When Jacques Champion (ii) spoke in the *déclaration* of the 'support and advancement' that his elder son received 'both before his marriage and after', advantages that 'in his old age' he was unable to match for his two younger children, he implied that the wedding took place before the late and evidently unexpected births of those children. The advantages were not inconsiderable: 'sommes de deniers, vaisselle d'argeant et pièces d'or' to the value of 4500 livres. How Chambonnières came to take his grandfather's title is unknown, but the name, if not the rank – seigniory, barony or marquisate, according to whim – seems never to have been disputed, and it is used in legal documents, including a royal warrant. Yet although he evidently occupied the manor at times, there is some doubt whether it belonged to him (see below).

In his father's will of 4 June 1632 Chambonnières is called 'gentilhomme ordinaire de la Chambre du Roy'. The salary attached to this post and the date when he acquired it are not known; his duties were presumably those that his father was no longer able to carry out. Whether at Louis XIII's dismal court or in the newly

flourishing salons and private concerts, Chambonnières displayed his talents as a harpsichordist, establishing a reputation that, to judge from two references by Mersenne, seems to have burgeoned quite suddenly in the early 1630s. Mersenne (*MersenneHU*, general preface), after his reference to him as 'the younger Chapelle' (p.141), continued: 'commonly called Baron de Chanbonniere, who is almost without peer in the whole world' (though he noted the elder La Chapelle's opinion that the grandfather Thomas excelled them both). Chambonnières was thus already established as a player and had begun his scramble up the social ladder. A little later Mersenne praised him even more highly (though demoted him in rank):

> After listening to the harpsichord played by the Sieur de Chambonnières ... I can only express my feeling by saying that one should hear nothing afterwards, whether one desires lovely melodies and fine accompanying parts mingled together, beauty of rhythm, fine touch or lightness and speed of hand ... it can be said that this instrument has met its ultimate master.

In 1637 Chambonnières drew the same salary as his father; from 1640 until 1643 the accounts mention both, but give only one salary, while in 1644 Chambonnières is alone as *joueur d'épinette* (Ledbetter, 6). Thus his father seems gradually to have relinquished his functions over at least a decade until his death in 1642.



It was not only as a harpsichordist that Chambonnières excited applause, for he was careful too to acquire the aristocratic art of the dance. He appeared for the first time in the *Ballet de la Marine*, danced before their majesties at the Arsenal on 25 February 1635; later, side by side with the young Louis XIV and Lully, he danced in the *Ballet royal de la nuit* (23 February 1653) and in the ballet inserted into Carlo Caproli's opera *Le nozze di Peleo e di Theti* (14 April 1654).

The first of several notarial acts recording the establishment by Chambonnières of what may have been the first paying concert series is dated 17 October 1641; the 'Assemblée des honnestes curieux', frequented in the autumn of 1655 by Christiaan Huygens, was perhaps a continuation of it. By these acts ten musicians were engaged to appear every Wednesday and Saturday at noon for a year at a salary of 150 livres each 'tous ensemble avecq aultres personnes que se recontreront faire concert de musique'. A further act, of 13 December, records the rental by Jehan Delin, one of Chambonnières' hired musicians, of a hall in the rue Mauconseil (a few hundred metres north of St Eustache) for the same days at ten livres a time. The gatherings are here called 'consers de musique en consequence de l'accademye instituée par le roy', indicating royal support, and Chambonnières' name is not mentioned; possibly he had delegated Delin as manager. The fact that the hall was used for weddings and was fitted with benches that were to be left in place for the musical assemblies suggests something resembling concerts in the modern sense; certainly it is unrealistic to imagine that Chambonnières was planning to lay out some 2500 livres a year – nearly double his father's court salary and emoluments put together – without the prospect of some return beyond the thrill of playing the *grand seigneur* with a private musical establishment. Of the music that was performed one can say only that it was both vocal and instrumental, since at least two, possibly three, of the musicians were singers. Except for a viol player and Chambonnières himself, the instruments played are unspecified.

In 1643, the year after Chambonnières' father's death, Louis XIII died, and Anne of Austria became regent. She had her own harpsichordist, Charles Henry Chabanceau de la Barre, so Chambonnières doubtless had plenty of time for his assemblies and teaching. It was he, however, and not La Barre whom the queen commissioned to buy a harpsichord for her son, the seven-year-old Louis XIV: on 17 September 1645 Chambonnières acknowledged reimbursement of his outlay of 600 livres.

The years around 1650 saw him at the peak of his career. In the Netherlands, Constantijn Huygens was busily spreading his fame to anyone who would listen, and it was apparently through him that about 1649 Froberger received some of Chambonnières' pieces. It cannot have been later than 1651 and was probably a year earlier that the three Couperin brothers, Louis, Charles and the elder François, came from nearby Chaumes to Chambonnières to serenade the lord of the manor on his name day, surprising and delighting him to such an extent that he launched all three in the Parisian musical world. At some time during this period his wife must have died, for on 16 December 1652 he married Marguerite Ferret, daughter of a law court usher, settling on her a dowry of 3000 livres. In the same year the armies of the Fronde were laying the Brie region to waste, possibly injuring Chambonnières' financial situation. It may have been with the idea of recouping such losses that he offered himself to Queen Christina of Sweden for a temporary engagement. Constantijn Huygens (the only source for this story) wrote to a friend at the Swedish court on 28 May 1655 that he would be delighted if the queen could send Chambonnières on a tour of Brabant. Although the reception that he accorded Christiaan Huygens in Paris the following autumn – including a coach and horses, suppers, and attendance at the 'Assemblée des honnestes curieux' – hardly conveys the impression of penury, his one surviving letter, written to Christiaan on 8 January 1656 (see illustration) after the latter's return to The Hague, confirms his interest in a journey to the north. That June the king issued letters conferring the reversion of his post on his brother, Nicolas, and permitting the latter to substitute for him in his absence, but by the autumn Christina herself was in Paris, and the projected journey was abandoned.

In 1657 Chambonnières' fortunes took an abrupt downward turn. By an act of 14 February the king delivered a blow to his pride by engaging Etienne Richard as the royal harpsichord teacher. In the spring there was an expensive lawsuit concerning land at 'Le petit Plessis' that ended on 30 May in its sale for the meagre sum of 2840 livres. Chambonnières is not mentioned in the act, only his mother, brother and sister; it is not clear whether the manor of Chambonnières was included, or indeed if he ever actually owned it. On 13 June, for unexplained reasons, Marguerite obtained a decree of separate maintenance and the right to 'son reffus'. A month later she did not hesitate to turn the knife by forcing the sale of some of his property to recover her portion. They continued, however, to live together until his death: very likely they could not afford to do otherwise. Moreover, Chambonnières' position at court had become shaky: Titon du Tillet reported a plot that would have put Louis Couperin into his post, but Couperin refused out of loyalty to his benefactor, and the king honoured his sentiment by creating a new charge for him.

et tres obeissant seruiteur
De Chambonniere

Hug. 45.

Autograph letter (8 January 1656) from Chambonnières to Christiaan Huygens (NL-Lu Hug.45)

In November 1660 contacts with the Huygenses were renewed, and about the end of the following year, now calling himself a marquis, Chambonnières finally met Constantijn. A title was small consolation, however: in a letter of 13 August 1662 recommending him for a post at the electoral court of Brandenburg, Constantijn Huygens mentioned Chambonnières' disgust at seeing a 'pension of about 1000 écus a year' cut off by the 'low and evil clique that reigns in this court', thus characterizing a situation that can hardly be unconnected with the appointment of Lully as *Surintendant de la musique de la chambre* the year before. Even the tone of Christiaan's letters had changed: on 20 December 1660 he wrote of having heard Chambonnières play and sing an *air* which 'seemed to me only mediocre': and on 14 September 1662 he wrote thus:

> The situation of the Marquis de Chambonnière would be pitiable if he had not put on such airs in the past. The last time I saw him he tried again to make me believe he was no longer playing the harpsichord – he would indeed be unfortunate now if he did not possess that métier.

Finally, on 23 October 1662, his brother Nicolas apparently having died, Chambonnières sold the reversion of his post to d'Anglebert for 2000 livres on terms which specified that d'Anglebert should immediately assume all the duties but none of the emoluments. Complicated litigation then ensued on the matter of the allowance for harpsichord moving, which seems to have been resolved amicably in spite of the seemingly lopsided contract. The reason for Chambonnières' retirement, often speculated upon, was uncovered by Lesure (1960) in a remark by the violist Jean Rousseau: 'Who does not know that Monsieur de Chambonnières could not accompany [from a bass] and that it was because of this that he was obliged to resign his court position and come to an agreement with Monsieur d'Anglebert? ... This was not the case with Monsieur [Louis] Couperin'. One can, however, readily sympathize with the refusal of the aging virtuoso to learn a new skill that, once laboriously acquired, would have stripped away the last shred of seignorial illusion masking his status as a hired professional by reducing him to a cog in Lully's orchestral machine.

Although there is only one more record of a concert by Chambonnières – on 1 November 1665 at the Duchess of Orleans' salon – he doubtless continued playing, if only in order to live. In 1670 he finally brought out two engraved books of his pieces, 30 in each, the first dedicated to the Duchess of Enghien. A posthumous inventory of his property was drawn up on 4 May 1672, suggesting that he had probably died during the preceding month. His estate was that of a decayed gentleman: two carriages and a pair of ancient horses, a bit of plate (192 ounces, to be exact), furniture, pictures, tapestries and so on; much of it was in a condition that the inventory specifies as 'tel quel'. There were four instruments, a spinet, a regal and two harpsichords, one of which may have been the two-manual Couchet that Constantijn Huygens mentioned in a letter of 6 April 1655. His widow had been provided for in the sale of his charge to d'Anglebert: she was to receive 600 livres a year. She remarried in 1675, and her pension was continued until 1689.

2. Character, influence and achievement. Chambonnières the man emerges with rare clarity from the scattered records of his life. His formative years as the talented only child of an aging father eager to provide him with every professional and material advantage were not such as to produce a character of modesty and generosity. As he grew to maturity his father must have become aware of this, since he felt it necessary to have recourse to the law to safeguard the well-being of the woman he knew must soon be his widow and the second son and daughter born so late in their union. Later in life Chambonnières was the butt of ridicule for his pretensions. Two stories about his carriages circulated: one claiming that he sent his horses to graze at the city walls for lack of feed, the other that he economized on staff by mounting a stuffed page on the back of his coach. One report after another records the efforts of people around Chambonnières to prevent his destruction of their livelihood. In the end he destroyed his career by pretending to the status of a dilettante.

Yet Chambonnières did well by his pupils. The three Couperin brothers, Hardel, one of the Gautiers (probably Pierre Gautier (ii)), d'Anglebert, Lebègue, Cambert and Nivers: even if not all of those whose names have at various times been connected with him actually studied with him, their music speaks to his credit, and the loyal refusal of Louis Couperin to displace him and the noble *Tombeau de Mr. de Chambonnières* by d'Anglebert could only have sprung from personal regard. Le Gallois took his part in what appears to have been friendly artistic rivalry with the followers of Louis Couperin; he called the two masters 'chefs de secte', and his little book tells much. The pupil who came closest to Chambonnières' style was Hardel. Chambonnières' own playing was distinguished by delicacy and subtlety of touch, fleetness without display, and imaginative embellishment: 'each time he played a piece he mingled in new beauties – *ports*

de voix, passages and various ornaments, with *doubles cadences*'. But he disapproved of over-embellishment and especially of flourishes sweeping up through an octave. Le Gallois compared his 'chants naturels, tendres, & bien tournez' with Louis Couperin's 'doctes recherches' and declared that the one 'touched the heart, the other touched the ear'. And in fact, after becoming acclimatized to Chambonnières, one may well momentarily find Couperin crabbed and lush until his intellectual power and depth of feeling begin to unfold.

3. Works. Approximately 85% of the very roughly 150 surviving pieces are allemandes, courantes, sarabandes and gigues, with half the total consisting of courantes, a quarter of sarabandes and the remainder evenly divided between allemandes and gigues. There are also four pavanes, three or four chaconnes, and a small miscellany of other types, most of them dances. Conspicuously absent are preludes, Chambonnières being the only important French harpsichord composer of the period with none to his credit. There are a total of 22 known sources, of which only eight were available when Brunold and Tessier's edition was published. The three principal sources are two engraved books, with 60 pieces in carefully notated and generously ornamented versions; the Bauyn Manuscript (*F-Pn*, formerly thought to have been copied in the 1660s but now known to have been written on paper that was not manufactured before 1676; Gustafson and Fuller, 1990, p.356), including most of the above in plainer versions, along with many other pieces; and a manuscript in the collection of Guy Oldham, in London, with 22 pieces and 3 *doubles*, of which five pieces are unique. The particular importance of the Oldham manuscript arises from the fact that 13 of the pieces are in a hand that those who have examined the source agree to be the composer's, and at least one of the pieces, *Le moutier allemande*, appears to have been composed directly into the manuscript. Two of the 19 further manuscript sources merit special mention because of the possibility that among their unattributed pieces are some by Chambonnières. Of the 39 pieces in another manuscript (*F-Psg* 2348), only one has an attribution, but 28 are concordant with known pieces by Chambonnières. Four are by other composers, and it is possible, even likely, that some of the remaining seven pieces are by Chambonnières. More intriguing is the manuscript *B-Bc* 27220 (incomplete inventory in Gustafson and Fuller, 374–82). Among the 115 pieces, not one of which names the composer, are 15 keyboard dances that appear in other sources with attributions to Chambonnières; stylistic and thematic evidence suggests that a few more of the dances in this manuscript may be as yet unidentified pieces by him. In addition, there are nine anonymous *préludes non mesurés*. Since no piece of this kind known to be by Chambonnières exists for comparison, attribution on stylistic grounds is difficult; nevertheless, the possibility cannot be ruled out that here are some of his missing preludes.

The rich source material for Chambonnières' music yields abundant evidence to corroborate Le Gallois' report that he approached his pieces freshly every time he played them. Although some variants are undoubtedly the result of corrupt transmission, others are not, for example the differences between the composer's autograph versions of certain pieces in Oldham and those published in 1670. The *Sarabande Jeunes zéphirs* is found in 11 sources, no two versions being identical, and some strikingly different.

Ex.1 *Allemande La Rare: Pièces de clavessin. . . . livre premier* (1670)

(a)

(b) canonic skeleton of the first strain

It has been argued that there can be no definitive reading of a piece by Chambonnières, and that it is the player's privilege and even duty to take ever varying liberties with the printed page (Fuller, 1993).

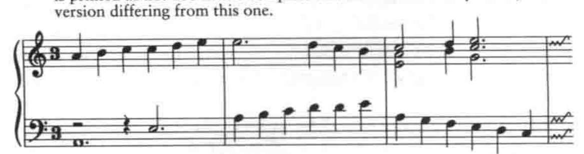
About 20 of the pieces have titles, some of which may indicate a date of composition that would otherwise be impossible to ascertain: *Allemande La Dunquerque* for the capture of Dunkirk in 1646, *Les Baricades* for the uprising that began the Fronde in 1648, *Sarabande de la Reyne* for Louis XIV's marriage in 1660, *Courante de Madame* for the wedding of Monsieur (Philippe of Orléans) in 1661. The 60 pieces published in 1670 were an anthology chosen from the composer's life work and gathered into groups or suites, defined by key. It is clear from the patterns of transmission as well as from overwhelming evidence from the entire period that few, if any, entire suites were composed as units, even though certain sub-groups may have been (see below). Since, however, it was the composer who assembled them, the groupings can be assumed to reflect his best judgment as to the order in which the pieces ought to be heard. The

order is normal for the period: all but three consist of an allemande, two or three courantes and a sarabande, to which a final piece is sometimes added. If it is true that Chambonnières himself copied or even composed certain pieces directly into the Oldham manuscript, one may venture a hypothetical reconstruction of the genesis of the third suite (nos.11–16). The manuscript includes nos.12–14 and, after a gap, 11. The three courantes delicately complement one another in the direction of their melodies, the degrees of the scale emphasized, the choice of harmonies and their range of textures; yet a little four-note scale fragment, common currency of his style, is just prominent enough in all three to cast a uniform hue over them. The fact that they reappear in the same order in the edition he supervised – as none of the other autograph pieces do – is evidence enough that one is not reading in a spurious connection. If Oldham's manuscript is in fact a composing score, then the *Allemande La loureuse* (11; 'The Bagpiper') was probably written later to introduce the courantes, though a musical connection is far from obvious. *Les Baricades* (16; a gigue wrongly labelled 'courante' in the Bauyn Manuscript and modern editions) was then perhaps selected from a store of older pieces to close the suite, and a sarabande was supplied to recall the courantes' scale motif. All the pieces are found more or less together in a much larger group of D minor pieces in the Bauyn Manuscript: nos.11, 12, 82, 83, 13, 84, 16, 14, 15 and five more. It is worth noting how little the compiler of the Bauyn Manuscript cared about Chambonnières' subtle grouping (if indeed it was apparent in the sources from which he worked). If one claims a complementary connection between the three courantes, one can hardly pass in silence over the much more striking resemblances between *Les Baricades* and a gigue in D major (17) that follows it in the 1670 anthology. Could Chambonnières have been experimenting here with a minor-major pair? The puzzle is compounded by still another, contrasting D major gigue (18).

Chambonnières' exact role in the creation of the classical French harpsichord style is impossible to assess for lack of sources from the first half of the 17th century. He has long been credited with transferring the diaphanous lute style of Ennemond Gaultier and his contemporaries (the *style brisé*) to the harpsichord, but so was Froberger, as early as Mattheson's *Grundlage einer Ehren-Pforte* (1740), and the interchange between Froberger and Chambonnières predated the earliest datable sources of the latter's music. Moreover, the second great French master, Louis Couperin, was demonstrably and profoundly influenced not only by Chambonnières but also by Froberger, who visited Paris in 1652. The dark years of Chambonnières' biography — the period between 1611 and about 1635 — correspond exactly to the apogee of the French lute school, and one can only imagine that he and other possessors of harpsichords, of which inventories show that there were many, did not hesitate to play their favourite lute pieces as best they could, in the manner of the handful of anonymous early keyboard transcriptions, both French and German, that survive. It is consistent with what we know of Chambonnières the man and with reports of his later activites that he would have set out deliberately to 'cash in on' the immense success, particularly the social success, of the lutenists by adopting the types of allemande, courante and sarabande that they (especially Mesangeau) had created in the 1620s.

Precisely when he did this cannot be determined, though Mersenne's panegyric cited above can be read to imply that by 1636 he had arrived at the style we know, having left behind the earlier style of showy and rather mechanical diminutions on songs. The evidence of Froberger's realization of French lute style suggests that he worked at first without knowledge of Chambonnières; it was the *style brisé* that fascinated him, and he carried it to sometimes bizarre extremes, whereas Chambonnières used it sparingly.

Moreover, unlike the elder composer, who adopted the lutenists' loose and flexible attitude towards groupings with their characteristic multiplication of courantes, Froberger 'rationalized' the disorderly French concatenations into regular sets of allemande, courante and sarabande, influenced perhaps by the uniformly constituted suites of early 17th-century German ensemble music (see SUITE). But Chambonnières' style cannot be explained solely by the model of the lutenists. At its core must have been a thorough grounding in counterpoint, transmitted perhaps from his grandfather Thomas, 'the greatest contrapuntist of his time' (*MersenneHU*), through his father. Other, undocumented influences – *ballets de cour, airs de cour*, organ music, music imported from England and Italy – must also have operated.



However formed, the art of Chambonnières betrays nothing of warring styles. It is as assured, direct and easy as if it had always been there, the product of a brilliant talent anchored below the surface in solid contrapuntal discipline. The quality that above all distinguishes his pieces is line: each strain, especially of his allemandes and courantes, is one hovering curve of melody. But there is much more. Ex.1*a* shows the first strain of the allemande (no.1) that Chambonnières chose to begin his published collection. The register of the strictly conjunct line changes at the caesura in bar 5 – a poignant deceptive cadence on the dominant minor, with an unresolved suspended 7th – to produce a climax on the high G, after which the line subsides, wreathed in ornament, to its resting place at the first relaxation of the harmony since the opening. No two bars have the same rhythm; no little motifs are tossed about as so often happens in allemandes; there is no 'theme'. And yet the whole skeleton (the second strain continues with the method of the first in an even broader sweep) is canonic. As the reduction in ex.1*b* demonstrates, it is a canon of contours and pitches, not of rhythms, and the lower line wanders through the texture at will. The craft of this lovely piece, which after many hearings still sounds like an inspired improvisation, was, as the title implies, something special for Chambonnières; even apart from the canon, the texture is suffused with polyphony, whereas in most of his pieces the polyphony is transitory. But it seems to have inspired (or perhaps been inspired by) a courante, which subtly paraphrases the whole melody of the allemande, and a sarabande, which are found together in the source (*F-Psg* 2348; see exx.2 and

Ex.2 Openings of the third courante following *Allemande La Rare* in *Pièces de clavessin . . . livre premier*. The example is copied from a simpler version in *F-Psg* MS 2348.

3). The courante (4) – the only piece in this suite missing from the Bauyn Manuscript – was enriched with ornament for publication; the sarabande (135) was rejected.

Ex.3 Opening of a sarabande which follows the courante above in *F-Psg MS* 2348. It does not figure in either of the engraved collections of 1670, but is printed as no. 135 in the complete edition after the 'Bauyn' MS, in a version differing from this one.

The range of styles and forms in Chambonnières' works is tiny. The pavanes are the grandest pieces, the sarabandes the smallest. But the same compass, the same note values, the same textures and the same motifs are found everywhere. It is an art that gives the modern listener very little to hold on to; the events that might seize our attention are often so encrusted with ornament that we miss their profile. But within the narrow limits of the idiom there is an incessant flow of invention. Ideas are exploited briefly, only to be abandoned for new ones, and the materials of one strain rarely appear in the next. Yet the two halves of each piece are united by an exquisite balance of tension, modulated by a rhythm whose intricacies are poised on the elegant pulse of the dance. What Chambonnières failed to achieve in life informs his music: the aristocracy of concealed means, where effort seems remote and pedantry is scorned.

WORKS

Edition: *Jacques Champion Chambonnières; oeuvres complètes*, ed. P. Brunold and A. Tessier (Paris, 1925/*R*1967 with Eng. trans. and new preface by D. Restout)

numbers in parentheses are those used in the edition; all pieces are for harpsichord; for concordances see Gustafson (1979) and Gustafson and Fuller (1990)

DAVID FULLER

Chambray, Louis François, Marquis of [Fakaerti or Fakaerli; de Ratisbonne, George] (*b* Château de Chambray, nr Evreux, 23 May 1737, *d* Vienna, 1 April 1807). French composer. An officer in the royal army, he eventually attained the rank of *premier enseigne* (equivalent to that of a present-day general) in the light cavalry. He held many distinctions and military titles, but seems to have been present at only one battle, that of Rossbach in 1757; as Rossbach is near Ratisbon (Regensburg), it has been suggested that Chambray based his *nom de plume*, in part, on his activities there. The only positive link between the names Chambray and Fakaerti consists of an entry in a manuscript catalogue compiled by the contemporary librarian of the Bibliothèque Royale de Paris, P.-L. Roualle de Boisgelou: 'Sgr. Fakaerli (M. le marq. de Chambray No.3) ... M. le Marq. de Ch. composa trois sinf. que Béraud publia sous le nom supposé de Fakaerli'.

A gifted amateur composer, Chambray showed that he was able to assimilate Italian influences as well as those of the Mannheim school. He was apparently connected, perhaps as a patron, with Antoine Bailleux and A.L. Baudron, as each dedicated a work to him in 1767. Chambray's surviving works comprise one vocal duo, one quintet for flute, violin, viola, cello and bass, and five symphonies.

KENNETH LANGEVIN

Chaminade, Cécile (Louise Stéphanie) (*b* Paris, 8 Aug 1857; *d* Monte Carlo, 13 April 1944). French composer and pianist. While it is striking that nearly all of Chaminade's approximately 400 compositions were published, even more striking is the sharp decline in her reputation as the 20th century progressed. This is partly attributable to modernism and a general disparagement of late Romantic French music, but it is also due to the socio-aesthetic conditions affecting women and their music.

The third of four surviving children, Chaminade received her earliest musical instruction from her mother, a pianist and singer; her first pieces date from the mid-1860s. Because of paternal opposition to her enrolling at the Paris Conservatoire, she studied privately with members of its faculty: Félix Le Couppey, A.-F. Marmontel, M.-G.-A. Savard and Benjamin Godard. In the early 1880s Chaminade began to compose in earnest, and works such as the first piano trio op.11 (1880) and the *Suite d'orchestre* op.20 (1881) were well received. She essayed an *opéra comique*, *La Sévillane*, which had a private performance (23 February 1882). Other major works of the decade were the *ballet symphonique Callirhoë* op.37, performed at Marseilles on 16 March 1888; the popular *Concertstück* op.40 for piano and orchestra, which was given its première at Antwerp on 18 April 1888; and *Les amazones*, a *symphonie dramatique*, given on the same day. After 1890, with the notable exception of the Concertino op.107, commissioned by the Conservatoire (1902), and her only Piano Sonata (op.21, 1895), Chaminade composed mainly character pieces and *mélodies*. Though the narrower focus may have been due to financial, aesthetic or discriminatory considerations, this music became very popular, especially in England and the USA; and Chaminade helped to promote sales through extensive concert tours. From 1892 she performed regularly in England and became a welcome guest of Queen Victoria and others.

Meanwhile, enthusiasm grew in the USA, largely through the many Chaminade clubs formed around 1900, and in autumn 1908 she finally agreed to make the arduous journey there. She appeared in 12 cities, from

Cécile Chaminade

Boston to St Louis. With the exception of the concert at Philadelphia's Academy of Music in early November, which featured the *Concertstück*, the programme consisted of piano pieces and *mélodies*. The tour was a financial success; critical evaluation, however, was mixed. Many reviews practised a form of sexual aesthetics that was common in Chaminade's career and that of many women composers in the 19th and 20th centuries (see Citron, 1988). Pieces deemed sweet and charming, especially the lyrical character pieces and songs, were criticized for being too feminine, while works that emphasize thematic development, such as the *Concertstück*, were considered too virile or masculine and hence unsuited to the womanly nature of the composer. Based also on assumptions about the relative value of large and small works, complex and simple style, and public and domestic music-making, this critical framework was largely responsible for the decline in Chaminade's compositional reputation in the 20th century.

Prestigious awards began to come her way, culminating in admission to the Légion d'Honneur in 1913 – the first time it was granted to a female composer. Nonetheless, the award was belated and ironic considering that she had been largely ignored in France for some 20 years. In August 1901 Chaminade married Louis-Mathieu Carbonel, an elderly Marseilles music publisher, in what may have been a platonic arrangement; he died in 1907 and she never remarried. While her compositional activity eventually subsided because of World War I and deteriorating health, Chaminade made several recordings, many of them piano rolls, between 1901 and 1914. Aeolian produced additional piano rolls of her works after the war, now with the improved technology of the Duo-Art system. In later years, by which time she was feeling obsolete, she was tended by her niece, Antoinette Lorel, who attempted to promote Chaminade's music after her death in 1944.

Chaminade was well aware of the social and personal difficulties facing a woman composer, and she suggested that perseverance and special circumstances were needed to overcome them. Her output is noteworthy among women composers for its quantity, its high percentage of published works and for the fact that a large portion – notably piano works and *mélodies* – was apparently composed expressly for publication and its attendant sales (Enoch was the main publisher). Chaminade composed almost 200 piano works, most of them character pieces (e.g. *Scarf Dance*, 1888), and more than 125 *mélodies* (e.g. *L'anneau d'argent*, 1891); these two genres formed the basis of her popularity. Stylistically, her music is tuneful and accessible, with memorable melodies, clear textures and mildly chromatic harmonies. Its emphasis on wit and colour is typically French. Many works seem inspired by dance, for example *Scarf Dance* and *La lisonjera*. Of her larger works, the one-movement *Concertstück* recalls aspects of Wagner and Liszt, while the three-movement Piano Sonata shows the formal and expressive experimentation that was typical of the genre by the late 19th century (see Citron, 1993, for a feminist analysis of the first movement). The *mélodies* are idiomatic for the voice and well-suited expressively and poetically to the ambience of the salon or the recital hall, the likely sites for such works. The Concertino has remained a staple of the flute repertory; while it is a large-scale work and thus represents a relatively small part of her output, the piece still provides a sense of the elegance and attractiveness of Chaminade's music.

WORKS

(selective list)

printed works published in Paris unless otherwise stated; for a complete list see Citron (1988) and Tardif

La Sévillane (oc), private perf., 23 Feb 1882

Chamorro music. *See* MICRONESIA, §IV, 1.

Champagne, Claude (Joseph Arthur Adonai) (*b* Montreal, 27 May 1891; *d* Montreal, 21 Dec 1965). Canadian composer. His work marks the development of a specifically Canadian music, characterized by the influence of French-Canadian folk culture, modality, free forms and the topography of the Canadian landscape. Champagne's paternal grandfather introduced him to folk music and to the violin; this early acquaintance with Canadian fiddle tunes and the rhythms of Canadian square dance music was later to influence several compositions. From his Irish grandmother he inherited his love of legend and the dreamy, poetic side of his nature. During the years 1900–08 he studied the violin, the piano and the saxophone, and Rodolphe Mathieu introduced him to harmonic theory through Rimsky-Korsakov's treatise, which Champagne later translated into English (1930, unpublished). From Alfred Laliberté, a pianist and composer who had

been a pupil of Skryabin, he learnt the use of superimposed 4ths and something of Wagnerian lyricism. He was also drawn to the harmonic techniques of Russian composers, notably Musorgsky's use of modality and the colourful orchestrations of Borodin. It was Laliberté who determined Champagne's career by submitting his symphonic poem *Hercule et Omphale* (1918) to Rachmaninoff. The work was played in Paris in 1926, by which time Champagne was in France for further study (1921–28). Dukas advised him to study with Gédalge, who gave him a thorough grasp of counterpoint and fugue. After Gédalge's death he was a pupil of Laparra and also worked with Koechlin. In addition, he studied the violin with Jules Conus and music aesthetics with Léon Algazi. He discovered Renaissance polyphony while participating in the chorus of the Schola Cantorum, sensing a link between 16th-century modality and French-Canadian folk music. The modal subtleties of Fauré's harmony and Debussy's use of the whole-tone scale strongly affected his style, leading him to greater rhythmic as well as harmonic freedom.

It was in the *Suite canadienne* (1927) for chorus and orchestra where the counterpoint harks back to the spirit of French polyphonic chansons that Champagne succeeded in combining aspects of both French-Canadian folklore and the European symphonic tradition. This work, which established the style of his first maturity, won the Beatty International Folklore Prize (1928), and was a great success in Paris where it was performed at a Pasdeloup concert. His next important work was the *Danse villageoise* (1929) for violin and piano, composed after his return to Canada in 1928. In it he created his own folk-like material; the syncopated passages are reminiscent of the Canadian country fiddler's dance music. Two elements in particular evoke Champagne's combined French and Irish heritage: the melodic upper part, which recalls the *rigaudon*, and the accompaniment, which evokes Celtic bagpipes. This was to become the composer's best-known work, both in its original form and in later versions for string quartet and orchestra. During this period Champagne played an important role in Montreal as a teacher: he introduced solfège teaching into schools, and taught composition, imparting to his pupils both a sound technical basis and an understanding of the necessity of hard work. He was professor at the McGill Conservatorium of Music (1930–42), taught harmony, counterpoint, fugue and composition at the Ecole Vincent d'Indy (1930–62) and was on the staff of the Ecole Normale de Musique of the Institut Pédagogique, Westmount, Montreal. One of his most important contributions was the formation of the Montreal Conservatory in 1942; he sketched the plan for the state-subsidized academy modelling its teaching methods on those of the Paris Conservatoire. He was assistant director and composition professor at the Montreal Conservatory for many years.

During a visit to Brazil in 1942 Champagne composed the piano piece *Quadrilha brasileira* on a theme from the island of Marajo. Three years later he was visiting professor at the Rio Conservatory, where he conducted the orchestra and, in collaboration with Villa-Lobos, organized a concert of Canadian chamber music. The works of this period include the *Images du Canada français* (1943) for chorus and orchestra. This piece is a collection of sound pictures of outstanding orchestral mastery. In particular 'Marines' shows a trace of Debussy's influence in its harmony and instrumentation. In 1945 Champagne produced the *Symphonie gaspésienne*, which revealed him further as an impressionist of the Canadian landscape. He described the background of the work in the following terms:

> I sought quite simply to transpose the Gaspé scenery into musical form ... by means of combinations of sounds which evoke in me the idea of fog, boats' sirens, bells, waves, light, flocks of gulls, and by a dynamism suggesting ... the steep slopes of the landscape.

Though its three movements are linked by two recurrent themes, the work is closer, in both style and form, to *La mer* than to a conventional symphony.

Champagne deliberately reserved the string quartet genre until late in his life; in 1951 he composed the Quartet in C, a work that relates both to sonata form and to fugue. Its structure and harmony make it Champagne's most adventurous work: there are bold dissonances and polytonal passages, with a frequent Bartókian use of simultaneous major and minor 3rds; the music develops through perpetual variation. The last major work, *Altitude* (1959), is a symphonic poem for chorus and orchestra stimulated by the spectacle of the Canadian Rockies. The powerful use of the full orchestra, including an ondes martenot, contrasted with leaner, contrapuntal writing for strings and vocal recitatives, reveals a supreme technical command. Shortly before Champagne's death a retrospective concert was organized by the Ecole Vincent d'Indy and the Association of Conservatory Professors for the inauguration of the Salle Claude-Champagne in Montreal.

ANDRÉE DESAUTELS

Champein, Stanislas (*b* Marseilles, 19 Nov 1753; *d* Paris, 19 Sept 1830). French composer. By the age of 13 he was choirmaster at the collegiate church of Pignon, Provence, for which he composed a mass, a *Magnificat* and psalms. In 1776 he went to Paris where his motet for large choir, *Dominus regnavit*, was performed at the royal chapel at Versailles. On St Cecilia's day (22 November) 1776 he had a new mass and the Versailles motet performed at the Mathurins church.

In 1779 he made his début as a stage composer with *Le soldat françois*, an *opéra comique* performed by the Comédiens du Bois de Boulogne. Thereafter he wrote many works for the Comédie-Italienne, the Comédie-Française and the Opéra. Among these, *La mélomanie* (1781), a great success that assured his reputation, was revived several times. In 1789, at the Théâtre de Monsieur, he presented *Le nouveau Don Quichotte* as a translation of a play by a fictitious Signor Zuccarelli, because only Italian plays were permitted under the theatre's licence; apparently the subterfuge fooled even the Italians. During the first years of the Revolution he lived in Rouen, where he produced occasional patriotic songs. In 1793 he was appointed president of the Rhin-et-Moselle département at Koblenz; his administrative duties account for the long break in his production of stage works. He maintained contact, however, with Parisian music circles until his return in 1804. *Menzikoff* (1808), a slight work on an improbable subject but with idealistic sentiments, shows that after his return he moved towards the 'larmoyant' *opéra comique*; some of the dramatic *airs* and ensembles are quite typical of the period. In 1812 his opera in prose after Sophocles's *Electra* was rehearsed at the Opéra but not performed. At the Restoration Champein lost the pension of 6000 francs granted to him by Napoleon; he then experienced poverty and undeserved oblivion despite the tardy help of more fortunate colleagues like Boieldieu and Catel. Towards the end of his life a committee of authors induced M. de Martignac, a minister under Charles X, to grant him a pension, from which he benefited only briefly.

His son Marie-François Stanislas (*b* Paris, 20 July 1799; *d* Paris, 8 March 1871), having briefly succeeded to the Parisian music publishers and dealers Langlois, took up a career in journalism and founded the music journal *Le franc-juge* (Brussels, 1834–9), the weekly *La mélomanie revue musicale* (Paris, 1841) and *Le musicien* (Paris, 1842). After fleeing to England to avoid prosecution for libel, he lived in Italy, returning to Paris a few years before his death.

PAULETTE LETAILLEUR

Champgrand, Sophie de. *See* BAWR, SOPHIE DE.

Champion. French family of composers and musicians. At least six musicians of this name were active in the 16th and 17th centuries: the five enumerated below and Nicolas or Jehan-Nicolas 'de La Chapelle' (*b* Paris, between 1620 and 1625; *d* before 1662), a younger brother of (5) Jacques Champion (iii) who is mentioned briefly under (4) Jacques Champion (ii). The last four represent three successive generations of the same family. Whether or not the first two belonged to an earlier generation of this family is unknown, though the later recurrence of their first names makes it seem likely that they did.

(1) **Jacques Champion** [Campion, Scampion, Sampion] (i) (*b* late 15th century; *d* after 1534). Singer and ?composer. He is traceable from 1513 as master of the choristers at St Rombout, Mechelen, and from 1518 as a singer in the court chapel of the Emperor Charles V. At an unknown date he succeeded Nicolas Carlier as master of the choristers there, but by 1528 he had been replaced by Gombert, perhaps because of age (Federhofer), and in 1530 or 1531 he appears to have been pensioned off (Schmidt-Görg). He is not heard of after 1535. Coclico may have been referring to him when he spoke of 'many princes of musicians, Josquin des Prez, Pierre de la Rue, Jacobus Scampion, and others, who used admirable and most sweet embellishments of clausulae' (*Compendium musices*, Nuremberg, 1552/*R*; after Reese, 517).

(2) **Nicolas Champion** [Nicolas Liégeois] (*b* in or nr Liège, *c*1475; *d* Lier, 20 Sept 1533). Composer and singer, brother of (1) Jacques Champion (i). He was a prominent member of the court chapels of Philip the Fair and Charles V, and was probably connected with the court of Frederick the Wise, Duke of Saxony. His extant works comprise two five-voice masses, *Missa supra Maria Magdalena* and *Missa ducis Saxsonie 'Sing ich niet wohl'*, two psalm motets, *Beati omnes* and *Deus in adjutorium*, for six and four voices respectively (sacred works all ed. in CMM, lx, 1973), and one four-voice Flemish chanson, *Noch weet ick* (ed. in Mw, xxii, 1962; Eng. trans., 1964). They represent outstanding examples of Franco-Flemish polyphony in the high Renaissance. Typical stylistic features include proportional designs, florid discantus parts and densely layered textures with superimposed contrasting motives, elaborate rhythmic activity in the approach to cadences and the use of modal mutations for expressive effect (as found also in the works of Ockeghem and La Rue); these are combined with such Josquinian traits as imitative paraphrase of motifs from the cantus firmus, meticulous text declamation and systematic tonal organization. The clear formal symmetry of Champion's works is enhanced by the cyclical recall and development of material between sections of motets and between entire mass movements. These and other advanced techniques of melodic and contrapuntal development place him at the forefront of his generation; his works were disseminated, like those of other Franco-Flemish composers, in later German and Spanish sources.

(3) **Thomas Champion** [Mithou, Mythou, Mitou, Mytou] (*d* after 1579). Composer and keyboard player. He was generally known as Mithou and was highly esteemed as both composer and performer. He is first heard of in the service of Antoine de Bourbon-Vendôme, father of Henri IV. In 1554 he was living in Paris and in 1557 in Béarn, which his employer had acquired by marriage along with his title of King of Navarre. Towards the end of 1557 he entered the king's service; in 1559 he played the part of Orpheus in a court festivity celebrating the marriage of Marguerite, sister of Henri II, to the Duke of Savoy. In 1578 he became the first organist of the royal chapel and chamber. There is no record of him after 1580. Mersenne not only praised his organ and spinet playing but called him 'the greatest contrapuntist of his time'. His surviving works are, however, too few to substantiate this claim: they amount only to *Premier livre contenant 60 pseaumes de David* (Paris, 1561) for four voices, as well as four sacred chansons and seven four-part secular chansons scattered through collections (RISM 1548^{4}, 1549^{20}, 1552^{3} ($2/1556^{12}$), 1552^{4} ($2/1554^{20}$), 1554^{26}, 1556^{15}, 1556^{16} ($2/1556^{14}$), 1575^{4} and 1597^{10}), two also transcribed for lute (1552^{34}).

(4) **Jacques Champion (ii)**, Sieur de La Chapelle (*b* ?Paris, before 1555; *d* Paris, 1642). Keyboard player and composer, son of (3) Thomas Champion. The evidence for his date of birth is a reference to him as 'octogenarius' made about 1635 by Mersenne, backed up later by statements by Champion himself mentioning his old age. On 10 March 1564 he was old enough to be a godfather, and he had married some time before 27 May 1580. A report of this date provides the first evidence of his employment – as organist and *valet de chambre* to Henri III, a position that he may have taken over from his father. Later he is described as *joueur d'espinette*, but his interest in the organ evidently continued since he was a member of the committee that in 1610 accepted the newly enlarged organ in Notre Dame. There is no record of the death of his wife, nor were there any children (at least, none survived into the 17th century). But on 31 January 1601 he took as his second wife Anne, daughter of Robert Chastriot, 'escuier, sieur de Chambonnière'. Chambonnières was a small manor in the commune of Le Plessis-feu-Aussous, about 55 km east of Paris (and 15 from Chaumes-en-Brie, home of the Couperin family). The marriage contract identifies the groom as 'Jacques Champion, escuier, sieur de La Chapelle, vallet de chambre ordinaire du Roy, demeurant à Paris, rue de la Chanverrerye, paroisse St-Eustache', showing that at some time after 1580 he had acquired the title of minor nobility (La Chapelle) by which he was known in certain documents and possibly as a composer (see below).

The first of his three children was (5) Jacques Champion (iii) (*see* CHAMBONNIÈRES, JACQUES CHAMPION). For many years his father believed he would be the only one, and he lavished on him all the benefactions that it was in his power to bestow, including the reversion of his royal charge. When a daughter and another son were born there was little left, and it is a measure of Champion's perception of his elder son's character that he felt it necessary to go to law to assure himself that the imbalance would be at least partly offset. In a *déclaration* dated 10 April 1631 (a source of many biographical details for the whole family) he ordered that immediately after his death Chambonnières should pay a total of 3000 livres to his mother, brother and sister in consideration of the post and other benefits conferred on him by his father. In effect, Chambonnières was being ordered to buy the charge from his family, and if he were to refuse out of 'disobedience and ingratitude' his father begged the king not to accept him into his service. He acted in this decisive manner explicitly to preserve harmony among his three children, but he need not have worried. In 1639 his

daughter Louise married a Piedmontese nobleman, and his younger son, Nicolas (or Jehan-Nicolas), who took over the title of 'sieur de La Chapelle', became a captain in the regiment of the Count of Harcourt, danced in a court ballet and in 1656 received the reversion of his brother's and late father's charge – there is no other record of his musical activity, though the royal act expresses satisfaction with his abilities – which he was prevented from exercising apparently because of his premature death.

The will of Jacques Champion (ii) is dated 4 June 1632 and calls him 'chevalier de l'ordre de St-Michel'. He figures for the last time in payment records in January 1638, and his son, who must by that time have taken over his functions, appears alongside him as reversioner. The salary was 600 livres a year, with about the same amount added for maintenance, 80 livres for a mount and 150 livres for harpsichord moving. The date of his death is given in a marginal note in Mersenne's own copy of his *Harmonie universelle*.

In the preface to the same work Mersenne spoke of Champion's 'profound knowledge and beautiful touch on the harpsichord'. In 1621 John Bull dedicated *Het joweel voor capelle* to him (Dart), and the source of this composition (*GB-Lbl* Add.23623, dated 1629) contains three pieces that Dart attributed to him, 'Fantas: de Chappel', 'Pauana simphonie de Chappel' and 'Gaillarde de Chappelle' (the jewel and pavane are edited in H.F. Redlich: *Harpsichord Pieces from Dr John Bull's Flemish Tabulatura*, Wilhelmshaven, 1958); a fourth piece may be the 'Alemande de Chapelle' on which Sweelinck may have written two variations (in the 1662 *Celler Klavierbuch*, *D-CEbm* 730, ed. in EMN, ii, 1965). This music, if it is indeed by Champion – Apel (Eng. trans., 796, n.19) disagreed – is thoroughly retrospective in style and suggests that, although Chambonnières may have received his solid contrapuntal grounding from his father, he did not derive from him his free melodic sweep and rich keyboard textures. According to Dart, five dance pieces 'de chapelle', one dated 1619, were in the lost Clark manuscript.

(5) Jacques Champion (iii). *See* CHAMBONNIÈRES, JACQUES CHAMPION.

DAVID FULLER/DAVID LEDBETTER (1, 3–5), NORS S. JOSEPHSON (2)

Champness [Champnes, Champneys], **Samuel Thomas** (*b* *c*1732; *d* Sept/Oct 1803). English singer. There were at least three, possibly four, 18th-century singers of the name Champness; it is difficult to separate their identities beyond doubt. According to Chapel Royal records, two – both named Thomas – were discharged as boys (presumably when their voices broke), on 31 August 1748 and 20 July 1753 respectively; but Chamberlayne (*Magnae Britanniae Notitia*, 37th edition) listed Samuel Champness among the Chapel Royal boys in 1748, and an 1803 obituary notice in *The Gentleman's Magazine* said that Samuel 'was one of the singing-boys under that great master Handel, who composed several songs in the oratorio of *Joseph* expressly for him'. The last statement is probably untrue, but it seems possible that Samuel was identical with the first Thomas.

A 'Mr Champness' was a prominent bass soloist, especially in oratorio, from the mid-1750s, and it seems likely that all references in this paragraph are to the same man. He sang in *Judas Maccabaeus* and probably other oratorios under Chilcot at Bath in April and May 1755 and in *Samson* there in 1757. It is not certain when he first appeared in Handel's London seasons: certainly in 1757–9, and probably in 1755–6. In 1757 he created the part of Time in *The Triumph of Time and Truth*. In 1758 he sang in the same work and in *Belshazzar*, *Jephtha* and *Judas Maccabaeus*; in 1759 in *Solomon* and probably *Samson*. He sang Polyphemus in *Acis and Galatea* at the Great Room, Dean Street, in 1758 and for Beard's benefit at the Long-Room, Hampstead, in 1759, and made many provincial appearances: at Salisbury (1759, when according to the *Salisbury Journal* he 'sung the base part with great energy and exactness', 1760 and 1763–5), Birmingham (1760), Oxford, Cambridge (1761 and 1765) and the Three Choirs Festival (1760 and 1763). His name appears in many later librettos, and he was probably the Champness who appeared in the Covent Garden oratorio seasons of 1776–7 and 1789–91 and was a bass at the Handel Commemoration Festival of 1784.

One Champness sang in the chorus of Handel's Foundling Hospital *Messiah* in 1754, and two – a soloist who received one and a half guineas and a member of the chorus who received half a guinea – in those of 1758 and 1759. It is probable that the soloist was the Champness of the previous paragraph, and that he was the man who sang in Arne's *Eliza* (1754) and *Britannia* (1755) at the New Haymarket and every season at Drury Lane from 1755 to 1774, when he retired from the stage. According to the 1803 obituary Samuel was celebrated 'for his powerful bass-voice, particularly in the character of Hecate, in *Macbeth*'. He appeared in J.C. Smith's *Tempest* in 1756, and in *Almena* by Michael Arne and Battishill in 1764. Samuel Champness (? the same man) was a member of the Westminster Abbey choir, 1783–1803, and admitted as a Gentleman of the Chapel Royal on 20 November 1789.

A Thomas Champness was appointed minor canon of St Paul's on 14 January 1766, joined the choir of Westminster Abbey ('late', perhaps after retiring from the theatre) in 1777, became a minor canon there in 1779 and died or retired about 1781–2. Samuel's brother

Weldon (or Welldon) Champness became a minor canon of St Paul's on 21 November 1761, lay vicar at Westminster Abbey (1762–77), minor canon there (1778–1801), precentor (1794–1808) subdean and succentor at St Paul's (1797–1810), and died in 1810. He was almost certainly the 'Rev. Mr. Champness' who sang countertenor at the 1784 Commemoration. Thomas Weldon Champness, son of Samuel, was a member of the Westminster Abbey choir in 1800–11.

WINTON DEAN

Chance. *See* ALEATORY, §9.

Chance, John Barnes (*b* Beaumont, TX, 20 Nov 1932; *d* Lexington, KY, 16 Aug 1972). American composer. He began studying composition at the age of 15, and received the BM and MM degrees from the University of Texas, Austin, where he was a pupil of Clifton Williams, Kent Kennan and Paul Pisk; he won the Carl Owens Award for student composition in 1956 and 1957. He was a timpanist with the Austin SO and an arranger for the Fourth and Eighth US Army Bands before serving as composer-in-residence for the Ford Foundation Young Composers Project, Greensboro, North Carolina (1960–62). In 1966 he joined the music department at the University of Kentucky, a position he held until his death. His most popular compositions include *Variations on a Korean Folk Song* (which won the American Bandmasters Association Ostwald Award in 1966), *Incantation and Dance*, *Elegy*, *Blue Lake Overture*, *Introduction and Capriccio* and the Symphony no.2, finished just before his death. Chance's works are tonal and unabashedly romantic, demonstrating rhythmic inventiveness and a secure command of instrumentation.

WORKS

Inst: Sym. no.1, orch (1956); Ov. to a Fairy Tale, orch (1957); Credo, tpt, pf (1959); Fiesta!, orch (1960) [arr. H. Hazelman, band (1997)]; Satiric Suite, str (1961); Incantation and Dance, band (1962); Introduction and Capriccio, 24 ww, pf (1966); Variations on a Korean Folk Song, band (1967); Blue Lake Ov., band (New York, 1971); Elegy, band (1972); Sym. no.2, wind, perc (1975)

Vocal: Blessed are They that Mourn (Bible), chorus, 4 hn, str, b drum (1961); The Noiseless, Patient Spider (e.e. cummings), female vv, multiple fl (1961); Alleluia, chorus, band (1962); Ballad and March (Amer. trad.), chorus, band (1962); 3 Songs (cummings), S, fl, pf (1962); Kyrie and Alleluia, chorus, orch (1967)

Principal publisher: Boosey & Hawkes

RAOUL F. CAMUS

Chance, Michael (*b* Penn, Bucks., 7 March 1955). English countertenor. He studied at King's College, Cambridge, where he was a choral scholar, and quickly established a reputation. He made his British operatic début as Apollo in Cavalli's *Giasone* (1983, Buxton Festival) and his European début as Andronicus in Handel's *Tamerlano* (1985, Lyons). Other roles have included Otho, in Monteverdi's *L'incoronazione di Poppea* and in Handel's *Agrippina*, and Ptolemy in Handel's *Giulio Cesare*. He sang with Kent Opera as the Military Governor in the première of Judith Weir's *A Night at the Chinese Opera* (1987, Cheltenham Festival) and in 1988 achieved a notable success in the title role of *Giasone* at the Innsbruck Early Music Week. In 1989 he appeared at Glyndebourne as Oberon in Britten's *A Midsummer Night's Dream* and as Apollo in *Death in Venice* with the Glyndebourne Touring Opera. In 1990 he sang with the Netherlands Opera in Monteverdi's *Il ritorno d'Ulisse in patria*, and in 1997 appeared as Gluck's Orpheus at the ENO. His recordings include *Agrippina*, *Tamerlano*, *Orfeo* (Monteverdi and Gluck), *Giasone*, Mozart's *Ascanio in Alba* and Alexander Goehr's *The Death of Moses*, in addition to music ranging from Elizabethan lute songs to *Carmina burana*. Chance's secure technique and natural-sounding, unstrained vocal projection have made him much in demand in both opera and oratorio.

NICHOLAS ANDERSON

Chance, Nancy Laird (*b* Cincinnati, 19 March 1931). American composer and pianist. She studied theory and composition with Ussachevsky, Luening and Chou Wen-chung at Columbia University. She received the ASCAP/Nissim prize for orchestral composition twice (1981, *Liturgy*; 1984, *Odysseus*), as well as two awards from the NEA, three fellowships from the MacDowell Colony and a Sundance Film Composer Fellowship in 1988. Her commissioned works include *Planasthai* (Cleveland Chamber Orchestra, 1991), *In Paradisium* (Florilegium Chamber Choir, 1987) and the Woodwind Quintet (Quintet of the Americas, 1983), and her works have also been performed by the Philadelphia Orchestra, the St Louis SO, the Da Capo Chamber Players and other contemporary chamber ensembles in New York, Philadelphia, Boston, Washington, DC, and Chicago. The *New York Times* (June 1985), writing of *Rhapsodia*, described her music as 'densely plotted series of aural clusters … gnarled sounds that expand and contract with a violent poetry'. Several of her works have been recorded on Opus One.

WORKS
(*selective list*)

Orch: Liturgy, 1979; Odysseus, suite, 1983; Planasthai, 1991

Other inst (for chbr ens unless otherwise stated): Darksong, 1972; Edensong, 1973; Daysongs, 1974; Ritual Sounds, 1975; Ceremonial, 1976; Declamation and Song, 1977; Duos II, ob, eng hn, 1978; Duos III, vn, vc, 1980; Exultation and Lament, a sax, timp, 1980; Solemnities, 1981; Ww Qnt, 1983; Rhapsodia, 1984; Str Qt no.1, 1984–5; Elegy, str orch, 1986; Heat and Silence, 1989

Choral (with orch unless otherwise stated): Domine, Dominus, motet, double chorus unacc., 1964; Odysseus, 1981–3; In Paradisium, 1986–7, chbr version, 1987; Pie Jesu, Libera me, Hosanna and Benedictus, 1990

Other vocal: 3 Rilke Songs, S, fl, eng hn, vc, 1966; Duos I, S, fl, 1975; Say the Good Words, 1v, synth, 1989

Film: Last Images, 1988

CYNTHIA GREEN LIBBY

Chançoneta. *See* CHANZONETA.

Chancy [Chansi], **François de** (*d* Aug 1656). French composer and lutenist. By 1629, when he published his *Tablature de mandore*, he may already have been in the service of Cardinal Richelieu, to whom he dedicated it. He definitely served him from 1631 to 1635. From 1635 until his death he was a chamber musician of the king, and from some time before 1644 until his death he also headed the children of the royal household. His successor in this latter position was Cambefort, who served at his

side from 1644 until 1656, when he assumed all his duties. From about 1630 on Chancy often participated in *ballets de cour*, for some of which he wrote music, for example *Ballet de la félicité*, *Ballet des triomphes* (1635), *Ballet de la vieille cour, Ballet de la prospérité des armes de France* (1639) and *Ballet des fêtes de Bacchus* (1651).

Chancy's instrumental music comprises pieces for mandora (a series of branles and six short suites, each beginning with a *recherche* or prelude); for lute (including several suites whose dances are unusual in having asymmetrical phrase lengths); and three courantes for violin and oboe. His songs are mostly solo *chansons pour danser* and *chansons pour boire* with lute accompaniment. *Je ne puis vivre un seul moment* is an unusual *gavote pour boire*. There are a few songs for two or three voices and also two collections for four voices, for which Chancy wrote most of the poems. He could apparently compose at great speed, since on one occasion, when Maria de' Medici paid a sudden visit to Richelieu, he was ordered to compose and perform a new song on the spot. Mersenne, who included several pieces by Chancy in his treatises, thought him one of the best songwriters at the French court. (G. Durosoir: *L'air de cour en France: 1571 à 1655*, Liège, 1991)

WORKS
all published in Paris

Editions: *Oeuvres de Chancy, Bouvier, Belleville, Dubuisson, Chevalier*, ed. A. Souris (Paris, 1967) [S]

Tablature de mandore de la composition du Sieur Chancy (1629)

2 suites (6 dances each), lute, 1631[6], S

Airs de cour, 4vv, 2 vols. (1635–44); 1 air ed. A. Verchaly, *Airs de cour pour voix et luth (1603–1643)* (Paris, 1961)

Les équivoques, 1–3vv, lute, 5 vols. (1640–55); vols.iii–v are entitled Livre des chansons; vols.ii–v repr. as Recueil des quatre livres des Equivoques pour boire et pour danser (1699)

Isolated instrumental works in the Philidor collection (*F-Pn*) and in the treatises of Mersenne; 4 ed. in S

JOHN H. BARON

Chandor, Henry (*fl* 1568–76). French choirmaster and music editor. In 1568 he was *maître de musique* at the collegiate church of St André in Grenoble. By 1576 he had moved to Paris, where he worked for his friend Nicolas Du Chemin as an editor and as tutor to his three children. He appears as an editor in only one surviving print, *Sonetz de P. de Ronsard*, set for four voices by Guillaume Boni and published by Du Chemin in 1576. Evidently Boni was not satisfied with Chandor's work, since he obtained a privilege for a revised edition which was subsequently issued by the rival press of Le Roy & Ballard.

FRANK DOBBINS

Chandos. English record company. It was founded in 1979 by Brian Couzens and has championed rare and neglected repertory. Initially focussing on British composers (including Bax, Bliss, Dyson, Moeran and Rubbra), it later entered a wider field including American and European (especially Scandinavian) music. In 1989 the period performance label Chaconne was formed and in 1995 an Opera in English series was launched (with *The Barber of Seville*). Standard repertory has also been recorded, notably Mariss Janson's Tchaikovsky symphony cycle (1984–6). Whenever possible, extended series are undertaken, among them complete Walton and Grainger 'editions'. Chandos was among the earliest record companies to use digital technology (from 1978) and to release recordings on CD (1983). It remains an independent, family-owned company, producing about 100 CDs a year.

PAUL D. WESTCOTT

Chang. Sassanian vertical angular harp. *See* IRAN, §§I, 5 and II, 5. *See also* PAKISTAN, §5(iii).

Chang, Sarah (*b* Philadelphia, 10 Dec 1980). American violinist of Korean origin. Precociously gifted, she began to perform in public at the age of five, and at seven won the Starling Scholarship to the Juilliard School in New York, where she studied with Dorothy DeLay and Hyo Kang. She made her professional début in 1988 playing Paganini's First Violin Concerto with the New York PO directed by Mehta, and by the time she was 15 had appeared with most of the major orchestras in Europe and the USA, and at leading festivals. She made her début at the Proms, playing the Sibelius Concerto, in 1999. Her pure tone, dazzling technique and fluent musicianship can be heard in her recordings of the Paganini First Concerto and the concertos of Mendelssohn, Tchaikovsky and Sibelius.

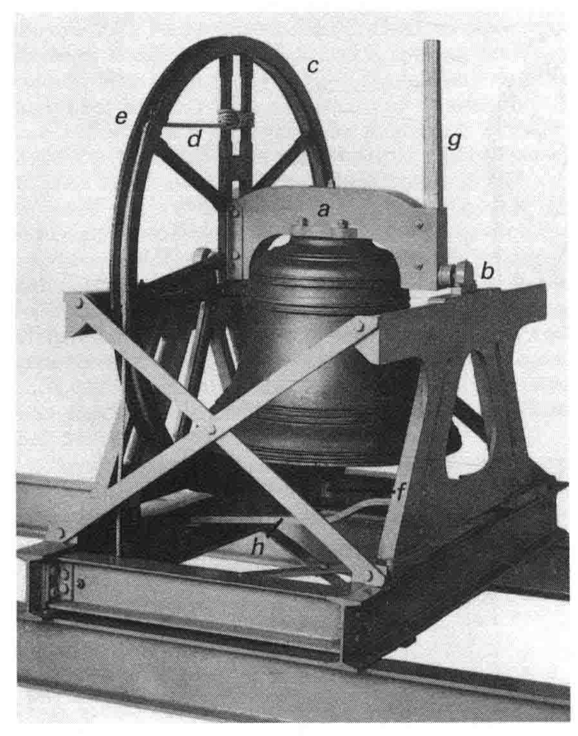
RICHARD WIGMORE

Change ringing. An art of bellringing peculiarly English and producing a music of its own. It was developed in England during the 17th century, while on the Continent there was a parallel, although unconnected development in the carillon.

1. History. 2. Methods of change ringing.

1. HISTORY. For centuries before the development of change ringing, the general shape and form of the bell and the uses of bellringing had been established. Probably the most characteristic sound in the medieval town was that of the chiming of bells, announcing the time for prayer or simply the hour. The bells were chimed, singly or in twos or threes, by means of a rope and lever which enabled them to be swung just far enough for the clappers to strike them. They were hung in church towers because such buildings were almost the only ones large enough to contain them.

Change ringing in approximately the form we now know it began around the end of the 16th century and expanded considerably, both in popularity and complexity, during the second half of the 17th century. The adoption of change ringing as a pastime by associations of well-to-do young men in the middle of the 17th century was particularly influential in its development, although its strength has always been as a vernacular folk art. The growth of ringing is discussed by Sanderson.



One of the changes brought about by the Reformation in England and the simplification of public worship and, in the 17th century, the Puritan tenet of sabbatarianism, was the almost complete secularization of change ringing. The quasi-liturgical ringing of bells was forbidden, although of course the ban was never completely successful, and change ringing remained a secular hobby to be

carried out on any day of the week except Sunday; indeed it was abhorred by most of the clergy.

After a period of stagnation in the first half of the 19th century, there was a movement in the second half for reform in the use of bells for church purposes, taking its seeds from the Oxford Movement. Associations were formed throughout the country based on county or diocesan areas, and they encouraged the use of bells to call people to worship and to mark the great church festivals. Change ringing was advocated as an element in supporting this reform. The secular side of ringing still remained, but to ring the bells regularly on Sundays became the overriding duty of ringers.

Change ringing is once again flourishing, with local associations covering the whole of the British Isles. The number of active ringers remained fairly constant throughout the 20th century at between 35,000 and 40,000, but it increased to over 50,000 by the year 2000 in a drive to ring every bell in the country at the start of the new millennium. There is also a rapidly growing, although limited amount of change ringing in other parts of the world, particularly in North America and Australia but also in New Zealand and southern Africa. The organization unit is the 'local band' (the group of ringers attached to a particular 'ring' of bells) and it is this strong local structure which has enabled change ringing to flourish continuously for 400 years. Some of the early pieces of ringing ('methods') are rung as much today as they were 350 years ago, but since World War II there has been rapid growth in extremely complex methods, which the ringers of earlier periods would have thought impossible to cope with.

2. Methods of change ringing. Fig.1 shows the way in which a modern bell is hung for the purpose of change ringing. The crown of the bell is firmly bolted to the headstock, which revolves on 'gudgeons' working in ball-bearings. To the headstock is fixed a large wooden wheel, flanged to hold the rope which passes down, by means of pulleys and guides, into an approximate circle with its neighbours in the ringing-room, normally 9 metres or more below. Here the ringer pulling on a 'sally' (a coloured woollen section woven into the rope about 240 cm from the end) sets the bell in motion (fig.2), making it swing alternately in opposite directions, one double swing for each pull. When the swing of the bell exceeds 90° from the vertical, the garter hole passes a stationary pulley (concealed behind the front left corner of the frame in fig.1) and the direction in which the rope leaves the garter hole is reversed. The clapper strikes within each swing when the bell is approaching the end of its arc. With each pull the bell describes an ever increasing arc until it is mouth upwards; the process of getting the bell into this position is called 'raising', and the bell when raised is said to be 'up'. The bell may, if desired, be allowed to go a little way over the 'balance' point and be held there. If allowed to go even further until the stay rests against the slider, it is said to be 'stood' or 'set' and can be left that way during rest periods. This process of 'full circle' ringing, with the facility of being able to hold the bell just over the balance point, enables the striking of the bell to be slightly delayed or advanced through small variations in pull so as to fit in with the other bells either in a repeated sequence or in changing patterns.

1. Change-ringing bell at rest: (a) headstock (b) bearings (c) wheel (d) rope (e) garter hole (f) clapper (g) stay (h) slider

The starting point for all change ringing is the repeated ringing of all the bells in sequence down the musical scale ('rounds'), most 'rings' of bells being tuned so that their strike notes are in a major key. (For a discussion of the tuning of bells *see* Bell (i), §2.) Normally there are six or eight bells in a ring although there may be fewer or more, with 16 the current maximum. In ringing rounds and in all change ringing it is considered essential that all bells are invariably struck in an even spacing one from another with the exception of a double interval at the end of every other change. No variation from this strict rhythm is permitted and achieving it is known as 'good striking'. It is difficult because of the varying size of change ringing bells – the average weight being around 250 kg but some bells weighing up to four tonnes – and the remote and cumbersome nature of the equipment. Indeed, a bell hung for change ringing sounds two seconds after the physical action.

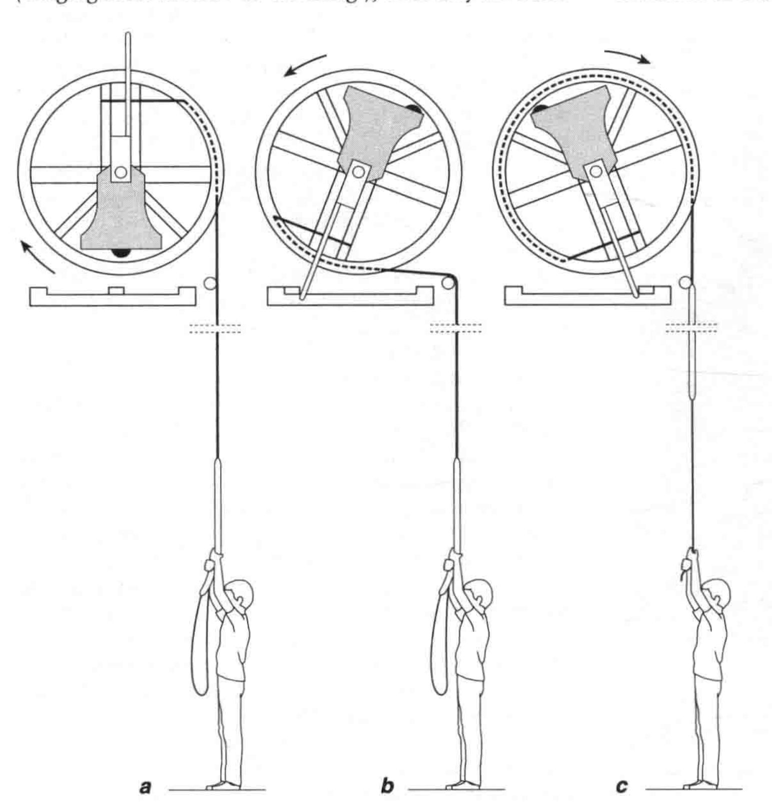
The earliest and simplest form of change ringing is known as ringing 'call changes'. In this method the order of striking is varied from simple rounds by pairs of bells swapping their places at suitable intervals on the instructions of one of the ringers (called the conductor). Call change ringing is still practised throughout Britain and is especially used to give beginners practice in bell control. From this it is a short step to ringing simple methods.

The total number of changes possible on any number of bells (that is, the different sequences which can be obtained without repetition) is the factorial of the number: the number of permutations obtainable on three bells is factorial three, i.e. $3 \times 2 \times 1$, or six changes; on four bells $4 \times 3 \times 2 \times 1$, or 24 changes; on eight bells 40,320 changes are possible, and on ten bells 3,628,800.

The basic principle involved in ringing changes on any number of bells is called 'plain hunt', the word 'hunt' being used in the sense of a course, or path among the

other bells. Each bell is represented on paper by an ordinal, starting with 1 for the treble (the smallest bell) and going down the scale to the tenor (the largest bell). Table 1 shows examples of plain hunt on three, four and six bells. Each bell follows a regular path among the others, going from the front (or lead) up to the back (or behind) and then down to lead again. In each of the sets of changes given in Table 1, a line can be drawn along the path of any of the numbers, each representing a bell; the result will be a straight path from front to back and then from back to front, or vice versa. This progress of a bell is called plain hunting, and plain hunt produces twice as many changes as there are bells, each bell being struck twice in each position in the row: once on the way up and once on the way down.

These changes can be written out by reversing the order of the bells in pairs of adjacent numbers. In the six-bell example the second row is obtained by reversing the order of each of the three pairs; the next row by changing only the inner two pairs; and so on until the original order returns.



But change ringing is not confined to plain hunting. On three bells plain hunt produces all of the six possible changes. But on four bells only eight of the 24 possible sequences can be produced by plain hunt, and it is an essential tradition of change ringing to ring as many different changes as are possible in the time available without repetition. Plain hunting must therefore be varied to obtain more of the possible changes.

There are two main types of method: one for use with an even number of changing bells, the other with an odd number. In the latter, an even number of bells are rung but the tenor is always rung at the end of each change ('ringing tenor behind' or 'covering'), with only the other bells changing. Each method of obtaining changes is described by its name and by the number of bells changing: even-bell methods are 'minimus' on four bells, 'minor' on six, 'major' on eight, 'royal' on ten and 'maximus' on twelve. Odd-bell methods are 'doubles' on five bells, 'triples' on seven, 'caters' (from *quatres*) on nine and 'cinques' on eleven. (In doubles two pairs of bells interchange at every permutation; in triples three pairs interchange and in caters four pairs interchange.) These descriptions have survived from the early days of change ringing.

The simplest of the even-bell methods, and the one best suited for use as an introduction to the inexhaustible complexities of change ringing, is Plain Bob. Its basis is the plain hunt, varied in the simplest way possible to produce more and different changes. On four bells plain hunt starts from rounds and returns to rounds in eight changes. This length, from the time the treble leads until it returns to lead again, is called a 'lead'. At the first lead

TABLE 1: Plain Hunt

Three bells	*Four bells*	*Six bells*
1 2 3	1 2 3 4	1 2 3 4 5 6
2 1 3	2 1 4 3	2 1 4 3 6 5
2 3 1	2 4 1 3	2 4 1 6 3 5
3 2 1	4 2 3 1	4 2 6 1 5 3
3 1 2	4 3 2 1	4 6 2 5 1 3
1 3 2	3 4 1 2	6 4 5 2 3 1
1 2 3	3 1 4 2	6 5 4 3 2 1
	1 3 2 4	5 6 3 4 1 2
	1 2 3 4	5 3 6 1 4 2
		3 5 1 6 2 4
		3 1 5 2 6 4
		1 3 2 5 4 6
		1 2 3 4 5 6

2. Change-ringing action: a pull on the rope raises the bell from down position (a) to up position (b); a further pull causes the bell to swing down and continue round to position (c); the next pull returns the bell to position (b)

TABLE 2: Plain Bob Minimus

1 3 4 2	1 4 2 3	1 2 3 4

TABLE 3: Lead ends for Plain Bob Minor

1 2 3 4 5 6	rounds
1 3 2 5 4 6	first lead end
1 3 5 2 6 4	second lead
1 5 3 6 2 4	second lead end
1 5 6 3 4 2	third lead
1 6 5 4 3 2	third lead end
1 6 4 5 2 3	fourth lead
1 4 6 2 5 3	fourth lead end
1 4 2 6 3 5	fifth lead
1 2 4 3 6 5	fifth lead end
1 2 3 4 5 6	rounds

end (Table 2) the bells are prevented from coming round (back to 1 2 3 4): the bell striking over the treble (3) stays in 'seconds place' (the second position) for another blow (called 'making seconds place'). To prevent repetition the bells in thirds and fourths place (2 and 4 in Table 2) change places – this is called a 'dodge' – and a new row (1 3 4 2) is produced.

A second lead is then produced by plain hunting until its end is reached. A corresponding dodge is made and the row 1 4 2 3 is produced. The third lead, incorporating the same dodge when the lead end is reached, produces rounds. Thus all of the 24 possible changes on four bells have been rung, with no repetition and no omission. A line drawn through any one of the numbers 2, 3 or 4 in Table 2 will show the path of one bell in this 'plain course' of Plain Bob Minimus. Each of these 'working' bells has followed a path consisting of plain hunting, varied at the lead ends by making seconds place, a 3–4 dodge after the two blows behind (this is called 3–4 down) or a 3–4 dodge before the two blows behind (called 3–4 up). The treble has retained its plain hunting path throughout. When this Plain Bob method is rung on six bells a plain course of 60 changes is obtained by ringing five leads of plain hunt, each one incorporating a similar variation at the treble lead end. The lead ends starting from rounds for Plain Bob Minor are shown in Table 3.

Changes can now be rung, all different, for about two minutes, depending on the weight of the bells (which governs the speed of the ringing). The next stage is to vary the Plain Bob method further, introducing different changes until all the 720 changes possible on six bells can be produced. At the appropriate stage in the ringing, just before the treble leads, the conductor may call 'bob'. This is an instruction to the ringers, or some of them, to alter their paths, thus producing a new row from which further changes can be rung. The variation made by a bob called at the last lead end of a plain course of Plain Bob Minor is shown in Table 4.

The difference caused by the bob is that instead of a bell making seconds place at the lead end, another bell makes fourths place. The effect is to alter the paths of three of the bells; consequently if a bob is called at the corresponding position twice more – that is at the 118th and the 178th changes – these bobs will affect the same three bells, and all six bells will be back at rounds in 180 changes.

If bobs are called at appropriate places it is possible to produce 360 changes – half the total number possible on six bells – but for complex mathematical reasons, it is not possible to obtain the full 720 changes in this method by bobs alone. The order of one pair of bells alone must be changed at one time if all or some of the other 360 changes are to be produced, and a further single change is then required to get back to rounds. To do this the conductor calls 'single' at the appropriate places. The effect is compared in Table 4 with a plain lead and a bob lead.

However many bells Plain Bob is rung on, the bobs and singles will affect only the bells which are in seconds, thirds or fourths place at the lead end. All the other bells follow the normal path as at a plain lead. But the number of positions at which bobs and singles may be called and made, and the number of changes they will produce become much greater on the higher numbers of bells. The most a normal ringer ever rings at one time without stopping is about 5000 changes, starting from and ending with rounds, and without repetition in between – although for doubles and minor where the total possible changes are less than 5000, periodic repetition is allowed. This length is called a 'peal' and takes about three hours to ring. 'Quarter-peals' (being about 1250 changes) are rung far more frequently than peals but the normal length rung on Sundays and for practice is a 'touch' lasting five to ten minutes, although many such touches are rung in a standard ringing session of between 30 minutes and two hours. The composer – whether of peals, quarter-peals or touches – must ensure that his compositions are 'true' (i.e. they contain no repeated changes) and that they are as musical as possible. A composition which is not true is said to be 'false'.

Many ringers, and probably still more listeners, prefer the more obvious rhythmic and musical effect produced when the tenor bell is rung at the end of every row while the other bells change. On the normal ring of six or eight

bells this means that an odd number of bells change. One of the earliest, but most lastingly popular, of the odd-bell methods is 'Grandsire'. In the ringing (and as usually taught) it seems to be completely different from Plain Bob, but it is in fact a very simple extension of it. While Plain Bob on four bells consists of a plain hunting treble and three working bells, in Grandsire Doubles (i.e. on five bells) another bell does a plain hunt parallel to the treble. The lead of each in Table 5 shows only the plain hunt bells.

This double hunting path means that it is not possible for one of the working bells to make seconds place at the lead end, because all the working bells must keep out of the way of the hunting path of the treble and the 'bell in the hunt' (bell no.2 in Table 5); but, when 1 and 2 change over at the front, a bell can make thirds place. This causes the two bells behind to dodge together, but it will be in the 4–5 positions instead of the 3–4 positions (Table 6). The result is that whereas Plain Bob on four bells produces the sequence seconds, 3–4 down and 3–4 up, everything now moves one position further along to give thirds, 4–5 down and 4–5 up. Using this double hunt system, but otherwise proceeding as for Plain Bob, a plain course of Grandsire Doubles is produced as in Table 7. Touches are obtained by the use of bobs and singles having the effect of changing the second hunt bell and thus producing different changes. Like Plain Bob, Grandsire can be rung on all numbers of bells. Grandsire Triples, for example, is based on the same principle, being Plain Bob Minor (six bells) with an additional bell in the hunt.

So far the methods considered have been based on a lead with the treble having a plain hunting path. There is another and very large class of method where the treble has a dodging path instead of a plain one. An old word for dodging was 'bobbing', hence this path of the treble is called 'treble bob' and methods based on this dodging path are sometimes called treble bob methods. Other methods of this class are called 'surprise' or 'delight' methods. Whereas in plain hunt all the bells can do the same work and will come back to rounds without repetition, the bells cannot all have a dodging hunt because, as Table 8 shows, each change will be repeated. To avoid this, some alterations to treble bob hunting must be made, and the nature of these variations determines the particular method that is obtained. Table 9 gives the first leads of the two most-rung treble bob methods – here on six bells. Repetition is avoided by the bells in thirds and fourths place 'making places' (i.e. ringing two consecutive blows there) shortly before and after the lead ends, and another bell repeatedly making seconds throughout the middle of the lead.

These methods are considered relatively straightforward to ring, but there are many thousands of extremely complex methods on the same basic plan of the treble following a treble bob path, but with the other bells making places in various parts of the lead. Table 10 gives the first leads of two of the most complex six-bell methods currently rung. Avoiding falseness when composing for treble dodging methods is extremely difficult and most composers now check their compositions by computer.

A method in which all the bells do the same work in a plain course is sometimes known as a 'principle', and the most popular principle is 'Stedman', composed by Fabian Stedman, the 17th-century ringer and writer. Plain hunt on three bells produces six changes, and these can be achieved in two different ways, known as forward and backward hunting (Table 11).

For Stedman Doubles, the three bells at the front of the row ring plain hunt while the two bells in the 4–5 places dodge with each other. At the end of the six changes (known as a 'six'), the bell in thirds place changes places with the bell in fourths place. Another six changes are rung on the new front three bells (two already there with one new one) while the two bells now at the back dodge with each other. The sixes (i.e. the sets of three bells hunting at the front) must, however, consist of alternate forward and backward hunting. The forward hunting six is known as a 'quick six' and backward hunting six as a 'slow six', and the plain course starts in the middle of a quick six. Table 12 gives a plain course of Stedman Doubles. After the first two changes bell no.4 goes into the front three places and stays there for 30 changes before going out to the back again. During those changes it follows what seems to the beginner a rather complicated path. Then after two sixes in the 4–5 places it goes into the front again, but after only six changes it comes straight out to dodge again in 4–5. These two pieces of work in the front are called 'the slow' and 'the quick' respectively.

Each one of the five bells does exactly the same work, merely starting in a different place. At the end of 60 changes – half the possible total – the bells come back to rounds. To obtain the other 60 changes a 'single' is called in the middle of any one of the sixes. Instead of one of their dodges behind, each of the bells at the back then

TABLE 13: Stedman Triples

Plain		Bob		Single
1 2 3 4 5 6 7		1 2 3 4 5 6 7		1 2 3 4 5 6 7
2 1 3 5 4 7 6	call bob	2 1 3 5 4 7 6	call single	2 1 3 5 4 7 6
2 3 1 4 5 6 7		2 3 1 4 5 6 7		2 3 1 4 5 6 7
3 2 4 1 6 5 7	make bob	3 2 4 1 5 7 6	make single	3 2 4 1 5 6 7
2 3 4 6 1 7 5		2 3 4 5 1 6 7		2 3 4 5 1 7 6
2 4 3 6 6 5 7		2 4 3 1 5 7 6		2 4 3 1 5 6 7
etc		etc		etc

makes a place – one in fourths place and the other in fifths. (This is known as 'lying still'.) This changes the relative positions of just two of the bells and if the method is continued the second 60 changes can be rung. Then another single is called and the bells are back in the plain course which continues until rounds is reached.

To produce Stedman Triples, Caters and Cinques on seven, nine or eleven bells, the additional pairs of bells dodge with each other in the same way as in doubles, swapping places in the 3–4, 5–6, 7–8 and 9–10 positions at the end of the sixes, as before. To extend the method beyond a plain course, a single may be called as before, and also a form of bob, in which the bell in fifth place makes place. Unlike doubles, however, these calls are made at the change of the sixes. An example of a bob and a single in Stedman Triples is shown in Table 13.

Change ringing is also performed on handbells as well as on tower bells, but since the performers have one bell in each hand the difficulties they experience are to that extent increased. But the standard of the ringing is often higher because the control of handbells is far easier.

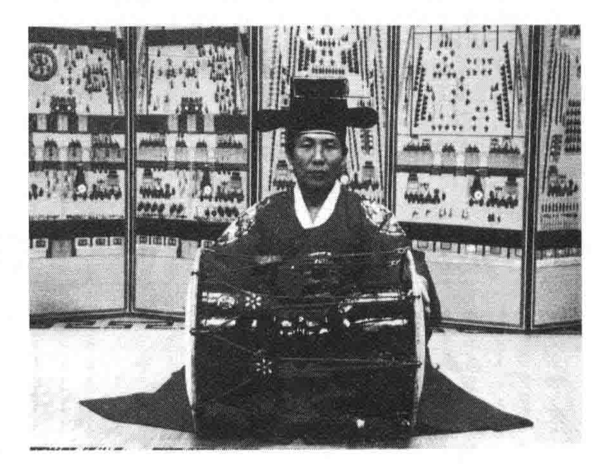
Changes. Jazz and popular musicians' term for a sequence of chords: for example 'blues changes', referring to a blues progression.



Changgo. Double-headed hourglass drum, the chief percussion instrument of Korea (*chang*: 'stick'; *go*: 'drum'). It is also known as *changgu* (especially in central Korea and among folk performers), *sŏlchanggo* (for the instrument used in the farmers' percussion band music *nongak*) and *seyogo* (a Chinese term used in certain historical sources, meaning 'narrow-waisted drum'). The *changgo* body is made in a number of sizes, and in general a *changgo* used in court music and for subtle accompaniment will be larger and deeper-toned than one used in *nongak* and in certain types of folksong.

The body of the instrument is made of a single piece of paulownia wood, fashioned in the shape of an hourglass and hollow even at the narrow waist. The body ranges in length from roughly 40 cm to over 60 cm and in diameter at the ends from roughly 20 cm to over 30 cm. It may be painted red and decorated with traditional motifs, though some drums used in *nongak* are left with a natural finish. The circular heads, of animal skin, are mounted on metal hoops of a diameter several centimetres larger than the end diameter of the wooden body; because the heads are larger, there is a protruding overhang of 6 to 8 cm around each end. The two heads are laced directly to each other by cords running from hooks attached to the metal hoops. Small leather sleeves placed on pairs of adjacent lacing cords can be manipulated to vary the head tension; the drum is tuned to an effective resonance, but not to any particular pitch. According to the *Akhak kwebŏm* (1493) both heads were originally of horseskin, thick on the left and thin on the right; the left skin is now usually of cowhide and the right of dog- or sheepskin, except in the case of the medium-sized *sŏlchanggo* used in *nongak*, which has dogskin for both heads.

In most types of Korean music the *changgo* is placed horizontally on the floor in front of the seated performer (see illustration). The left face is struck with the open left hand, the right face with a slender stick of bamboo; the right face can be struck in the centre in loud music, or along the protruding flange (producing a crisp, high-pitched sound). The open hand produces a deep, resonant sound, the stick a drier, penetrating sound. In the case of *nongak*, which is performed out of doors and requires considerable volume of sound, the *changgo* is strapped with sashes onto the performer, who holds a bamboo mallet (with a ball of wood or plastic at the striking end) in the left hand, hitting either the left or right heads, and a sturdy bamboo stick in the right hand, striking the centre of the right skin in a virtuoso technique, full of visual display.

The hourglass drum in Korea can be traced back to mural paintings of the Koguryŏ period (37 BCE–668 CE) and artefacts (such as stone and metal reliefs) of the Silla period (57 BCE–935 CE). The name *changgo* appears in literary references to the year 1076, and both the instrument and the name have remained essential to the tradition ever since: virtually all surviving forms of Korean musical notation (tablature, letter, graphic etc) include parts for the *changgo*, and it is the one instrument vital for nearly every performing ensemble.

At present the *changgo* is found in most genres of Korean music, whether court, aristocratic or folk. Normally its purpose is to articulate the repetitions of structural rhythmic patterns as an accompaniment to melody instruments, but there is also a solo repertory of

Changgo (hourglass drum) of Korea

considerable rhythmic subtlety in *nongak* and the more recent small percussion ensemble *samullori*.

Related hourglass drums include the Korean *kalgo*, the several Japanese *tzuzumi*, and the Chinese *zhanggu*.

ROBERT C. PROVINE

Changing note. *See* NOTA CAMBIATA.

Chanler, Theodore (Ward) (*b* Newport, Rhode Island, 29 April 1902; *d* Boston, 27 July 1961). American composer and critic. He studied the piano and composition with Hans Ebell and theory with Arthur Shepherd, and in 1919 entered the New York Institute of Musical Art to study with Richard Buhling (piano) and Goetschius (counterpoint). Later he worked under Ernest Bloch at the Cleveland Institute and attended Brasenose College, Oxford University (1923–5). After studying composition for three years with Boulanger in Paris, he returned to the USA in 1933; for a short time in the following year he was music critic for the *Boston Herald*. He won the League of Composers Town Hall Award in 1940 with *Four Rhymes from Peacock Pie*, and received two Guggenheim fellowships (1940, 1944). He taught at the Peabody Conservatory (1945–7) and later at the Longy School, Cambridge, Massachusetts, where he remained until his retirement in 1959. A perceptive and articulate composer-writer, he was a regular contributor to *Modern Music*. His compositions are marked by lyrical melody, polytonality and economy of musical materials; his output largely consists of songs. He holds a unique position in 20th-century American music history as a lyric miniaturist; his song cycle *Eight Epitaphs* (New York, 1939) is considered his most outstanding work and one of the most valuable contributions to American art song.

DAVID E. CAMPBELL/LAURA L. BROUGHTON

Channey, Jean de (*b* Piedmont, *c*1480; *d* Avignon, *c*1539–40). French printer. He began his printing career in Lyons around 1500 as an apprentice to Jacques Arnoullet. On the latter's death in 1504 or 1505, his widow Michelette du Cayre entrusted the press to Channey, who published a book under his own name in about 1505, using Arnoullet's type. Assuming that he would have had to be in his mid-20s for such a responsibility, he was probably born about 1480. Another book with his name as printer was published in 1510, using his printer's mark, a copy of the Aldine anchor and dolphin, for the first time.

Because Arnoullet's sons were coming of age and were ready to take over their father's business, Channey petitioned the Avignon town council in late 1512 for permission to establish a printing firm there. In August 1513 the first of many books with the Avignon address appeared in print. Michelette du Cayre followed him to Avignon, where she married him.

His involvement with music came about through a contract with the composer Elzéar Genet, known as Carpentras, to print four books of his music. Channey was perhaps the best of the few printers in Avignon, but apart from the undated book *Regles communes de plain chant avecques la fin des tons tant reguliers que irreguliers nottee*, he had no experience with music. He remained a publisher of books of grammar, law, theology, popular tales in French and Latin, and poetry (including Marot) until 1540 when he issued a series of ordinances of King François I. This last publication is dated 1540 on the title-page but 1536 on the colophon. An agreement dated 2 January 1531, which reveals many important details about contemporary printing problems, states that Carpentras was to provide a trained singer-corrector at his own expense, to supervise the project and to share the responsibilities for the print run of 500 copies. There was great difficulty in making the note types fit the lines and spaces of the staves, and instead of the six months specified in the contract it was 16 months before the first of the four books appeared (on 15 May 1532). Following this first book (of masses), a second book (of Lamentations) was published on 14 August 1532. An undated book of hymns was issued before 1534 (it is dedicated to Cardinal Ippolito de' Medici, who died in August 1534). A fourth book, also undated and containing *Magnificat* sections, appeared later, probably not after 1536.

Although Attaingnant and Moderne had already begun printing music by the new single-impression method, Channey was the only French printer to follow the double- or triple-impression methods of Petrucci and other Italian music publishers. The most original and distinctive feature of the books is the music type, which has rounded instead of lozenge-shaped note heads. This type was designed by the music copyist Etienne Briard of Bar-le-Duc, who imitated the kind of handwriting that he himself had used 15 years earlier at the papal chapel of Leo X where Carpentras had been a singer. (For illustration, *see* PRINTING AND PUBLISHING OF MUSIC, fig.7.)

His four music books are an isolated example of teardrop notation in the history of music printing, unless they served as a model for Robert Granjon in Lyons when he designed a similar round-note music type in 1558.

SAMUEL F. POGUE/FRANK DOBBINS

Channing, Carol (Elaine) (*b* Seattle, 31 Jan 1921). American actress and singer. She made her stage début in 1941 with *No for an Answer*, created the role of Lorelei Lee in *Gentlemen Prefer Blondes* (1949), and succeeded Rosalind Russell in the role of Ruth Sherwood in *Wonderful Town* (1953). It is for the role of Dolly Gallagher Levi in *Hello, Dolly!* (1964), however, that she is best known, and for which she has won both a Tony Award and the *Variety* Drama Critics Award. She received a special Tony Award in 1968. In 1973, she returned to Broadway as Lorelei Lee in *Lorelei*, for which she was nominated for a Tony Award. Her success on stage made her a popular guest on various television game and talk shows, including 'Password', 'To Tell the Truth', the 'Merv Griffin Show', and the 'Ed Sullivan Show'. In 1994, Channing reprised the title role in the revival of *Hello, Dolly!*, 30 years after its creation. In 1995, she received a special Tony Award for lifetime achievement. She began her career as a soprano, but evolved into a true Broadway belter. She possesses a large stage voice with a heavy emphasis on the lower chest register, and has one of the most uniquely recognizable voices of 20th-century musical theatre, having retained its remarkable quality through the decades.

WILLIAM A. EVERETT, LEE SNOOK

Chanot. French family of violin makers. The first member of the family known to have made violins is Joseph Chanot (*b* Boulaincourt, nr Mirecourt, 10 Sept 1760; *d* Mirecourt, 23 Aug 1832). He worked in Mirecourt from the 1780s. His eldest son, François (*b* Mirecourt, 25 March 1788; *d* Brest, 11 Nov 1825), was a mathematician who specialized in naval construction, but who also took an interest in violin making. In 1817 he patented a 'guitar-shaped' violin built on what he considered to be acoustical principles, with a flat table, c-holes and no soundpost, and he presented such an instrument, with a paper on the subject, to the Académie Royale des Beaux-Arts. An example of this instrument, made in 1818 for Viotti, and a cello, are in the instrument collection at the Musée de la Musique, Paris.

François Chanot's brother Georges Chanot (i) (*b* Mirecourt, 25 March 1801; *d* Courcelles, nr St Rémy-les-Chevreuse, 10 Jan 1873) is judged second only to J.B. Vuillaume among Parisian copyists of Stradivari and Guarneri 'del Gesù'. Their lives to some extent ran parallel, since both came from Mirecourt to Paris, both became renowned experts and dealers as well as makers of new instruments, and both had powers of observation which put them ahead of their contemporaries as copyists. Georges Chanot settled in business in Paris from 1821, firstly at 3 place des Victoires, then 7 passage Choiseul. In 1837 he moved to 26 rue de Rivoli and in 1847 to 1 quai Malaquais, where the family stayed until 1888. Chanot's business was smaller than Vuillaume's and produced comparatively few instruments. In order to avoid fierce competition with Vuillaume, Chanot himself spent much time travelling through Europe, especially Spain, England, Germany and Russia, in search of old instruments and doing repairs. By this means he also gained an international reputation for his own instruments. His exceptionally neat workmanship perhaps shows more sympathy with Stradivari than with Guarneri, and his familiarity with worn Cremonese varnish helped him to produce most realistic results in his imitations. His instruments have as good a tone as any made in Paris after Lupot, with the characteristic French power of sound but without the Italian subtlety of response.

Georges Chanot had three sons: Adolphe (*b* Paris, 16 Sept 1826; *d* Paris, 15 July 1854) was a fine restorer and bowmaker. He worked for a while at John Turner's shop in London but died at the age of 27. Georges Chanot (ii) (*b* Paris, 11 Jan 1831; *d* London, 11 March 1893) moved to London in 1851, and in 1858 worked on his own account. He was known for many years as one of the best workmen in London. One of his sons, Georges-Adolphe Chanot (*b* London, 28 Oct 1855; *d* 1911), made violins in Manchester from 1879 and another, Joseph-Anthony (*b* London, 1 Oct 1865; *d* 1936), worked in Wardour Street, London. The third son of Georges Chanot (i) was Joseph Chardon (*b* Paris, 22 May 1843; *d* Paris, 21 June 1930); his mother was Antoinette Chardon, Chanot's shop assistant. Joseph was never legitimized by his father, and when he succeeded to the business in 1873, he adopted the trade name 'Maison Chanot, fondée en 1821, Chardon successeur'. He moved to 22 boulevard Poissonnière in 1888 and to 3 rue d'Edimbourg in 1914. He was a good dealer and a renowned expert. In 1897 he was joined by his son Georges (iii) (*b* Paris, 22 April 1870; *d* Paris, 11 June 1949); the firm then became known as 'Chardon et fils successeurs'. In 1939 Georges (iiii) moved to 39 rue de Rome; after his death, the business was run by his two children: André (*b* Paris, 18 July 1897; *d* Paris, 24 Aug 1963), a fine bowmaker, with his sister Joséphine (*b* Paris, 10 July 1901; *d* Paris, 1 Feb 1981), who was responsible for the commercial aspects of the trade. The firm ceased with the death of 'Mademoiselle Chardon'.

Chanson (Fr.: 'song'). Any lyric composition set to French words; more specifically, a French polyphonic song of the late Middle Ages and Renaissance. In a general sense the word 'chanson' refers to a wide variety of compositions: the monophonic songs of the Middle Ages (*see* TROUBADOURS, TROUVÈRES); court songs of the late 16th and 17th centuries (*see* AIR DE COUR); popular songs of the streets, cafés and music halls in the 17th, 18th and 19th centuries (*see* CHANSON POUR BOIRE; VAUDEVILLE; PASTOURELLE; BERGERETTE (ii); BRUNETTE); art songs of the 19th and 20th centuries (MÉLODIE); as well as to folksongs ('chanson populaire' or 'chant folklorique'). The term is sometimes used in its more specific sense to refer only to those 15th- and 16th-century polyphonic songs that do not set poems in one of the *formes fixes* (*see* RONDEAU (i); VIRELAI; BALLADE (i)), but in this article it is taken in a somewhat broader context to mean any polyphonic song with French text written from about the time of Machaut to the end of the 16th century.

1. Origins to about 1430. 2. 1430 to about 1525. 3. 1525 to the mid-16th century. 4. The second half of the 16th century.

1. Origins to about 1430. Extensive collections of monophonic songs by trouvères and troubadours survive from the 13th century, and secular songs sometimes appear in one of the upper parts of a 13th-century motet, combined with other texts in French or Latin and set over a tenor derived from plainchant (or, rarely, from a song or dance). But polyphonic compositions in which all the voices sing the same lyrical poem (or where the top line, intended to be sung, is accompanied by one or two newly invented subordinate lines) are extremely rare before the middle of the 14th century. Guillaume de Machaut is the earliest musician to have written an extensive collection of polyphonic songs; he can legitimately be called the first important composer of polyphonic chansons.

But a few polyphonic songs survive from the late 13th and early 14th centuries: a number of three-voice rondeaux, including 16 composed by Adam de la Halle, one by Jehannot de L'Escurel and two in the so-called Picard roll (*F-Pn* Pic.67), dating from the early 14th century. In addition, the late 13th-century manuscript *F-Pn* fr.12786 contains on ff.77–82 a group of 35 poems (mostly rondeaux) with spaces that can only have been intended to contain polyphonic music of the kind found in Adam de la Halle's chansons. Apel also proposed that three songs in the Leiden fragments (*NL-Lu* BPL 2720, ed. in Apel, 1972, iii, nos.285–7, and Van Biezen and Gumbert, 1985, nos.L9–11) could be from the first quarter of the century, though their context in a Flemish manuscript of around 1400 could be otherwise construed. Most of these songs were written in a style closely resembling that of the conductus. The music moves in lightly decorated note-against-note counterpoint; most of the pieces were notated in score with the text beneath the lowest voice. In some or all of these chansons, the lowest or middle voice seems to be the most important melodically; for example, the middle voice of Jehannot's *A vous, douce debonaire*, appears elsewhere in the manuscript of his works as an independent melody supplied with the complete poetic text (the polyphonic version has only the refrain). This could suggest that these earliest chanson composers may well have set about making polyphonic versions of originally monophonic melodies.

Besides the two polyphonic rondeaux, the Picard roll also contains two chaces, that is, three-part canons, complete with onomatopoeic effects, that set hunting poems in the manner of an Italian caccia (although most cacce consist of a two-part canon over a third non-canonic supporting line). Only an incomplete fragment of one chace appears in the Picard roll, and the second (*Se je chant mains que ne suel*) was originally thought to be a two-part canon.

Among Machaut's settings of long sequence-like poems called lais, most of them monophonic, are several that are canonic, and one of his polyphonic ballades consists of a three-part canon with each voice singing different words. But most of Machaut's polyphonic songs resemble neither chaces nor the conductus-like compositions of Adam and Jehannot. Instead, they are basically treble-dominated, with one or more florid melodic lines supplied with text, one or more slower-moving accompanying lines (tenors and contratenors) and an occasional faster-moving upper part called 'triplum'. Judging from their musical style, Machaut's chansons seem best adapted for performance as solo songs with instrumental accompaniment, although 14th-century performing practices allowed *a cappella* performance of them.

In his long narrative poem, *Remede de Fortune*, probably written before 1342, Machaut interpolated compositions for one, two, three and four voices to illustrate various verse forms: Lai, *complainte*, *chanson roial*, *baladelle*, ballade, virelai and *rondelet* (or rondeau). But the major portion of his secular polyphonic works consists of settings for two, three and four voices of ballades, virelais (or 'chansons baladées', as he called them) and rondeaux. They have survived as a group, included in the several manuscripts that contain Machaut's complete poetic and musical works, though several also appear scattered throughout various manuscript anthologies of the time. Since there are so few connecting stylistic links between the conductus-like chansons of the earlier generation and the treble-dominated style of Machaut, with its emphasis on rhythmically unstable, intricately decorated melodic lines, it may be that Machaut himself invented the new chanson style that was to dominate secular polyphony for almost 200 years. Possibly Philippe de Vitry, none of whose secular works survive, first composed polyphonic chansons in the new style; an anonymous 14th-century poetic treatise credits him with having 'found the manner of the lais and simple rondeaux', a statement that may acknowledge his innovations in the realm of secular polyphony, but may merely suggest that he established those poetic forms in the manner in which musicians would continue to use them, or that he set those poetic forms to monophonic music. Possibly, too, Machaut derived his new chanson style from the earlier motet, for the two kinds of composition are not completely dissimilar. The 13th-century motet is normally polytextual, but the tenor is in longer notes; thus a two-voice motet, with French text in the upper voice, differs from a chanson chiefly in having a tenor that is derived from plainchant and written in modal rhythms or isorhythmic patterns, rather than being newly composed and rhythmically free.

The repertory of polyphonic chansons of the first half or even three-quarters of the 14th century is quite small (Machaut's 70 or so compositions make up by far the largest single group), but composers after about 1360 regularly set French lyric poems polyphonically. Well over 400 compositions survive from the last three or four decades of the century, all of them available for study in modern editions (see Apel, 1950 and 1970–72; Greene, 1981–9; Wilkins, 1966), and Reaney (1955–83) has published over 100 more dating from the first decades of the 15th century. These chansons were the work of two overlapping generations of composers active during the period between Machaut and Du Fay (*c*1360–1420): a group of 'mannerists', most of whose complex works were composed before the turn of the century; and a somewhat younger group (the precursors of Du Fay and Binchois) who wrote less complicated chansons during the first two or three decades of the 15th century, but who began their work before 1400. The works of some of the best composers of this period, such as Johannes Ciconia, Matteo da Perugia and Baude Cordier, show the characteristics of both generations; during their careers, however, these composers appear to have simplified their earlier mannerist tendencies and helped to establish a new style.

The majority of mannerist chansons, which consist of mostly three-part settings of ballades, virelais and rondeaux, appear in four large manuscript anthologies from libraries in Chantilly (*F-CH* 564), Modena (*I-MOe* α.M.5.24, olim lat.568), Paris (*F-Pn* n.a.fr.6771, the so-called Reina Codex) and Turin (*I-Tn* J.II.9), the last of which contains a repertory of music from Cyprus. Some of the mannerist composers worked at the papal court in Avignon (J.S. Hasprois, Johannes Haucourt) and at the courts of Foix or Aragon (Gacian Reyneau, Jaquemin de Senleches, Pierre Tailhandier and Trebor). Others, such as Anthonello de Caserta, Philippus de Caserta and Matteo da Perugia, were Italian, and their works show the influence of the Trecento ballata, madrigal and caccia.

The mannerist composers took special delight in rhythmic complexity, written down in a sophisticated notation capable of expressing intricate syncopations and polyrhythms (ex.1; the sets of notes above and below the staves were added by the editor, Apel, to clarify the rhythmic groupings of the original notation). Most of their chansons have the treble-dominated texture first found in Machaut's polyphonic songs, a florid melody with text accompanied by two slower-moving supporting voices (tenor and contratenor). This basic scheme is capable of great variety, however: the contratenor sometimes approaches the cantus in speed and complexity; some chansons have two florid melodies, each supplied with text; in some a fourth voice, called 'triplum', is added above the others. The longest and most ambitious and serious chansons of the mannerists set ballades, some of which extend to 90 bars or more. Among the most immediately appealing compositions in this repertory are the virelais that imitate natural sounds such as birdcalls (e.g. Vaillant's *Par maintes foys*).

Ex.1 Anthonello de Caserta: *Dame d'onour en qui*

Chansons by the later of the two generations between Machaut and Du Fay are found in a number of early 15th-century manuscript anthologies, particularly that in Oxford (*GB-Ob* Can.misc.213). This collection includes music by Nicolas Grenon, Richard Loqueville, Estienne Grossin, Franchois Lebertoul, Guillaume Legrant, Johannes Reson, Hugo and Arnold de Lantins, as well as by Johannes Cesaris, Johannes Carmen and Johannes Tapissier, the three composers singled out by Martin le Franc in his poem *Champion des dames* as having astonished Paris with their music before the advent of Du Fay and Binchois. With their simpler style, in which the complex artifices of the mannerists are largely absent, they established the conventions that the later 15th-century composers followed. In their music the principal melodic line is less florid than in works by Machaut and his successors. Melismas are usually reserved for initial or final parts of a phrase (and may well occasionally have been performed by instruments). The contratenor generally moves with the tenor in slower note values often disjunctly, filling in the harmonies. The more ambitious ballades and multi-stanza virelais all but disappeared in favour of the shorter and more epigrammatic rondeaux.

2. 1430 TO ABOUT 1525. Many of the most important 15th-century composers were born and educated in the areas controlled by the dukes of Burgundy, especially in the part that is now northern France and Belgium. From there many of them pursued careers in various parts of western Europe, particularly Italy, and became the ambassadors of an international musical style. Hence scholars speak of a Burgundian school of 15th-century composers, or a Franco-Flemish school, and of Burgundian or Franco-Flemish chansons. The terms have proved their usefulness, and it is doubtless correct to stress the importance of the 15th-century Burgundian court as a cultural centre so long as it is clear that the most important surviving French chansonniers of the years 1450–75 are from central France (perhaps Paris, Tours or Bourges) and that other French centres were often just as important.

The work of Guillaume Du Fay dominates our view of the French chanson in the second quarter of the 15th century, largely because his are the works that most vividly characterize their texts. He seems to have chosen a wider range of poetic theme than most of his contemporaries. The variety of moods in his song poetry is enormous: from the celebratory – *Resvelliés vous* – to the lamenting – *Mon chier amy* – to the hearty and companionable – *Hé compaignons* – to the obscene – *Je ne suy plus* – to the seasonal – *Ce jour de l'an* – to the suicidal – *Helas mon dueil* – to the farewell song – *Adieu ces bons vins* – to the incomprehensible jargon of the drinking-song *Puisque vous estes campieur*, and so on. He cultivated a wide range of sharply focussed ideas, while many other composers operated within a less

consciously varied palette (the variety is still there, just with rather subtler gradations).

But even within his love poetry, Du Fay shows the most astonishing variety. *Par le regard de vos beaux yeux* is one of the few songs of blissfully happy and fully reciprocated love. *Pouray je avoir* is in the genre of persuasive seductive songs, uncertain of their reception. *J'ay mis mon cuer* is a song of unrestrained praise expecting no response. In *Malheureux cuer* the poet addresses his heart and complains that it has brought him unfathomable sadness.

Du Fay could set the tone with absolute precision in only a few notes. The long held note that opens *Par le regard de vos beaux yeux* shows an almost tentative introduction to a melody that becomes more and more luscious as it progresses. The striking chromatics at the start of *Helas mon dueil* are among the saddest notes he wrote, strikingly different from the joyful chromatics at the opening of the wedding song *Resvelliés vous*. The languid octave rise and fall that begins *Malheureux cuer* gives a wonderful introduction to the poet's dialogue with his wayward heart. At the start of *Vostre bruit* the sturdy imitative pattern marvellously reflects the poet's courage in aspiring to love a lady so much loved by others. The bracingly imitative opening of *Entre vous, gentils amoureux* instantly sets the tone of communal merrymaking on Mayday.

Du Fay, like his predecessors, set mostly chansons cast in one of the *formes fixes* (*La belle se siet* is a rare exception, being based on a popular ballad melody), but he had a decided preference for rondeaux over ballades or virelais; almost 60 of his 80 chansons are rondeaux, a proportion characteristic of the chanson production of most later 15th-century composers.

Du Fay inherited the treble-dominated three-part texture from earlier generations, but in his chansons this traditional model underwent considerable revision and refinement. The principal melodic line (and, indeed, all three lines) in his early chansons, such as *Adieu ces bons vins de Lannoy* (ex.2), is apt to be quite simple metrically. Except for frequent hemiola patterns they can be transcribed into modern notation in 3/4 or 6/8 with few or no syncopations over the bar-lines. In later works Du Fay

Ex.2 Du Fay: *Adieu ces bons vins*

conceived his melodies in irregular groupings of two or three beats independent of metrical units, a feature that gives his melodies a floating, almost detached quality, and that established a stylistic convention followed by most composers for the next 150 years. Also in his later chansons Du Fay refined his control of tonality, and he took ever greater care to integrate the various strands of texture into a homogeneous whole (while never abandoning the layered structure of treble-dominated texture), by moving all three voices at approximately the same speed, for example, or by increasing the amount of imitation among the voices.

Binchois is usually portrayed as a lesser contemporary of Du Fay. Spending most of his mature career at the court of Burgundy, Binchois cultivated a much more consistent style, where Du Fay seems to have gathered new ideas from others almost with each new piece. The music of Binchois is more private and reflective, so it has found less favour in recent years. But in the 1420s and 30s his music was more widely distributed than that of Du Fay; and in many ways his restrained and refined style can be considered to represent the central tradition of the chanson in those years.

Much of Binchois' music is very simple: extremely regular phrases; almost syllabic declamation of the text until the slight melismas in the last line to bring it to a close; but most important of all, very much music of melodic line and grace, with the lower voices often playing no role except to support the melody. Everything is calculated to framing the very simple melody that projects the words. In his music every slightest gesture seems designed for a clear musical purpose; the text must come through with absolute clarity, an aim achieved by using an almost minimalist melody, sometimes with phrases that keep within only three or four notes.

When Binchois becomes more elaborate it is still clear that his aim is clarity and graceful line. His music shows very little interest in harmonic colour for its own sake. Binchois was a composer of lines, not harmonies or textures. In some of his chansons there are astonishing and fascinating dissonances, but even these are calculated merely to drive the melodic line.

Du Fay and Binchois were the most distinguished figures of their generation, but there were many fine chanson composers among their contemporaries, most of them employed in cathedrals and princely chapels as church musicians. Like Du Fay, many of them had been educated by the great choir schools in the Low Countries. Graduates of those institutions who were active during the first half of the century include Nicolas Grenon, Richard Loqueville, Johannes Brassart, Hugo and Arnold de Lantins and Johannes Franchois de Gemblaco.

Around 1450, various changes in the chanson style took place, of which three should be mentioned here. The first is syntactical: the contratenor moved into a range below the tenor, becoming a true bass line for the first time in musical history; that affected all kinds of polyphony (including, for example, the emergence of a consistent style of four-voice sacred polyphony at the same time) and therefore needs no further comment in this context. The second concerns text-setting: just as the composers of the early 15th century had reacted against the music of the Ars Subtilior by writing songs that were almost syllabic and put their emphasis on clear declamation, so the generation of the 1450s allowed a new luxury

of lines to create their own kind of novelty. A rondeau with a four-line refrain in the 1420s or 30s would characteristically take about two minutes to perform, whereas those of the 1450s could be twice as long and those of the Compère-Agricola generation perhaps six or seven minutes – a development that surely contributed to the ultimate abandonment of the *formes fixes*. Third, and perhaps related to the second change, was the revival of the old virelai form that had been neglected for some 40 years but was to become one of the favoured forms for composers such as Ockeghem and Busnoys.

Busnoys was a sophisticated melodist particularly adept at writing long and elaborately shaped vocal lines. Often they are made up of melodic clichés, cadence formulae and turns of phrase common to all Franco-Flemish composers of his time, but Busnoys filled his melodies with finely wrought details and organized them in carefully balanced segments. His technique of beginning each phrase syllabically with a clearcut motif and continuing with faster motion and a long melisma on the penultimate or antepenultimate syllable derives from earlier masters; but he normally took great pains to contrast the differing formal and melodic functions of phrase beginnings and endings. Moreover, in his music, individual phrases tend to be longer and more complex (they are often subdivided, for example, into several smaller units) than those of earlier composers.

Like Ockeghem, Busnoys made an effort to weld the three voices together into a homogeneous texture, partly by understating the conventional hierarchy of principal melody (cantus), supporting melody (tenor) and filler voice (contratenor). Not infrequently two of the three voices move in parallel 3rds or 10ths, a mannerism associated with Busnoys as well as Jacob Obrecht and Alexander Agricola, both his younger contemporaries. The amount of imitation Busnoys wrote in any one chanson varies greatly; some have very little, whereas others include fully developed points of imitation between two or even all three voices at the beginnings of most or all of the phrases.

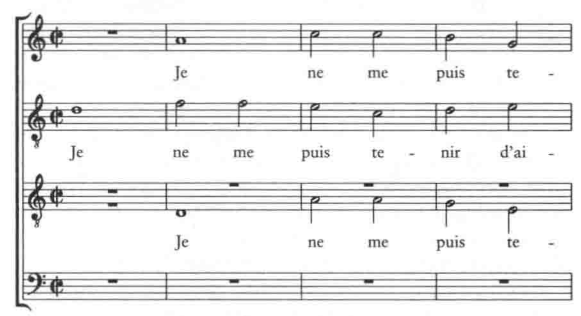
In addition to his settings of rondeaux and virelais, Busnoys also composed a few polyphonic arrangements of popular tunes, and some chansons in which one or two popular tunes serve as cantus firmi providing the scaffolding over which the cantus (and sometimes other voices as well) sing a more conventional lyric, usually a rondeau. Normally three voices sufficed to set these stereotyped love-poems to music, but in about a third of his chansons Busnoys wrote for four voices, the texture that was to become standard for secular as well as sacred music by about 1500.

It looks very much as though most of the surviving chansons by Ockeghem and Busnoys were composed by about 1470. At about the same time a new and startling generation arose. Perhaps the most successful of these was the young Hayne van Ghizeghem, whose *De tous biens plaine* and *Allez regrets*, both composed around 1470, were to become the most widely copied chansons of their time and were to stay in the repertory for some 70 years, to judge from their surviving sources. The true innovator of that generation, however, seems to have been Loyset Compère, whose chansons show the most radically new uses of imitation and of melismatic lines that are plainly used purely for their decorative effect. In that same generation Alexander Agricola produced some of the most elaborately florid text settings of the entire 15th century. A favoured form of chanson at this time was the MOTET-CHANSON, normally in three voices, in

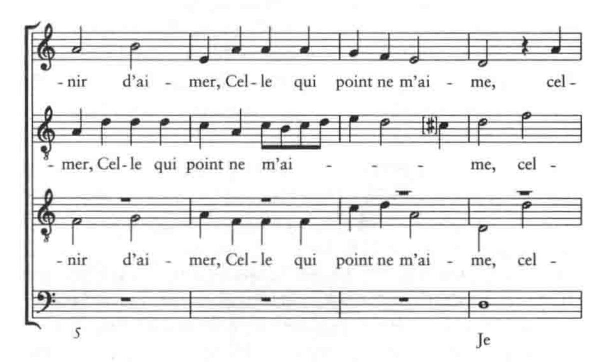
1. Courtiers making music in the Garden of Love: miniature by the Master of the Prayerbooks of c1500, from a 'Roman de la rose' made for Engelbert II of Nassau, c1500 (GB-Lbl Harl.4425, f.12v); chansons would have been appropriate on such an occasion, and the miniature may well reflect contemporary performing practice

which a lower voice carried a Latin text and was usually based on chant.

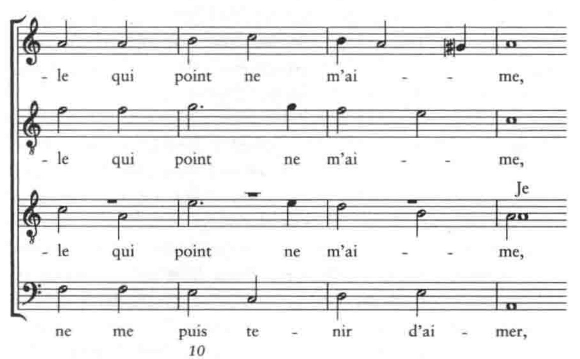
Also in those years, perhaps initially in the hands of Johannes Martini, the tradition of the 'instrumental' chanson arose. In texture and melodic structure these works differed little from the chansons of Compère and Agricola. The main difference is in their formal design: while they generally adhere to the formal pattern of the rondeau settings, they do not have the clear separation of poetic lines that had characterized all songs of the 15th century. None of these works has any identifiable text beyond the opening words, and it must be assumed that these were simply titles of pieces that stand firmly in the chanson tradition but were evidently intended for instrumental ensemble performance.



Some time about 1480 this led to yet another tradition, perhaps pioneered by Alexander Agricola, that of apparently instrumental pieces that were elaborations based on just one voice of an existing chanson: Hayne's *De tous biens plaine* was initially a favourite for this kind of treatment, as were Ockeghem's *D'ung aultre amer* and the anonymous *J'ay pris amours*.



In secular and sacred works, musical style changed radically towards the end of the 15th century. The generation of Franco-Netherlands musicians whose careers span the several decades before and after 1500 – in the first place, Josquin Desprez, but also Jacob Obrecht, Henricus Isaac, Pierre de La Rue, Jean Mouton, Antoine de Févin and many others – forged new techniques that became central to 16th-century musical language. Although they continued chiefly to use cantus firmi, composers around 1500 made a decisive step forward in liberating themselves from the scaffolding techniques of the later Middle Ages, which forced predetermined elements of design on their compositions. They began to work with motifs as the smallest units of musical construction, creating in the process pieces consisting of chains of interlocked phrases, each of them devoted to the manipulation of a single motif. In its 16th-century classical formulation, this technique produced a series of points of imitation, interrupted for variety and contrast by occasional chordal passages. The composer planned his piece without recourse to any predetermined scheme; he varied the texture and changed the character of the music at will, shifting from full sounds to thin, from strict imitative counterpoint to dialogue among parts of the choir to thickly scored chords as his mood and the musical requirements dictated.



These new techniques radically changed the relationships of individual voices and hence the way music actually sounded. Although both Du Fay (especially in his later years) and Ockeghem tended not to emphasize the differences among various voices, each strand in the contrapuntal fabric did not become fully equal until the end of the century, in the music of Josquin and his contemporaries. Perhaps the most obvious result of the innovations of the new generation of composers working around 1500 was the change from a hierarchical texture, in which each voice has a special function, to a texture in which all the voices, while independent, are equal in importance and in melodic style. This new sonority is sometimes described as a combination of melodic lines that are all vocal in conception, but this does not mean that pieces in the new style were performed exclusively by voices. Specifically in the chanson, the new technique of imitative counterpoint applied to equal but independent melodic lines enabled composers more easily to abandon the predetermined repetition schemes of the *formes fixes*. The gradual disappearance of rondeaux, ballades and virelais, however, did not prevent Josquin and his contemporaries from using repetition schemes. Josquin often repeated phrases in ways that are easily comprehensible if untraditional, and he was especially apt to associate musical repetition with poetic lines that rhyme. Josquin mirrored the structure of the poem, for example, in his setting of *Plusieurs regretz*, composed round a canon, the structural device that he used more than any other in his settings of serious courtly lyrics. But in *Je ne me puis tenir d'aimer* (ex.3), a through-composed chanson without any scaffolding device, he took full advantage of the possibilities of imitative writing and choral dialogue to vary the texture of the music and to extend each phrase by working with one or more motifs very much in the manner of a motet.

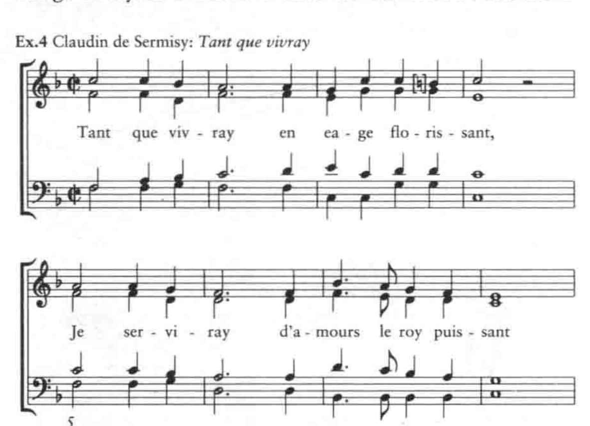
Popular poems, intended to be sung, circulated throughout France during the 16th century in cheaply printed books of verse; the melodies for some of them survive in several manuscripts prepared for the aristocratic circles

Ex.3 Josquin: *Je ne me puis tenir d'aimer*

round Louis XII, who evidently cultivated for a time this attractive genre, intended in the first place for the amusement and education of the urban lower and middle classes. Josquin's generation was the first to use this material extensively, and he himself wrote a substantial number of popular arrangements. It is not always possible to be certain that a particular chanson incorporates a popular tune if its monophonic model has not survived, but the tenor of Josquin's *Si j'eusse Marion* is so simple and straightforward that there can be little doubt that the composer took into his polyphonic texture one of the melodies sung in the streets of Paris. Josquin treated his borrowed material in the manner he reserved for three-part popular arrangements; that is, the outer voices imitate the cantus firmus, but the tenor enters last and presents the melody in its simplest and most complete form while the outer voices either continue their imitation or move in parallel motion. Similar three- and four-part popular arrangements were composed by Févin, Mouton, Ninot le Petit and various other composers working in the late 15th century or early 16th. In four-part popular arrangements the borrowed material is often paraphrased rather than presented as a cantus firmus, and Josquin sometimes put the popular melodies into canons with themselves to form a solid structural framework round which the other voices weave their complex and varied web; he did so, for example, in *Faulte d'argent*, and in *Adieu mes amours*, in which the cantus sings a rondeau while the lowest voices move in free canon.

Not all late 15th- and early 16th-century composers were as progressive as Josquin in abandoning the *formes fixes*. The chansons of Pierre de La Rue, Johannes Prioris, Antoine de Longueval, Antonius Divitis and others include settings of rondeaux and virelais as well as some songs in the newer forms and styles, whereas Obrecht, Isaac, Mouton, Févin, Ninot le Petit, Braconnier, Antoine Brumel and others abandoned the older forms almost entirely. The music of these men appears in the later manuscript chansonniers as well as in the magnificent three-volume anthology of songs published by Ottaviano Petrucci of Venice in the years after 1501: the *Odhecaton*, *Canti B* and *Canti C*.

See also BORROWING, §7.



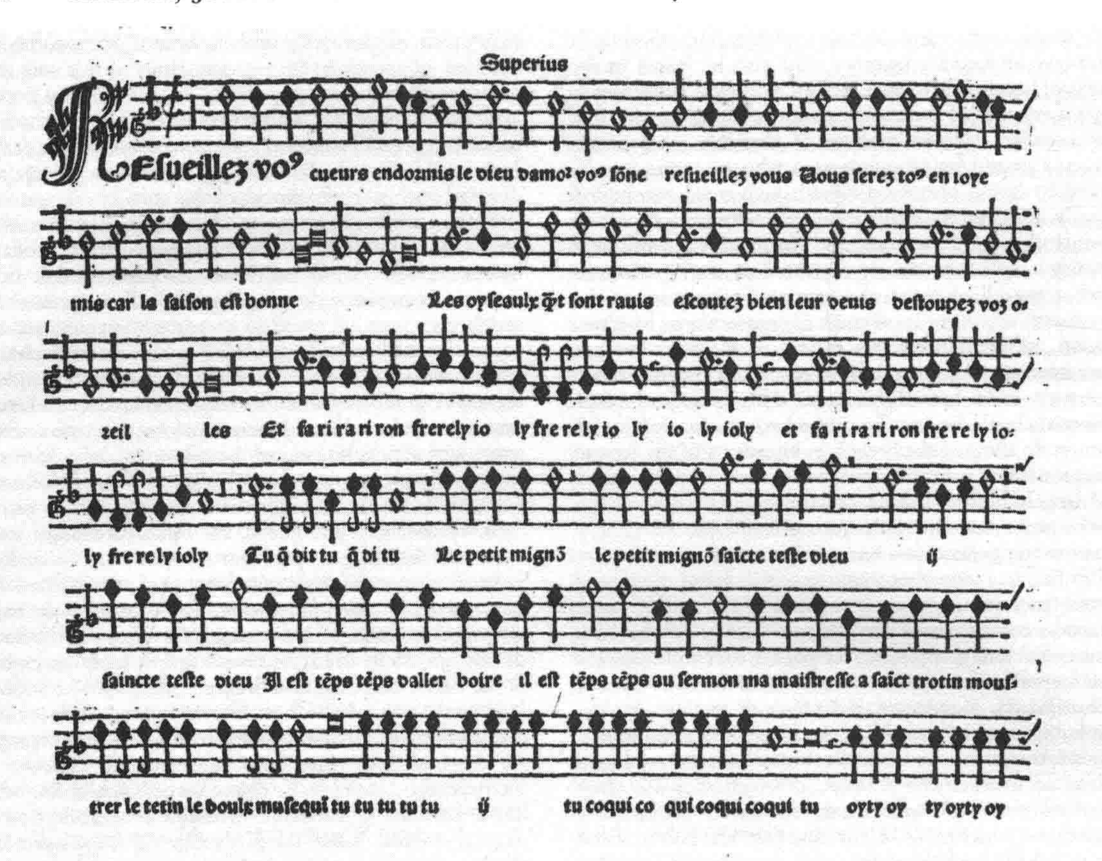
3. 1525 TO THE MID-16TH CENTURY. Much discussion of the chanson repertory of the second quarter of the 16th century has taken place against a background of presumed differences in national or regional approaches to musical style. This view has stressed the apparent contrast between the predominantly imitative and contrapuntal style favoured by Franco-Flemish composers such as Gombert (who worked at the Netherlands Habsburg court and whose chansons were issued principally by Flemish printers such as Susato) and the patent lyricism and homorhythmic textures preferred by French composers, above all the royal musician Sermisy (whose output figures largely in the offerings of the official French printer Attaingnant). Indeed, a considerable stylistic gulf separates the two approaches.

Many of Sermisy's chansons are graceful but quite straightforward lyrical miniatures with easy charming melodies that follow closely the rhythms of the words they set. Sermisy harmonized his polished soprano lines with simple chords, or placed them in a polyphonically animated homophony, or else he elaborated the important melodic material by means of relaxed bits of imitation that make the texture varied and interesting. But it is the very simplicity of a song like Sermisy's *Tant que vivray* (ex.4), which sets a poem by Clément Marot, that makes its greatness so elusive and so difficult to explain. Such a chanson certainly reaches no great expressive heights, although its charm and ability to delight listeners are immediately evident. Like so many of Sermisy's chansons the words seem to control the flow of the music. They are set for the most part syllabically, with short melismas only towards the ends of phrases serving a purely decorative function. Moreover, the structure of each musical phrase exactly matches the formal details of the poetry. The pause on the fourth note of each of the first three phrases, for example, marks the caesura in the middle of the poetic line, and the characteristic opening rhythm, repeated at the beginning of each phrase, mirrors the dactyls of the poem. Some chanson melodies are virtually isorhythmic, so closely do they fit the patterned repetitive rhythms of the poetry. In spite of its imitative second half, *Tant que vivray* is unusually homorhythmic; in most Parisian chansons the texture is enlivened by rather more actively moving and independent inner parts. Moreover, most chansons in this repertory reveal more clearly than *Tant que vivray* that their counterpoint is based on a self-sufficient duet between superius and tenor, to which a harmonic bass and a complementary (and sometimes extraneous) altus have been added.

How different these French chansons of the 1530s are from settings produced in the Netherlands can immediately be seen by comparing *Tant que vivray* with the songs by Clemens non Papa, Gombert, Willaert, Richafort or Crecquillon that were published by Susato in Antwerp and by other Flemish printers of the mid-16th century. Without their words, many of these Netherlands chansons could well be mistaken for motets, so pervasive is their imitation and so dense their texture once all the voices have entered (there are many works for five voices here, as well as three- and four-voice ones such as are found in French prints). In purely musical terms the secular nature of such compositions can be discerned only in matters of details and emphasis; they are shorter, less serious and somewhat more tuneful than most motets, their phrases are more concise and clearly defined, and their rhythms shortwinded and inclined to regular emphasis (even though the implied metre often conflicts with the bar-lines of modern editions).

Scholars have now refined their view of the chanson repertory of the second quarter of the century, recognizing that each of the two principal types embraces a wide range of styles. Much the same concern for coordinated

Ex.4 Claudin de Sermisy: *Tant que vivray*



polyphonic motion and clear text declamation in Sermisy's *Tant que vivray*, for instance, can also be heard in the music of his close associate Certon, who was employed in Paris as master of the choirboys at the Ste Chapelle. But the so-called Parisian manner of chanson composition was not shared by all composers whose careers can be linked to Paris, nor were French provincial composers equally disposed to emulate directly Sermisy's approach to melodic style, texture and form. Thus, although Sermisy's style was clearly favoured at the royal court (and at the allied court of Lorraine, to judge from the speed with which the local court composer there, Mathieu Lasson, adopted Sermisy's model of melodic design), there now seems no convincing reason to view the French repertory as a monolithic one. The long and often melismatic melodic lines favoured by Janequin, who with Sermisy dominated the French publications of the second quarter of the century, reveal that the restrained lyricism and largely homorhythmic textures typical of Sermisy's works were not the only means available to French chanson composers.

Efforts have also been made to understand the patent variety of stylistic types as reflecting the poetic texts. Chanson composers in the second quarter of the 16th century no longer chose to set poems that followed the rigid formal and thematic conventions of the 15th-century *rhétoriqueurs*. Rondeaux, ballades and virelais, for example, appear only rarely in Attaingnant's anthologies. Instead, the poems on which Parisian chansons are based follow no fixed rhyme scheme, although they are often strophic, and their patterned repetitions are usually immediately intelligible. Their long metrical patterns and elegantly balanced *quatrains* and *huitains* lend themselves well to the refined melodic manner that is the epitome of the mid-century chanson, with its clear alignment of rhyme, prosody and musical line. Often, as in *Tant que vivray*, the first few phrases of music are repeated to new text, and the last phrase or two of both words and music are also repeated, in order to round off the composition convincingly. Many Parisian chansons are organized according to the scheme *AABBC*, but that is only one of several similar groundplans commonly adopted. Like the formal schemes, the subject matter and diction of the poems chosen by Parisian composers also reflect a new freedom and a release from the strictness of late medieval traditions. The subject matter was more varied than in chansons of around 1500; it encompassed fulfilled as well as unrequited love, and comic as well as serious aspects of the amorous predicament. Many poems mix popular with courtly elements. Clément Marot, the leading chanson poet of the time, even edited anthologies of the song texts that were presumably those most frequently heard in the streets of Paris. And the poetic diction, less strained and artificial than in 15th-century chansons, took on a more relaxed, natural and individual tone.

French composers also set narrative texts, many of them humorous and some as wittily indecent as Marot's tale of an amorous priest, *Frère Thibault*, whose plans are foiled when his young lady friend gets stuck halfway through the latticework attempting to enter his bedchamber. Like most narrative chansons, Certon's setting of this anti-clerical story alternates points of imitation, based on short and precise motifs, with simple chordal passages that occasionally break into triple metre – changes of texture and technique designed both to embody the dynamism of the story and to imitate the profile and rhythms of speech itself. Compositions of this sort seem to have enjoyed great popularity in 16th-century France, at least to judge by the prominence afforded them by music printers. The second volume of the Lyonnais printer Jacques Moderne's *Difficile des chansons* (1544) was devoted exclusively to works of this sort.

Both prolific, Sermisy and Janequin between them wrote more than 400 chansons of various sorts, lyrical or narrative, relentlessly imitative, simply chordal, or in some in-between style of polyphonically animated homophony. Sermisy excelled at composing delicate and sophisticated love-songs, while Janequin's most characteristic works express the vivacious or irreverent side of the *esprit gaulois*. Quite extraordinary and in a class by themselves, though, are Janequin's long descriptive chansons, for which he is now best known. In a series of compositions (*La guerre*, *La chasse*, *Le chant des oiseaux*, *Les cris de Paris*, *Le caquet des femmes* and so on) he took up themes – the battle, the hunt, birdsongs, street cries and ladies' gossip – that allowed him to make a virtuoso display of their onomatopoeic possibilities. The harmonically static *La guerre*, for example, probably written to commemorate François I's victory at the Battle of Marignano in 1515, imitates trumpet fanfares, calls to arms, battle cries, cannon fire and other warlike sounds. It became one of the best-known pieces of the entire century, copied by many other composers and arranged for keyboard or lute solo and for all varieties of instrumental ensemble. *Le chant des oiseaux*, on the other hand, includes a veritable ornithological collection of natural sounds. When the birdsongs start, the harmonic rhythm slows down and the 'counterpoint' becomes simpler. The series of slowly moving chords merely furnishes an unobtrusive frame for the rich jangle of fancifully elaborated animal noises that constitute the main point of this brilliantly amusing work (fig.2).

The precise origins of the chanson repertory issued by Attaingnant beginning in the 1520s have been the subject of much discussion. There is, of course, a superficial resemblance between these new works and the frottola that had been composed and performed at north Italian courts. But scholars have come to discount any direct relationship between the two genres: the frottolists specialized in the declamation of poetry within conventional formal structures and with formulaic instrumental accompaniment, whereas chanson composers worked in a tradition of arranging borrowed timbres and stylized imitations of those tunes in three- and four-voice polyphonic settings. The source tradition for the chanson in the decades immediately before Attaingnant's first publications, moreover, is particularly complex. Relatively few chansonniers survive from the years between Petrucci's *Odhecaton* (1501), *Canti B* (1502) and *Canti C* (1504) on the one hand, and Attaingnant's first printed collections. Among these, one or two manuscripts from the French court of Louis XII contain three-voice chansons, by Antoine de Févin, Jean Mouton and other court composers, that anticipate the style of some of Sermisy's efforts. But there is also ample evidence to suggest that the new style of chanson composition embodied in the Attaingnant repertory and in other prints of the 1530s emerged in Rome, Florence and other Italian centres where French musicians, among them Ninot le Petit, Antoine Bruhier and Jean Mouton sang and composed.

2. *Opening of the superius part of Janequin's 'Le chant des oiseaux' from his volume of chansons (Paris: Attaingnant, 1537)*

These findings are, of course, consistent with the new recognition of the manifest pluralism of the Attaingnant chanson repertory itself.

Finally, scholars have re-examined the role of printers and editors in the history of the chanson and the formation of public taste, accepting that compositional choice was mediated by printers' own interests and musical judgments. That the music of Sermisy, Certon and others closely associated with royal patrons and their allies should dominate Attaingnant's early output might in part bear witness to the printer's own dependence on the royal patronage of François I for the protection of his patent to issue music. But if the French music press of the 16th century had important links with the state (a principal patron and protector) and the Catholic Church (a traditional training-ground for composers and singers), it also enjoyed a growing readership among a musical public that stretched well beyond the confines of courts and cathedrals. Indeed, Attaingnant's royal privilege of 1531 explicitly acknowledges this broad appeal, which it identifies as a worthy aim, authorizing Attaingnant alone to print 'many books and quires of Masses, motets, hymns, chansons, as well as for the said playing of lutes, flutes, and organs, in large volumes and small, in order to serve the churches, their ministers, and generally all people, and for the very great good, utility, and recreation of the general public'. Attaingnant did not long remain the only music printer active in the realm, however. Jacques Moderne began issuing music books in Lyons even while Attaingnant's patent was still in effect. And when Henri II became king following the death of François I in 1547, Attaingnant and Moderne's rather exclusive hold on French music printing was briefly loosened. In Paris Attaingnant was joined in the musical market-place first by Nicolas du Chemin (in 1548) and later by Adrian Le Roy and Robert Ballard (in 1551). Moderne, too, was joined by local competitors starting in the late 1540s, when the Beringen brothers, Robert Granjon and others began issuing music aimed at the cosmopolitan world of mid-century Lyons. Together these printers published chansons by a host of minor masters from Paris and from the provinces, composers such as Pierre Cadéac, Pierre Clèreau, Pierre Colin, Jean Conseil, Jean Courtois, Garnier, Nicolle des Celliers de Hesdin, Jacotin, Guillaume Le Heurteur, the Florentine Francesco de Layolle, Jean Lhéritier, Jean Maillard, Mittantier, Pierre Passereau, Rogier Pathie, Dominique Phinot, Jean Rousée, Pierre Sandrin (Regnault), Mathieu Sohier, Pierre Vermont and Pierre de Villiers. And beginning in 1543, Susato published chansons in Antwerp, by both French and Netherlands composers. Nor was circulation of the French chanson limited to France and the Low Countries. Philip van Wilder, a Netherlands émigré who was the leading musical figure at the English court of Henry VIII, brought knowledge of continental musical practice of the second quarter of the 16th century to his adoptive country. In Augsburg, members of the Herwart family were keen collectors of the chanson repertory as it appeared in the Attaingnant prints.

4. The second half of the 16th century. Even before Attaingnant's death in 1551 or 1552 the pattern of dissemination of chansons in France began to change. Attaingnant and Moderne's virtual monopoly was broken, as more French publishers were granted printing privileges, and publishers in the Netherlands set up presses that issued chansons among other things. In Paris, Michel Fezandat started to print music after 1552; and about 1549 Du Chemin issued a series of volumes of 'chansons antiques' (that is, songs borrowed for the most part from Attaingnant's earlier publications), as well as a series of 'chansons nouvelles' by a younger generation of composers. But it was the firm run by Le Roy and Ballard which, more than any other, took Attaingnant's place as the most important music publisher in Paris, a position it kept from the time it began issuing music in 1551 to the end of the century. In Lyons, Moderne's monopoly was broken in the second half of the century by Granjon, the Beringen brothers, Simon Gorlier and others. Beginning in the 1540s and 50s Netherlands chansons as well as those composed by Frenchmen appeared in the several series of anthologies published by Pierre Phalèse in Louvain, and by two firms in Antwerp, one owned by Susato and the other by the partners Hubert Waelrant and Jean de Laet. Although their repertories overlapped to an extent, each of these publishers had his own group of composers. The history of the late 16th-century chanson could best be written as a report on these several, overlapping repertories; the published catalogues of the output of Phalèse and the Lyonnais printers (Vanhulst, 1990, and Guillo, 1991) have now set the stage for this sort of work.

In the 1550s the older composers who had been associated with Attaingnant – Janequin, Certon and their contemporaries – still made their appearance in anthologies published by Du Chemin and by Le Roy & Ballard, along with such younger composers as Nicolas de Bussy, Entraigues, Didier Leschenet, Jean Maillard, Thomas Champion (Mithou) and Pagnier. But it is Jacques Arcadelt, the Netherlands composer of madrigals, who returned north in the early 1550s in the company of Cardinal Charles de Lorraine (at the time a close ally of the royal court), who is the most important new name in Le Roy & Ballard's anthologies of secular music of the 1550s. In the next decade other composers closely linked with the French aristocracy, such as Guillaume Costeley and Nicolas de la Grotte, also figure prominently in the offerings of that firm. But the official printer also turned to composers who had no direct ties to the court, such as Goudimel and especially Lassus. Even though Lassus never left his position as Kapellmeister to the dukes of Bavaria in Munich, his reputation as a chanson composer continued unabated in France; his collections of songs were reprinted again and again until the end of the century. Perhaps the greatest of all the native French composers of chansons during the second half of the 16th century, Claude le Jeune, began to have his chansons published in the 1570s, along with a number of his contemporaries, including Guillaume Boni, Antoine de Bertrand, Fabrice Marin Caietain, Denis Caignet, Eustache Du Caurroy, Jean de Castro, Jehan de Maletty, Jacques Mauduit and Jean Planson.

Shortly after the middle of the century the group of poets known as the Pléiade, led by Pierre de Ronsard and including Joachim du Bellay, Jean-Antoine de Baïf, Jean Dorat, Pontus de Tyard, Etienne Jodelle and Rémy Belleau, came to prominence, and their views on poetry and music had an important influence in determining the character of French chansons of their time. They urged the imitation of classical forms and metres, and extolled the moral effects of these means. In illustration of his intentions, Ronsard published in a *Supplément* to his *Amours* of 1552 a small number of musical settings for four voices (by Certon, Janequin, Goudimel and the humanist Marc-Antoine de Muret) to which all the sonnets in his collection could be sung. The Pléiade strongly encouraged a close union between poetry and music, but without prescribing precisely how it should be brought about, except with rather vague exhortations to follow ancient models. The ideology embodied in the *Supplément* to the *Amours* encouraged the continued development of short, predominantly syllabic settings of courtly poems in strophic form, using textures that are almost completely homorhythmic. The melody in the top line (and hence all the lower voices too, since they had the same rhythm) matched the metre and the declamation of the poetry exactly; on a purely formal level, Ronsard's ideal of a union of poetry and music was fulfilled in these simple songs, and they were well suited for singing as solos with lute accompaniment. Compositions of this sort (at times called 'voix de villes' or 'vaudevilles') are found in anthologies as early as the 1540s. Arcadelt and Clēreau, themselves closely associated with the same courtly circles that embraced the literary ideals of the Pléiade, adapted techniques from the Italian villanella for their three-voice French (and Latin) songs that were published by Le Roy & Ballard during the 1550s. By 1571 the importance of this new ideal was such that Le Roy was quick to assimilate this patent variety to a single genre, *airs de cour*, which he described in a preface as 'chansons de la cour ... legières que jadis on appelloit voix de ville, aujourd'huy Airs de Cour', as though the term 'voix de ville' were no longer used, even though it (or 'vaudeville') continued to denote the simplest sorts of *airs de cour*.

The styles of the *airs* or vaudevilles suited Baïf's experiments with neo-classical poetry and music perfectly. In the 1560s he devised a way of translating the quantitative metrical patterns of Greek and Latin verse into accentual French verse (*see* Vers mesurés, vers mesurés à l'antique), and he encouraged musicians (among them, the brilliant Claude le Jeune) to set his neo-classical poems in the simple style of *airs*, in order that his audience could follow the poetry while it was being sung. In this *musique mesurée à l'antique*, composers set a long syllable to a note twice as long as that for a short syllable, so the music moved exclusively in, say, quavers and crotchets with, perhaps, an occasional pair of semiquavers to break the monotony. Since the accent patterns of the poetry were rather varied, the music tended to proceed in irregular groupings of two and three beats, a feature that compensated to some extent for the lack of variety in the homorhythmic textures. Thus songs written as *musique mesurée* can best be transcribed without bar-lines. The Académie de Poésie et de Musique that Baïf formed under royal patronage in 1570 lasted only a short time, but its influence on secular music extended throughout the rest of the century, and even into the 17th. Le Jeune's *Fiere cruelle* (ex.5), for instance, displays many features of *musique mesurée*.

Still other chansons from the second half of the 16th century reveal the strong influence of the Italian madrigal on French musical culture. In some respects the first serious

Ex.5 Claude le Jeune: *Fiere cruelle*

influence of this repertory was manifest in the chansons of Arcadelt and Lassus, who on account of their work in Italy had come to set Italian texts as well as French. But French composers such as Le Jeune, Costeley and others used the wealth of polyphonic, rhythmic and harmonic means favoured by madrigal composers to express the meaning as well as the form of poetry in their music. They emphasized rhetorically important or strongly emotional words; they evoked the mood of their texts by manipulating texture, inventing appropriate melodic lines and so on; and they seldom repeated the same music with different words (most of their chansons are through-composed). In order to cope with the increased expressive demands and for greater technical flexibility, they often increased the number of voices from four to five or six. Not least, they set sonnets, sestinas and other Italian verse forms, and even some of Petrarch's poetry in French translation; on occasion they parodied Italian madrigals, just as some of the *airs* had reworked villanellas. In short, chansons gained in range of expression and variety of technique while they lost, perhaps, in that sense of clarity that had been so strong a characteristic of the earlier Attaingnant chanson. However, French composers never pushed their expressionistic intentions to the extremes found in the late 16th-century Italian madrigal.

This time of religious conflict in France also saw the rise of the *chanson spirituelle* or 'chanson morale', a secular composition with moralistic or even sacred words. *Chansons spirituelles* were written chiefly by Protestant sympathizers, but they occasionally appear as well among the works of the Catholics. Some anthologies of polyphonic chansons, and many collections of chanson texts, merely substitute a new set of 'purified' and doctrinally acceptable words (or even sectarian polemics) for the original love-poems; they keep the pre-existing music. Other volumes contain newly invented music as well. The *Chansons spirituelles* published in Lyons in 1548 with texts by Guillaume Guéroult and music by Didier Lupi Second were among the best-known Protestant chansons in the second half of the 16th century. The whole volume was reprinted a number of times, and one composition in the collection, *Suzanne ung jour*, was reworked and parodied by many composers, regardless of their religious convictions. Hubert Waelrant and Jean Caulery were among the other musicians of the middle of the century who wrote or arranged sacred songs, and in the 1570s and 80s Jean Pasquier and Simon Goulart did so too; they also published editions of Lassus's songs with new texts replacing the originals. At the very end of the century Le Jeune produced one of the masterpieces of the genre: his collection of three- and four-voice settings (published posthumously in 1606) of the *Octonaires de la vanité et inconstance du monde*, made up of moralistic texts by the Calvinist preacher, Antoine Chandieu.

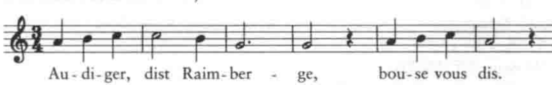
Chanson à boire. *See* CHANSON POUR BOIRE.

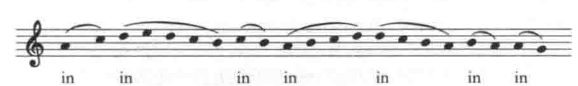
Chanson baladée. *See* BALLADE.



Chanson de geste (Lat. *cantus gestualis*). A type of epic poetry in which the recitation of the tale is unfolded with the help of simple melodic material, necessarily simple so that the attention of the listener may be directed towards the dramatic delivery of the story. The poems, which may be very long, are divided into sections called *laisses* or *tirades*, each having its own formula. The constant repetition of the same melodic phrase is comparable with the form of the litany. All the surviving examples, about 100 in number, are northern French in origin and mostly from the 12th century. Perhaps the most famous example is the *Chanson de Roland*, which consists of nearly 300 *laisses*. The form of the *chanson de geste* is described in the following terms by the theorist Johannes de Grocheio (see Seay):

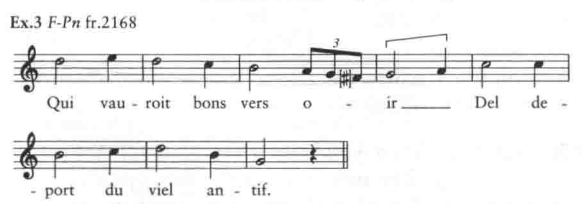
The verse in gestual cantus [cantu gestuali] is that which is made up of many versicles. The versicles end on the same poetic rhyme. In a particular cantus it may close with a versicle not rhyming with the others, just as in the *chanson de geste* which is said to be by Girade de Viana. The number of verses in a gestual cantus is not fixed, but is dependent on the amount of material and the will of the composer. Also, the same melody ought to be repeated in all the versicles.

Strictly speaking, the reiteration of the melodic formula is true of each *laisse* but not of the poem as a whole. The subject matter deals mainly with deeds of heroism or, according to Grocheio, the life of Charlemagne or lives of the saints. Two religious *chansons de geste* survive, one a Passion and the other a life of St Léger (*F-CF* 240 ff.110 and 159*v*), but neither is notated.



No *chanson de geste* has survived with its music fully notated, which is scarcely surprising, since the short melodic formulae would not have been difficult to memorize; two formulae survive, however, as quotations in other works. In Adam de la Halle's pastoral play *Le jeu de Robin et de Marion* one character, Raimberge, quotes a single *laisse* (beginning as shown in ex.1) which

Ex.1 Adam de la Halle: *Le jeu de Robin et de Marion*



constitutes the total material for the section. A second quotation is found in Thomas de Bailleul's *Bataille d'Annecin* (*GB-Lbl* Roy.20 A.xvii, f.177). Under each group of ligatures appears the syllable 'in', the significance of which is obscure (ex.2).

Ex.2 *GB-Lbl* Roy. 20 A.xvii. f.177

Something of the form of the complete *chanson de geste* can be seen in existing examples of the *chante-fable*. The main difference between the two is that the *chante-fable* alternates prose and verse sections, but the latter are effectively in the same form as a *chanson de geste* type *laisse*. The only surviving example of the *chante-fable* is *Aucassin et Nicolette* (*F-Pn* fr.2168; ex.3). Apart from its

Ex.3 *F-Pn* fr.2168

entertaining quality the *chanson de geste* also seems to have had a didactic purpose. Grocheio suggested that it was suitable for reciting to old people or workers resting from their labours, so that by contemplating misfortunes their own hardships would be easier to bear.

IAN R. PARKER

Chanson de toile [chanson d'histoire] (Fr.). A spinning or weaving song. Both names appear in 13th-century sources referring to a small and clearly delineated group of French poems. They are narratives, with a substantial refrain breaking the metre at the end of each of the short monorhyme stanzas. The story is normally of a noble young lady waiting, often spinning, in the absence of her noble love.

There are some 20 known poems (ed. in Saba and Zink), which must be seen in three categories: (1) six known only from their inclusion in longer works, five of them in Jean Renart's *Roman de Guillaume de Dole* (*c*1210); (2) nine known only from the chansonnier of St Germain-des-Prés (*F-Pn* fr.20050, ff.64*v*–66*v* and 69*v*–70*v*); and (3) five ascribed to AUDEFROI LE BASTART, more widely distributed but grouped together as a unit in the Manuscrit du Roi (*F-Pn* fr.844, ff.148–151*v*). Apart from the work of Audefroi, everything is anonymous. Melodies survive for all the Audefroi poems but for only four of the poems in fr.20050 – though the others in that manuscript have empty staves or spaces above them for music that was never added.

Given that Audefroi was active in the first quarter of the 13th century and that fr.20050 cannot be much later, Faral (strongly supported by Zink) proposed that the anonymous poems are also from the early 13th century and conceivably all by a single poet, albeit one writing in a pastiche of an earlier style. Moreover, as Zink observes, two of the Audefroi poems appear anonymously alongside the others in fr. 20050. But it remains true (as stressed by Beck, 1938, and Bec, 1977) that Audefroi's *chansons de toile* differ significantly from the remaining repertory: in having enormously more stanzas, in favouring 12-syllable lines as against the eight and six syllables in the anonymous repertory, in having more melismatic melodies, and in preferring the major mode to the minor mode of the anonymous works. While this dispute will doubtless continue, the unusual nature of fr.20050 and its repertory could well support the hypothesis of a much earlier date for these remarkable melodies, the mere process of recopying in such an informal manuscript perhaps bringing in certain 13th-century elements. If so, Audefroi would have taken over the old form and recast it in his own way.

Chansoneta. *See* CHANZONETA.

Chanson-motet. *See* MOTET-CHANSON.

Chansonnier (i). A manuscript or printed book containing principally chansons (i.e. lyric poetry in French) or monophonic or polyphonic settings of such poetry. The most important medieval chansonniers date from the 13th century and contain the monophonic songs of the troubadours and trouvères (for summary list of principal monophonic chansonniers, and illustration, *see* SOURCES, MS, §III). Apart from Machaut's complete works, secular music was mixed with sacred music in 14th-century manuscripts. From about 1420 the two genres began to appear in separate sources, sacred music in large choir-books and secular music in small chansonniers, many of them prepared for princes, courtiers, or other well-born music lovers or bibliophiles. Chansonniers, some of them elegantly decorated, were compiled in Italy and Germany as well as in France and the Low Countries during the 15th century, but no matter where they were written, they contain mostly French polyphonic chansons. Obviously French culture was foremost in courtly circles everywhere in western Europe at the time, at least as far as secular music was concerned. The chansonniers are true miscellanies, however, and also reflect local tastes and customs. Along with chansons they include song motets in Latin, compositions with Italian, German, Spanish, English or Dutch texts, and even a few compositions apparently originally conceived for instruments. Summary lists of the principal 15th-century chansonniers appear in a number of studies (see Droz and Piaget, Atlas, and Fallows), and in various modern editions of complete chansonniers (e.g. Perkins and Garey, and Brown).

Many sources from the 15th and 16th centuries contain courtly texts without their music. Lachèvre listed and described many of the printed sources. Two manuscript chansonniers that contain popular monophonic tunes survive from the late 15th or early 16th centuries (see Reese and Karp). Beginning in the early 16th century, collections of popular song-texts were printed, many of them to be hawked on the streets of Paris and other French cities; Brian Jeffery republished almost all this material to 1543. Such popular anthologies, which include poems on currently popular topical subjects meant to be sung to traditional tunes, were the ancestors of 17th-, 18th- and 19th-century song collections, such as *La clef des chansonniers* and *La clef du caveau*, which contain the entertainment music of the urban population.

For information on the polyphonic chansonnier *see* SOURCES, MS, §IX, 8.

HOWARD MAYER BROWN

Chansonnier (ii). (1) A term used in France to describe a writer and performer of satirical songs, monologues and skits.

(2) In Quebec since World War II the term has been used in a broader sense and applies to songwriters who sing their own songs. The music generally adopts the ballad style of singers such as Trenet, Bécaud or Aznavour but is also influenced by French-Canadian folksong, folkdance and current popular trends. Leading Quebec chansonniers are Félix Leclerc, Gilles Vigneault, Claude Léveillée, Jean-Pierre Ferland, Robert Charlebois, Georges Dor, Tex Lecor, Raymond Lévesque, Marc Gélinas, Clémence Desrochers, Claude Gauthier, Jacques Blanchet and Jacques Michel.

GILLES POTVIN

Chansonnier Cordiforme (*F-Pn* Rothschild 2973). *See* SOURCES, MS, §IX, 8.

Chanson pour boire [chanson à boire] (Fr.). A French drinking-song. The term was used, often coupled with *chanson pour danser* (dancing-song), particularly from about 1627 to about 1670, in many printed and some manuscript collections of short, simple, strophic, syllabic French songs for one voice with lute accompaniment. *Chansons pour boire* usually have humorous texts concerned with drinking, and they differ from the later AIR À BOIRE only in that songs of the latter type are often for two or more voices. *Chansons pour danser*, on the other hand, are usually settings of more serious pastoral poems and differ from the contemporary AIR DE COUR in being for only one voice and never in a free rhythmic and poetic structure. The dance-songs often consist of repeated rhythmic patterns in a regular metre, but since many *airs de cour* and *chansons pour boire* also do, there is no clearcut distinction between the three types. As many *airs*

and drinking-songs are in the forms *ABB*, *AABB* and *AABCC* as are *chansons pour danser*.

The Ballard family brought out two sets of *Livres de chansons pour danser [dancer] et pour boire*, the first in 21 volumes (Paris, 1627–62), the second in seven (Paris, 1663–9). There are individual collections by Bacilly, Jean Boyer, Chancy, Denis Macé, Jean Mangeant, Melinte, Guillaume Michel, Louis de Mollier and André Rosiers. The anthologies *Le Parnasse des muses* (Paris, 1633), *Alphabet de chansons pour dancer et pour boire* (Paris, 1646) and *Recueil d'ariettes et de chansonnettes de table et à danser* (*F-Pn* Vm[7] 3639) contain further examples. The two types of chanson practically disappear in name only after 1670, though Ballard republished Bacilly's examples in one volume (Paris, 1699), and some *chansons à danser* appeared in *Brunetes ou petits airs tendres*, in three volumes (Paris, 1703–11).

JOHN H. BARON

Chant, Gregorian. *See* GREGORIAN CHANT.

Chantavoine, Jean (François Henri) (*b* Paris, 17 May 1877; *d* Mussy-sur-Seine, Aube, 16 July 1952). French musicologist. He studied philosophy at Paris and music history at Berlin under Max Friedlaender, and then became music critic of the *Revue hebdomadaire* (1903–20) and of *Excelsior* (1911–21). He also contributed to several music periodicals, notably *Le ménestrel*, and edited the annual *Année musicale* with Michel Brenet, Louis Laloy and Lionel de La Laurencie (1911–13). He was secretary-general of the Paris Conservatoire (1923–37). His most important work was on Beethoven, several of whose letters and sketches he published for the first time. Chantavoine also rediscovered Bizet's Symphony and the supposedly lost operetta *Don Sanche* by Liszt, and made translations of texts of operas by Mozart, Wagner, Strauss and others.

MALCOLM TURNER

Chante-fable. The name given to a type of medieval narrative, part recited, part sung. The only surviving example is AUCASSIN ET NICOLETTE (*see* CHANSON DE GESTE, ex.3).

Chanter. The melody pipe of a BAGPIPE. *See also* PRACTICE CHANTER.

Chanterelle (Fr.: 'the singing one'; Ger. *Chorsaite*; It. *cantino*). The highest-pitched string of any instrument, though today most usually applied only to the lute, the violin *e′* string and the melody string of the five-string banjo. It seems likely to have originated with the *vielle-à-roue*, or hurdy-gurdy, whose one or two chanterelles really do 'sing' the melody, while the bourdons supply only the drones.

IAN HARWOOD

Chantey. *See* SHANTY.

Chanticleer. American male vocal ensemble. Based in San Francisco, it was founded in 1978 by Louis Botto to specialize in the performance of Renaissance and Baroque polyphony. Botto was artistic director until his death in 1997, and Joseph Jennings was appointed musical director in 1984. Chanticleer is remarkable for being the only fully professional vocal ensemble in the United States, and for its unusually eclectic repertory. It has commissioned, performed and recorded numerous works by contemporary American composers, while its recordings of early music embrace Franco-Flemish polyphony (including Brumel and Josquin), Morales and Palestrina, in addition to lesser-known repertories, most notably music of the Mexican Baroque, which it has performed in the locations of its first performances. The ensemble has also recorded anthologies devoted to jazz, gospel and crossover repertories.

Chanty. *See* SHANTY.

Chan Wing-wah (*b* Hong Kong, 2 Feb 1954). Hong Kong Chinese composer and teacher. His experience of singing polyphonic music in a Catholic church choir from the age of 16 fuelled his later commitment to composition and choral conducting. He studied with David Gwilt at the Chinese University of Hong Kong, and after graduating in 1979, studied with John Beckwith at the University of Toronto (MM 1981, DMus, 1985). He became strongly influenced by the music of the European avant garde, especially Henze and Messiaen, after attending the Darmstadt summer course in 1986. Joining the Chinese University as a lecturer in 1986, he became chair of the music department in 1992.

By contrast with most Hong Kong composers, there is little reference to vernacular Chinese music in his compositions, a notable exception being the court music episode of Symphony no.3. Chinese instruments however are widely employed, as in the two solo pipas of Symphony no.2. He won a prize in the USA with the refined, colourfully scored chamber piece *Autumn* (1980); later works have been commissioned by the Fires of London, the Kronos Quartet and the Hong Kong Philharmonic Orchestra, whose composer-in-residence he was from 1994 to 1996. His devotion to symphonic writing is atypical for an east Asian composer: sometimes programmatic, his six symphonies are each drawn to a carefully

conceived plan. Usually tragic in mood and containing widespread and dramatic use of percussion, their idiom is polymodal or atonal, and they contain numerous asynchronous elements such as the appearance of thematic transformation side by side with aleatorism. Symphonies nos.3 and 5 demonstrate his fascination with the concept of double or opposing performing groups.

Chanzo. *See* CANSO.

Chanzoneta [chançoneta, chansoneta, canzoneta, cansoneta] (Sp.: 'little song'). A Spanish refrain song similar to the villancico but usually sacred. The word was derived from the French 'chansonnette' in the 13th or 14th century, probably through Provençal. The *chanzoneta* resembles the villancico in form but is more cheerful and less refined in style. Sebastián de Covarrubias Horozco (*Tesoro de la lengua castellana*, 1611) confirmed its resemblance to the villancico, defining both forms as Christmas carols. It is also related in form to the 16th-century Italian canzonetta. Venegas de Henestrosa published a number of *chanzonetas* in his *Libro de cifra nueva* (1557; ed. in MME, ii, 1944/*R*) and Francisco Guerrero referred to his *Canciones y villanescas espirituales* (1589; ed. in MME, xvi, xix, 1955–7) as 'chanzonetas y villancicos'. Further examples are found in 15th-century sources such as the Cancionero de Baena, in the early 16th-century plays of GIL VICENTE, in the writings of Juan Bermudo and in numerous manuscripts of the 16th and 17th centuries (in *E-Bc*, *Mn*, *P-Ln*, *US-NYhsa*).

Chapel (medieval Lat. *cappella*, *capella*; Fr. *chapelle*; Ger. *Capelle*, *Kapelle*; It. *cappella*; Port. *capela*; Sp. *capilla*). A term that, since its first known use in the 7th century, has been appropriated in many different languages and has acquired a great diversity of meanings. By the 13th century the term 'cappella' already had several meanings pertaining to music and ritual. It could signify (1) a reliquary, often in the form of a small church, which might contain relics of saints and items associated with the life of Christ, service books, and other valuable articles or archives; (2) its guardian priests or chaplains (*cappellani*), clerks who were often trained singers in minor orders, and lower-ranking officers; or (3) a place of worship, either a room with its altar within a palace, castle or house (hence privately owned), or an area within a church, cathedral or abbey with its own altar, or a small, separate church building. By the 15th century, the term was restricted to the latter two meanings: the guardian priest-musicians designated as a *cappella* were usually employed by magnates or popes rather than by individual churches, whose musicians were more often referred to collectively as singers or by their individual canonical or musical functions. In the 16th century, after the institution of the Cappella Giulia at S Pietro in Rome in 1513, many Italian churches formed their own *cappelle*. In the 19th century the term 'Kapelle' for part of a sacred institution ceased to be used in Germany, where it denoted a small dance band or brass ensemble. Correspondingly, the title Kapellmeister was given to the conductor of any ensemble; in some establishments it indicated a lower rank than the chief director (Chefdirigent or Musikdirektor), in others a higher rank. It is now used most often as a derogatory characterization. Similarly, in the late 19th century, *Kapellmeistermusik* was a term applied to skilfully composed but uninspired music. In France, Spain and Italy, *chapelle*, *capilla* and *cappella* have continued to be used to designate sacred musical establishments, and *maître de chapelle*, *maestro de capilla* and *maestro di cappella* accordingly the titles of their respective directors. Their function remains separate from that of the *maître de chant*, who was responsible above all for training choirboys.

The *cappella* as a reliquary had its origin in the Carolingian Empire of the late 8th century. The word was first used in 679 to refer to the cape (*cappa*) of St Martin of Tours, a relic revered by the Merovingian kings. Under Pippin the Short the men appointed to guard this cape were designated *cappellani*, and by the time of Charlemagne (768–814) the collection of relics as a whole had acquired the name *cappella*. By the end of the 8th century the term was applied to the building in which the reliquary was housed, the basilica at Aix-la-Chapelle, and also to the priests serving the reliquary, who were subsumed as a separate organization within the royal household. In the 9th century an *archicappellanus* led several ranks of *cappellani*-priests. The members of the royal family had their own reliquaries, also called *cappellae*, with a similar hierarchy among their *cappellani*.

The late Merovingian reliquary and its staff were modelled on the idea of the Old Testament Ark of the Covenant and its attendant Levite priests under King David. This deliberate simulation was part of Pippin's attempt to re-establish the concept of biblical kingship in the Frankish Empire and to model his own authority on that of Moses and David. It is intimately associated with

the liturgical acclamations known as LAUDES REGIAE, which have their origin in the period 751–74, and with the anointing of the king with oil at his coronation. The *laudes* and the *cappella* were both designed to herald Pippin as 'priest-king' rather than as pagan king in the Roman imperial image; and this duality (the king's 'two bodies') was continued with Charlemagne's coronation as Holy Roman Emperor in 800. Itinerancy was essential to the chapel: like the Ark, the *cappella* was transported with the king wherever he went, and the chaplains formed his ecclesiastical 'bodyguard'.

Over the next three or four centuries the right to have *laudes* sung periodically in their honour was claimed by the pope, archbishops, bishops, princes and dukes. In the same period such men also had private chapels, in the sense of both reliquary and clerical staff (as they had the right to grant ecclesiastical benefices), and eventually also of a room and building. By the 15th century even lower clergy and landed gentry had their own chapel, which became a symbol of social status.

The chapel as a staff of chaplains and clerics functioning permanently in one building developed only as the constant itinerancy of the early medieval courts gave way to residence in a capital city. An architectural and organizational model followed by many was the Ste Chapelle in Paris, dedicated in 1248. In England a permanent group of chaplains staffed the chapels of Westminster Palace during the 14th century, when other royal chapels were established as 'outposts' in castles and manors throughout the country. Since such chapels were responsible, above all, for the souls of their patrons, new rulers or patrons and their wives or officers would normally bring their own clerical retinue and dismiss or reappoint members of predecessors' chapels.

In the late 14th and early 15th centuries the priests of royal and princely chapels began to include known composers as well as singers of renown. The author of the mid-14th-century musical treatise *Quatuor principalia* complained of certain malpractices in the application of *musica ficta* by singers who, when asked why they committed them, 'allege that their authority and reason are the singers in the chapels of magnates [*cantores de magnatorum capellis*]; they say that they would not do this without reason, since they are the best singers' (*CoussemakerS*, iv, 250). The status of ecclesiastical and noble chapels thus came to be determined by the number and reputation of the singers in the group, although they did not necessarily sing together at the same time.

Influential court chapels were established throughout Europe. The Chapel Royal of Henry V and VI of England had about 30 chaplains, clerks and boys, and the chapels of the Burgundian-Habsburg dukes included composers such as Fontaine, Binchois, Du Fay and Busnoys (*see* BURGUNDY). Fine musicians were in great demand and were better paid than in the churches, so musicians often moved from chapel to chapel, a phenomenon largely responsible for the dissemination of different musical styles.

'International' chapels included the Vienna Hofmusikkapelle, which was in existence by the early 15th century and was fundamentally reorganized by Maximilian I in 1498, whereupon it became one of the most famous and influential in Europe. King René employed minstrels, performers and composers of all nationalities in his court chapel at Aix-en-Provence which, according to Louis XI who was there in 1481 to recruit musicians for the Ste Chapelle in Paris, had the best singers to be found anywhere, including Josquin Des Prez.

During the second half of the 15th century many wealthy court chapels (*cappelle ducali*) were established in Italy on northern models, for example in Naples by the 1450s and in Milan and Ferrara during the 1470s. These *cappelle* paid high wages, which encouraged many young men to undertake musical study. Tinctoris, in the preface to his *Proportionale* (1476), attributed the current upsurge of music to the initiative of 'Christian princes' who

> founded chapels ... in which at extraordinary expense they appointed singers to sing pleasant and comely praise to our God ... and since the singers of princes, if their masters are endowed with the liberality which makes men illustrious, are rewarded with honour, glory and wealth, many are kindled with a most fervent zeal for this study.

There were three royal chapels (*capillas reales*) in Spain (Catalonia-Aragon, Castile, Navarra) until the death of Isabella. Ferdinand V then selected the best singers from the royal chapel of Castile and incorporated them into his (that of Aragon) in 1504, forming a single royal chapel which had 32 singers in 1508.

The rising wealth and splendour of the chapels of secular rulers encouraged the establishment of papal chapels, which in turn supported the more extensive cultivation of polyphony and competed with the courts for the best singers from throughout Europe. The papal *schola cantorum* was suppressed by Pope Urban V in 1370 and replaced in function by the *cappella* that had been instituted in 1334 by Pope Benedict XII. The papal *cappella* returned to Rome in 1443 under Pope Eugenius

Emperor Maximilian I attends Mass at Augsburg: woodcut attributed to the Master of Petrarch, c1518; Maximilian kneels in the centre while the chapel choir (singing from a large choirbook) stands on the right, and the organist (possibly Paul Hofhaimer) plays a regal on the left

IV and moved into the Cappella Sistina under Pope Sixtus IV. The separate Cappella Giulia was instituted at S Pietro by Pope Julius II in 1513, whereafter the two *cappelle* were complemented by others in the churches of Rome.

Kapellen, responsible for the performance of both secular and sacred music, were formed at many German courts during the first half of the 16th century (*see* GERMANY, §I, 1), usually comprising several different groups. Clerics and choirboys of the court Kapelle were initially responsible for religious services (Duke Albrecht IV took two cleric members of the Chapel Royal to found his Kapelle at Munich in the late 15th century), but after the Reformation the Protestant Kapelle was remodelled on the Kantorei, in which professional singers and choirboys took the place of clerics. The Capella Rorantistarum (*see* KRAKÓW, §2), a Polish religious and musical establishment founded in 1540 by King Sigismund I at Wawel, the Kraków royal castle, comprised nine priest-singers under the direction of a *praepositus*; they performed the works of such composers as Palestrina, Lassus and Goudimel, as well as of Polish composers of vocal polyphony. This chapel was active until the partition of Poland in 1795.

Although instrumentalists (other than the organist) increasingly came to be included in 15th- and 16th-century chapels (particularly in Italy), the papal chapel did not use an organ. Its purely vocal style, also cultivated at Cambrai Cathedral, came to be known by the 19th century as the *a cappella* style, a term that has since become common. In England, however, the Chapel Royal continued to comprise only singers and an organist; the instrumentalists remained a distinct group and eventually became known as the King's Band of Music (*see* LONDON, §II, 2). Elsewhere it is impossible to determine when or where the word 'chapel' (in each language) came to mean the whole of the musical establishment of a church or court including the instruments.

During the 15th century throughout Europe those musicians who were in charge of the various chapels, both sacred and secular, came to be known as 'masters': Kapellmeister (or Hofkapellmeister) in Germany, *maestro di cappella* in Italy, *maître de chapelle* (or *sous-maître*) in France, *kapelmeester* (or *zangmeester*) in Flemish areas, *maestro de capilla* in Spain, *mestre de capela* in Portugal and so on ('chapelmaster' is not customarily used in English). Such a position was usually separate from that of organist but was at least comparable in stature. As the chapels in various countries developed along different lines, the Latin countries tended to retain this function, but the titles of the directors gradually assumed different meanings.

In the 17th century the most famous composers and musicians were employed in ecclesiastical chapels as well as at courts. S Marco in Venice and S Petronio in Bologna became centres for some of the most important developments in vocal and instrumental composition. All the large churches included instruments in their musical chapels, but the courts remained predominant and their musical establishments grew in size and stature. In France, as in Spain, however, the royal chapel retained its sacred function, with the *maître de chapelle* often being a cleric (*see* PARIS, §§II and VI).

In 17th- and 18th-century Germany '*Kapelle*' could mean either the singers and organist of a church, or the singers and instrumentalists of a court. Soon the term encompassed all the musicians and all the musical activities of a court, including opera and orchestral concerts, all of which were generally served by the same orchestra. The Dresden Hofkapelle, founded in 1548 by Moritz of Saxony, is an example of this development. It was at first a group of 11 singers, but as the court became increasingly secularized it expanded to include an orchestra and an opera; it continues in all these capacities as the Dresden Staatskapelle.

The musical repertories of chapels always included sacred music for the Mass, Office, votive services and the Mass for the Dead, as well as occasional works. Most chapels kept their own libraries of choirbooks or music books.

Further information and bibliography on specific chapels may be found in articles on cities and countries.

ADELE POINDEXTER/BARBARA H. HAGGH

Chapelet, Francis (*b* Paris, 3 March 1934). French organist. He studied the organ with Duruflé and improvisation with Rolande Falcinelli at the Paris Conservatoire, where he won *premiers prix* for harmony in 1958 and for organ and improvisation in 1962. In 1954 he was appointed to Notre Dame du Liban and in 1964 to St Séverin, both in Paris. As an expert on early French and especially Spanish organ music, Chapelet is well suited for this post,

particularly as it offers one of the most beautiful-sounding historic organs, and he is regarded as one of the greatest authorities on the restoration of historic organs in this geographic and stylistic sphere. The majority of his recordings have been made on organs in Spain and Portugal. He contributed articles on tonal problems with Spanish organs to the series of publications entitled Orgues Historiques. Chapelet is a standing member of the Real Academia de Bellas Artes in Madrid, and in 1979 founded an academy devoted to Iberian music at Paredes de Nava in Castile. In 1980 he was appointed professor of organ at the Bordeaux Conservatoire. He has a marked interest in geology and has written music for a number of films about volcanoes; hence the title of his composition *Etna 71* for organ, first performed in Notre Dame in 1972.

GERHARD WIENKE

Chapel Royal. The section of the English court musical establishment devoted to the performance of sacred music; *see* LONDON, §II, 1. For other royal chapels, *see* CHAPEL.

Chapí (y Lorente), Ruperto (*b* Villena, nr Alicante, 27 March 1851; *d* Madrid, 25 March 1909). Spanish composer. In 1865 he conducted the band in his home village, where his father, an enthusiastic music-lover, was a barber. Two years later Chapí enrolled in the Madrid Conservatory, studying with Arrieta and winning first prize in harmony in 1869. While earning a precarious living as cornettist in the Circo de Price theatre orchestra, he composed an overture *Zanzé* and his first zarzuela *Abel y Caín*. In 1871 he competed successfully for the directorship of the artillery regimental band. His first symphonic suite *La corte de Granada: fantasía morisca* was composed in 1873 (the third of its four movements, 'Serenata', is still played); his one-act opera *Las naves de Cortés*, performed at the Teatro Real on 19 April 1874 with Tamberlik in the title role, earned him a three-year government grant to study, first at the Spanish Academy of Fine Arts in Rome, then at Milan and Paris. As fruit of these years abroad, he sent back the one-act operas *La hija de Jefté* (1876) and *La muerte de Garcilaso* (1878), and the three-act *Roger de Flor* (1878).

Beginning with his one-act *Música clásica* (1880), Chapí, once more in Madrid, wrote more than 100 zarzuelas, many of which ran more than 100 consecutive nights. In contrast with Chueca, who caught the ear of the illiterate, Chapí's zarzuelas appealed to the city's middle and upper classes. In 1905 he published the first of four string quartets, a unique venture for a zarzuela composer and one symptomatic of his loftier musical aims.

ROBERT STEVENSON

Chapin. American family of musicians. They were active principally in Ohio, Kentucky and Pennsylvania in the 19th century. The brothers Lucius Chapin (*b* Springfield, MA, 25 April 1760; *d* Cincinnati, 24 Dec 1842) and Amzi Chapin (*b* Springfield, 2 March 1768; *d* Northfield, OH, 19 Feb 1835) were well-known singing-school teachers. Although they were proponents of the music of Andrew Law, both wrote folk hymns. Five of their tunes, 'Ninety-third', 'Rockbridge', 'Rockingham', 'Twenty-fourth', and 'Vernon', are included in Wyeth's *Repository of Sacred Music, Part Second* (1813). As many as 16 hymns were attributed to the Chapins in such collections as Carden's *Missouri Harmony* (1820) and Funk's *A Compilation of Genuine Church Music* (1832), although only seven of these can be credited to them with any assurance. Four tunes ('Ninety-third', 'Olney', 'Twenty-fourth', and 'Vernon') remain in modern editions of the southern tune books *Christian Harmony* and *Sacred Harp*, and the two most popular, 'Ninety-third' and 'Twenty-fourth', are included in such major Protestant hymnbooks as the *Methodist Hymnal* and the *Lutheran Book of Worship*.

Lucius Chapin had five sons, three of whom were also singing-school teachers: Lucius Rousseau Chapin (1794–1861); Amzi Philander Chapin (1795–*c*1835); and Cephus Lysander Chapin (1804–28).

JAMES SCHOLTEN

Chappell. English firm of publishers, concert agents and piano manufacturers. The firm, active in London, was started on 3 December 1810 by the pianist and composer Johann Baptist Cramer, Francis Tatton Latour and Samuel Chappell (*b* ?London, *c*1782; *d* London, Dec 1834), who formed a partnership. Chappell was formerly employed by the music publisher Birchall. In addition to substantial publishing activities, including educational music, the firm sold pianos, undertook concert promotion, and played a leading part in the creation of the Philharmonic Society (1813). In 1819 Cramer retired from the business; in about 1826 Latour withdrew and carried on a separate business until about 1830, when he sold it to Chappell, who was also in partnership with the instrument makers George Longman and T.C. Bates from 1829.

After Samuel Chappell's death, the business was continued by his widow Emily Chappell and her sons. The eldest, William (*b* London, 20 Nov 1809; *d* London, 20 Aug 1888), was noted for his interest in early music. In 1840, with Rimbault, Macfarren and others, he founded the Musical Antiquarian Society, which met at his firm's premises; he edited Dowland's songs for the society (1843). He had earlier published his *A Collection of National English Airs* (1838–40), copiously annotated with historical details, and this was subsequently expanded into his major work, *Popular Music of the Olden Time* (2 vols., 1855–9). William Chappell left the family firm in about 1843 and in 1844 went into partnership with Cramer and Beale, as Cramer, Beale & Chappell, remaining until his retirement in 1861. He also assisted in founding the Musical Association in 1874, and in the same year the first volume of his projected general history of music appeared. Meanwhile the Chappell firm prospered and greatly expanded under his brother Thomas Patey Chappell (*b* London, 1819; *d* London, 1 June 1902). The manufacture of pianos was started in the 1840s, and the firm's interests turned towards popular dance music such as that of Charles D'Albert and Charles Coote (senior), and light opera, beginning with Balfe's *The Bohemian Girl* (1843). Under Thomas Chappell's management the Monday and Saturday Popular Concerts were begun in 1858 at St James's Hall (also a project of the Chappells). Thomas's younger brother, Samuel Arthur Chappell (*b* London, 1834; *d* London, 21 Dec 1904), directed these concerts, and many famous artists appeared there, including Charles Santley, Piatti and Clara Schumann. Thomas Chappell also organized the later seasons of Dickens's public readings from 1866 to 1870. In the 1870s the firm's association with Gilbert and Sullivan began. In addition to publishing nearly all their operas, Thomas Chappell financed the Comedy Opera Company, which performed the works before D'Oyly Carte took over the operas in 1877. Thomas Chappell was also one of the original directors of the RCM, and a governor of the Royal Albert Hall.

The firm's fortunes declined temporarily at the end of the 19th century, and in 1894 William Boosey was engaged, initially to run a series of ballad concerts in competition with the highly successful series of Boosey & Co. These concerts also included performances by great instrumentalists such as Pachmann and Kreisler. The firm soon recovered and Boosey became managing director in 1902. Chappell also played a leading part in the campaign against musical piracy, which resulted in the effective Copyright Act of 1906. The new Queen's Hall was leased by the firm, which ran the Promenade Concerts there from 1915 until 1926 when the BBC took over their management.

In the 20th century the firm's predominance in the field of light music increased enormously. After Louis Dreyfus (*b* Kuppenheim, 11 Nov 1877; *d* London, 2 May 1967) bought the firm in 1929 his brother, Max Dreyfus (1874–1964), who had earlier been associated with Harms, turned the New York branch of Chappell (established in 1906) into a separate affiliate company. Chappell became the leading publisher of show music on both sides of the Atlantic, producing scores by such composers as George Gershwin, Jerome Kern, Frederick Loewe, Cole Porter, Richard Rodgers and Sigmund Romberg, as well as works by Noël Coward and Ivor Novello. Up to the 1970s the British firm also continued the publication of more serious works, including most of Bax's music, and from 1938 to 1973 was the British agent for the Schirmer firm. In the early decades of the century it ranked among the leading British piano manufacturers, but ceased to produce its own instruments after 1971.

Philips (later Polygram) bought the American and British companies in 1968, and while the extensive show and standard catalogue was maintained, the emphasis shifted to rock and popular music. The New Bond Street premises in London, for so many years the home of the firm, were subsequently sold to Kemble Pianos, who were permitted to continue a retail music store there under the name 'Chappell of Bond Street'. With its many other subsidiary and associated companies, including an important Australian branch, founded in Melbourne in 1904, and the firm of Ascherberg, Hopwood & Crew, acquired

in 1969, Chappell was sold again in 1984 to a group of American investors, and a takeover was agreed in 1987 by Warner Communications; as Warner Chappell it is now one of the largest music publishers in the world.

Chapuis, Auguste (Paul Jean-Baptiste) (*b* Dampierre-sur-Salon, Haute-Saône, 20 April 1858; *d* Paris, 6 Dec 1933). French organist, educationist and composer. He studied at the Paris Conservatoire with Théodore Dubois, Massenet and Franck, winning *premiers prix* for harmony (1877) and for organ (1881) as well as the Rossini Prize (1885). From 1882 to 1887 he was organist at the Paris church of Notre Dame des Champs and from 1888 to 1906 at St Roch. He was professor of harmony at the Paris Conservatoire from 1894 until his retirement in 1923, inspector of music in Parisian schools from 1895, and president of the examining board for military music. In 1899 he revived the Orphéon Municipal, a Parisian group of populist choral societies. His operas were unsuccessful; however, Cobbett noted that Chapuis's chamber works were 'solidly constructed, skilfully written and full of ideas. The most important of these is the [piano] trio'. Chapuis edited Rameau's *Castor et Pollux* for the *Oeuvres complètes* (1903). He also wrote a *Leçons d'harmonie* (Paris, 1909) and three other works of the same name, one each for the Garde Républicaine, the navy and the army (all published in Paris, 1911). His portrait appears in the *Annuaire officiel du Conservatoire national de musique* for 1919.

WORKS

Enguerrande (drame lyrique, 4, V. Wilder, after E. Bergerat), Paris, OC (Lyrique), 9 May 1892, vs (1892)

Les demoiselles de Saint-Cyr (op, 4, A. Lénéka, after A. Dumas *père*), Monte Carlo, 19 April 1921 (Paris, 1921)

Yannel (drame lyrique, 3)

Elen (chorus and incid music)

Choral: Les sept paroles du Christ, orat; Les jardins d'Armide, cant., solo vv, chorus; La chanson du charbonnier, chorus, orch (Paris, 1903); Le poème du travail, solo v, chorus, orch (Paris, 1911); Ancêtres (légende dramatique, 3), solo vv, chorus, orch; Masses; works for various vocal combinations, pf acc.

Many songs (some on texts by R. Darzens), duets etc.

Orch: Fantaisie; Menuet (Paris, 1891); Tableaux flamands, 1918; Au crépuscule, sym. poem, Concerts Lamoureux, 1898

Chbr: Suite, vc, pf (Paris, ?n.d.); 5 pieces, vn, pf (Paris, 1887); Fantaisie concertante, db, pf (Paris, 1907); Pf Trio, G (Paris, 1912); Vc Sonata, A (Paris, 1919); Vn Sonata, g (Paris, 1921); 2 pieces, ob, pf (Paris, 1922); 3 pieces, fl, pf (Paris, 1927)

Many works for pf including two suites: *Pulcinelli* and *Suite par la gamme orientale*; others listed in *MGG1*

Works for org

Sets of solfèges

DAVID CHARLTON (with CORMAC NEWARK)

Chapuis, Michel (*b* Dôle, Jura, 15 Jan 1930). French organist and authority on organs. At a very early age he played the organ in the cathedral in Dôle, and was greatly influenced by this historic instrument. He later studied in Paris with Souberbielle, and then with Dupré at the Conservatoire, where he took *premiers prix* for organ and improvisation (1951). He was subsequently organist of the Paris churches of St Germain-l'Auxerrois, 1951–4, and St Nicolas-des-Champs, 1954–72, and in 1964 was appointed to St Séverin. From 1955 to 1964 he accompanied the choir at Notre Dame, and in 1995 became organist of the Chapelle Royale at the palace of Versailles. To improve his understanding of old instruments he studied early treatises and spent two years with the organ builder Müller; thereafter, in playing the entire French repertory of the 17th and 18th centuries on the organ of St Nicolas-des-Champs (built by Clicquot), he gained a detailed knowledge of Baroque phrasing, articulation, *notes inégales*, ornamentation and registration. He has taught the organ at the conservatories of Strasbourg, 1956–79, Besançon, 1979–86, and Paris, 1986–95, and in several academies. Through his teaching activities and numerous recordings of French and German Baroque repertory Chapuis played an important part in the movement of the 1960s aiming to revitalize the interpretation of early and Baroque music. As a member of the Commission Nationale des Orgues Historiques he has supervised the restoration of several historic instruments.

GILLES CANTAGREL

Characteristic [character-]**piece** (Ger. *Charakterstück*). A piece of music, usually for piano solo, expressing either a single mood (e.g. martial, dream-like, pastoral) or a programmatic idea defined by its title. The term is usually applied to pieces written since the early 19th century, although a number of harpsichord pieces by Couperin and Rameau and other earlier composers anticipate the genre. An early use of the term occurs in Beethoven, who called his *Leonore* Overture no.1 a 'characteristic overture', by which he must have implied that it was characteristic of operatic overtures and dramatic in style. The two marches by Schubert published posthumously as op.121 (D968*b*) were called 'marches caractéristiques' by the publisher Diabelli, no doubt to suggest that they were characteristic of Schubert's marches, many of which had already been published; at that time (1830) the term was still unusual. An early frequent use of the term is in the piano music of Stephen Heller. He gave titles to many pieces, sometimes of a general nature, e.g. Four Arabesques (op.49) or Three Albumleaves (op.157), and others more definite in their implications, as in *Spaziergänge eines Einsamen* (op.78) and *Voyage autour de ma chambre* (op.140); he also composed an 'Etude caractéristique' for Moscheles' *Méthode des méthodes*. Schumann

gave the subtitle *18 Characterstücke* to his *Davidsbündlertänze* op.6. His use of the term there perhaps refers to the characters of Florestan and Eusebius: the pieces bear the initials of one or other (sometimes both) and are accordingly either passionate or meditative.

All of Mendelssohn's seven *Characteristische Stücke* op.7 are characteristic of a mood. Smetana's second set of characteristic pieces, written in 1875, was published under the general title *Rêves*; each of the six pieces has an individual title. These pieces indicate a trend towards a wider use of the idea of the genre: two of them – *Le bonheur éteint* and *Consolation* – depict moods, but others are called *Près du château*, *La fête des paysans bohémiens* and *Au salon*, the last extended waltz. All are written in an elaborate, decorated style, and represent the beginning of a tendency for the characteristic piece to embody a mood widened to embrace human characters, scenery and literary conceptions. This can be seen in the Five Pieces op.103 of Sibelius (1924): the titles of these five pieces – *The Village Church*, *The Oarsman*, etc. – give the listener a clear idea of the music's character, thus applying the term in a different way from its original usage. On the other hand, in Stanford's Six Characteristic Pieces op.132 (published 1913), which include a study, a toccata and two romances, the collective title is apparently used simply to indicate that the individual pieces are typical of their particular genres.

Character notation [shape-note notation, buckwheat notation]. A type of notation used for SHAPE-NOTE HYMNODY.

Charango. Small fretted lute of the Andean regions of Bolivia, central and southern Peru and northern Argentina. It is one of the few hybrid instruments resulting from contact between indigenous and European cultures and is known to have existed by the early 18th century (an example is found in a decorative sculpture at Puno Cathedral, completed in 1755). Its area of distribution, which follows precisely the major colonial trade routes, indicates that it was disseminated by muleteers; its small size may have been partly due to practical considerations of transport.

It is shaped like the Spanish guitar but has a small, thin soundbox and short strings, giving a sharp, high-pitched sound (see illustration). The neck has between five and 18 wooden, bone or metal frets. The soundbox may have a flat wooden back of cedar or walnut, or a round back made of armadillo shell or a single piece of carved wood; its face, which has a round soundhole, is of pine, spruce, cedar or walnut and the bridge is cedar or walnut. The total length of the instrument varies from 45 to 65 cm.

Charango (fretted lute) played by a Quechua-speaking campesino, Otavi region, southern Bolivia

The instrument also exists in other forms; it has been made from a round gourd, in a pear-shape of wood or armadillo, and ornately carved in the form of a mermaid. The strings are arranged in four or, more commonly, five single, double or triple courses and number between four and 15; they are of metal, nylon or gut (now rare). Tunings vary according to region and personal taste; those found most frequently are A minor (*e″/e″–a′/a′–e″/e′–c″/c″–g′/g′*) and E minor (*b′/b′–e″/e″–b′/b′–g″/g″–d″/d″*). In Peru and parts of Bolivia, the *charango* is also referred to as *chillador* (from Spanish *chillar*: 'to make a high-pitched cry'). The armadillo *charango* is sometimes called *kirkinchu* (Quechua for 'armadillo') or *kirki* in Peru and Bolivia, and *tatu* or *mulita* in Argentina.

Two distinct contemporary *charango* traditions may be identified. The Quechua- and Aymara-speaking peasants (campesinos) in much of Peru and Bolivia favour a small wooden flat-backed instrument with five double or triple courses of thin metal strings, which produce a thick treble sound. Campesinos in northern Argentina and the Lake Titicaca region of Peru and Bolivia play a metal-string armadillo *charango*. A single melodic line is strummed rapidly with the remaining open strings to produce a dense texture; the rhythmic aspect of the music remains dominant. The *charango* is played only by men as a solo or ensemble instrument and is used predominantly for courting and festival dances. It is also played in certain isolated areas in connection with agricultural and animal fertility ceremonies.

The performers of the mestizo *charango* tradition in larger towns and urban centres favour an instrument with more bass and a deeper timbre (often the round-backed variant with a low octave string in the central course) and the clearer sound of nylon strings. The music consists of

sections that are alternately plucked and strummed. In the former, the melody is plucked and an accompanying harmonic line in parallel 3rds; the chords used in the strummed introduction, interlude and postlude sections are triadic. The *charango* is used to accompany singing and dancing at family parties and in stage presentations; it is performed solo and in ensembles of string, wind and percussion instruments.

THOMAS TURINO

Chardavoine [Chardavoyne], **Jehan** [Jean] (*b* Beaufort, Anjou, 2 Feb 1538; *d* *c*1580). French music editor and ?composer. A contemporary document records that Jehan Chardavoine, who rented a house near the Collège du Cardinal Lemoine at Paris on 6 July 1571 was 'praticien'. On 20 August 1573 'Maistre Jean Chardavoyne' was granted a royal privilege to publish, with a printer and bookseller of his choice, a collection of chansons 'en forme de voix de ville' with simple melodies that he had adapted or composed. The title-page of *Le recueil des plus excellentes chansons en forme de voix de ville tirées de divers autheurs et poètes françois tant anciens que modernes* (Paris, 1576/*R*) indicates that the 'common tunes had been arranged so that they might be sung or played anywhere'. Chardavoine's preface, signed from Paris on 10 November 1575, mentions various dances as different types of *voix de ville*, notably 'la pavane double, à la simple, et de la commune, rondoyante, moyenne ou héroïque; le bransle gay, le bransle simple, le bransle rondoyante, le tourdion', and other songs ordinarily danced and sung in the streets.

Chardavoine's collection contains 190 strophic poems, 186 of which have their first stanzas set below a monophonic melody (generally notated in the alto clef); the remaining four have suggestions for suitable tunes. Clearly many of the texts were popular, since they appeared in contemporary anthologies without music. Chardavoine acknowledged none of the poets, but nearly half of them have been identified including Forcadel, Marot, Tyard, Ronsard, Saint-Gelais, Du Bellay, Belleau, Baïf and Desportes. Chardavoine adapted many of the tunes from three- and four-part settings of the same texts by earlier composers, principally Arcadelt (from publications of 1554–75), Certon (1552), Pierre Clereau (1559–75), Nicolas de La Grotte (1569), Adrian Le Roy (1564–73), Fabrice Marin Caietain (1576) and Antoine de Mornable (1553). Some of these had already appeared during the 1550s in arrangements for voice and guitar or lute. The superius usually provided the model, but for one, *J'ay le rebours*, a tenor was used. He occasionally used the same tune for two or three different texts. The fact that some of his tunes bear little or no resemblance to those of polyphonic settings of the same texts lends some support to his claims as a composer; but most of the tunes have the simple popular character and dance-like rhythms typical of the *voix de ville* during the second half of the 16th century.

Chardavoine's 1576 collection may have been re-edited in 1580 but no copy of such an edition survives; at all events it provided the basis for two new Parisian editions in 1588, one published by Claude Micard, the other by Marc Locqueneux with a preface signed 'M.A.C.' (RISM 1588[13]); 44 of the original pieces were omitted, 25 new ones introduced, and some of the tunes were modified.

FRANK DOBBINS

Chardiny [Chardin, Chardini], **Louis-Claude-Armand** (*b* Fécamp, 1755; *d* Paris, 1 Oct 1793). French composer and singer. Italianizing his name to increase his chances of success, he joined the Académie Royale de Musique as a *basse-taille* in 1780, although judging by his most successful part, that of Theseus in Sacchini's *Oedipe à Colone*, his voice was a tenor rather than a baritone. His taste was for serious opera (he was a fervent admirer of Gluck), but his only contribution to the repertory of the Opéra was to write the recitatives and some cavatinas for a French adaptation of Paisiello's *Il re Teodoro in Venezia* (as *Le roi Théodore à Venise*, 1787). *La ruse d'amour*, produced at the Théâtre des Beaujolais, brought that small theatre its first real success ten months after it had opened. In this work, as in *Le pouvoir de la nature*, the other of his operas available in score, Chardiny sought to compete with the opéras comiques produced at the Comédie-Italienne. Later he was employed as an arranger for the Théâtre du Vaudeville (from January 1792). Beffroy de Reigny wrote that 'Chardiny hated the revolutionaries', but he was nonetheless captain of a section of the National Guard at the time of his death.

MICHEL NOIRAY

Chardon de Croisilles (*fl* 1220–45). French trouvère. He was presumably a native of Croisilles, near Arras. Five chansons (one spurious), two jeux-partis in Old French (R.1437 and 1822) and one in Provençal have been credited to him, of which the items listed below survive with music. In two chansons the poet celebrated in acrostics Marguerite de Bourbon, who married Thibaut IV of Champagne in 1232. There is also reference to the fortified castle of Monreal (near Pamplona), where Thibaut stayed in 1237. Chardon may have joined the crusade of 1239 – led by Thibaut – together with Henry II of Bar, a judge in one of the jeux-partis. All poems are constructed with *pedes* and cauda; most caudas consist of two sets of paired rhymes. The chansons are uniformly decasyllabic, the jeux-partis in Old French octosyllabic. The use of non-repetitive melodies in *Mar vit raison* and the main setting of *Rose ne lis* is unusual. The floridity of the latter contrasts with the comparative simplicity of *Li departirs*.

THEODORE KARP

Chareau, Antoine. Dutch music seller who acquired the firm of ESTIENNE ROGER.

Charité [Carité], **Jean** [Jacques] (*fl* 1401–33; *d* Cambrai, 28 July 1461). French composer. His single work, the triple-texted rondeau *Jusques à tant/Puisqu'ency/Certes m'amour* (ed. in CMM, xi/2, 1959), is preserved in the fifth fascicle of *GB-Ob* Canon.misc.213. He has generally been identified with one of three individuals: Jean Carité, a canon of Laon and one of 24 ministers of the artistic and literary society known as the Cour d'Amour ('Court of Love'), founded in the Burgundian Duke Philip the Bold's Hôtel d'Artois in Paris on St Valentine's Day, 1401; Johannes Caritatis, a canon of St Donatian, Bruges, from 1406 to 1411 and chaplain of the duke of Berry; and Jacques Carité, also chaplain of the duke of Berry. All three are probably the same person, in fact, since the names Jean and Jacques are used interchangeably in the records and since many of Philip the Bold's singers entered the service of his brother Duke Jean de Berry upon the former's death in 1404. The Jean [Jehannin, Jacques] Carité [Charité] who had served first as a sommelier, then as a chaplain, in the household chapel of Jean de Berry (who gave him gifts of a ruby and three diamonds) was undoubtedly also the Jean [Jacques] Charité who served from 1418 to 1422 as canon of the Ste Chapelle of the Bourges palace, founded in 1405 by Jean de Berry (Bourges, Archives départementales du Cher, 8G1509, fols. 8r, 9r). A Jacques Carité, again almost certainly the same man, was a canon of Cambrai Cathedral by 1433 and died there in 1461. Guillaume Du Fay was one of the executors of his will (Lille, Archives départementales du Nord, 4G1253).

PAULA HIGGINS

Chariteo, Il. *See* GARETH, BENEDETTO.

Charity children. The children of London charity schools or orphanages, who sang in certain church services given for the benefit of those institutions from the 16th century to the 19th; *see* LONDON, §I, 4.

Charivari (Fr.; Ger. *Katzenmusik*). A mock serenade (also known as 'rough music' and in the USA as 'shivaree') of loud and discordant noises using pots and pans, cowbells, toy horns, guns or other noisemakers, and by extension any cacophony of out-of-tune noises. In some parts of Europe, Canada and the USA such concerts are still traditionally given outside the windows of couples on their wedding night, and continue until the musicians are treated to a drink by the bridegroom. In former times charivaris were often reserved for individuals who had incurred the ridicule or wrath of the community, as in the case of marriage between people of greatly different ages, hen-pecked husbands, those who had seriously offended sexual mores, or the politically unpopular. The term was used in France as early as the 14th century, when it signified a banging of pots and pans, or noisy mock music; the *Roman de Fauvel* includes an illustration of one. For further discussion see E.P. Thompson: *Customs in Common* (New York, 1991), 467–538.

JAY SCOTT ODELL

Charke, Richard (*b* *c*1709; *d* Jamaica, *c*1738). English violinist, composer and singer. He began his career as a

Charivari: 'The Industrious 'Prentice out of his Time, and Married to his Master's Daughter', engraving by William Hogarth from the series 'Industry and Idleness', 1747

dancing-master, but by 1729 he had succeeded Richard Jones as leader of the Drury Lane orchestra, and he was soon playing concertos in the intervals and singing small roles. He also sang the male lead in several ballad operas, for instance Carey's *The Contrivances* and Cibber's *Damon and Phillida* (both 1729). Burney called him 'a man of humour'; he wrote the first of the many amusing Medley Overtures that in the next 20 years were often played before pantomimes. The tune fragments, from Purcell and Handel as well as from popular songs such as *Lilliburlero*, occur in the bass as well as at the top and are sometimes cleverly combined. The slow middle section of Charke's overture is surprisingly beautiful, with its 3/4 tune accompanied in 6/8.

Unfortunately his private life was a disaster. In 1730 he married his manager's youngest daughter, Charlotte Cibber, with whom, says Burney, he quarrelled incessantly. In the very first month of the marriage he was chasing '2s. 6d. drabs', and by summer 1736 his gambling debts were such that he fled to Jamaica.

WORKS

Songs in: The Lovers Opera (ballad op, W.R. Chetwood), London, Drury Lane, 1729 (London, 1729); The Generous Freemason (ballad op, Chetwood), 20 Aug 1730 (London, 1731)

2 Songs in The Humours of Oxford (comedy, J. Miller), London, Drury Lane, 9 Jan 1730 (London, 1730)

Music in Harlequin Restored or The Country Revels (pantomime), London, Drury Lane, 14 Dec 1732: Medley Overture, a 3, in 6 Medley or Comic Overtures (London, 1763); Comic Tunes

ROGER FISKE/LINDA TROOST

Charles [first name unknown] (*b* ?1705–1710). Horn player, clarinettist and composer, probably Hungarian. He is a shadowy figure but important as the earliest named performer on the clarinet in the British Isles. He is first mentioned in the *London Daily Post* in connection with 'two little Negro-boys, Scholars to Mr. Charles' who performed on two french horns at the Theatre Royal, Drury Lane (3 March 1738). In March 1742 he arrived in Dublin from London, heralded in *Faulkner's Dublin Journal* as 'an Hungarian, the famous French horn', and in May he played a concerto on the clarinet and solos on the horn, 'Hautbois d'Amoir,' and the 'shalamo', a concert that was repeated by popular demand the following month. In November he took over 'Mr Geminiani's Concerns and Great Musick Room' and gave lessons on the horn. He played horn and clarinet concertos in the Theatre Royal, Aungier Street, and at Smock Alley Theatre in February and March 1743. He then returned to England, where he was advertised to perform in the Assembly Room, Salisbury, on 1 November, playing solos on the horn, clarinet, oboe d'amore and 'shalmo, being instruments never heard here before', and joined by his

wife and son in a trio for three horns. His last recorded concert was in Edinburgh on 20 March 1755.

F.G. RENDALL/CHRISTOPHER HOGWOOD/BARRA R. BOYDELL

Charles V. Holy Roman Emperor, member of the HABSBURG family.

Charles VI, Emperor (*b* Vienna, 1 Oct 1685; *d* Vienna, 20 Oct 1740). Austrian patron, Holy Roman Emperor. The younger son of the Habsburg Emperor Leopold I, he was declared King of Spain in 1703 in opposition to Philip V. Charles had his residence in Barcelona, where he also maintained a musical establishment. Several operas with texts by Pariati and Zeno and music by Caldara, Albinoni, Gasparini and others were performed there, beginning in 1708. He became emperor in 1711 and soon adopted the rich operatic life of his predecessors in Vienna. He engaged Caldara and Gottlieb Muffat, who joined Fux and F.B. Conti whom he had taken over from his brother. From the 1720s they were supported by Giuseppe Porsile, Georg Reutter (ii) and Giuseppe Bonno. Charles was a composer as well as a patron, but none of his works survives. He directed several performances from the harpsichord, including Caldara's *Euristeo* in 1724. After his death the tradition of Italian court opera ceased and the Hofkapelle declined.

HERBERT SEIFERT

Charles, Michel, Ozi et Cie. *See* MAGASIN DE MUSIQUE (i).

Charles, Ray [Robinson, Ray Charles] (*b* Albany, GA, 23 Sept 1930). American rhythm-and-blues and soul singer, pianist and songwriter. Charles grew up in Greenville, Florida, in a poor black family, and at the age of five he contracted glaucoma; it went untreated and within a year he was blind. At the same age he also began playing the piano. Two years later he went to the St Augustine School for the Deaf and the Blind, where he studied composition and learnt to write music scores in braille. In 1945 Charles was orphaned and left school to form a combo, which toured northern and central Florida. He then moved to Seattle, where he played in jazz trios, developing a piano and vocal style heavily influenced by Charles Brown and Nat 'King' Cole. It was also at about this time that he changed his name to Ray Charles, in order to avoid confusion with the prizefighter Sugar Ray Robinson. His first rhythm-and-blues hits were *Baby let me hold your hand* (Swing Time, 1951) and *Kiss me baby* (Swing Time, 1952).

Soon after joining the Atlantic label in late 1952 Charles made his first musical breakthrough – a merger of his sophisticated technique with the new type of rhythm-and-blues that was developing at that period into rock-and-roll. With *I've got a woman* (Atl., 1955) he immediately established himself as a major figure in the new style. *I've got a woman* violated one of the most deeply felt taboos of black culture by adopting a manner of delivery associated with the intense testifying of the Holiness and Apostolic churches and applying those vocal techniques (moans, grunts and ecstatic incoherences) to the most explicitly sexual material that had ever found success on the popular charts. During this period Charles took many of his song ideas from the gospel repertory.

Charles still sang straight, sophisticated blues – *Drown in my own tears* (Atl., 1956) is one of the greatest performances of urban blues recorded since World War II – but his most successful songs were those performed in his sensual gospel style, such as *Hallelujah, I love her so* (Atl., 1956), *The Right Time* (Atl., 1959) and *What'd I say* (Atl., 1959); the last effectively re-creates the ambience of a Pentecostal service in its manic, swinging fervour.

Ironically, Charles may have achieved so many hits with such material precisely because of the unfamiliarity of white Americans with the conventions of blues and gospel. Such listeners were captured by the combination of emotionalism and virtuosity on Charles's recordings, for however simple the subject matter and emotions of his songs, his performances always created the impression of a highly developed and controlled technique. This allowed him to broaden his palette to a degree previously unprecedented in rhythm-and-blues, which made him acceptable to audiences devoted to many different styles of music, from rock-and-roll and white pop to jazz; Frank Sinatra called him 'the only genius in the business' (an accolade that Atlantic fully exploited). On the album that Charles recorded at the 1958 Newport Jazz Festival, *Ray Charles at Newport* (Atl., 1959), he established himself as a testifying rock-and-roll preacher, a smooth, sophisticated popular singer, a big-band leader and a swinging post-bop pianist. By that time he was recording as many albums as singles, working with such versatile arrangers as Ralph Burns and Quincy Jones (the latter had taken music lessons from Charles during his youth in Seattle) and touring with a big band and a female backing chorus modelled on gospel groups – supporting forces of a size that for economic reasons had seldom been used since the war.

By the end of the 1950s Charles had outgrown the commercial confines of Atlantic, which was a rhythm-and-blues and jazz company; having explored the possibilities open to a black singer recording with black musicians for a black audience, he had become an ambassador for black culture to white audiences. In consequence in late 1959 he signed with ABC/Paramount Records, a popular label owned by the ABC television network. At first, this change of labels made no essential

difference to Charles's approach. (Indeed, one of his purposes in making the move was to gain more creative control over his recordings, though this seems to have amounted to no more than his being granted royalties as a producer as well as a performer.) Even his most adventurous project, the recording in 1962 of two albums entitled *Modern Sounds in Country & Western Music* (both ABC/Para., 1962) was foreshadowed by a version of Hank Snow's country song *I'm movin' on* (*The Genius of Ray Charles*, Atl., 1960). The best of the early ABC hits – *Georgia on my mind* (ABC, 1960), *Hit the road Jack* (ABC, 1961), *I can't stop loving you* (ABC, 1962), *You don't know me* (ABC, 1962), *Busted* (ABC, 1963) – have the same searing intensity, musical inventiveness and sly wit as the earlier successes. It was as a result of these recordings, as much as his first hits, that Charles became a dominant influence on such important performers of the 1960s as Aretha Franklin, Stevie Wonder, Steve Winwood, the Righteous Brothers, James Brown and Eric Burdon of the Animals. However, eclecticism proved to have as many pitfalls for a black performer in the blues tradition such as Charles as it did for a white one such as Elvis Presley. And, like Presley's, his music deteriorated towards the end of the 1960s, not because it paled in comparison with new developments in hard rock, but because the material became increasingly sentimental and banal. In addition, his career was damaged by his arrest in 1965 for possessing heroin (it transpired that he had been an addict for his entire adult life, but he was apparently quickly and completely cured). After an absence from performing of a year following the arrest, Charles recorded some successful singles, including (ironically) *Let's go get stoned* (ABC, 1966), and at least one great album (*A Message from the People*, ABC, 1972). But his power was diminished by his own acceptance of the conventions of supper-club show business. Although almost all of his later recordings include a remarkable moment or two, and his concerts have continued to be stimulating, Charles has never again recaptured the consistent unity of vision that marked his first decade as a performer.

Yet Charles must be regarded as a musician of fundamental importance and far-reaching influence. It can be argued that he was the principal architect of the transformation of black popular music from the rhythm-and-blues style to soul. There has been almost no performer in the latter genre who has not been deeply affected by his style. And within the mainstream of popular jazz Charles's instrumental recordings, particularly those made with the vibraphone player Milt Jackson of the Modern Jazz Quartet (*Soul Brothers*, Atl., 1957; *Soul Meeting*, Atl., 1958), have been equally influential. Furthermore, it is difficult to name another performer whose recorded work so completely expresses the scope of American popular-music ambition and achievement from the 1950s to the 1980s. All of these qualities decisively mark Charles not only as one of the most original popular artists of the 1950s, but as one of the most important American musicians of any style to have emerged in the postwar period.

DAVE MARSH/R

Charles d'Argentille [Ciarles Argentil] (*b* ?Argenteuil; *fl* 1528–56). French singer and composer, active in Italy. He entered the papal chapel as a bass in 1528 and may have been the singer mentioned by Verdelot, in Antonfrancesco Doni's *I marmi* (Venice, 1552, ed. E. Chiorboli, Bari, 1928), as his partner along with 'Bruett' (possibly Hubert Naich) and 'Cornelio' (?Senolart), in entertaining the Florentine populace with French chansons (franzesette). In 1556 he was ordained a Carthusian priest. It is likely that he was the composer of the three madrigals ascribed to 'Carlo' in *Madrigali ... libro primo de la serena* (RISM 1530[2]). Other works ascribed to 'Charles' probably by him include the five-voice madrigal *Moneta, signor mio* (in RISM 1542[16]), a *Missa super 'De beata virgine'* that survives in manuscript (*I-Rvat* C.S.13), and the four-voice *Missa super 'Quem dicunt homines'* in a printed book of masses (RISM 1544[3]).

DON HARRÁN

Charleston (i). City in South Carolina, USA. Founded in 1670 by Lord Anthony Ashley Cooper (later 1st Earl of Shaftesbury), the town (then Charles Town, after Charles II) rapidly became the centre of commerce and culture in the colonial South. In the 18th century it grew from a small seaport into the fourth largest city in the USA. The pre-Civil War years (*c*1830–60) saw the culmination of the city's golden age of commerce and culture. Charleston continued to dominate the intellectual, cultural, commercial and political life of the South until the Civil War. Today it is a modern shipping and industrial centre.

The first records of musical activity in Charleston date from 1732, when the *South Carolina Gazette* reported a 'Consort of Musick' presented 'for the benefit of Mr Salter' on 12 April, the second public concert on record in the American colonies. Charleston was also the site of the first opera performance in the colonies, when Colley Cibber's ballad opera *Flora, or Hob in the Well* was given at 'the Courtroom' above Shepheard's Tavern on 18 February 1735. Colonial Charleston housed several musicians of high calibre. Among these were John Salter, first organist at St Philip's Church, and his successor, Charles Theodore Pachelbel, son of the famous German organist Johann Pachelbel. Charles Theodore was an organist and church musician in Charleston from 1737 until his death in 1750.

The mainstay of Charleston's 18th-century musical life was the St Cecilia Society, the oldest musical society in the USA, founded in 1762. Its heyday was in the 1770s, when its concerts were affairs of great elegance and noteworthy musical interest. Typical programmes included overtures, oratorio selections, songs and piano pieces by contemporary European composers. These concerts continued until 1822 when increasing difficulty in obtaining musicians led to the society's transformation into an exclusive social cotillion which continues today.

The social season in pre-Civil War Charleston from October to May offered a round of pleasures including concerts, balls and theatrical productions. Audiences heard a host of performers, many of whom were

internationally renowned, such as Mme Anna Bishop, Ole Bull, Jenny Lind, Adelina Patti and Sigismund Thalberg. Apart from contemporary Italian opera, which was highly favoured, the concert repertory bore a distinct British imprint, for the most popular composers were either native Britons or lived in London (Haydn, Handel, Moore, Bishop, Arne, Braham, Clementi, Stevenson, King and others).

Among noteworthy local musicians was Jacob Eckhard, composer and organist at St Michael's from 1809 to 1833, who maintained high standards in church music. Also prominent were Charles Gilfert, a composer, pianist and theatrical entrepreneur who lived and worked in Charleston from 1807 to 1825; André Louis Eugène Guilbert, a composer, violinist and harpist; Henry Wellington Greatorex, the 'American psalmodist'; and Samuel Dyer, an English church musician who lived in Charleston from 1819 to 1822. Filippo Trajetta, son of Tommaso Traetta, also made Charleston his home during the first decade of the 19th century. Six local music societies presented regular concerts, most of which were organized in the interest of charity and the cultivation of music among the citizens. Summer pleasure gardens were also popular, the favourite being Vauxhall Gardens, modelled after its British counterpart.

Cultural events naturally diminished sharply during the Civil War, in which the city was directly involved. After it, Charleston again enjoyed a flourishing musical life. The Charleston Conservatory was opened in 1884 under the leadership of Otto Müller. The leading musical personality of the late 19th century was 'Mme Barbot' (formerly Hermina Petit), teacher, conductor and upholder of local musical standards and traditions. Other prominent residents in the early 20th century included the composer Karl Theodore Saul; Karl Metz, composer and leader of 'Metz's Band'; and G. Theo Wichmann, founder of the Charleston PO (1925; now the Charleston SO). A series of concerts (1919–24) sponsored by Maud Gibbon, a local patron of music, brought to the city such artists as Casals, Thibaud, Lhévinne, Kreisler and Rachmaninoff. The Jenkins Orphanage Band was a group of African American children that achieved international recognition in the early 20th century with tours of the USA and Europe. The Siegling Musical House (1819–1970), among the longest lasting music shops in the USA, was also active in music publishing during the 19th century.

The Charleston Concert Association, founded in 1936, presents major soloists, orchestras and opera and dance companies. Dance is presented by the Charleston Ballet Theatre and, associated with the College of Charleston, the Robert Ivey Ballet. The college has also held an International Piano Series annually since 1990; an extension of this has been the yearly piano masterclasses of Maria Curcio since 1993.

Gian Carlo Menotti chose Charleston as the New World setting for his Festival of Two Worlds, held also in Spoleto, Italy. Since 1977 this annual event in May and June has been a comprehensive arts festival, including jazz and country music as well as art music, and featuring newly discovered talent. The Lowcountry Heritage Society, founded in 1994, presents works of music, art and literature about or inspired by the South Carolina Lowcountry.

JOHN JOSEPH HINDMAN/DOUGLAS ASHLEY

Charleston (ii). A lively social dance of the 1920s, said to have originated in Charleston, South Carolina, as a black American dance form. It appeared for the first time in theatrical dance in the black musical comedy *Liza* (1922, music by Maceo Pinkard) and achieved enormous popularity in 1923 as a dance-song by James P. Johnson and Cecil Mack (ex.1), in the black musical *Runnin' Wild* and

Ex.1 C. Mack and J.P. Johnson: *Charleston* (1923)

other shows. It became the symbol of the frenzied social gaiety of the 'roaring twenties' that came abruptly to an end with the Wall Street crash in 1929.

The movements of the charleston were based on those of other black American exhibition dances, especially the ones introduced in the black revue *Shuffle Along* in 1921. They included shimmying (*see* SHIMMY), exuberant and sometimes violent kicking and arm-swinging, and slapping of parts of the body with the hands, all of which were performed in the seemingly awkward posture of a

Bee Jackson dancing the charleston, 1925

half-squat, with hunched shoulders, knees together and toes pointing inward; the effect, however, was one of grace and lighthearted abandon. As a stage dance the charleston's movements included vigorous side kicks, flailing of the arms and swinging of the torso (see illustration). During its few years of popularity about 1925–8 it was modified by the English gliding style of dance, and the abrupt motions were replaced by subtler ones with hands on the knees or swaying of the torso while rotating the hands with the palms out. In the late 1920s the charleston fell out of favour and was assimilated into the LINDY. It was revived as a stage dance in the 1950s and 60s, notably for nostalgic musicals. The music was fast, about 50–60 bars per minute. The characteristic syncopated rhythm, usually notated as in ex.1, is used in other dances of black American origin, notably the BLACK BOTTOM.

Charlier de Gerson, Jean. *See* GERSON, JEAN CHARLIER DE.

Charlot, André (*b* Paris, 26 July 1882; *d* Woodland, CA, 20 May 1956). French theatrical producer. He gained early managerial experience at various Parisian theatres and music halls, including the Folies-Bergère. In 1912 he was appointed joint manager of the Alhambra Theatre, Leicester Square, London, and by 1915 was the managing director, specializing in the presentation of revue. He then produced a series of revues at the Vaudeville Theatre (1916–23) including *Some*, *Cheep*, *Tabs*, *Buzz-Buzz*, *Pot Luck*, *Snap* and *Rats*. These entertainments defined Charlot's style as intimate and small-scale, relying on sophisticated material performed by witty personalities with simple, though stylish sets and costumes. He introduced Noël Coward both as a lyricist (*Tails Up*, 1918) and as a composer (*London Calling*, 1923). Beatrice Lillie, Gertrude Lawrence and Binnie Hale rose from the ranks of Charlot choruses to stardom. In *A to Z* at the Prince of Wales Theatre, Jack Buchanan introduced Ivor Novello's *And her mother came too* (1921).

Perhaps Charlot's greatest triumphs were on Broadway, where in 1924 and 1925 he presented editions of *Charlot's London Revue*. More used to the lavish spectacles of Florenz Ziegfeld, the Broadway audiences were charmed by the strength of personality of Buchanan, Lillie and Lawrence. As the popularity of revue declined, Charlot, who brought Jerome Kern's *Very Good Eddie* to London in 1918, occasionally produced musicals such as *Wonder Bar* with Elsie Randolph at the Savoy (1930). In 1937 he moved to America and in 1939 became a technical adviser for the Paramount Picture Corporation.

ROBERT HOWIE

Charlton, David (*b* London, 20 June 1946). English musicologist. He studied at Nottingham University and at Cambridge with Hugh Macdonald, gaining the doctorate in 1970 with a dissertation on orchestration and orchestral practice in Paris at the turn of the 19th century. In 1970 he was appointed a lecturer, and in 1991 a reader, at the University of East Anglia, and in 1996 became a reader at Royal Holloway College, University of London. His work has centred on French opera, especially *opéra comique*, of the late 18th and early 19th centuries. His research interests also include French Revolutionary music and its instruments, performing practice, E.T.A. Hoffmann and German Romantic theory, and the music of Berlioz; he published an edition of E.T.A. Hoffmann's musical writings in 1989 and is on the editorial board of the new edition of Berlioz's complete works. He also serves on the editorial committee of the *Cambridge Opera Journal*. Among his writings are the important study *Grétry and the Growth of Opéra-Comique* (Cambridge, 1986), the chapters on French opera in the 19th century in the *New Oxford History of Music*, ix (1990) and many contributions to periodicals and reference works.

Charpentier. *See* BEAUVARLET-CHARPENTIER, JEAN-JACQUES.

Charpentier, Gustave (*b* Dieuze, Moselle, 25 June 1860; *d* Paris, 18 Feb 1956). French composer. His father (a baker) and godfather encouraged his interest in music before the family moved to Tourcoing, near the Belgian border, in 1870 to escape the advancing Germans. There Charpentier continued to study (particularly the violin) and joined the municipal band in 1876. He began work

Gustave Charpentier's 'Louise', Act 2 scene i, from the original production, Opéra-Comique: from 'Le théâtre' (April 1900)

in a spinning-mill, but also founded a local musical society and taught the violin to his employer, Albert Lorthiois, who was sufficiently impressed by his musical abilities to sponsor his entry to the Lille Conservatoire in 1878. His subsequent success led to an annual pension from the town council of Tourcoing, enabling him to enter the Paris Conservatoire in 1879. He soon developed a passion for Montmartre and bohemian life as well as an active distaste for authority. Massart, his violin teacher, engaged in a personal vendetta against his irregularities, forcing him to leave the Conservatoire and spend a brief period as an orchestral violinist. He returned to study harmony with Pessard in 1881, but military service intervened before he entered Massenet's composition class in 1884. There the reaction was favourable and, to everyone's surprise, he was awarded the Prix de Rome in 1887 for his cantata *Didon*.

Charpentier carried his spirit of revolt to the Villa Medici and, like Debussy before him, escaped from Rome to Paris on several occasions. He managed however to write the nucleus of his life's work there: the orchestral suite *Impressions d'Italie*, the *symphonie-drame La vie du poète* (a latterday *Lélio*) and most of the libretto and the first act of his most famous work, *Louise*. Tired of waiting for a promised libretto from Massenet's editor Georges Hartmann, he collated a series of adventures from his Montmartre days into a realistic social drama with anarchist associations. Back in Paris in 1890, he read the libretto of *Louise* to friends who suggested greater lyricism at the expense of the existing crude realism. The opera probably lost more than it gained in the process of this advice being accepted, but was finally completed in 1896, almost certainly with some clandestine assistance from the symbolist poet Saint-Pol-Roux (including the words for Louise's celebrated aria 'Depuis le jour'). Various offers to stage *Louise* in curtailed form in Paris were wisely rejected by Charpentier, but in January 1898 Albert Carré decided to inaugurate his directorship of the Opéra-Comique with a complete production. Charpentier's growing success in the 1890s with *La vie du poète* and open-air extravaganzas like the *Sérénade à Watteau* and *La couronnement de la muse*, coupled with the expected scandal attached to the opera's promiscuous theme and the excitement of the Paris Exhibition, led to a box-office triumph in February 1900 (see illustration), though the composer had nearly starved during the previous year. The vociferous young left wing hailed him as the saviour of French music, though it was undoubtedly the sociological ideals of this first opera of women's liberation rather than its music which appealed. Dukas gave the soundest verdict: 'The first and last acts are those of a master; the other two are those of an artist; the whole is the work of a man'.

On 30 April 1900 Carré gave away 400 seats for *Louise* to the dressmakers of Paris; Charpentier soon converted this publicity gesture into a permanent scheme, his Oeuvre

Mimi Pinson (after Musset's heroine). In 1902 he founded the Conservatoire Populaire Mimi Pinson, which successfully gave free musical tuition to midinettes until the onset of World War II, benefiting by the organizing genius of its altruistic founder, who spread his message throughout France with popular festivals of his own works.

In 1912 Charpentier was elected to the Académie des Beaux Arts on the death of Massenet (he was also named a Chevalier of the Légion d'Honneur in 1900, a Commandeur in 1930 and a Grand Officier in 1950). The success of his last performed work, the opera *Julien* (1913), was considerable but fairly brief owing to the sudden departure of the singer of the title role, Charles Rousselière, for Brussels six months after the première. Immediate revivals were prevented by World War I, later ones by Charpentier's wisdom. His susceptibility to criticism had intensified after 1890, and constant revisions increasingly delayed the final versions of existing works and the genesis of new ones.

After 1913 none of Charpentier's many projects seems to have been completed. In that year he announced a trilogy of two-act operas: *L'amour au Faubourg*, *Comédiante* and *Tragédiante*, none of which was finished. Brief synopses show them to be lyric operas of the 'people' in the *Louise* tradition. The first is sometimes cited as the third of a trilogy with *Louise* and *Julien*, intended for the Opéra-Comique 1913–14 season. Delmas (1931) mentioned a projected opera *Marie* (the daughter of Louise), as an alternative completion to the *Louise-Julien* trilogy, though *Marie* was originally the title for *Louise*, according to a letter of February 1893 from Debussy to Prince Poniatowski. Apart from his strenuous concert activities, and occasional efforts as a writer and music critic, Charpentier became increasingly interested in the development of the gramophone, radio and film as means of bringing music to a wider audience. In 1938 he supervised the recording of a film version of *Louise*, directed by Abel Gance, but after World War II he remained a recluse in his Montmartre flat.

With Charpentier, life and works are inseparable. After the première of *Julien* he said: 'My works represent the ideal synthesis of a destiny. *Louise* represents a period of my life, like the *Impressions d'Italie* and *La vie du poète*. That is why I need ten years to write a work; I need to live it first.' However, his output shows that he drew increasingly on the early autobiographical works of his Prix de Rome period: *La couronnement de la muse* is an elaboration of *Louise*, Act 3 scene iii, and *Julien* borrows extensively from *Louise*, the *Impressions fausses* and *La vie du poète*, though it has most in common with the last. The famous rising arpeggio which characterizes Louise's *élan amoureux* first occurred in *Didon*. *Louise* is a supreme example of Charpentier's ability to suit contemporary Parisian taste. Although he claimed it was written 'instinctively', its leitmotifs and certain harmonic progressions derive from Wagner and other progressions recall Gounod and Massenet. Berlioz awakened in Charpentier 'the sense of the picturesque and the unexpected' and provided precedents for his musical portrayal of the sensitive artist in society and for his grandiose outdoor spectacles. Massenet made him 'understand, and above all love, music' and specifically directed his early rebellious enthusiasm towards Montmartre and (unwittingly) *Louise*.

All Charpentier's works have contemporary pictorial or literary bases, and it should be remembered that *Louise* was conceived as an opera before the *verismo* works of Puccini, Mascagni and others had been staged. Décor is an all-important factor in his art; the real heroine of *Louise* is Paris. In complete contrast to Fauré, Charpentier was indifferent to chamber music. His main talents lay in the ingenious metamorphosis of simple thematic material and in vivid and effective orchestration. Variety in his output can be found in the *Impressions fausses*, which develop the themes of revolt and suffering with unusual concision, and in the grave, religious quality encountered only in his massive *Chant d'apothéose* (1902). After this, *Julien* shows Charpentier turning from reality to fantasy. In this pretentious allegorical mixture of reason and illusion he moves from the anecdotal and human approach of *Louise* towards abstract principles of passion and beauty, and his musical talent falls below the challenge of his dream. This factor perhaps contributed to his later public (if not private) silence as a composer.

WORKS

librettos by the composer unless otherwise stated
some dates of composition approximate owing to continual revision
all first performances and publications in Paris

OPERAS

Louise (roman musical, 4, with Saint-Pol-Roux), 1889–96, OC (Favart), 2 Feb 1900, vs (1900), fs (1905)

Julien, ou La vie du poète (poème lyrique, prol, 4), 1913, OC (Favart), 4 June 1913, vs (1913) [based on material from La vie du poète, Impressions fausses and Louise]

L'amour au faubourg (drame lyrique, 2), *c*1913, unperf.

Orphée (légende lyrique, 4), 2 acts reported finished by Delmas (1931)

ROBERT ORLEDGE

Charpentier, Jacques (*b* Paris, 18 Oct 1933). French composer and organist. In 1953–4 he spent 18 months in Bombay and Calcutta studying Hindu music; he then went to the Paris Conservatoire to study composition with Aubin and analysis with Messiaen. This twin education, in India and France, has had a profound influence on his music. The *Etudes karnatiques*, for example, are each based on one of the 72 Carnatic modes, which embrace all the possible seven-note scales containing intervals of one, two or three semitones (e.g. karna kangi: C–D♭–E♭♭–F–G–A♭–B♭♭). Most of Charpentier's works employ these modes. His closeness to Messiaen is well displayed in the harmony, rhythm, organ style and theology of the *Livre d'orgue*, composed in honour of the 700th anniversary of the death of St Thomas Aquinas. The work was played for the first time by the composer at the 1973 Metz Festival. He has worked in a wide range of musical genres including opera (*Beatris*, *Marie-Antoinette*) and the symphony. He has composed several works for the ondes martenot, from the Quartet (1958) to *Stèles* for soprano, ondes martenot and organ, on texts by André Malraux (1997).

Beside his activities as composer and organist, Charpentier has pursued a career in the administration of French music. He was principal inspector (1966), inspector-general (1975) and director of music, lyric arts and dance (1979–81) at the Ministry of Culture. He subsequently spent seven years in Nice, as a professor of composition. His return to Paris in 1989 marked the start of a distinguished new career, as a teacher of composition at the Conservatoire National de Région, and of orchestration at the Paris Conservatoire. Charpentier was awarded the Chevalier de la Légion d'Honneur and Commandeur des Arts et des Lettres.

ALAIN LOUVIER/BRUNO MANTOVANI

Charpentier, Marc-Antoine (*b* in or nr Paris, 1643; *d* Paris, 24 Feb 1704). French composer. Although he never held a position at the court of Louis XIV, his ability, reliability and productivity won him important posts in Paris and considerable renown. Overshadowed during his lifetime

by his more strategically placed contemporary, Lully, and soon forgotten, it was only in the 20th century that he came to be acknowledged as one of the most gifted and versatile French composers.

1. Life. 2. Sacred music. 3. Stage music. 4. Chamber music.

1. Life. The year of Charpentier's birth, long uncertain, has been determined convincingly, if without explicit documentation, by Patricia Ranum (1987). His father was a Parisian master scribe, descended from a family of notaries and merchants in Meaux. Facts about Charpentier's youth and education remain unknown, but there is indirect evidence that he was taught by the Jesuits. No documentation exists for the frequently repeated claims that he came from a family of artists and went to Rome initially to study painting. He seems to have arrived there between May 1666 and December 1667, and according to the *Mercure galant* of February 1681 he studied for three years with Carissimi. Research has raised doubts that Carissimi actually taught him, but there is no doubt about the young composer's thorough absorption of mid-century Italian music. Among his extant autographs are copies of Carissimi's *Jephte* (*F-Pn* Vm[1] 1477) and the unpublished *Missa mirabiles elationes maris* for four choirs (*F-Pn* Vm[1] 260) by Francesco Beretta; other Roman composers whose music he must have known include Domenico Mazzocchi (whose *Sacrae concertationes* of 1664 includes Latin dialogues prefiguring Charpentier's), Stradella, Bonifatio Gratiani, Francesco Foggia and Pasquini. Sebastien de Brossard, a reliable source, commented in 1724 on his 'prodigious' musical memory and mentioned his having brought back to Paris copies of various Italian motets and several oratorios by Carissimi.

According to Titon du Tillet, Charpentier, on his return to Paris from Rome (by Lent 1670), was given an apartment in the vast Hôtel de Guise by Marie de Lorraine, known as 'Mademoiselle de Guise'. This pious noblewoman boasted one of the largest private musical establishments in France, especially after inheriting the family fortune in 1675. Charpentier seems to have served as her composer-in-residence and as a singer (*haute-contre*) until shortly before her death in 1688; in March that year the *Mercure galant* remarked that he had 'lived at the Hôtel de Guise for a long time'. For her musicians Charpentier wrote several dramatic motets ('oratorios'), two pastorales on the Nativity story, other motets and psalm settings, and *Idyle sur le retour de la santé du roi*, celebrating, early in 1687, Louis XIV's recovery from an anal fistula. Also for her ensemble, which eventually included seven female and seven male singers plus instrumentalists, he composed six secular theatre works, including a reworking of the original prologue of *Le malade imaginaire* under the title of *La couronne de fleurs*. These miniature operas (as they have been called) may, however, have been commissioned by Madame de Guise, the less single-mindedly devout daughter-in-law of Mademoiselle de Guise and wife of the Duke of Guise, for performance in her luxurious residence in the Palais du Luxembourg.

It may have been thanks to his connections with the Guise family that Charpentier began in 1672 a long association with the troupe of Molière – the 'Troupe du Roy', renamed in 1680 the Comédie-Française. The fruitful collaboration between Molière and Lully had dissolved when Lully embarked, with monopolistic royal privileges, on his career as an opera composer. When *La comtesse d'Escarbagnas*, first given at court on 2 December 1671, was played before the Parisian public on 8 July 1672, it had an overture by Charpentier and, instead of preceding the *Ballet des ballets* with music by Lully (as it had the previous December), it preceded a revival of *Le mariage forcé* with new entr'acte *intermèdes* by Charpentier. Completely set to music by him were the lengthy pastoral prologue, *intermèdes* and other scenes in Molière's last play, *Le malade imaginaire*, first performed on 10 February 1673. After Molière's death (that very day) Charpentier continued to write for the company for about two decades (see illustration). He replaced earlier music (mostly by Lully) for plays by Molière and others with new material that conformed to the restrictive terms of several increasingly draconian ordinances, obtained from Louis XIV by Lully, limiting the troupe's use of musicians. He also composed original music for the first runs of seven other stage works.

Already, by the late 1670s, Charpentier was in demand by others. The *Mercure galant* of September 1679 reported his having provided music on the Feast of St Louis for a solemn Mass sponsored by the court artist Charles Le Brun; in April 1680 it recounted how, during Holy Week, crowds had gone to the Cistercian convent of the Abbaye-aux-Bois to hear Tenebrae compositions by him. He wrote treble-voice motets for the nuns of other convents as well, including Port-Royal de Paris, for which he also composed a mass including not only the usual Ordinary items but also Propers relevant to that convent's favoured saints, Francis and Margaret. In 1679–80, and again in 1682–3 and later, Charpentier was called upon for sacred music for the chapel of the young dauphin, which was separate from the chapel royal of Louis XIV; motets by him were said to please the king, according to the *Mercure galant* for March 1681 and May 1682. Probably also for the dauphin's musicians were a huge dramatic motet on the death in 1683 of Queen Marie-Thérèse, *In obitum augustissimae nec non piissimae gallorum reginae lamentum* and its similarly massive companion-piece, a *De profundis* (no.189). It seems to have been for the same musicians that Charpentier composed two theatre pieces on courtly subjects, *Les plaisirs de Versailles* and *La fête de Rueil*, the latter at the behest of Armand-Jean du Plessis de Vignerot, Duke of Richelieu, on the centenary of his grand-uncle, the cardinal and statesman.

In 1683 Louis XIV, reorganizing the royal chapel, held a competition among composers for appointment to the newly created quarterly posts of *sous-maître* (music-director and composer). Charpentier was one of 16 who survived a first round of 35 competitors, but he had to withdraw from the second because of illness (according to the *Mercure galant* for April). Two months later the king awarded him a pension, perhaps in gratitude for his services to the dauphin. This was as close as Charpentier came to royal patronage, although about a decade later, in 1692–3, he was again on the periphery of the court circle as music teacher to Philippe d'Orléans, Duke of Chartres, a nephew of the king and future Regent of France. For the duke, according to Brossard, Charpentier wrote the brief *Règles de composition* and an appended 'summary' of the principles of accompaniment from figured bass (no.551). According to early sources, the two men collaborated on an opera, *Philomèle*, which was

Autograph MS of the 'Second air pour les tapissiers' from Charpentier's 'Le malade imaginaire rajusté autrement pour la 3ème fois', composed 1685 (F-Pn Rés.Vm^{1}259, xxii, f.31v)

played three times in the duke's apartments in the Palais-Royal, but he wished it not to be published and it is not extant.

By that time Charpentier had been connected for about a decade with the Jesuits, first, according to Titon du Tillet, as *maître de chapelle* at their Collège de Clermont (renamed in 1683 the Collège de Louis-le-Grand) and then as *maître de musique* of the principal Jesuit church in Paris, St Louis (later named St Paul-St Louis). Brossard spoke of the latter post as being 'among the most brilliant' in French musical life; Le Cerf de la Viéville called St Louis 'l'église de l'opéra' (and in fact some of Charpentier's manuscripts of sacred music from this period name singers associated with the Opéra – the Académie Royale de Musique – such as the bass-baritone Jean Dun).

Besides composing many religious works for St Louis until at least the mid-1690s, Charpentier also contributed to the sacred dramas of the Jesuit Collège d'Harcourt (no.498) and the Collège de Louis-le-Grand. For the latter he composed *Celse Martyr* in 1687 (only the published libretto is extant) and in 1688 *David et Jonathas*, its music surviving in a full score of 1690 copied by the king's music librarian, André Danican Philidor *l'aîné*. Both works were full-scale Lullian *tragédies en musique*, in five acts with prologue.

Even before 1687–8 the Jesuits had become powerful enough for such fully scored large-scale dramatic works not to be subject to the restrictions on music in theatres outside the Académie Royale de Musique controlled by Lully. With Lully's death in 1687, the way was opened for *tragédies lyriques* by others to be introduced even at the Opéra. One by Charpentier was heard there: *Médée*, with a libretto by Thomas Corneille, younger brother of Pierre and a poet with whom Charpentier had collaborated in earlier dramatic works (*Circé*, 1675; *L'inconnu*, 1675; *La pierre philosophale*, 1681). *Médée* received its première on 4 December 1693. Although the king had accepted its dedication, and even though the sets were by Jean Berain (successor to Carlo Vigarani, longtime designer for the Opéra), and the title role was sung by the great Marthe Le Rochois (creator of several of Lully's heroines, notably that of *Armide*), it was not a great success. Writing in 1724, Brossard ascribed its poor reception to 'cabals of the envious and ignorant', surely meaning Lullists jealous of the threat posed by the 'italianized' Charpentier to their late hero. But, said Brossard, 'without exception, it is from this opera, more than any other, that one can learn the essentials of good composition'; it was also 'without a doubt the most expert and refined of all those that have been printed, at least since the death of Lully'.

On 20 May 1698 the post of *maître de musique* of the Sainte-Chapelle, the exquisite Gothic chapel in the Palais de Justice, fell vacant with the death of François Chaperon. Brossard hoped to be named to the post, second in French sacred music only to the royal chapel at Versailles; according to him, however, Charpentier got the Duke of Chartres to intercede successfully on his behalf, and on 28 June he was named Chaperon's successor. Charpentier held the position until his death. His duties were to direct the music at all services and ceremonies, to compose music for them and to teach the choirboys solfège, plainsong, counterpoint and vocal technique. Charpentier composed some of his richest and most impressive works for the Sainte-Chapelle, judging by the few of his scores for it that survive. Among them are the *Motet pour une longue offrande* (1698–9) and the dramatic motet *Judicium Salomonis* (1702), both written for the annual 'Messe rouge' of the Parlement (named after the judiciaries' scarlet robes); massive settings for Holy Week in 1699

of Psalms lxxi, xxvii and xvi (nos.228–30); and the masterpiece among his masses, '*Assumpta est Maria*'.

According to Titon du Tillet, Charpentier was buried in the Sainte-Chapelle, but the grave's location is unknown. To posterity he left an enigmatic and poignant *Epitaphium Carpentarij* (no.474), a strange, semi-sacred dramatic cantata to a Latin text, its date unknown, in which 'the shade of Charpentier' speaks to two wanderers in the underworld. It includes this rueful assessment: 'I was a musician, considered good by the good ones, scorned as ignorant by the ignorant. And since those who scorned me were much more numerous than those who lauded me, music became to me a small honour and a heavy burden. And just as at my birth I brought nothing into this world, I took nothing from it at my death'.

Very little of Charpentier's music was published during his lifetime: some *airs* from *Circé* (Paris, 1676), a few *airs sérieux et à boire* and (by the music publisher who enjoyed a royal monopoly, Christophe Ballard) the full score of *Médée* (Paris, 1694); Ballard also published some small vocal works in issues of his periodical *Meslanges*. Fortunately Charpentier was a meticulous caretaker of his manuscripts, which were carefully written in ink and gathered in numbered sheafs (*cahiers*), and he bequeathed them to a nephew, Jacques Edouard, who was a printer and bookseller. Edouard published in 1709 a collection of 12 *petits motets*; then, having sought but failed to interest private purchasers in all his uncle's manuscripts, sold them, no longer completely intact, to the king's library in 1727. These 'meslanges autographes', as they came to be known, were bound in 28 large volumes (now *F-Pn* Rés.Vm[1] 259); publication in a facsimile edition began in 1990.

2. SACRED MUSIC. The course of Charpentier's career and the musical posts he occupied, including his service as composer for the devout Mademoiselle de Guise, occasioned much more sacred music – for churches, private chapels and convents – than any other kind. Almost 500 religious works survive, covering a wide range of genres. The vocal church music includes 11 mass settings and about 140 other liturgical works; 84 psalm settings; and 207 motets of various types, among them the dramatic motets that are usually termed oratorios. About 30 instrumental ensemble compositions for the church survive.

In almost every category of the sacred music there is great diversity among the individual works in length, number of performers required, compositional techniques and forms. The masses, for example, range from the delicate *Messe pour le Port Royal* (no.5) for three soprano soloists, unison soprano chorus and continuo to the immense *Messe à quatre choeurs* (no.4) – obviously modelled on the Roman polychoral style of Benevoli and others – calling for 20 soloists, four SATB choirs, doubling strings and four continuo groups, each with its own organ. Similarly, perhaps the two most notable *Magnificat* settings are no.73 for *haute-contre*, tenor and bass soloists (a favourite medium for Charpentier), trumpets, strings and continuo, based entirely on 89 repetitions of an italianate ostinato consisting of a descending tetrachord, and the mighty *Magnificat à 8 voix et 8 instruments* (i.e. for double chorus, double orchestra and eight solo singers). The latter is constructed as a *grand motet* resembling those by such court composers as Du Mont, Pierre Robert and Lalande, with multiple movements and alternation of both vocal and instrumental *petit choeur* passages with others for *grand choeur*.

Among Charpentier's most original and perhaps influential sacred works are his Tenebrae compositions for Holy Week. Many of the lessons are rooted, in part, in the Gregorian 'tonus lamentationis', but even more deeply in the *airs de cour* (especially their highly ornamented *doubles*) of Antoine and Jean-Baptiste Boësset and Michel Lambert. These Tenebrae lessons seem to have initiated a distinctive French style in the genre (termed by some the 'high melismatic style'), culminating in François Couperin's single extant set of three. The responsories are less extravagantly ornamented, more cantabile.

Equally French in style (drawing on that of the *grand motet*) are Charpentier's four extant settings of the *Te Deum*. The one deservedly best known (no.146), with eight soloists, SATB chorus, woodwinds, trumpets, timpani and strings, reflects in its scoring the models of Lully and Lalande. The key is D major – a 'joyous and martial' key according to Charpentier's *Règles de compostition*, in which he set down perhaps the first list of 'key feelings' ('énergie des modes') – and the work begins with an attractive preludial *marche en rondeau* and proceeds through several contrasting movements to a blazing, climactic conclusion.

About half of Charpentier's psalm settings were conceived for liturgical use, the others as paraliturgical additions to Mass or Office services – as motets, in short. The earliest, composed in the early 1670s, are fairly lacklustre and quite italianate; most are for SATB with two treble instruments (violins or recorders) and continuo. A later group, dating from the late 1670s to the early 1680s (nos.170–9, 181 and 185–8), is more assured, with bolder dissonance and more assertive word-painting; most are in *petit motet* style for vocal trios, with a pair of violins and continuo for the ritornellos and often a prelude anticipating the vocal entries to follow. Other psalms of the early to mid-1680s, for the Dauphin's musicians, are more ambitious in both scoring and length. One such is the *De profundis* of 1683 on the queen's death (no.189), cast in the 'official' *grand motet* style with scoring à la Lully (including five string parts) and length to match (more than 500 bars). Similar in self-assurance, if not grandeur, are many motets of the 1680s and early 1690s composed for the Jesuits; these show Charpentier at the height of his powers. They are marked by more subtle relationships between music and text, more daring harmonic language and a unique fusion of French respect for perfect declamation and an italianate bent for lyrical, vocally grateful melodic lines.

Charpentier's motets, more than 200 in all, resist generalization, being even more diverse in media and styles than the psalm settings. They may be classified in four main genres: Elevation motets, 'Domine salvum' motets, occasional motets and dramatic motets. Elevation motets and 'Domine salvum' motets were conventional components of the king's Mass services and, as such, emulated in other chapels. The Elevations, performed 'à l'heure qu'on lève l'hostie' (as Charpentier comments in the manuscript of no.256), were conceived as brief punctuating highlights between the first 'Hosanna in excelsis' of the Sanctus and the 'Benedictus qui venit'. Charpentier's 48 Elevations are settings of a wide variety of texts, but almost all are hushed, gentle and reverent *petits motets*, in keeping with the most mystical moment

of the Mass. By contrast, his 25 'Domine salvum' motets, to be sung at the conclusion of the ceremony, are settings of but a single text, Psalm xx.9: 'O Lord, save the king, and hear us in the hour when we call upon thee'. They are considerably diverse in length and expressive content.

The 'occasions' of Charpentier's 85 occasional motets are of many kinds: saints' days or church feasts; special catechism services or Corpus Christi processions; and seasons, celebrated in the *Méditations pour le Carême* (nos.380–89) and the *Chant joyeux du temps de Pâques*. Gratitude for the restoration to health of the king or the dauphin (nos.341 and 326) and lamentation on the death of the queen (no.331) have sacred counterparts in many motets addressing the Virgin, the Trinity or Mary Magdalene, to whom Charpentier returned several times in poignant, not to say voluptuous, works, notably the extensive *Magdalena lugens* (1686–7) for solo soprano. The majority of the occasional motets are *petits motets*. Among the larger ones, especially masterly are *In honorem Sancti Xaverij canticum*, which, with its virtuoso operatic solos (ex.1), was certainly composed for St Louis; *In honorem Sancti Ludovici Regis Galliae canticum*, a late work of exceptional pomp, circumstance and musical braggadocio; and the *Motet pour l'offertoire de la Messe Rouge*, retitled *Motet pour une longue offrande* (no.434) – a long offertory, indeed: almost 800 bars and lasting about 25 minutes.

Charpentier's dramatic motets number 35. They are more commonly known as oratorios – a misnomer, since they were composed as Latin motets for sacred services, not for meetings in oratories or for spiritual concerts. Diversity reigns in this genre, as in others treated by Charpentier. The largest, indebted in various ways to the Old Testament Latin oratorios of Carissimi, are works such as *Judith*, *Sacrificium Abrahae* and the very late *Judicium Salomonis*. Others, often termed by the composer 'cantica' ('canticum' meaning 'song'), are more modest and on different subjects; four (nos.394, 397, 413 and 415) are centred on the early Roman martyr Cecilia (patron saint of music), another four on the Nativity (nos.393, 414, 416 and 421). Tending to be even slighter are motets in the Italian dialogue tradition (nos.406 and 417). Common to all the motets is Charpentier's ability to portray character and his affective realization of

Ex.1 *In honorem Sancti Xaverij canticum* no. 355, (bars 23–31)

[I saw an angel flying amidst the heavens]

dramatic situations. Among the most remarkable in this regard is *Le reniement de St Pierre*. (Its French title, anomalous since the text is in Latin, is perhaps attributable to Brossard, who may have made the unique copy.) It builds to a quasi-operatic quartet in which Peter hysterically denies his association with Christ, while his accusers just as insistently identify him as a disciple; and it concludes with a celebrated chorus, of sovereign linear integrity, describing how Peter wept bitterly over his betrayal. It was partly such masterly control of contrapuntal textures that led Brossard to acclaim Charpentier as 'the most profound and learned of modern musicians'. His harmonic audacity – commented on by his contemporaries, some with admiration ('Neuvièmes et tritons brillèrent sous sa main'), some with distaste ('Quels tristes accords écorchent nos oreilles') – is frequently put at the service of dramatic intensity, as in the wrenching augmented 6ths and augmented octaves (marked with asterisks in ex.2) of the lament in *Mors Saülis et Jonathae* with which the chorus grieves over the deaths of Saul and Jonathan.

About 20 sacred instrumental compositions include a *Messe pour plusieurs instruments* (no.513), sets of pieces for Corpus Christi street-altar ceremonies and consecrations of bishops, offertories and *alternatim* versets for Masses, antiphons for Office services and two groups of carol settings for Christmas week. As a whole, in their exceptionally precise and completely written-out manuscripts, these reveal Charpentier as a gifted orchestrator and a colourist. His orchestral mass – apparently unique in French Baroque music as a substitute for the more common organ mass – betrays a youthfully demonstrative control over a dazzlingly varied group of instrumental ensembles. Its offertory 'à deux choeurs' resembles the italianate *Offerte pour l'orgue et pour les violons, flûtes et hautbois* (no.514) in its massive block-like opposition of winds and strings, its drone basses and its sectional, canzona-like design. Much more purely French are the ten delicate *Noëls sur les instruments* for flutes, four-part strings and continuo. A group of three of these (no.531) was apparently composed for performance along with the grandest of the Christmastide dramatic motets, *In nativitatem Domini canticum* (no.416); the other group of seven (no.534) were specifically intended for performance with the so-called O Antiphons (nos.36–43) preceding Christmas.

3. Stage music. Music by Charpentier for some 30 theatre pieces survives. One group consists of overtures, *intermèdes* and incidental music for spoken dramas produced, almost without exception, by the Comédie-Française; a second group is of self-contained musico-dramatic entertainments – pastorales, operatic divertissements and *tragédies en musique* – for various other places and patrons.

To his compositions for the Comédie-Française the 'profound and learned' Charpentier brought remarkably keen wit, élan and sense of theatre, initially in collaborations with Molière. They first worked together on musical revisions of *La comtesse d'Escarbagnas* and *Le mariage forcé* (1672), then on the first production of *Le malade imaginaire*, with its extensive music culminating in the final, hilarious 'Cérémonie des médecins', its orchestration genially including apothecaries' mortars, scored as if for timpani. Other collaborations with the company, after Molière's death, were less extensive, except for Thomas Corneille's *Circé* (1675), an elaborate work 'ornée de

Ex.2 *Mors Saülis et Jonathae* no. 403, (bars 507–20)

[O unhappy and harsh fate! O cruel and bitter death!]

machines, de changements de théâtre et de musique' (an overture, many dances, and vocal solos and ensembles); the 1680 comedy *Les fous divertissants*, with three *intermèdes*, one of them including a very funny 'laughing trio'; and Pierre Corneille's *tragédie à machines* called *Andromède* (1682).

For the musicians of Mademoiselle de Guise, Charpentier composed eight theatre works between about 1684 and 1687, mostly *pastorales* with ballet entrées (nos.481–4 and 486–9). All are chamber works, and most are scored for a small, conservative instrumental ensemble including recorders and/or viols. Two are Christmastide *pastorales* emphasizing the shepherds (and shepherdesses!) of Judea and the barnyard beasts of the birth at Bethlehem. Another is the 40-minute Ovidian *pastorale* in six scenes, *Actéon* (1683–5), revised as *Actéon changé en biche* to change the title role from *haute-contre* (probably sung by Charpentier) to soprano. The last Guise work in which Charpentier sang (upstaged in the title role by an *haute-contre* new to the ensemble) was *La descente d'Orphée aux enfers* (?1686), similarly based on Ovid. Though probably incomplete in the two acts that survive, it has proved viable; calling for ten singers and flutes, violins, viols and continuo, it has a deeply affecting lament and several seductive airs for Orpheus, who departs the underworld leaving its shades lamenting the loss of his enchanting voice.

Two light, frothy and amusing entertainments that may be termed 'operatic divertissements' are *Les arts florissants* and *Les plaisirs de Versailles* (the latter composed not for the Guise musicians but probably for the dauphin's). Each is in one act and several scenes; *Les arts* lasts about 45 minutes, *Les plaisirs* about 30. Both are allegorical fantasies dealing with the arts and other leisure-time pleasures, and in both Music has a leading role.

Three massive Lullian *tragédies lyriques* represent the climax of Charpentier's works for the theatre. *Celse Martyr* (music lost) and *David et Jonathas*, both for the Jesuits, preceded by a few years the masterwork, *Médée*, of 1693, produced at the Opéra. Charpentier's characterization of the several personae of the heroine – lover, mother, jealous wife, furious and malignant sorceress – is extraordinary. The elements of his mature style shine throughout: a synthesis of warmly italianate vocalism and precise French declamation; solo *récits* in an arioso manner poised between aria and recitative; dances for orchestra with carefully fashioned inner parts, buoyant and full of appealing rhythmic interplay of voices; a rich harmonic palette abounding in pungent chromaticism and evocative dissonances; a flair for unusual orchestral colours; and a magisterial command of instrumental and choral polyphony. Brossard's high opinion of *Médée* was ultimately vindicated, through recordings and stage productions, 300 years after its first performance.

4. Chamber music. Charpentier left a small body of secular chamber compositions, *airs sérieux et à boire*, cantatas and miscellaneous instrumental ensemble works.

More than 30 *airs* survive, mostly in 17th- and 18th-century prints. They constitute a virtual compendium of the chamber song as it existed during Charpentier's life. He composed about two dozen examples of the *air sérieux* (or *air tendre*), successor to the *air de cour* as the principal genre of small-scale but sophisticated French song. Most are for solo soprano and continuo, their texts diverse but in the oldest tradition of French lyric poetry, with love the main topic, shepherds and shepherdesses the main characters. Perhaps most unusual is a set of three on stanzas from Corneille's *Le Cid*; although published separately in successive issues of the *Mercure galant*, they belong together as a multipartite *air*, virtually a dramatic soliloquy.

A few bacchic *airs à boire*, with texts of rough humour and music of almost folkish charm, include several contrafacta of an *air* composed by Charpentier to replace Lully's 'Qu'ils sont doux, bouteille jolie' in Molière's *Le médecin malgré lui*; one of these is the well-known noël 'Un flambeau, Jeanette-Isabelle!' ('Bring a torch, Jeanette-Isabella').

Eight other secular vocal works may be termed cantatas for lack of a better term. Five have Italian texts, and four of these are indeed rooted in the Italian cantata. The

substantial wedding cantata (no.473) for the brother-in-law of the dauphin is, however, a different kind of work, scored very grandly with winds, brass, drums and strings. Along with the odd, enigmatic and autobiographical *Epitaphium Carpentarij*, the most important cantata is *Orphée descendant aux enfers*. Composed in 1683 for three male singers, two violins, flute, recorder and continuo, it has been claimed as 'the first genuine cantata in the French style' (Tunley, 1974).

Fewer than a dozen secular instrumental ensemble pieces by Charpentier survive, several of them (including two triumphal 'airs de trompettes', no.547) perhaps not chamber works but intended for outdoor performance. The most important are a *Concert* for an ensemble of four viols without continuo (perhaps the earliest genuine French Baroque suite of dances, with six contrasting movements) and a sonata (no.548) for eight instruments. The sonata anticipates Couperin's *Les nations* in combining elements of sonata and suite; its preludial first movement and two virtuoso *récits*, one showing off the bass viol, the other the bass violin, as well as the six other dance movements, reveal a confident mastery of independent instrumental compositions that Charpentier, regrettably, had little occasion to demonstrate.

WORKS

The numbering system is that used in Hitchcock's catalogue (1982). Titles given are Charpentier's own, followed by text incipits where different. For untitled works the text incipit is given either alone or with an editorial title in square brackets. Generic scoring (e.g. ww, str) indicates that although parts were written out specific instruments are not stipulated. Roman numerals in the *Source* column refer to volumes of Charpentier's autographs (*F-Pn* Rés.Vm[1] 259; 28 vols.); they also correspond to the volume numbers in ser.I of the complete edition.

Edition: *Marc-Antoine Charpentier: Oeuvres complètes*, ed. H.W. Hitchcock, ser.I–III (facs.), IV (Critical Commentary, Index) (Paris, 1990–)

H. WILEY HITCHCOCK

Chart. A list of songs or records graded in terms of popularity, generally measured in terms of record sales, radio airplay or both. The charts, also known as the hit parade, are regarded as important marketing tools by the record industry. The earliest charts (of sheet music sales) were published in American music trade magazines at the end of the 19th century. The importance of music for radio in the 1930s led to the introduction of chart programmes of which the most famous was 'Your Hit Parade', launched in the USA in 1935. The longest-running British chart programme is the BBC television show 'Top of the Pops', transmitted weekly since 1964. Since the 1950s, a considerable number of local radio stations in the USA have based their programming solely on the records appearing in the national singles charts by adopting a 'Top 40' format.

The methods used to compile charts gradually increased in sophistication. For many years, telephone interviews were conducted with store managers who listed their best-selling recordings. In Britain in the 1960s this was replaced by a printed list of titles, sales of which store managers were required to register by placing a tick next to the title. With the introduction of bar codes on the packaging of recorded music and of electronic point of sale (EPOS) systems in the retail sector, it was eventually possible to link shop tills to a central computer for analysis. When such a system was introduced in America by the SoundScan™ company (1995), previously unrecognized sales patterns were revealed. In particular, it was found that sales of albums by country music singers had been under-reported in the past.

The strategic importance of charts for successful promotion and marketing has made them the target of numerous attempts to falsify statistics. These efforts are often described as 'payola' or 'hyping' and have involved the bribing of radio station personnel, the staff of record stores or even the chart compilers themselves. In some cases, chart hyping teams have been sent into strategically important stores to purchase multiple copies of a record in order to boost its chart position. Successful 'chart-rigging' has become more difficult as chart compilation has become based on computer technologies and bar codes.

By the end of the 20th century, the number and variety of charts had proliferated enormously. National charts based on sales of pop music singles or albums were being published in over 40 countries of Europe, the Pacific Rim, the Americas and Africa. In the USA, *Billboard*, the leading music industry trade magazine, publishes on a weekly basis some 20 charts for numerous musical genres. As well as mainstream pop music, these included rhythm and blues, country music, gospel and contemporary Christian musics, New Age, classical and 'classical crossover'.

DAVE LAING

Charteris, Richard (*b* Chatham Islands, New Zealand, 24 June 1948). New Zealand musicologist. He studied at Victoria University, Wellington, gaining the BA in 1970; moving to the University of Canterbury, he took the MA in 1972, and the doctorate in 1976, with a dissertation on John Coprario. He was a research fellow at the University of Sydney (1976–90) and senior research fellow (reader) in musicology there (1991–4). In 1995 he was made professor of historical musicology. His main areas of activity have been European music, musicians and musical sources of the 16th and 17th centuries, particularly in England, Germany and Italy. A prolific music editor, he has published editions of the complete works of Giovanni Gabrieli and members of the Ferrabosco family. Other composers on whose music he has worked include Giovanni Bassano, Thomas Lupo and Adam Gumpelzhaimer.

PATRICIA BROWN

Charters, Samuel (Barclay) (*b* Pittsburgh, 1 Aug 1929). American jazz, blues and folk music scholar. He was born into a family of jazz musicians, and attended Sacramento City College, from which he received an associate's degree in 1949, and Tulane University (1954); he studied music with Imbrie and Denny at the University of California, Berkeley (BA 1956). His field recordings of blues performances in the New Orleans area, which he submitted to the Vanguard record company in 1954 at the suggestion of Frederic Ramsey jr, were the first of his many recordings of ethnic music. He wrote studies of Southern blues and of jazz in New Orleans and New York. From 1970 to 1984 he lived in Sweden, studying indigenous folk music; his research resulted in a book, *Spelmännen* (1979), about Swedish folk fiddling. Other fieldwork has taken him to the British Isles, Mexico and the Bahamas. He has been active as a producer of folk music recordings; a series of albums of African music entitled *African Journey* was issued by Vanguard in the mid-1970s, and he has supervised other projects for Folkways. In 1979 he received an ASCAP-Deems Taylor award for his book *Roots of the Blues*, and a Grammy Award for Clifton Chenier's recording *I'm Here*, which he produced. Charters has also written novels and poetry, and combined his musical and literary interests in his book *Jelly Roll Morton's Last Night at the Jungle Inn* (1984).

KATHLEEN HAEFLIGER

Charton-Demeur [de Meur], **Anne** [Arsène] (*b* Saujon, Charente Maritime, 5 March 1824; *d* Paris, 30 Nov 1892). French dramatic mezzo-soprano. She studied with Bizot at Bordeaux and made her operatic début there in 1842 playing the title role in Donizetti's *Lucia di Lammermoor*; as Mlle Charton she subsequently toured in Toulouse and Brussels. On 18 July 1846 she made a successful London début at Drury Lane, singing Madeleine in Adam's *Le postillon de Longjumeau*; she later sang Angèle in Auber's *Le domino noir*. At Drury Lane she met the Belgian flautist Jules-Antoine Demeur (*b* Hodimont-lez-Verviers, 23 Sept 1814) whom she married on 4 September 1847. Demeur had studied with Lahore at the Brussels Conservatory and later learnt the Boehm flute from Dorus in Paris. From 1842 to 1847 he played first flute at the Théâtre de la Monnaie and in that capacity performed at Drury Lane in 1846. He gave up this position to travel with his wife on her engagements.

In 1849–50 Mme Charton-Demeur was the leading female singer for Mitchell's French company at St James's Theatre, London; she also sang at a Philharmonic Society concert in 1850. She performed her first Italian role at Her Majesty's Theatre on 27 July 1852 as Amina in Bellini's *La sonnambula* and on 5 August she sang there in the Duke of Saxe-Coburg-Gotha's *Casilda*. Her performances at the Paris Opéra-Comique in 1849 and 1853 met with little success. Between 1849 and 1852 she appeared in Madrid, St Petersburg, Vienna, New York and Havana to great acclaim. She returned to Paris in 1862 to perform at the Théâtre Impérial Italien as Desdemona in Rossini's *Otello*.

One of Charton-Demeur's most interesting and permanent associations was with Berlioz. In the first performance of *Béatrice et Bénédict*, at the new theatre at Baden-Baden in 1862, she sang the title role under his direction. He wrote in his *Mémoires* that she sang 'with warmth, delicacy, great energy, and rare beauty of style'. He subsequently asked her to sing the role of Dido in the first performances of *Les Troyens à Carthage* at the Théâtre Lyrique in 1863, a role she had helped create in performances of the uncompleted work for private audiences. Although he realized that her voice was unequal to the vehemence required in certain scenes, Berlioz wrote that he 'was intensely moved by certain pieces in *Les Troyens* … above all Dido's monologue "Je vais

mourir" overwhelmed me'. She had generously accepted a fee far below what she had been offered simultaneously by a Madrid theatre; when receipts for *Les Troyens* did not meet expectations her contract was cancelled and she left for Madrid, but soon returned to the Théâtre Lyrique. She maintained her friendship with Berlioz and was present when he died in 1869. At about that time she formally retired from singing, but occasionally appeared in concerts of Berlioz's music, including the Berlioz Festival at the Opéra in 1870 where she sang the duo nocturne from *Béatrice et Bénédict* with Nilsson. She also sang Dido in 1879 at Pasdeloup's Concerts Populaires.

THOMASIN LA MAY

Chartrain [Chartrin], ? **Nicolas-Joseph** (*b* Liège, 1740; *d* ?Paris, 1793). Flemish composer and violinist. Recent investigations show that most of the biographical information on Chartrain given in musical dictionaries is merely conjecture (including his first name). The one certainty is that he was successful from 1772 to 1783 at the Concert Spirituel as a violinist and composer of concertos and symphonies. A review in the *Mercure de France* (February 1779) concluded that he had 'done for the violin what M. [Armand-Louis] Couperin did for the organ 20 years ago' and praised his compositional style. His preferred field was instrumental music, as can be seen from his published works. The music of his first opera, *Le lord supposé*, seems to have met with approval despite a mediocre libretto. *L'avocat Patelin* was a success.

MICHEL NOIRAY/R

Chartres. City in France, capital of the Eure-et-Loir département. Since the 4th century the cathedral of Notre Dame has been the focal point of Chartres and its musical life. From at least the 9th century it was the site of a major Marian cult, which influenced the development of the liturgical arts, including music. Chartres is important for the history of sacred music (especially in the central Middle Ages), not so much for what was actually composed there, but rather because of the state of the sources and the excellence of the surviving art and architecture, which allow for the study of musical repertories in the context of the visual arts. Chartres was one of the few places in Europe whose library was maintained continuously from the Carolingian period onwards. Thus the firebombing of May 1944, which devastated the municipal library and destroyed hundreds of medieval manuscripts, was a major cultural disaster. Scholars now study the Chartrain chant repertory primarily from the few microfilms that were made before the fire and located elsewhere, and from Chartrain sources extant in other libraries. (Inventories of manuscripts can be found in Delaporte, 1957 and Fassler, 1993.) The most famous 'Chartrain' manuscript, Chartres 47, a gradual from the 10th century, was actually not prepared in Chartres, although it does contain Chartrain additions and modifications (see Hiley, 1993). There are sources extant from several churches within the diocese, including the Benedictine abbey of St Pèreen-Vallée and the abbey of St Jean-en-Vallée, which was reformed by Ivo of Chartres in 1098; however, the greatest numbers of manuscripts represent the liturgy of Notre Dame. Chartrain chant manuscripts from the late 12th century onwards are often notated using coloured lines with green representing 'f', and yellow 'c', as can be seen in *I-Rvat*.lat.4756, a 13th-century notated breviary from Chartres (first half of the year only).

The liturgy and music of Notre Dame de Chartres, following a pattern typical throughout Europe, were greatly augmented in the late 10th century and the 11th. A full complement of tropes was added, a few of which seem to have been written at Chartres; there was significant Office music composed, including important responsories for the feast of the Nativity of the BVM (*see* FULBERT OF CHARTRES); all four Marian feasts were provided with a standardized set of Office texts and music, incorporating materials created in Chartres itself (this collection, in *F-CHRm*, was destroyed in the fire); there were a small number of new sequences composed. The city was famous throughout the 11th century as a centre of learning and culture, and we know the names of two musicians in Bishop Fulbert's entourage: the cantor Sigo, who was probably responsible for some of the 11th-century repertory composed at Chartres, and Arnoul, who composed the Office of St Evroult.

In the late 11th and early 12th centuries the cathedral canons reorganized their liturgy, initially, it might be supposed, under the influence of the reform-minded Ivo (bishop from 1090 until his death in 1115), a distinguished canonist and the foremost churchman of his age. This liturgical standardization resulted in the production of an early ordinal which dates from the third quarter of the 12th century (see Delaporte), and which formed the basis for later books, not only other ordinals, but also graduals, breviaries and pontificals, all of which are clearly dependent upon it. These books afford greater understanding of how various repertories of music functioned within the liturgy. For example, the introit tropes were designed to augment the ceremonial of episcopal celebration; polyphonic repertories which were sung by cathedral soloists, and served as a sign of their advanced musical

Bishop Fulbert (c975–1028) surrounded by the canons, monks, nuns and choirboys of Chartres Cathedral: miniature from the Obituaire of Notre Dame de Chartres, 1028 (F-CHRm, destroyed 1944)

skills in stational liturgies, as well as in the cathedral itself.

The musical and liturgical forces of Chartres Cathedral between the early 11th and the mid-12th centuries surpassed those of most comparable establishments in northern Europe. Until the mid-12th century Chartres was a leader in law and learning, in the visual arts and architecture, and in the liturgical arts, including music: its bishops Fulbert and Ivo were two of the most respected men of the age, while the counts of Chartres/Blois in this period were wealthy and powerful. But from the mid-12th century leading masters settled in Paris rather than in Chartres; in music and liturgy Chartres developed little of the forward-looking repertories which were to make Paris renowned in the late 12th century and the 13th. Only in the visual arts did Chartres remain innovative and pre-eminent; its craftsmen and artistic styles were unsurpassed from the mid-12th century until far into the 13th century.

Although Chartres did not produce composers of stature after the 11th and 12th centuries, its choirs, choir directors and organists continued to be of the first order; Gilles Mureau (*c*1450–1512) was director of the choristers from 1469, and several of his compositions survive; Antoine Brumel seems to have composed his first works when in residence at Chartres (1483–6); Gilles Jullien (*d* 1703) composed both organ and choral music for the cathedral in the late 17th century. The lavish case of the present organ in Chartres Cathedral, located in the south gallery, was built by Filleul in 1546. The instrument itself dates from 1971 and was built by the firm of Danion-Gonzalez. Since that same year the cathedral has hosted one of the foremost organ competitions in the world, the Concours International d'Orgue 'Grand Prix de Chartres'.

MARGOT E. FASSLER

Charvet, Jehan. Singer who may be identifiable with JACOBUS CARLERII.

Chase, Gilbert (*b* Havana, 4 Sept 1906; *d* Chapel Hill, NC, 22 Feb 1992). American music historian and critic. He studied at Columbia University and the University of North Carolina (AB), and privately (piano, music theory) with Max Drittler in New York and Max Weld in Paris. He was awarded the honorary LLD degree from the University of Miami, Florida (1955). From 1929 to 1935 he was music critic in Paris for the continental edition of the London *Daily Mail* and correspondent for *Musical America* and the *Musical Times*. He was associate editor of the *International Cyclopedia of Music and Musicians* (1938) and of the fourth edition of *Baker's Biographical Dictionary of Musicians* (1940). From 1940 to 1943 he served as Latin American specialist in the music division of the Library of Congress, from 1943 to 1947 as educational music supervisor at NBC. He was American cultural attaché in Lima and Buenos Aires (1951–5) and

in Brussels (1958–60). In 1955 he was appointed director at the School of Music of the University of Oklahoma and served as acting dean of its College of Fine Arts (1956–7). In 1961 he joined the faculty of Tulane University, where he founded and directed the Inter-American Institute for Musical Research. After leaving Tulane in 1966 he worked independently as a scholar, author, editor and lecturer. He was named first senior research fellow at the Institute for Studies in American Music, Brooklyn College (1972–3), and in 1973–4 was visiting professor at SUNY, Buffalo. In 1975 he was appointed professor of comparative studies, history and music at the University of Texas, Austin. He retired in 1979.

Chase was a prolific writer on Spanish and American subjects. *The Music of Spain* (1941) was the first comprehensive account of the subject in any language. *America's Music* (1955) was translated into French, German, Portuguese, Spanish and Chinese and was the first historical study of music in the USA to treat folk and popular music as seriously as art and religious music. In other books, lectures and some 200 articles in both Spanish and English, Chase addressed himself to the history of Latin American and American music in its cultural context, focussing not on musical works as objects alone but on their use, meaning and function in society. He founded and edited the yearbook of Tulane's Inter-American Institute (1965–9); in 1970 this was renamed the *Yearbook (Anuario) for Inter-American Musical Research*. He was also advisory editor of The *Encyclopedia of Opera* (New York, 1976).

H. WILEY HITCHCOCK

Chassa. Designation attached to a two-voice Gloria in the manuscript *F-APT* 16bis. The word may not refer to a composer's name, but might rather reflect the nature of the piece (i.e. reminiscent of the secular caccia; see Tomasello). Some voice-exchanging typical of the caccia is in fact found in the Gloria; on the other hand, it cannot be considered canonic. Otherwise, Wright has suggested that 'Chassa' may refer to one Cassin Hullin, a *valet de chambre* and singer in the chapel of Duke Philippe 'the Bold' of Burgundy in 1385. The Apt manuscript does contain works by several musicians who served the duke (Baude Cordier, Tapissier, Baude Fresnel).

Stäblein-Harder considered the Gloria to be a composition in 'simultaneous style' (MSD, vii, 1962, 47–8). It is predominantly syllabic and is the simplest of the Glorias in the manuscript. The piece is for two low voices which run principally in contrary motion, a feature that is found in hardly any of the Avignon mass sections in the manuscript. These traits are characteristic of an old-fashioned style, perhaps reflecting the practice of *cantus planus binatim*, likewise the presence of text for both voices, the textless interludes and perhaps also the parallel 5ths in the final Amen. (The Gloria is ed. in PSFM, 1st ser., x, 1936, p.25; CMM, xxix, 1962, p.56 [commentary in MSD, vii, 1962, pp.47–8]; PMFC, xxiii*a*, 1989, p.100 [commentary in PMFC, xxiii*b*, 1991, pp.476–7].)

GIANLUCA D'AGOSTINO

Chasse. *See* CHACE.

Chassé (de Chinais), Claude Louis Dominique [de] (*b* Rennes, 1699; *d* Paris, 25 Oct 1786). French bass. He made his début at the Paris Opéra as Léandre in the 1721 revival of Campra's *Les fêtes vénitiennes*. In 1732 he created the title role in Montéclair's *Jephté* and went on to create leading roles in many of Rameau's operas. He also sang all the principal *basse-taille* parts in the continuing revivals of the staple 17th- and early 18th-century repertory. His intensity and intelligence in declamation and action made him arguably the greatest male singing actor of the 18th century in Paris; Voltaire envisaged him as the ideal protagonist for his biblical tragedy, *Samson*. His sonorous voice was of great power and beauty, though subject to harsh attack (*saccades*) and to *chevrotement*, according to Collé.

PHILIP WELLER

Chassidism. A Jewish tradition that originated in the 18th century in Eastern Europe. *See* JEWISH MUSIC, §III, 3(iii).

Chastelain [Chastellain, Chasteleyn, Castelain, Scastelain, Schastelain], **Charles** [Jean] (*b c*1490; *d* Soignies, 1578). Flemish composer. In 1551 and 1564 respectively he obtained a prebend and the office of provost at the collegiate church of St Vincent, Soignies, where, according to a letter (dated 7 October 1564) from Philip II of Spain to Margaret of Parma, he was a canon and *maître de chapelle*. Philip requested him to come to Madrid as

master of his Flemish chapel, but he respectfully declined on account of old age and ill-health. His surviving music shows that he was influenced by Josquin.

HENRI VANHULST

Chastelain de Couci (*b c*1165; *d* May or June 1203). French trouvère. The Chastelain's coat-of-arms is given in an Arras miniature, and his purported name ('Mess. Reignaut Castellain de Couchy') is entered in *GB-Lbl* Eg.274. However, the rubric is in a 15th-century hand and is undoubtedly erroneous. Because of his fame as a poet, and because he appears as the hero of the *Roman du Chastelain de Couci et de la Dame de Fayel* (ed. J.E. Matzke and M. Delbouille, Paris, 1936), an unusual interest in his identification has prevailed since Claude Fauchet's *Recueil de l'origine de la langue et poésie francoises* appeared in 1581. Many solutions have been proposed, most without factual foundation. The *Roman*, written *c*1300 by a certain Jakemes, is one of the numerous adaptations of the 'Eaten Heart' legend which spread throughout western Europe between the 12th and 16th centuries. Yet the *Roman* was treated as biographical fact even as late as the 20th century.

The Sires of Coucy were among the more powerful nobles of medieval France, and the castellanship of Couci le Château (north of Soissons, département of Aisne) was an important post entrusted to descendants of the Thourotte (Torote) family during the 12th century; through marriage, the post passed to the house of Magny in the early 13th century. Two chansons by the Chastelain (*Li nouviaus tens* and *Par quel forfait*) are quoted by Jean Renart in the *Roman de la rose ou de Guillaume de Dole*, a work possibly dating from the 1220s. The first of these is a *chanson de croisade*. Gui IV de Couci is known to have participated in the third crusade, and was possibly at Acre, where Raoul de Couci fell in 1191. Gui was also among the leaders of the fourth crusade; Villehardouin recorded in his *Conqueste de Constantinople* (ed. R. de Clery and J. Longnon, Paris, 1981) that he died on the voyage, his body being committed to the sea. There is no evidence to indicate that Renaut de Magny, his successor (1207–18), participated in any crusade. Holger Petersen Dyggve's suggestion that Gui IV may have been identical with the Gui de Ponceaux, a friend of Gace Brulé, is reasonable but undocumented.

Presumably the Chastelain was acquainted with other trouvères who participated in the third and fourth crusades, including Conon de Béthune and Hugues de Berzé. The Chastelain is mentioned as a minor in an act of 1170 and appears in his own right in documents of 1186–1202. He assisted in the regency of Couci during the minority of Enguerrand III, following his return from the third crusade. He is cited by Eustache Le Peintre de Reims (in R.2116) together with Tristan and Blondel de Nesle as one of the ideal representatives of the tradition of courtly love. Quotations from the Chastelain's chansons also appear in the *Roman de la violette* by Gerbert de Montreuil and in the *Roman de la Chastelaine de Vergi*. Four poems by the Chastelain are employed by Jakemes in his *Roman*, together with two others of erroneous attribution. Three of his chansons served as the models for other chansons, one of these for two, possibly even three others.

The Chastelain was one of the more skilful of the trouvère poets, particularly in the handling of rhyme schemes, some of which show evidence of Provençal influence. His poems leave an impression of elegance and sincerity, but do not stray from conventional paths of thought and imagery. He favoured isometric, decasyllabic strophes, but works such as *L'an que rose* are more complex. Whereas all of the original settings of his poems are in bar form, there is considerable variety to the melodic structures. *A vous, amant*, *L'an que rose* and *Quant li estés* each use reciting notes prominently, but others move more freely. *La douce vois* is a fine Dorian melody, beginning on the subfinal, as does *Merci clamant*, reaching a peak at the opening of the cauda and subsiding gently. *Coment que longve demeure* and *Quant voi venir*, on the other hand, begin near the peak and descend over the long term. The melodic ideas, like those of the poems, make much use of common coin. The opening of *Je chantasse volentiers liement* is notated in 3rd mode in *F-Pn* fr.846, and there are very brief similar indications for *A vous, amant*, but little other evidence of symmetrical rhythmic organization in the melodies.

THEODORE KARP

Chasteleyn [Chastellain], **Charles** [Jean]. *See* CHASTELAIN, CHARLES.

Chastellux [Châtellux], **François-Jean**, Marquis [Chevalier] de (*b* Paris, 5 May 1734; *d* Paris, 24 Oct 1788). French writer on music. A soldier and administrator by profession, he consorted with artists and philosophers (he was one of the celebrated circle of Mlle de Lespinasse) and was elected to the Académie Française in 1775. In 1765 he published anonymously his *Essai sur l'union de la poésie et de la musique*, a vigorous polemic in favour of Metastasian *opera seria* with its taut, concise dialogue and rounded, periodic aria texts set to music in the international, 'Neapolitan' style of Hasse. However, his aim was not the wholesale importation of *opera seria* performed in the original Italian, but the reform of serious opera in French. He approved in principle the integration of the chorus in the French manner but was much more concerned to advocate periodic phrasing for aria music than to discuss dramaturgy. He wished to see a bel canto style properly set in relief by the restriction of the orchestral accompaniment to simple patterns with largely homogenous instrumentation. The place for contrast and volatility was in the accompanied recitatives.

The *Essai*, written with the approval of Metastasio himself, is probably best seen as a polemical prolongation of the Querelle des Bouffons and as a plea for the italianization of French opera at a time when the Opéra was financially and artistically almost bankrupt. In 1772 Chastellux published, again anonymously, his *Observations*, restating his position in response to the challenge of Laurent Garcin's *Traité du mélodrame*. The following year he published a translation of Algarotti's *Saggio sopra l'opera in musica* as *Essai sur l'opéra ... suivi d''Iphigénie en Aulide', opéra par le traducteur*. The text shows differences from that published (anonymously) in the *Mercure de France* in 1757, itself possibly the work of the young Chastellux. His claimed authorship of the text to *Aulide* should be treated with caution.

PHILIP WELLER

Chastillon, Guillaume de, Sieur de la Tour (*b* ?Caen, *c*1550; *d* Caen, 24 May 1610). French composer. He was a member of the Reformed Church and in 1576 was living near the church of St Jean in Caen. By 1590 he had received a privilege from the Parlement of Normandy to publish three books of 'airs, chansons et musiques'. The first of these was printed in 1592 at Caen by Jacques Mangeant, with a dedication to the Chevalier de La Veronne, a Protestant military leader who was particularly fond of 'airs that could be sung by a single voice'; Chastillon's preface explains that he wrote the collection for friends who preferred their poetry to be set with 'sweetness of melody rather than harmonic profundity'. Of the 40 poems set, 12 are by Gilles Durant de la Bergerie and one by Malherbe. The surviving superius partbook (*F-LYm*) illustrates the simple, lightly ornamented syllabic melodies.

The second book of Airs (for four voices) appeared at Caen in 1593 with a dedication to King Henri IV. It opens with a salutation, *Vive Henri*, with a five-voice refrain, and this is followed by 37 'saintly and christian poems', divided into three sections: 'The Greatness of God'; 'Divine Love and Marriage'; 'Worldly Scorn and Hope in God'. The poets include Isaac Habert, La Noue, Maisonfleur, Desportes and Du Bellay. Arranged sequentially by mode and clef, most of the airs are simple and syllabic with a lightly ornamented melody, harmonically supported by the three lower voices in free rhythm, similar to *musique mesurée*. The more sombre pieces are set in a heavier metrical monophony.

The third book has not yet been located, but many more melodies by Chastillon were printed in Mangeant's monophonic *Airs nouveaux et chansons à dançer* (RISM 1608^{7-9}). In these Mangeant claimed that he had used the superius part of unpublished airs by Chastillon. Similarly, many of the melodies in Mangeant's *Recueils des plus beaux airs* (1615^{8-9}) were signed 'T.C.' (possibly signifying the Latin form of the composer's name: 'Turris Castellionis'). Shortly after Chastillon's death Mangeant published 35 four-voice *Airs et chansons ... trouvés dans le cabinet du Sieur de la Tour après son decez* (Caen, 1611; sup. in *D-Sl*). Sacred parodies of these works were published in Lyons as *L'amphion sacré* (1615^{7}). Mangeant's 1611 volume also includes five airs from the *Mascarade d'Arion* written by Chastillon for the entry of Henri IV into Caen in 1603.

Two anagrammatic texts in the 1593 *Airs* and a lamentary sonnet by Robert Angot de l'Espéronière in the 1611 *Airs* allude to Chastillon's lute. However, these references may be purely figurative; the only known

surviving archival documents from Caen refer to his activities as a composer and bookseller.

FRANK DOBBINS

Châtelet, Jean Guyot de. *See* GUYOT, JEAN.

Chatham, Rhys (*b* New York, 19 Sept 1952). American composer. He studied at New York University with Morton Subotnick, among others, and with La Monte Young. In 1971 he founded the music programme at the Kitchen, an important New York performing space, which he directed from 1971 to 1973 and again from 1977 to 1980. His Guitar Trio (1977), an extended work for three electric guitars tuned in just intonation and generating shimmering overtones, led him towards the sound, aesthetic and lifestyle of rock, which he explored for several years. When his hearing was affected, he began to write for brass instruments and eventually to compose fully notated works for many guitars, using 100 of them in *An Angel Moves Too Fast to See* (1989). By this time, he had moved to Paris, where he began to study the trumpet. Later, he became interested in techno music, creating works both alone and in collaboration with Martin Wheeler. Some of these alter a trumpet timbre electronically to make it sound like 'an extremely distorted electric guitar'. He has received commissions from the Brooklyn Academy of Music, Serious Fun! at Lincoln Center, the Lyons Opera Ballet and the Musica Festival, Strasbourg.

GREGORY SANDOW

Chatman, Stephen (George) (*b* Faribault, MN, 28 Feb 1950). American composer. After studying piano with Maria Syllm, he entered the Oberlin College Conservatory (BM 1972), where his principal teachers were Walter Aschaffenburg and Joseph Wood. At the University of Michigan, he studied with Bassett, Bolcom, Finney and Eugene Kurtz (DMA 1977). A Fulbright Scholarship enabled him to study for a year in Cologne (1974). He also received three BMI student composer awards (1974–6), a Charles Ives Award from the American Academy and Institute of Arts and Letters (1975) and commissions from the NEA, the Canada Council, the CBC and the Ontario Arts Council. In 1976 he joined the faculty of the University of British Columbia, where he was appointed professor in 1987. A strong programmatic element underlies Chatman's works, as in *Occasions* (1975–7), a depiction of a series of moods, and *Wild Cat* (1971–4). His keen sense of humour is evident in *Whisper, Baby* (1975) and *Variations on 'Home on the Range'* (1979). Consistent use of collage techniques, veiled references and a counterpoint of styles suggest an affinity with Ives, but Chatman's textures are clearer.

MICHAEL MECKNA

Chaucer, Geoffrey (*b* *c*1340–45; *d* London, ?25 Oct 1400). English poet. The son of a London vintner, Chaucer served in Edward III's army in France. He subsequently travelled abroad, often on diplomatic business, but for most of his life he was a high-ranking official, often in royal service. Although his works contain a number of allusions to music, he probably had little technical knowledge of the subject. A humorous reference to the *De musica* of Boethius in *The Nun's Priest's Tale* and his use of the term 'quynyble' (which he may have invented; *see also* QUINIBLE) in *The Miller's Tale*, exhaust the evidence for his musical expertise. Chaucer travelled extensively in both France and Italy and was familiar with the kinds of lyric poetry, both in French and Italian, set by composers of the Ars Nova. In his *Retraction* he confessed that he had written 'many a song and many a leccherous lay'; these presumably include at least some of his surviving lyrics and perhaps the French ballades labelled 'Ch' in a manuscript now in the University of Pennsylvania (*US-PHu* French 15). Whether any of his lyrics were set to music remains unknown. Virtually the only clue to that mystery is provided by the rondeau beginning 'Now welcome, somer', which ends the *Parliament of Fowls*: Chaucer declared that this poem had a melody (a *note*), made in France. Several manuscripts include the French line 'qui bien ayme (a) tard oublie' at this point, a familiar proverb that does not agree in syllable count with Chaucer's decasyllabic poem.

Chaucer made no certain reference to polyphony, either sacred or secular, and his allusions to known pieces are always to Latin monody. The most famous is *Angelus ad virginem*, which the Oxford student Nicholas sings in *The Miller's Tale*. Lost items, if they are not Chaucerian inventions, include *Com pa me* ('Come kiss me', presumably the beginning of a song or perhaps its refrain) and 'The Kynges Noote'. Many of Chaucer's other allusions

to music are valuable precisely because they do not refer to the polyphonic mainstream but evoke unwritten practices. Most of these are to be found in *The Miller's Tale*, an exceptional record of musical activity in 14th-century Oxford, at the level of the student and parish clerk. In the fashionable fop Absolon, serenading Alisoun with a gittern (the classic instrument of young men haunting taverns), or singing in a high voice to a rubible (*see* REBEC), Chaucer shows high-courtly values adapted to urban circumstances. The description of Nicholas, the Oxford student, playing the psaltery, completes Chaucer's presentation of musical life in a city also observed by his contemporary, the music theorist Johannes Boen.

CHRISTOPHER PAGE

Chaulieu, Charles (*b* Paris, 21 Dec, 1788; *d* London, 1849). French pianist, teacher and composer. He entered the Paris Conservatoire in June 1797 and studied with Catel (harmony and counterpoint) and Louis Adam (piano). He received a *premier prix* for both harmony and piano in 1805. With the exception of his *opéra comique Le bouquet*, all of his works were written for the piano. They include five sonatas, transcriptions of opera airs, and numerous chansons and character pieces, all published in Paris. Chaulieu was known especially for his didactic works, in particular *L'indispensable* op.100 (1830) and 63 *études spéciales* op.130 (1832). *L'indispensable* is a comprehensive manual of exercises for young pianists which was so successful that a revised version was published five years later. The études touch upon the fundamental difficulties encountered in pianistic writing: trills, repeated notes, scales, arpeggios, 3rds and 6ths, chords and octaves. They are arranged in order of increasing technical difficulty and are designed to bridge the gap between the exercises in the style of Cramer and Clementi and the virtuostic études of Moscheles, Kalkbrenner, Herz and Bertini. Chaulieu's series of *Cours analytiques de théorie musicale*, published between 1833 and 1835 in the periodical *Le pianiste* (which he edited), were considered remarkable by Fétis. Despite the success of his works, Chaulieu's popularity diminished and he established himself in London as a teacher in about 1840, where he remained until his death.

NATHALIE FROUD

Chaumont, Lambert (*b* ?Liège, *c*1630; *d* Huy, 23 April 1712). Flemish composer. He is first heard of in January 1649 and October 1651 at the Carmelite monastery at Liège, where he was a lay brother. An entry for 8 May 1659 in the monastery accounts records that he was one of nine brothers from there who had completed their novitiates at the monastery at Reims; in any religious context he henceforth called himself 'Frère Lambert de St Théodore'. This important document leads one to suppose that he was born about 1630 and proves that he was a native of the diocese of Liège. It possibly explains too the French style of his music at a time when musicians at Liège were clearly orientated towards the modern Italian style. He is not heard of again until 10 February 1674, when he was nominated rector of the tiny parish of St Martin at Huy. On 7 September 1688 he became priest of the neighbouring parish of St Germain and at the same time *pater* of the Carmelites at Huy. He carried out his duties until his death.

As a composer Chaumont is known only by *Pièces d'orgue sur les 8 tons* op.2 (Huy, 1695; ed. in Monumenta leodiensium musicorum, ser.A, i, 1939, and Le pupitre, xxv, 1970). The wide range of timbres called for in this volume shows that he was well acquainted with the organs of his day. He wrote in the best traditions of the French organists of the 17th century, grouping his pieces in eight suites of 12 to 15 numbers following the order of the eight church tones. There is a total of 111 pieces – preludes, fugues, duos, trios, *pleins jeux*, *récits de cornet*, dialogues, chaconnes, echoes, *tierces en taille*, *dessus et basses de voix humaine*, *basses de trompettes* and *basses de cromorne*, the contrapuntal forms being particularly plentiful; each suite ends with one or two dances, which seem more like harpsichord music. The book is full of excellent, enjoyable music, distinguished by its seriousness, its convincing sense of form, the fascinating blend of sonorities and the serene elegance of the counterpoint. It is worthy of standing with the notable organ books by French composers of the period such as Nivers, Lebègue, François Couperin and Grigny. The volume also includes a set of tuning instructions and two short essays, one on accompaniment, the other on plainchant. Chaumont's op.1 is lost, but a work of piety by him that appeared in 1709 survives.

JOSÉ QUITIN

Chaurasia, Hari Prasad (*b* Allahabad, 1 July 1938). Indian *bānsurī* player. He had his initial training in vocal music from Pandit Raja Ram and was taught to play the *bānsurī* by Pandit Bhola Nath. His principal teacher since the late 1960s has been Ustad Allauddin Khan's daughter Annapurna Devi, who is known as an outstanding *sūrbahār* player despite her refusal to play in public and reluctance to take on disciples.

Hari Prasad Chaurasia is credited with making great refinements to *bānsurī* technique – the flute had been reintroduced to the Hindustani concert stage by Pannalal

Ghosh (1911–60) – as well as extending its repertory. He is one of the most popular concert and recording artists in India, and has toured all over the world and made numerous commercial recordings.

During the period 1962–6 he held the position of music composer at All India Radio. He has acted as music director (composer) for many Hindi and Oriya language films. In 1992 he was appointed Artistic Director of the Rotterdam Conservatory. His numerous honours include the Sangeet Natak Academy Award (1984), the Padma Bhushan (1992) and the Padma Vibhushan (2000).

MARTIN CLAYTON

Chaushian, Levon Alexandri (*b* Yerevan, 10 May 1946). Armenian composer. The son of the cellist Aleksandr Chaushian, he began composing at the age of 11. He studied first at the Tchaikovsky Music School in Yerevan (1954–62) and then at the Komitas Conservatory (1964–73; composition with Mirzoian and the piano with Georgy Saradjian). He taught at the Melikian Music College from 1970 and in 1972 took over the choral courses at the Conservatory. He joined the Armenian Composers' Union in 1969, serving as deputy to the chairman of the board from 1986 to 1991. In 1994 he organized the Armenian Musical Assembly. His works have been performed and have won prizes both in the former Soviet Union and abroad (UNESCO prize, Paris, 1983).

The traditions of Khachaturian and Shostakovich, which were so important in Armenian music of the mid-20th century, are combined with a Bartókian kind of neo-classicism in Chaushian's work. Variation form, improvisation, virtuoso motor rhythms and ostinato structures play an equally significant role in the formation of a style in which classical principles govern the organization of thematic material and form. His one-movement Symphony (1984) is conceived as a multi-sectional poem; this model is also typical of his piano music, starting with the *Impromptu* (a compulsory work at the Trans-Caucasian piano competition in 1965) and continuing with *Epicentre* and the sonorous *Urbi et Orbi*. The piano works reveal the basis for his harmonic thinking, which is closely related to texture, giving preference to chords of 4ths and 5ths and tending towards an expanded tonality.

SVETLANA SARKYSYAN

Chausson, (Amédée-)Ernest (*b* Paris, 20 Jan 1855; *d* Limay, nr Mantes, Yvelines, 10 June 1899). French composer.

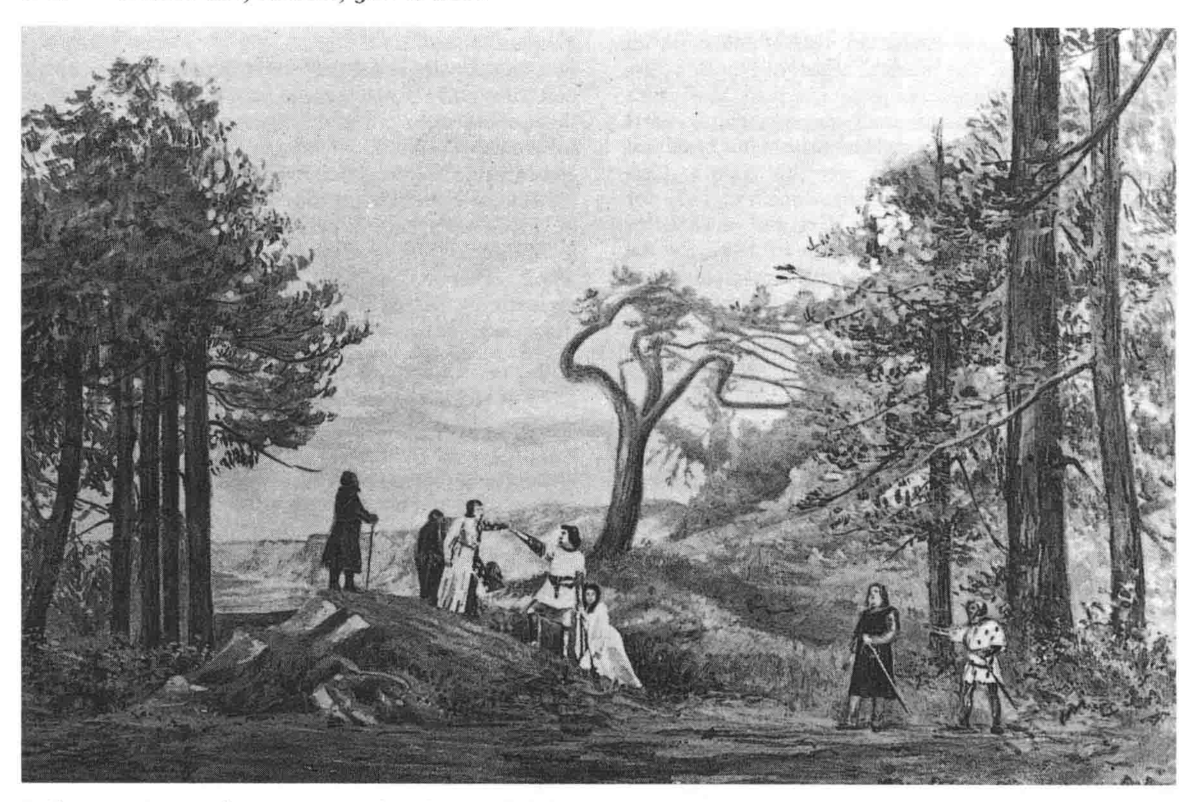
1. Life. 2. Works. 3. Aesthetic and style.

1. LIFE. The son of Prosper Chausson (1804–94), a public works contractor, and Stéphanie Levrault (1820–88), he was brought up in a comfortable but protective family environment (though his two elder brothers died at the ages of 22 and six). The young Ernest was entrusted to a tutor, Brethous-Lafargue, who stimulated his interests in reading, drawing, attending exhibitions and concerts, and who obtained his entrance at about the age of 16 to various Parisian salons, including those of Musset's godmother Mme Jobert and then of Mme Saint-Cyr de Rayssac. There he rubbed shoulders with Fantin-Latour, Odilon Redon, Chenavard, the Abbé Lacaria and the young d'Indy, and broadened his musical knowledge by getting to know the great works of musical Romanticism (Schubert, Schumann and Mendelssohn), some works of Bach, and Beethoven's symphonies played as piano duets.

Having thus grown up apart from other children and among people highly cultured but much older than himself, Chausson retained the marks of this experience throughout his lifetime, and the serious and thoughtful, even melancholy, inclination of his personality was intensified by it. His devotion to absolute standards made him hesitant in choosing his career; though he felt attracted to music, he was no less attracted to literature (he wrote short stories and sketched out a novel) or drawing (for which his sketchbooks indicate genuine talent). Pressed by his family, however, he enrolled (October 1875) in the law faculty where he obtained his first degree (24 April 1876) and then a doctorate; on 7 May 1877 he was sworn in as a barrister at the court of appeal in Paris. But he did not go into practice; like many of Franck's pupils who first completed legal studies, he considered himself as having paid sufficient heed to his father's advice and, encouraged by Mme de Rayssac, turned resolutely, though after much hesitation, to music. His first song, *Lilas*, which remained unpublished, was written in 1877.

On 2 October 1879 he became Massenet's pupil in instrumentation at the Conservatoire. His teacher considered him 'an exceptional person and a true artist', and he found himself entered for the Prix de Rome. But when he was unsuccessful he decided to give up official tuition (27 June 1881), and as evidence of his independence he composed a piano trio (in G minor, op.3); its felicitous spirit pays homage to Massenet but its harmonic richness and cyclical form are a tribute to

Franck, whose course Chausson also attended, as an unenrolled listener. The mystical aspect of Franck's class made it nearer his own temperament than Massenet's instruction. Added to this dual training, whose parts were opposed in spirit and style of writing but beneficial to the young man's education, were his visits to Germany to hear Wagner: he went to Munich in 1879 for *Der fliegende Holländer* and the *Ring* and in 1880 for *Tristan und Isolde*, and to Bayreuth in 1882 for the première of *Parsifal*. From this time his musical language shows greater assurance, in such works as the *Sept mélodies* op.2 (1879–82) and especially in *Viviane*, a symphonic poem written in the summer of 1882 and dedicated to his fiancée, Jeanne Escudier (fig.1), whom he married on 20 June 1883 and took on honeymoon to Bayreuth (*Parsifal* again).



Henceforward Chausson led a peaceful, uneventful existence shared between his family (there were five children) and music; he discovered an equilibrium and happiness to which he referred many times in his correspondence and in certain works, such as the vocal duets of 1883 *La nuit* and *Le réveil*, the songs *Apaisement* (1885) and *Cantique à l'épouse* (1896) and the piano piece *Paysage* (1895). His many journeys, in France and abroad, to some extent reflected his wish to work in peace away from Paris. There, during the season, his famous salon at 22 boulevard de Courcelles welcomed many poets and artists from Mallarmé to Régnier, from Franckists to Debussy and Albéniz, from Pugno to Cortot and Ysaÿe. Throughout his life Chausson showed himself a tireless worker 'understanding only effort which is constant ... and directed towards one goal' (letter to Poujaud, 1888). He laboured over his scores, partly out of a nagging desire for perfection, partly to conquer his defeatism and not to appear in his own eyes, as he was in those of others, an 'amateur'. Amateurism was a situation to which his material comfort (real, but much less considerable than is generally claimed) could have given rise; but he preferred not to rely on his affluence, though on many occasions it permitted him to give discreet assistance to fellow musicians (Debussy and Albéniz, among others). Though he came late to music and died prematurely in a cycling accident, he left a body of work in which all genres are represented.

1. Ernest Chausson and his wife in Basle, 1883

2. Works. Chausson's output, covering the years from 1878 to 1899, may be divided into three periods. During the first (broadly 1878–86), when his musical language was gradually taking shape, he employed shapely melodic lines, elegant harmonies and a style which, though sober, is more alive to pretty ideas than to depth of feeling; this is Massenet's legacy, and can be found in the songs *Le charme* (1879), *Les papillons* (1880) and the *Sérénade italienne* (1880). On this base he gradually superimposed a more varied harmonic language, underlined by bold progressions, a searching for characteristic timbres and sonorities derived either from Wagner, as in the orchestration of *Viviane* (1882), or from Franck, as in the emotional density of such songs as *Nanny* (1880), *La dernière feuille* (1880), the *Quatre mélodies* op.8 (1882–8), the choral *Hymne védique* (1886) and the grandiose *La caravane* (1887).

A second period began to emerge with his becoming secretary in 1886 of the Société Nationale de Musique (founded in 1871 by Saint-Saëns, Bussine, Franck and Castillon), which led to his closer involvement in Parisian intellectual and musical circles, and, as a consequence, to a more elaborate, more intensely dramatic style, as if the musician, brought face to face with other composers, was experiencing either new self-doubts, or greater difficulty in expressing his original ideas. Not surprisingly, with the exception of some charming, skilfully composed but insignificant occasional works (the choral *Chant nuptial* of 1887–8, the *Trois Motets* op.16 of 1888–91 and the *Tantum ergo* of 1891, and the incidental music for Shakespeare's *The Tempest* in 1888 and Aristophanes' *The Birds* in 1889), this whole period is dominated by large-scale, essentially dramatic works: the intense *Poème de l'amour et de la mer* (1882–93), *La légende de Sainte Cécile* (1891) and above all the opera *Le roi Arthus* (fig.2), which occupied Chausson from 1886 to 1895. Set to the composer's libretto in elevated language, the music of *Arthus* bears his intimate thoughts on life. After the fashion of the old king, he perceives life 'fixing on all things a gaze free from anger', 'believes in the power of effort and the energy of the will', and is supported in his struggle by faith in a pure and lofty ideal. The opera is far removed in spirit from the Schopenhauerian pessimism of *Tristan*, which, however, it resembles in its libretto, sound palette and motivic procedures. During the composition of his opera Chausson also wrote his noble Symphony in B♭ op.20 (1889–90) and the *Concert* op.21 for piano, violin and string quartet (1889–91), both of which underline his adherence to Franckism (with their cyclical form, many modulations and intensely expressive lyricism), but also announce new directions.

2. *Chausson's 'Le roi Arthus', Act 3 scene i, from the original production, Théâtre de la Monnaie, Brussels, 1903: from 'Le théâtre' (January 1904)*

A third period opened with the death of his father in 1894, his association with the Symbolist poets and his discovery of the Russian novelists (Turgenev, Dostoyevsky and Tolstoy), together with – for all the family tranquillity surrounding him – his latent pessimism. One product was the admirable cycle of *Serres chaudes* (1893–6) on poems by Maeterlinck, in which the writing gains in sonority, the variety of its material and in harmonic subtlety. Others were the disenchantment of the *Chanson perpétuelle* (1898) for voice and orchestra (or piano quintet) and the almost morbidly fantastic quality of the *Poème* op.25 for violin and orchestra (1896), which was based on a short story by Turgenev. All these works convey a certain oppressiveness in Chausson's world of heightened post-Romanticism, which he later abandoned. Under the influence of his friend Debussy, whose works he much admired, he had reached a turning-point in his way of writing and thinking about music. Having fully mastered his technique, and attempting to purge his style of all outside influences and to move towards greater clarity and conciseness, he returned to chamber music with the Piano Quartet op.30 (1897). It is a luminous, confident, almost gay work, like the transparent *Ballata* (after Dante) for chorus (1896–7), *Quelques danses* (1896) and the *Paysage* for piano, and the austere String Quartet, begun in 1897 and left unfinished at his death.

3. Aesthetic and style. Although he absorbed traditional harmony as taught at the Conservatoire, Chausson was clearly influenced by Wagner and 'Franckism', in this respect resembling all the French musicians of his time. Indeed, he was to become (even by Franck's own acknowledgment) one of the most prominent and influential members of the Franck circle. From Wagner he inherited certain procedures in harmony, orchestration (as with *Viviane* and the Symphony), and leitmotif technique (as with *Arthus*) as well as a naturally lyrical, even dramatic, language, which led hostile critics to condemn his music as vague, disjointed, incomprehensible, harmful ('*nuisible*') – in a word, Wagnerian. He quickly realized, nonetheless, that the true spirit of French music was not to be found in that direction and as early as 1888 he wrote to Poujaud that 'de-Wagnerization is necessary', that it was essential to rediscover a language free of Nordic mists and extreme Romanticism and return to a healthier, more classical expression. He therefore turned towards older Gallic resources and the romances of the Round Table (*Viviane* and *Arthus*), to Italy (*Ballata*), whose clarity and brilliance lightened both his writing (*Paysage*) and his general outlook, and to old French masters, especially Couperin and Rameau, even reviving the old French tempo and movement indications (*décidé*, *grave*, *très animé*) and the old forms themselves – he called his piece for piano, violin and string quartet a 'concert', as in the 18th century, not a sextet. He wanted to prove, above all (especially to those he termed *théâtreux*) that a sonata or a quartet may contain as much music as a whole opera. In the first bar of the String Quartet op.35 the basic elements of the work are superimposed on each other – a 3rd in the first violin, a 5th in the second violin and the viola, and a 6th in the cello; the principal theme is composed of just these three intervals.

Chausson was by temperament an intimate portraitist rather than a painter of epic canvases, and, with his

friends in the Franck circle, attempted to rekindle in France a taste for pure forms, whether architectonic (the Symphony) or free (the symphonic poems *Viviane*, *Solitude dans les bois* and *Soir de fête*), and, above all, for chamber music. His first works had been some songs and a trio, normal for a young composer still testing his powers; but in his last works he returned insistently to these genres, displaying full mastery and the avowed wish to get back to the purest classicism. This evolution in his conception of form reflects a parallel evolution in his thought and language. The three successive titles of op.25 symbolize this process of paring down to the essential; this most famous of Chausson's works was at first entitled *Le chant de l'amour triomphant: poème symphonique pour violon et orchestre* and subsequently became *Poème pour violon et orchestre* before being presented to posterity simply as *Poème*.

While Chausson's early works sometimes suffer from an excess of trills and arpeggios borrowed from Massenet, clumsy modulations, too many overlappings and half-cadences and brutal major–minor oppositions – the legacy of 'Père Franck' awkwardly used by a composer still unsure of his technique – his language rapidly gained in solidity and personality. One soon encounters numerous well-constructed three-and four-note chords, remote but effective modulations that turn easily about the 5th degree either chromatically or enharmonically, grace notes, appoggiaturas, anticipations, even certain rhythms (crotchet + triplet) and 7th chords that became the composer's hallmark, as well as the 11th chords that blossom in the final string quartet. As early as the song *Nocturne* of 1886 he was experimenting with Fauré's iridescent sonorities, and 'Debussyan' 9ths arrived in the song *Amour d'antan* (1882). There are anticipations also of Ravel in *Serre d'ennui*, a song of 1893, and of Koechlin's *La prière du mort* in *Oraison*, of 1895.

Chausson was denied the years in which he might have realized fully what he perceived only in outline after 1895–6. The examples of the *Concert* and the two quartets, however, and of less important works such as the *Pièce* for cello op.39 or the delicate *Vêpres pour le commun des vierges* op.31, leave no doubts as to the quest on which he had embarked and the direction which it would have taken: to apply 'the rule which corrects emotion', as Braque said – to achieve that supreme assiduity that renders the thought loftier, the image clearer.

WORKS

printed works published in Paris unless otherwise stated

MSS in F-Pc, Pn

STAGE

op.

4 Les caprices de Marianne (comédie lyrique, after A. de Musset), 1882–4, inc., Entr'acte, Paris, Société Nationale de Musique, 18 April 1885

7 Hélène (drame lyrique, 2, after Leconte de Lisle), 1883–4, inc., excerpts, Paris, Société Nationale de Musique, 14 May 1887; chorus for female vv, pf (?1895), Le jugement de Pâris, Bar, orch (n.d.)

18 La tempête (incid music, W. Shakespeare, trans. M. Bouchor), solo vv, small orch, 1888, Paris, Petit Théâtre des Marionettes, 5 Nov 1888; 5 nos., solo vv, fl, vn, va, vc, hp, cel (1905): Chant d'Ariel, Air de danse, Duo de Junon et Cérès, Danse rustique, Chanson d'Ariel

— Les oiseaux (incid music, Aristophanes), fl, hp, 1889, Paris, Petit Théâtre des Marionettes, April 1889

22 La légende de Sainte Cécile (incid music, Bouchor), solo vv, female vv, small orch, 1891, Paris, Petit Théâtre des Marionettes, 25 Jan 1892, vs (1892)

23 Le roi Arthus (drame lyrique, 3, Chausson), 1886–95, Brussels, Monnaie, 30 Nov 1903, vs (1900)

VOCAL-ORCHESTRAL

9 Hymne védique (Leconte de Lisle), 4vv, orch, 1886, vs (n.d.)

19 Poème de l'amour et de la mer (M. Bouchor), 1v, orch, 1882–90, rev. 1893, vs (1896), fs (1919): 1 La fleur des eaux, 2 Interlude, 3 La mort de l'amour [closing section, Le temps de lilas as song (1886)]

37 Chanson perpétuelle (C. Cros), S, orch/pf qnt, 1898 (*c*1911)

Unpubd: La veuve du roi basque (L. Brethous-Lafargue), ballad, solo vv, chorus, orch 1879; Hylas (Leconte de Lisle), solo vv, chorus, orch, 1879–80, inc.; Esméralda (V. Hugo), 1v, orch, 1880 [2 versions]; Hymne à la nature (A. Silvestre), 4vv, orch, 1881; L'arabe (cant., anon.), T, male vv, orch, 1881

ORCHESTRAL

5 Viviane, sym. poem on a legend of the Round Table, 1882, rev. 1887 (1893)

10 Solitude dans les bois, sym. poem, 1886, destroyed

20 Symphony, B♭, 1889–90 (?1908)

25 Poème, vn, orch, 1896 (Leipzig, 1898)

32 Soir de fête, sym. poem, 1897–8

— Symphony no.2, sketches, 1899

CHAMBER AND OTHER INSTRUMENTAL

1 Cinq fantaisies, pf, 1879–80 (*c*1880) [plates destroyed]

3 Piano Trio, g, 1881 (1919)

21 Concert, D, pf, vn, str qt, 1889–91 (1892)

26 Quelques danses, pf, 1896 (1896): 1 Dédicace, 2 Sarabande, 3 Pavane, 4 Forlane

30 Piano Quartet, A, 1897 (1898)

35 String Quartet, c, 1897–9 (1907), inc., completed by d'Indy

38 Paysage, pf, 1895 (*c*1913)

39 Pièce, vc/va, pf, 1897 (1917)

Unpubd: 2 sonatinas, pf 4 hands, g, 1878, d, 1879; pf Sonatina, F, 1880; 11 fugues, on themes by Bach, Franck, Hasse, Massenet, Saint-Saëns, 1880–81; Andante and Allegro, cl, pf, 1881; Marche militaire, pf, 1884; Conc., pf, ob, va, str qt, sketches, 1897

SACRED

— O salutaris, B, org/pf/hp, 1879

6 Deux motets, vv, vn, org, 1883 (n.d.): 1 Deus Abraham; 2 Ave verum

12 Trois motets, 4vv, vc, hp, org, 1886: 1 Ave Maria; 2 Tota pulchra es (1922), 3 Ave maris stella

16 Trois motets: 1 Lauda Sion, 1v, org, hp, 1888; 2 Benedictus, S, S, ?hp, 1890; 3 Pater noster, 1v, org, 1891 (1922)

— Tantum ergo, 1v, org, vn, hp, 1891

31 Vêpres pour le commun des vierges, org, 1897 (n.d.)

SONGS

for voice and piano unless otherwise stated

— Deux mélodies (M. Bouchor), 1878 (1878): L'âme des bois, Chanson

2 Sept mélodies (1879–82): 1 Nanny (Leconte de Lisle), 1880, 2 Le charme (A. Silvestre), 1879, 3 Les papillons (T. Gautier), 1880, 4 La dernière feuille (Gautier), 1880, 5 Sérénade italienne (P. Bourget), 1880, 6 Hébé (L. Ackermann), 1882, 7 Le colibri (Leconte de Lisle), 1882

8 Quatre mélodies (Bouchor) (1897): 1 Nocturne, 1886, 2 Amour d'antan, 1882, 3 Printemps triste, 1883, 4 Nos souvenirs, 1888

13 Quatre mélodies (n.d.): 1 Apaisement (P. Verlaine), 1885, 2 Sérénade (J. Lahor), 1887, 3 L'aveu (V. de l'Isle Adam), 1887, 4 La cigale (Leconte de Lisle), 1887

14 La caravane (Gautier), 1887 (*c*1890), also orchd

17 Chansons de Miarka (J. Richepin), 1888 (n.d.): 1 Les morts, 2 La pluie

24 Serres chaudes (M. Maeterlinck) (*c*1911): 1 Serre chaude, 1896, 2 Serre d'ennui, 1893, 3 Lassitude, 1893, 4 Fauves las, 1896, 5 Oraison, 1895

27 Trois lieder (C. Mauclair), 1896 (1897): 1 Les heures, 2 Ballade, 3 Les couronnes

28 Chansons de Shakespeare (trans. Bouchor) (1910): 1 Chanson de clown [from *Twelfth Night*], 1890, 2 Chanson d'amour [from *Measure for Measure*], 1891, 3 Chanson d'Ophélie [from *Hamlet*], 1896, 4 Chant funèbre [from *Much Ado about Nothing*], 4 female vv, 1897 (1897)

34 Deux poèmes (Verlaine), 1898: 1 La chanson bien douce (1910), 2 Le chevalier malheur, *ReM*, i/2 (1 Dec 1925), suppl.

36 Deux mélodies (1910); 1 Cantique à l'épouse (A. Jounet), 1896, 2 Dans la forêt du charme et de l'enchantement (J. Moréas), 1898

Unpubd: Lilas (Bouchor), 1877; Le petit sentier (Bouchor), 1878; L'albatros (C. Baudelaire), 1879; Le rideau de ma voisine (Musset), 1879; Nous nous aimerons (anon.), 1882; Le mort maudit (J. Richepin), 1884; Epithalame (Bouchor), 1886; Pour un arbre de Noël (anon.), op.33, 1898; Marins dévots à la Vierge (L.-P. Fargue), 1898

OTHER VOCAL

— Jeanne d'Arc (anon.), scène lyrique, solo vv, female vv, pf (*c*1880)

11 Deux duos, 1883: 1 La nuit (T. de Banville), ed. (1924) [orchd 1897], 2 Le réveil (H. de Balzac) (n.d.)

— Chanson de noces dans les bois (A. Theuriet), 2 S, pf, 1885 [? intended as op.11 no.3]

15 Chant nuptial (Leconte de Lisle), 4 female vv, 1887–8 (1932)

29 Ballata (Dante), 4vv, 1896–7 [orig. title Canzoniere di Dante]

JEAN GALLOIS

Chautauqua. Town in New York, USA. It gave its name to the Chautauqua Institution, founded there in 1874; this in turn inspired the Chautauqua movement, a network of assemblies that spread across the USA during the late 19th century and the early 20th.

The original Chautauqua Institution was founded by John Heyl Vincent (1832–1920) and Lewis Miller (1829–99) as a training camp for Sunday school teachers of the Methodist Episcopal Church. The first Chautauqua Assembly in 1876 also included members of other denominations. Two years after the institute's founding, other assemblies around the country began to imitate it, often calling themselves Chautauquas and offering similar programmes of summer education, entertainment and recreation. The early assemblies combined the religious fervour of the revival camp meeting with lectures and study groups; music, at first mostly sacred but later increasingly secular as well, was an important element in the programmes.

By the turn of the century, many of the performers were supplied by the bureaus of the LYCEUM movement, a similar network established in 1826, and by 1907 the travels of lecturers and performers had been rationalized by grouping the institutions on planned circuits. Many of the same performers appeared before Chautauqua audiences during the summer months and lyceum groups during the rest of the year; some travelled for years or even decades. A circuit remained in each community for three to seven days, with the programme given in the same order in each. The number of circuits reached a peak in the early 1920s, when there were about 100, using over 500 tents to serve nearly 10,000 assemblies and a total audience of about 40 million. The Chautauqua bureaus also managed and presented local performers. The total number of musicians involved by the early 20th

century was hundreds in any season and many thousands in total.

Professional bands were among the biggest attractions at any Chautauqua. There were instrumental ensembles of every sort, varying in size from two to 20. The musicians often doubled on a variety of instruments, and some might also sing or recite. Some choruses toured, but vocal quartets were favoured. African American singing groups were much in demand, usually called 'jubilee singers'. Instrumental and vocal soloists were less common. Internationally known musicians appeared occasionally, including Maud Powell, Mischa Elman, David Bispham, Pol Plançon, Ernestine Schumann-Heink, Tamaki Miura and Gladys Swarthout. Opera and light opera companies toured with a single work at a time or presented scenes and selections from several operas. A great variety of European national ensembles was also engaged, and groups came from various parts of the world – South Africa, New Zealand, the Philippines and Hawaii – to speak about their customs and to present songs and dances. There were also Amerindian troupes. In the late years of Chautauqua activity, musicians who had become known through radio, including country music groups, made their way into the tent programmes.

Before the advent of broadcasting, the lyceum and Chautauqua movements provided the best opportunity for Americans outside large cities to hear music performed. The last circuit Chautauquas operated in the early 1930s, and only a few independent programmes were still running by 1940. A handful of Chautauquas existed at the end of the 20th century, notably the organization at Bay View, Michigan, and the original Chautauqua Institution, which has continued to present cultural programmes every summer at the site of the original Assembly, where concerts are given by visiting soloists and the Chautauqua SO. The opera company, the second oldest in the USA, presents operas in English and runs an apprentice programme for young singers. The institute also sponsors a repertory theatre and a summer school of music, art and dance, established soon after 1874 and now associated with the State University of New York. Instrumental, singing, theory, composition, conducting and piano-tuning courses are taught by college and conservatory teachers in residence at Chautauqua.

FREDERICK CRANE (with RITA H. MEAD)

Chauvet, Alexis (*b* Marines, 7 June 1837; *d* Argentan, 28/29 Jan 1871). French organist and composer. He studied at the Paris Conservatoire with François Benoist (winning first prize for organ in 1860) and with Ambroise Thomas, who entrusted the post of répétiteur in his composition class to Chauvet. He was organist of several Parisian churches, first St Thomas-d'Aquin (1861), and then St Bernard-de-la-Chapelle, where he inaugurated the Cavaillé-Coll organ in 1863 before going to St Merri in 1866. He was appointed organist of La Trinité in 1869, and remained in this post until his early death from consumption.

Chauvet wrote several piano pieces, but he is particularly distinguished for his two organ collections of 1862 (*20 morceaux*, with an autonomous pedal part) and 1867–9 (*9 offertoires de caractères gradués pour l'Avent et le temps de Noël*). Together with Boëly's compositions, these are the most remarkable organ works composed in France before the publication of César Franck's pieces. Written in a serious style far removed from that of the many frivolous organists of the Second Empire, the *20 morceaux* are wide-ranging works in sonata, lied or rondo form. They are notable for their harmonic interest, their modulations, and certain features indicating a return to Baroque polyphony, also perceptible in the *15 études préparatoires aux oeuvres de Bach* for piano (1867). The *9 offertoires* constitute an important intermediate stage in the evolution of the noël from Lasceux, Boëly and Lefébure-Wély to Guilmant, in that each melody is the subject of a felicitous synthesis between the tradition of variation and the imperatives of sonata form.

FRANÇOIS SABATIER

Chauvin, Louis (*b* St Louis, 13 March 1881; *d* Chicago, 26 March 1908). American ragtime pianist and composer. He began a career as a vaudeville entertainer in partnership with Sam Patterson, a trained musician who had grown up with Chauvin in St Louis. According to Patterson, Chauvin became a superb all-round performer with a wide repertory of piano pieces, a fine tenor voice and effective comedy and dance styles. The duo eventually drew high praise from leading vaudevillians such as Bert Williams and George Walker. Later they disbanded to concentrate on the more profitable trade of piano playing. They appeared together at the Louisiana Purchase Exposition in St Louis in 1904, and in that same year Chauvin won the Rosebud Club piano contest, an annual competition under the aegis of the ragtime pianist Tom Turpin. By this time Chauvin had become known as the 'King of Ragtime Players'. However, his inability to read music and his dissipated life style prevented Patterson from taking him to New York when he left St Louis in 1906. Around 1908 Chauvin moved to Chicago, where he died a few months later.

By the unanimous testimony of his peers, Chauvin was the finest performer among the early St Louis ragtime figures. Patterson described his playing as being in a 'speed' style with overhand octaves and octaves in contrary motion. He reported that Chauvin composed rags almost daily, and preferred to rearrange other composers' tunes in more difficult keys. Brun Campbell claimed to have incorporated Chauvin's barrelhouse style into some of his own recordings, and Charles Thompson, another St Louis player, recounted that Chauvin played the blues, and was 'stretching 10ths way ahead of his time'. However, Chauvin's only surviving compositions

are collaborative pieces: *The Moon is Shining in the Skies* (1903), written with Patterson, and the well-known *Heliotrope Bouquet* (1907), notated by Scott Joplin. The first half of the latter piece is probably by Chauvin; the implied tango of the *A* strain and the grace-note figures of the *B* strain (deceptively notated as triplets) are features of a style different from that of the more conventional Joplin of the *C* and *D* strains. A surviving song by Chauvin, *Babe, it's too long off* (1906), probably scored by Patterson, makes use of a melodic-harmonic figure that occurs prominently in the *A* strain of *Heliotrope Bouquet*. Chauvin's sparse legacy makes it all the more regrettable that the recording industry did not begin documenting black talent in St Louis until the early 1920s.

TREBOR JAY TICHENOR

Chauvon, François (*fl* 1710–40). French composer. He was a pupil of François Couperin (ii), to whom he dedicated his *Tibiades* (1717), and held the positions of *ordinaire du roi* and (according to the *Mercure de France*, which announced the above-named work) *Huissier de la chambre de son Altesse Royale Monseigneur le Régent*. As in some of his teacher's works, Chauvon tried to bring the Italian sonata style into traditional French dance forms, an approach still sufficiently novel for him to describe *Tibiades* as a 'new genre of pieces for flute, oboe, with several sonatas for violin'. Curiously, he did not specify the instrumentation in the individual works.

It was natural that Chauvon should also contribute to a form in which French and Italian styles were united, the French cantata; his two works in this genre, *Le philosophe amoureux* and *Le tendre solitaire*, were published in 1717. *Les charmes de l'harmonie* and *Les agréments champêtres* were an extension of the cantata form towards that of the divertissement. The first of these, subtitled 'concert de voix et d'instruments, divisé en airs à jouer et airs à chanter', appeared in 1723, the second in 1736, when it was performed at Saint Cloud in the presence of the king. Three volumes of vocal pieces entitled *Les mille-et-un-air* (1712–15) comprised a series of 'dialogues'. Their enigmatic texts, rapid changes of mood, and metre reflect a whimsicality characteristic of much of this composer's music. (*FétisB*)

WORKS

published in Paris

Les mille-et-un-air, 4vv, unacc. (1712, 1713, 1715)

La gamme bachique, 1v, occasionally acc. bc (1715)

Cants. (S, 2 vn, 2 fl, bc): Le philosophe amoureux (1717); Le tendre solitaire (1717)

6 airs in Ballard's Recueils (1717–19)

Les charmes de l'harmonie, chorus, ens (1723); Les agréments champêtres, pastoral, chorus, ens (1736)

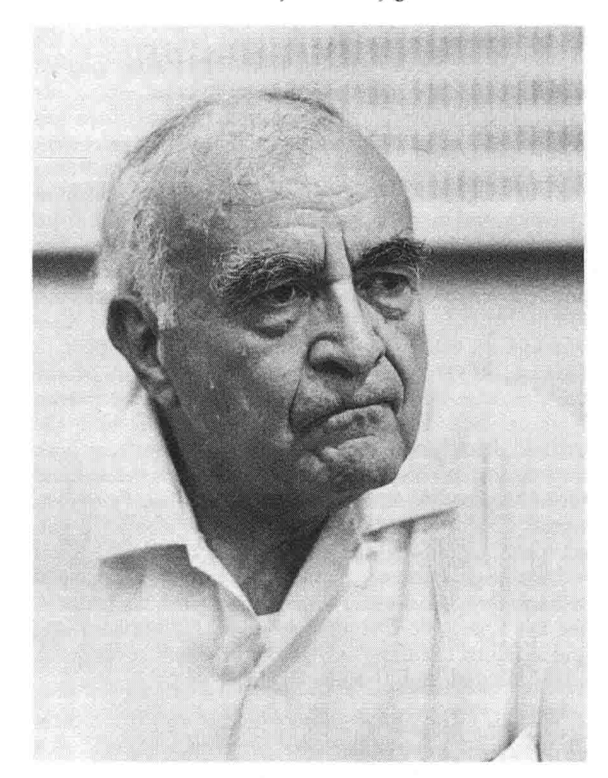
Pieces for fl, bc (1713); Tibiades (1717), fl, ob, vn, bc

DAVID TUNLEY

Chavarri [Chavarría]. *See* ECHEVARRÍA family.

Chávez (y Ramírez), Carlos (Antonio de Padua) (*b* Mexico City, 13 June 1899; *d* Mexico City, 2 Aug 1978). Mexican composer, conductor, teacher, writer on music and government official. His role in the musical and cultural life of Mexico was decisive during the second and third quarters of the 20th century. In a career spanning more than 50 years, he composed more than 200 musical works, conducted numerous orchestras in the USA, Latin America and Europe, held important government positions in the arts in Mexico, and lectured and wrote extensively about music and its place in the social milieu. Three broad stylistic tendencies pervade his music: Mexicanism, both pre-Conquest and modern; a mélange of brittle dissonance, angular melody, atonality and polytonality; and a conservative leaning toward classical forms, moderation of dissonance, and tonality.

1. LIFE. Chávez was the grandson of the lawyer, writer and poet Manuel Ramírez Aparicio on his mother's side; his paternal grandfather José María Chávez, governor of the state of Aguascalientes, was executed by Emperor Maximilian's forces in 1864. José María's son Augustín, Carlos's father, pursued a career as an inventor and saw a plough of his design reach production in the USA. He died in 1902, and his widow Juvencia, director of a school for young women, raised and educated their six surviving children in modest but comfortable circumstances. Carlos began taking piano lessons from his older brother Manuel. His first teacher outside the family was Asunción Parra, and he later studied with Manuel Ponce (1910–14) and Pedro Luis Ogazón (1915–20). Most of his professional training was as a pianist: he had no formal composition lessons, preferring to learn by analysing music of the great masters. At the age of 12 he began to study Guiraud's treatise on instrumentation, and when he was 16 he met Juan B. Fuentes, whose harmony lessons 'helped me greatly to clarify the useless complications of the German and French treatises'. An important formative influence was his frequent contact with Mexican Indian culture. From the age of 5 or 6 he went regularly with the family for vacations in the region of Tlaxcala. This childhood experience, augmented by later visits to Puebla, Jalisco, Nayarit, Michoacán, Guanajuato and Oaxaca, left an indelible imprint on two of his early works, the Aztec ballets *El fuego nuevo* and *Los cuatro soles*.



Chávez's coming of age coincided with the end of the Mexican Revolution in 1921 and the inauguration of Obregón as constitutional president. A new cultural nationalism began to take shape. The government became the chief patron of the arts, with a view to bringing culture to the masses, and great emphasis was placed on the indigenous Indian cultures, particularly those of the pre-Conquest era. 1921 was a crucial year for Chávez: he made his début as a composer with a concert of works including the Piano Sextet (1919), and he met José Vasconcelos, the dynamic minister of education and patron of the arts, who commissioned him to write a ballet on an Aztec subject. Although administrative tangles prevented the staging of *El fuego nuevo*, Chávez had established himself as the first composer to enunciate this new nationalism and had gained access to the inner circle of Mexican cultural politics. Thereafter he was almost continually involved with official aspects of art in Mexico.

In September 1922 he married Otilia Ortiz, and the couple departed at once for Europe, where they remained until the following April; they spent five months in Berlin, where Bote & Bock published two of the composer's

piano works, and made brief visits to Vienna and Paris. Chávez met Dukas, who advised him to follow Falla's example in dealing with indigenous melodies. But Chávez's reaction to Europe was generally negative. By contrast, his first visit to the USA (December 1923 to March 1924) began a lifelong and highly productive association, marked by lasting friendships, repeated engagements as guest conductor, important commissions, prestigious premières and musical publications. He was accorded significant honours, such as conducting a series of NBC radio concerts after Toscanini's sudden departure (1938), producing concerts at the Museum of Modern Art in New York on the occasion of the exhibition 'Twenty Centuries of Mexican Art' (1940) and giving the Norton lectures at Harvard University (1958–9).

Meanwhile his journalistic talent had surfaced in writings for *Gladios*, the cultural journal he created with some of his young literary friends in 1916. In 1924 he began a lasting affiliation to the Mexico City daily *El universal*, for which he wrote articles on music and art in almost every year thereafter: García Morillo lists over 200 titles amassed by 1955 on topics often relating to his main professional concerns at the time. In the years 1924–6 he also organized several concerts of new music at the National Preparatory School in Mexico City, with the collaboration of the singer Lupe Medina de Ortega and the violinist and composer Silvestre Revueltas. Their programmes, consisting mostly of chamber music, introduced modern works unfamiliar to Mexican audiences. The moderate success of this bold programming, however, was not sufficient to dissuade Chávez from leaving Mexico once again. He returned to New York in September 1926 and remained there until June 1928. He formed ties with Copland, Cowell and Varèse; with Varèse he was active in the International Composers' Guild and its successor, the Pan American Association of Composers. On his return to Mexico, he entered a new and pivotal phase of his career. The musicians' union decided in the summer of 1928 to form its own orchestra, the first permanent symphony orchestra in Mexico. Chávez, who as organist in the pit orchestra of the Teatro Olimpia in 1925 had worked with some of the musicians in the new orchestra, was appointed as its director. For the next 21 years he remained at the head of the orchestra, known initially as the Orquesta Sinfónica Mexicana and soon afterwards as the Orquesta Sinfónica de México (OSM). During this time the orchestra played a total of 487 works, including 82 premières by Mexican composers. Chávez organized concerts for workers and for children in addition to the regular subscription concerts, and took the orchestra into the Mexican provinces, bringing orchestral music to many audiences for the first time.

In December 1928 he was appointed director of the Conservatorio Nacional de Música, a post he held until March 1933 and again for eight months in 1934. He reformed the curriculum fundamentally and organized concerts of chamber, orchestral and choral music; gifted students were invited to appear as soloists with the OSM. Chávez also founded three 'academias de investigacion': for folk and popular music, for history and bibliography, and for 'new musical possibilities'. The first two were concerned with the collection and cataloguing of indigenous music and its literature (though the second also embraced Asian and African music), while the third focussed on the uses of old and new scales. Together with

Carlos Chávez

some of his progressive young faculty he created the music journal *Música*. Sweeping changes were made in composition teaching when Chávez instituted a course in free composition, involving experimental melodic writing in a variety of scales and modes for specific instruments. His four young students known as 'Los Cuatro' – Ayala Pérez, Galindo Dimas, Salvador Contreras and Moncayo [García] – went on to achieve singular success as composers.

During a visit to the USA in 1932 Chávez made a study of electrical sound reproduction; the resulting report, originally published as a series of articles in *El universal*, was the basis for his *Toward a New Music: Music and Electricity*. In March 1933 he was made chief of the department of fine arts in the Secretariat of Public Education, and took steps to infuse the public education system with Mexico's rich musical heritage. But political opposition prompted him to resign in May the following year. A decade later he was asked by President Alemán to draw up plans for the Instituto Nacional de Bellas Artes, which began to function officially on 1 January 1947, with Chávez as director general until 1952. All of the performing and plastic arts flourished with this new level of government subvention and with Chávez's organizational leadership. He also took charge of the institute's department of dance and led the formation and support of the publishing cooperative Ediciones Mexicanas de Música and the periodical *Nuestra Música*.

In 1947 he formed a new orchestra – the Orquesta Sinfónica Nacional (OSN) – under the auspices of the institute, which was to supersede the OSM as the nation's flagship ensemble. He resigned as director of the OSM in January 1949 to devote more time to composition, and the orchestra was dissolved two months later. Giving up

his position at the institute in 1952 for ostensibly the same reasons, he nevertheless continued a busy international conducting schedule with orchestras whose list eventually numbered over 100, and returned to a full regimen of composing, writing and lecturing. He went back to the conservatory in 1960 to set up a workshop for a small group of Mexico's most talented composition students, and directed it until 1964 with assistance from Hernández Moncada and the Cuban exile Orbón. The workshop's alumni included the conductor Eduardo Mata and the composers Estrada, Lavista, Quintanar and Humberto Hernández Medrano. Following several years without an official musical or administrative post in Mexico, he was appointed in 1971 as head of the department of fine arts and director of the Mexican National SO. However, a labour dispute with the orchestra precipitated his sudden resignation from both institutions and his virtual withdrawal from the musical life of Mexico. He directed the Cabrillo Music Festival in Aptos, California, in the summers of 1970 to 1973 and accepted invitations to lecture and conduct in several universities in England and the USA until 1975. Financial setbacks in his last years forced him to sell his home in the Las Lomas de Chapultepec suburb of Mexico City, and in failing health he moved to the Coyoacán residence of his daughter Anita, where he died.

2. WORKS. The compositions from before 1921, mostly for piano, are essentially Romantic, with Schumann as a detectable influence. These juvenilia also include piano arrangements of Mexican songs, and so prefigure two main musical interests of Chávez's maturity: traditional genres (sonata, quartet, symphony, concerto) and nationalistic leanings. These two strands are also represented in two works of 1921: the First Quartet and *El fuego nuevo*. Throughout the next two decades, nationalist and other works appeared side by side, but the former constituted less than a quarter of his output. Thus there was no 'nationalist period', but rather a Mexican tendency that was manifested strongly in *El fuego nuevo*, reached its height in the 1930s, and was evident only sporadically thereafter. This tendency gave rise to works of considerable diversity. A populist aspect is represented by the 'proletarian symphony' *Llamadas* and the 'Mexican ballad' *El sol* (both for chorus and orchestra) and by the *Obertura republicana* (later retitled *Chapultepec*), an arrangement for orchestra or band of three types of Mexican popular music: a provincial march, a 'nostalgic' waltz and a revolutionary canción. Such works expressed solidarity with the post-Revolutionary cultural ideology. His first two 'Aztec' ballets (the second being *Los cuatro soles*) exalted Mexico's pre-Hispanic heritage in a way that aligned with the prevailing nationalism, and the same is true of the *Sinfonía india* (Symphony no.2), though this is one of the few works by Chávez to quote actual Indian themes. It is also one of his most arresting works, melodically, harmonically and rhythmically: a combination of modernism and primitivism such as is encountered again in the Piano Concerto, where the primitive elements are less explicitly thematic.

When Chávez wrote music evocative of pre-Hispanic culture, he made a careful study of indigenous instruments and of the accounts of ancient music encountered by early Spanish historians. He employed an array of folk instruments – most of them percussive, but including primitive flutes – in the Indian ballets. But his most systematic attempt to evoke the character of pre-Conquest music was in the brief *Xochipilli* (1940), subtitled 'An Imagined Aztec Music', for four winds and six percussion players. It requires various Indian drums, among them the *teponaxtle*, a two-tongued wooden slit-drum, and the *huéhuetl*, a large upright drum, as well as rasps made of wood and of bone, and a trombone simulating the conch trumpet.

The ballet *Caballos de vapor [H.P.]* (1926–32) presents a large concentration of folk elements in a modern setting, where the sensual, 'natural' life of the tropics is contrasted with the industrialized society of the USA. The tropics are represented by two of the most popular Mexican dance types – the *huapango* and the *zandunga* – and some Mexican *sones* are quoted in the final 'Dance of Men and Machines'. A tango, suggesting the sirens' seductiveness, is unexpectedly and effectively introduced in the second scene, 'A Ship for the Tropics'.

Chávez's six numbered symphonies span the greater part of his creative maturity (1933–60). The First, *Sinfonía de Antígona*, was developed from incidental music for Cocteau's adaptation of the Sophocles tragedy. An archaic ambience is achieved with modal polyphony, harmonies built on 4ths and 5ths, and wind-dominated instrumentation. Formally the work is less a symphony than a symphonic poem governed by its subject. The Third Symphony, devoid of any programmatic reference in its title, nevertheless alludes to the life of Ann Clare Brokaw, in whose memory the work was commissioned by her mother, the American stateswoman and author Clare Boothe Luce. The Fourth is faithful to its subtitle, *Sinfonía romántica*, in its lyricism and buoyancy, but the Fifth, for strings, and the monumental Sixth are abstract in every sense.

A penchant for classical Greek theatre resurfaced after the *Antigone* experience. Another Greek theme, that of Medea, formed the basis for *La hija Cólquide*, composed in 1943 as a ballet for Martha Graham but not produced until 1946, by which time it had a new scenario and the title *Dark Meadow*. Originally written in eight sections for quartets of wind and strings, it was recomposed for orchestra as a symphonic suite in five movements. Ancient Greek theatre was also the basis for two lesser-known later works: the cantata *Prometheus Bound* (1956) and *Upingos* (1957), incidental music for solo oboe for Euripides' *Hippolytus*. But though he wrote five ballets, an opera and incidental music, Chávez was not notably a composer for the theatre. His ballets are better known as concert pieces; he failed to get either *El fuego nuevo* or *Pirámide* staged, and *Los cuatro soles* did not reach production until 1951 in the favourable political climate that existed when Chávez was director of the Instituto Nacional de Bellas Artes. Some of his non-stage works were mounted as ballets by the Mexican National Dance Academy during the same period.

Chávez was an adroit orchestrator, particularly in writing for winds, which he often used in solos. He found strong dynamic contrasts to reinforce unusual instrumental effects, showing a fondness for instruments of low register and resourcefulness in the use of native instruments. The importance of rhythm in his work shows itself in polyrhythms, cross-rhythms, syncopations and numerous irregular metres. His most salient rhythmic gestures, indigenous to Mexican popular song and dance, are the three-duplet versus two-triplet combination in 6/8 metre

and the interchange of duplets and triplets. Motor rhythm, like that in the *Sinfonía india*, generates a driving force of unbridled propulsion. Melodies are generally diatonic, modal or occasionally pentatonic. A four-note melodic cell with a pentatonic outline, C–A–D–C, is used conspicuously in several unrelated works written between 1926 and 1976, usually imparting a Mexican quality that seems to emanate, in Chávez's own words, from the 'accent of local speech that makes it relate to idiomatic expression'. Harmonies built on 4ths and 5ths abound, as do flint-hard dissonances of the vertical minor 9th in the more progressive works. On the whole he adhered to the principles of classical formal structure, but he rejected an over-use of repetition, harmonic pedals and obvious progressions and sequences, believing that the artist should 'reinvent' old forms to give them new meaning.

One of the forms Chávez 'reinvented' was the concerto. The one for violin is a grand virtuoso work in palindromic form: Andante, Allegro, Largo, Scherzo, Cadenza, Scherzo, Largo, Allegro, Andante. In the Concerto for Four Horns, the rondo finale's main theme comes from the first movement, and the omission of flutes, oboes and trumpets from the orchestral palette bestows an overall dark shadowing. The Piano Concerto is in the traditional three movements, but without a conventional cadenza. The two late concertos, for cello and trombone, conform to the dissonant, non-repetitive style of the orchestral works written after 1964. The Cello Concerto, with only its first movement completed, was projected to be in four movements defined structurally by the deployment of orchestral and solo resources; the soloist in the one-movement Trombone Concerto is frequently doubled with other instruments, creating a kaleidoscopic parade of timbres.

Among Chávez's most characteristic works are the four *Solis* (1933–66). *Soli I*, *II* and *IV* are for small wind groups, in which each instrument has the solo part in one movement; *Soli III* is for orchestra with four soloists. In *Soli I*, *III* and *IV* the guiding principle is again non-repetition, the avoidance of conventional sequence and recapitulation in favour of continuously unfolding new musical ideas. Whether in his more traditional works, in his originally conceived pieces such as the *Solis* and late orchestral works or in the extraordinarily varied works of Mexican character, Chávez's achievement established him as one of the major Latin American composers of his time. His efforts were integral in bringing Mexico's music into the 20th century and out to the rest of the world.

WORKS

STAGE

El fuego nuevo (ballet, Chávez), SA, orch, 1921, unstaged

Los cuatro soles (ballet, Chávez), S, SA ad lib, orch/small orch, 1925, Mexico City, Palacio de Bellas Artes, 31 Mar 1951, cond. Chávez

Caballos de vapor [H.P.] (sinfonía de baile, Chávez), orch, 1926–32, Philadelphia, Metropolitan Opera House, 31 Mar 1932, cond. L. Stokowski

Antígona (incid. music, after J. Cocteau, after Sophocles), pic, ob, eng hn, cl, tpt, hp, 2 perc, 1932, Mexico City, Orientación, 28–30 July 1932, cond. Chávez

La hija de Cólquide (ballet, M. Graham), wind qt, str qt, 1943; rev. as Dark Meadow (Graham), New York, Plymouth, 23 Jan 1946

Panfilo and Lauretta (op, 3, C. Kallman, after G. Boccaccio), 1953–6, New York, Columbia U.: Brander Matthews, 9 May 1957; rev. as Love Propitiated, Mexico City, 28 Oct 1959; rev. as El amor propiciado (trans. N. Lindsay, E. Hernández Moncada), Mexico City, 21 May 1963; rev. as Los visitantes, Mexico City, 26 July 1968; rev. as The Visitors, Aptos, CA, 1973

Pirámide (ballet, 4, Chávez), SATB, tape, orch, 1968, unstaged

ORCHESTRAL

Sym., 1915–18; Caballos de vapor [H.P.], suite, 1926; Cantos de México, 1933; Sinfonía de Antígona (Sym. no.1), 1933; Chapultepec (Obertura republicana): Marcha provinciana, Vals nostálgico, Canción de Adelita, orch/band, 1935; Sinfonía india (Sym. no.2), 1935–6; Conc., 4 hn, orch, 1937–8, reorchd 1964; Pf Conc., 1938–40; La hija de Cólquide, sym. suite, 1943, also Zarabanda, str, 1943; Toccata, 1947; Vn Conc., 1948–50; Sym. no.3, 1951–4

Sym. no.4 (sinfonía romántica), 1953; Baile, cuadro sinfónico, 1953; Sym. no.5, str, 1954; Sym. no.6, 1961; Resonancias, 1964; Soli III, bn, tpt, timp, va, orch, 1965; Elatio 1967, 1967; Discovery, 1969; Clio, sym. ode, 1969; Initium, 1971; Paisajes mexicanas, 1973; Mañanas mexicanas, band, 1974; Tzintzuntzan, band, 1974; Vc Conc., 1975, inc.; Zandunga Serenade, band, 1976; Trbn Conc., 1976

Orchestrations: D. Buxtehude: Chaconne in e, 1937; J. Nunó: Himno nacional mexicano, 1941; A. Vivaldi: Concerto, g, op.6. no.1, 1943

CHORAL AND VOCAL–INSTRUMENTAL

Imágen mexicana (trad.), STBB, 1923; 3 exágonos (C. Pellicer), S/T, pf/fl + pic, ob + eng hn, bn, va, 1923; Otros 3 exágonos (Pellicer), S/T, fl, ob, bn, va, pf, 1924; Tierra mojada (R. ROBERT PARKER

Chávez Aguilar, Monseñor **Pablo** (*b* Lima, 3 March 1898; *d* Lima, 1950). Peruvian composer. He entered the seminary of St Toribio, Lima, in 1913 and began organ and composition studies with José María Coll. His first major work, the *Misa solemne en honor de Santa Rosa*, was first performed in Lima cathedral in 1918. In 1919 he received the doctorate in theology from the Gregorian University in Rome, and was ordained as a priest while completing his musical studies at the Scuola Pontificia di Musica Sacra with Refice, de Sanctis and Manari; he was also taught by Perosi and G. Giannini. He was twice chapel master of Lima cathedral (1924–38, 1942–50), and in 1949 was named precentor. He founded the Bach Institute in Lima (1928) and was professor of harmony at the National Music Academy from 1930 onwards. The greater part of Chávez Aguilar's musical output is linked to his religious life and to his academic training which led him to express himself through a traditional harmonic language dominated by counterpoint. The *Variaciones sobre un tema incaico* (1926) and *Preludios incaicos* (1927) exhibit a tendency to adapt pentatonic themes, probably of Inca origin, to academic structures. In the *Suite peruana* (*c*1940) he explored a freer form based on the elaboration of motifs of a popular character (Raygada). Chávez Aguilar collaborated in the publications *L'organista liturgico*, *I maestri dell organo* and *Schola Cantorum*.

J. CARLOS ESTENSSORO

Chaykovsky, Aleksandr Vladimirovich (*b* Moscow, 19 Feb 1946). Russian composer and pianist. He graduated from Moscow Conservatory, where he studied composition with Khrennikov and the piano with Neuhaus and Naumov; he completed postgraduate studies in 1975. From 1976 he taught composition there, being made a professor in 1993 and head of department in 1997. He joined the Composers' Union in 1976, was made an Honoured Artist of Russia in 1988 and was for a while secretary of the USSR Composers' Union (1985–91). In 1992 he became musical advisor to the Mariinsky Theatre, St Peterburg. One of his principal spheres of work is musical theatre; here, one finds diverse subjects and genres, original dramatic solutions and a mastery of contemporary stage techniques. In the instrumental sphere Chaykovsky shows a preference for the concerto genre, displaying an individual approach to the treatment of the

solo instrument and its relation to the orchestra; for example, the Cello Concerto consists of six variations and themes while the First Viola Concerto combines the principles of symphony and concerto. In his symphonies, there is an inclination towards programmatic content, although the drama tends to the meditative. In compositions involving the piano (concertos, sonatas, quintet, trio) Chaykovsky's own talents as a performer affect his writing; he is a brilliant exponent of the psychological branch of Russian pianism. In Chaykovsky's output there is evidence of an appreciable unification of various styles and types of music, academic and light, professional and folk (Concerto for Orchestra, 'TsSKA — Spartak', the vocal-symphonic fantasia *V dushe moey* ('In My Soul'), to poems by Vladimir Vïsotsky). Chaykovsky's works regularly appear on the programmes of the Moscow Autumn festival and many of his theatrical works are successfully staged at various venues. His compositions have been performed by musicians including Bashmet and Fedoseyev and he has collaborated with directors such as Sats and Pokrovsky.

ALLA VLADIMIROVNA GRIGOR'YEVA

Chaykovsky, Boris Aleksandrovich (*b* Moscow, 10 Sept 1925; *d* 7 Feb 1996). Russian composer. He studied the piano with Oborin and composition with Myaskovsky, Shebalin and Shostakovich. During the last years of his life he taught in the composition department of the Gnesin Academy of Music in Moscow. He is one of the chief representatives of the so-called second generation, having inherited and developed the traditions of Tchaikovsky, Borodin, Lyadov, and especially Musorgsky, as well as having been influenced by Shostakovich. Characteristic of his style is a blending of the intellectual and the lyrical, and of philosophical profundity and refinement. His technique synthesizes classical devices and contemporary resources; after forays into serialism (in the Chamber Symphony) and polystylism (in the Second Symphony) he returned to tonal and programmatic methods, though often in unusual ways. His uniquely Russian style comes close to that of Myaskovsky; his music is distinguished by vivid ideas, temperament and dynamism. A characteristic peculiarity of his technique is to use pithy, simple themes and then to transform them in a complex way by means of thematic development, polyphonic devices and ostinatos which propel the argument forward. These methods often result in compressed one-movement works. The orchestral music is marked by seriousness of conception and individuality in resolving complex compositional problems. Overt thematic simplicity distinguishes the violin and cello concertos, the quartets, and his vocal works. The cycles to texts by Lermontov, Pushkin, Tyutchev and Zabolotsky are remarkable for their lyricism and their refined manner. The interpreters of Boris Chaykovsky's works include Samuil Samosud, Aleksandr Gauk, Vladimir Fedoseyev and the Borodin Quartet.

GALINA GRIGOR'YEVA

Chaykovsky, Pytor Il'yich. *See* TCHAIKOVSKY, PYOTR IL'YICH.

Chaynée, Jean de (*b* Liège, *c*1540; *d* Maastricht, 14 Oct 1577). Flemish composer. He received his musical training in the choir school of the cathedral of St Lambert, Liège, which he entered as a *duodenus* in 1550. On 20 September 1558 the chapter admitted him into the benefice of the altar of St Jean l'Evangéliste and St Agnes, which was reserved for the cathedral musicians. He was made first singer of the choir in 1561, but left Liège at the end of 1562. He accompanied his master, Jean Guyot, succentor at the cathedral, to Vienna to the court of the Emperor Ferdinand I, for whom he composed the motet *Quis dabit oculos* (ed. in CMM, lxiv, 1974). After Ferdinand's death on 25 July 1564, he entered the service of the Archduke Karl II at Graz. On 29 June 1573 he was dismissed from his post, but he spent a few more months at Graz as chaplain at the collegiate church there. He is next heard of at Maastricht in 1575, serving as choirmaster at the collegiate church of St Servatius, in succession to Gerardus Villarius, called Ovidius, who had been a fellow pupil and friend of his at Liège. Two years later he was murdered by Hector Constantinus, the organist at the collegiate church.

Like his elder contemporaries Guyot, Gombert and Clemens non Papa, Chaynée sought to achieve a close relationship between music and text. His technique is impeccable, and the setting of the text is careful. 11 motets for four to six voices were printed in the multi-volume anthology *Thesaurus musicus*, edited by Petrus Joanellus (RISM 1568^{2-6}); he also composed a Requiem mass for four voices (ed. J. Quitin, *Dix motets à 4 et 5 voix du Novi thesauri musici ... Officium pro defunctis*, Liège, 1987). In the motet *Derelinquat* a few restrained variations heighten some expressive passages; a simple and natural melody characterizes the purity of *Cecilia in corde suo*. The four voices of the Requiem mass are strongly influenced by plainsong melodies and move in the same rhythm throughout, creating an atmosphere of austerity and even of harshness, which is perfectly suited to the subject.

JOSÉ QUITIN/HENRI VANHULST

Chaynes, Charles (*b* Toulouse, 11 July 1925). French composer. His parents were musicians who taught at the Toulouse Conservatoire. He studied at the Paris Conservatoire, where he won first prizes in the violin, harmony and counterpoint, and composition; his teachers included Jean and Noël Gallon, Jean Rivier and Darius Milhaud. After winning the Grand Prix de Rome (1951), he was resident at the Académie de France in Rome (1952–5). In addition to his work as a composer, he pursued a career in radio (from 1956) and directed the France-Musique channel (1965–75) before becoming head of the Musical Creation service at Radio France, a post he held until 1990. As a composer, he has not followed any particular school, but kept his atonal writing distinct from external theoretical systems and guided more freely by individual compositional choices. His honours include first prize from the Monaco International Competition (1960) for his Second Concerto for Orchestra, the Grand Prize of the City of Paris (1965) for his Violin Concerto and several recording awards, among them the Orphée d'Or of the Académie du Disque Lyrique (1996).

Chebotarian, Gayane (Movses) (*b* Rostov-on-Don, 8 Nov 1918; *d* Moscow, 16 Jan 1998). Armenian composer and musicologist. A graduate of the Leningrad Conservatory, she studied composition with Kushnaryor and the piano with Khal′fin. In 1947 she began teaching at the Yerevan Conservatory, where she set up a special course to research into the polyphonic aspects of Armenian music. She was made an Honoured Art Worker of the Armenian SSR in 1965 and appointed professor of composition in 1977. Although her work incorporates certain national characteristics, both melodic and rhythmic, it also manifests elements of the classic Russian tradition. Chebotarian's music is melodious, striving for simplicity and clarity of expression. A mood of restrained melancholy, however, is pervasive in many of her compositions. Her piano writing is wholly idiomatic for the instrument. As well as a number of articles, she has published the book *Polifonia v tvorchestve Arama Khachaturiana* ('Polyphony in the Works of Khachaturian', Yerevan, 1969).

Chechlińska, Zofia (*b* Poznań, 21 Oct 1932). Polish musicologist. She studied musicology with Józef Chomiński at the University of Warsaw (MA 1956) and from 1961 at the Polish Academy of Sciences in Warsaw, where she received the doctorate in 1965 with a dissertation on the structure of Chopin's piano music; she completed the *Habilitation* in 1996 at Kraków University with a dissertation on Chopin's variation technique. She was assistant professor at the Universities of Toruń and Poznań in 1967 and 1968, and joined the staff of the Polish Academy of Sciences in 1969, becoming head of the department of music in 1981 and reader in 1997. In 1986 she also joined the staff of Kraków University.

Zofia Chechlińska's main field of research is the music of the 19th century, and most of her writings concern Chopin. She has challenged some widely-held misconceptions and tackled problems, such as Chopin's variation technique, which have not been addressed elsewhere. She has collaborated on the new critical edition of Chopin's works and has prepared editions of Polish 18th- and 19th-century music for the series Monumenta Musicae in Polonia, and works by Henryk Wieniawski. She is also co-editor of the journals *Rocznik chopinowski*, *Chopin Studies* and the series *Polish Musicological Studies* (Kraków, 1977–).

Check [back check]. A component of the action of grand and upright pianos. It prevents the hammer from rebounding on to the strings once a note has been struck. *See* PIANOFORTE, §I, esp. figs.1, 12, 16, 18, 20, 24, 32 and 33.

Chédeville [Chefdeville]. French family of musicians. They were related to the HOTTETERRE family.

(1) **Pierre Chédeville** (*b* Oulins, Eure-et-Loire, 13 Oct 1694; bur. Paris, 24 Sept 1725). Musette player. He was a son of Pierre Chédeville, a merchant and farmer, and Anne Coricon (granddaughter of Nicolas Hotteterre, *d* 1693, and daughter of Anne Hotteterre and Claude Coricon). As well as (2) Esprit Philippe and (3) Nicolas Chédeville, there were two other brothers, Jacques and Louis, who were not musicians, and four sisters. Pierre went to Paris with his brother Esprit Philippe at an early age, and in 1709 both entered the opera orchestra as musette players; they were probably under the supervision of their great-uncles Louis and Nicolas [Colin] Hotteterre, for they were listed at the opera under the name Hotteterre rather than Chédeville. In January 1714 Pierre acquired the reversion of Louis's place in the Grands Hautbois and seems to have taken the post over officially on Louis's death in 1716. Pierre left no original compositions.

(2) **Esprit Philippe Chédeville** (*b* Oulins, 2 Sept 1696; *d* Paris, 9 March 1762). Composer, musette maker and

musette player, brother of (1) Pierre Chédeville. His career as a young man was parallel to that of Pierre, and he was only 13 when he began playing in the opera orchestra. In 1723 he acquired the reversion of Jean Hotteterre's place in the Grands Hautbois, but when Pierre died in 1725 he took over his brother's place and the reversion of Jean's place passed to the youngest brother, (3) Nicolas Chédeville. Before Pierre's death Esprit Philippe was sometimes known as 'Chedeville le cadet'; after it he called himself 'Chedeville l'aîné'.

On 31 March 1730 Esprit Philippe took out his first privilege to publish instrumental compositions, and soon the first of a series of works intended primarily for musette or hurdy-gurdy, the two most fashionable *instruments champêtres* of the time, appeared, the title-page describing him as an 'oboe of the king's chamber' and 'musette of the Académie Royale de Musique'. On 1 January 1736 he retired from the opera, but he continued to play in the Grands Hautbois and on 18 January 1738 he was admitted to the Hautbois et Musettes de Poitou. He officially remained in both organizations until his death, although his health must have failed by 1760, for during that year both posts were filled by other musicians.

Esprit Philippe's compositions, along with those of his brother Nicolas, significantly expanded the repertory of the musette and contributed to the extraordinary vogue for the instrument during the first half of the 18th century in France. Intended primarily for amateur musicians, they include suites, sonatas and concertos as well as collections of minuets, contredanses, vaudevilles and other simple airs and dances. The suites, found in the collections labelled *Simphonies* (opp.1 and 2), *Duo galants* (opp.5 and 7), and *Fêtes pastorales* (op.9), consist primarily of short, simple dance movements, some of which are supplied with names or character titles. The concertos of op.3, small chamber concertos for only two melody instruments and continuo, have more running passage-work than the suites. The sonatas and *sonatilles* (opp.4, 6 and 10) contain Esprit Philippe's most sophisticated work. Their movements are generally somewhat longer and more developed, and some contain virtuoso passage-work. Occasionally they call for 'double stops' in which both musette chanters must be played at the same time. These compositions are lively and display good workmanship, though they rely heavily upon the stock formulae of their day. All are in C and G major or minor, the majority centring on C, because of the tuning of the drones on most of the musettes of the day. Extensive modulations cannot be sustained, resulting in a certain melodic and harmonic monotony.

At least of equal importance to his compositions were the musettes that Esprit Philippe made. Many instruments by 'Chedeville l'aîné' were advertised in the *Affiches, annonces et avis divers* between 1757 and 1783, and some were highly elegant, like the ivory musette with soufflets embroidered in silver and gold advertised on 27 April 1782. The only existing musette made by one of the Chédevilles known today is marked only 'CHEDEVILLE'; thus it is impossible to determine whether Esprit Philippe or Nicolas was its maker. This instrument, now in the Brussels Musée Instrumentale, is equipped with large and small rosewood chanters, each with six silver keys and ivory garnishings.

—	Les airs à la mode, lost

(3) Nicolas Chédeville (*b* Sérez, Eure, 20 Feb 1705; *d* Paris, 6 Aug 1782). Composer, arranger, musette maker, player and teacher, brother of (1) Pierre and (2) Esprit Philippe Chédeville. His great uncle Louis Hotteterre was one of his godfathers and may have taught him music and the art of turning instruments. In the early 1720s he entered the opera orchestra as oboe and musette player, and on 1 November 1725 he took over the reversion of Jean Hotteterre's post in the Grands Hautbois from Esprit Philippe. After Jean's death in 1732, he acquired the title to this post.

On 2 December 1729 he took out his first privilege to publish his own compositions. At first he called himself 'Chedeville le jeune' on the title-pages of these works; from op.3 he listed himself as 'Chedeville le cadet'. The dedications of many of his works show that he was much sought after as a musette teacher by members of the most highly-placed families in France. He taught Princess Victoire from about 1750, which led to his appointment as *maître de musette de Mesdames de France*. In his musette making he seems to have added to the instrument's lower compass, building musettes going down to *c'* (according to the *Mercure de France*, November 1733). The *Mercure* also reported that he had rearranged the keys on the little chanter, making it easier to play.

On 1 July 1748 he retired from the opera, although he agreed to return to play the musette there whenever he was needed, according to La Borde. Although he retained his post in the Grands Hautbois until his death, he must have dropped out of sight by 1780, because in that year

La Borde, who claimed that he was the most celebrated musette player France had ever had, said that he was dead; in fact he lived for two more years.

Nicolas's first two collections of pieces for musette or hurdy-gurdy, entitled *Amusements champêtres* (opp.1 and 2), are similar to his elder brother's early *Simphonies*; his op.3 works with the same title are more substantial and technically difficult. His op.6, inspired by a campaign on which he accompanied the Prince of Conti, contains movements with titles of battles, some of which express the 'war-like images' he referred to in his dedication. In 1737 he made a secret agreement with Jean-Noël Marchand for the latter to obtain a privilege to engrave, print and sell a work as Vivaldi's *Il pastor fido*, op.13, but in a notarial act dated 17 September 1749 Marchand declared that Chédeville was the composer, also revealing that Chédeville had provided the money for the publication and was receiving the emoluments. It is not certain why Chédeville chose to have his own work attributed to Vivaldi and issued under the privilege of Marchand, but perhaps, as Lescat has suggested, he was trying to give the musette, his favourite instrument, the endorsement of a great composer that it had lacked up until then.

His interest in Italian music was strong around this time. On 7 August 1739 he was granted a privilege to print, engrave and issue to the public his own arrangements of concertos and sonatas by Italian composers for the musette, hurdy-gurdy or flute. The names of ten Italian composers are mentioned in the privilege, along with those of Quantz and Mahaut. *Le printems, ou Les saisons amusantes* (1739) features arrangements of Vivaldi's 'La primavera', op.8 no.1, along with other concerto movements by Vivaldi.

His op.7 is his only collection specifically for the transverse flute, oboe or violin. The pieces have Italian tempo markings, a greater variety of keys than the musette works and more pronounced features of Italian style. In his op.9, dedicated to the 'illustrious virtuosos', both ladies and gentlemen, who were his students, he turned again to the rustic, pseudo-countrified style so fashionable at the time. Not arranged into sonatas or suites, the pieces appear to reflect the skill of the pupil to whom each is dedicated; some are quite simple, while others, such as 'The Virtuoso', use many 'double stops' and have rapid, difficult passage-work. Op.14, dedicated to Princess Victoire, features variations, incuding 12 based on 'Les folies d'Espagne'.

Though Nicolas's works are on the whole more substantial and glittering than those of Esprit Philippe, both were basically intended for the same purpose – that of the amusement of wealthy amateurs who played for their own pleasure – and both served that purpose well.

Cheetham, John. *See* CHETHAM, JOHN.

Chef (Fr.: 'chief'). In French usage a *chef d'orchestre* is the conductor of an orchestra. A *chef d'attaque* is a section leader in a choir or, by extension, in an orchestra. In military parlance *chef de musique* refers to the head of regimental music, hence a bandmaster.

Chef d'attaque (Fr.). *See* LEADER.

Chefdeville. *See* CHÉDEVILLE.

Chef d'harmonie (Fr.). *See* BANDMASTER.

Chein, Louis (*b* ?*c*1636; *d* Paris, 17 June 1694). French composer, priest and serpent player. Papillon and Poisot asserted that he was born at Beaune. Brenet, however, maintained that he was born in Paris and that he entered the Ste Chapelle as a choirboy on 24 June 1645. The records of the Ste Chapelle relating to his death and burial state that he had been a choirboy there and had served the chapel uninterruptedly thereafter. On the title-page of his one extant work he is described as chaplain of the Ste Chapelle and also of Quimper Cathedral. Four masses by him were published in Paris: *Missa 'Pulchra ut luna'* (1689, 2/1729), *Missa pro defunctis* (1690), *Missa 'Floribus omnia cedant'* (1691) and *Missa 'Electa ut sol'* (1691), all for four voices, except the third, which was for five. Only the first is extant. Its style is simple and largely syllabic but with points of imitation even in the longer movements; it suffers from the monotony and narrow range of the melodic lines.

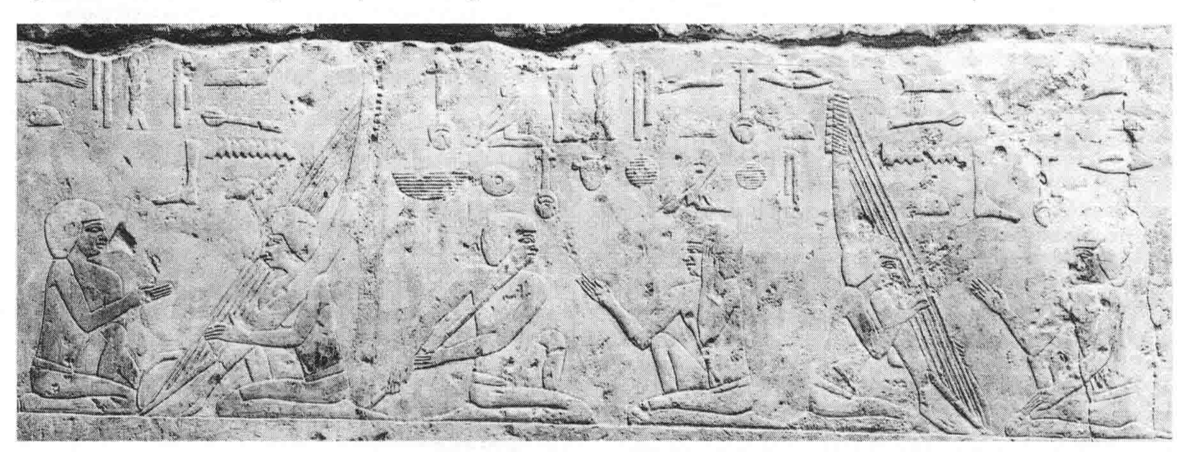
Cheio (Port.). *See under* ORGAN STOP.

Cheironomy (from Gk. *cheir*: 'hand'). The doctrine of hand signs: a form of conducting whereby the leading musician indicates melodic curves and ornaments by means of a system of spatial signs.

1. General. 2. Egypt. 3. South Asia. 4. Jewish tradition. 5. Byzantine and Western chant.

1. GENERAL. The practice of cheironomy can be detected in several basic forms:

(i) as hand movements made in the air to guide a musical performance;



(ii) as the transformation of these into a neumatic notation: many of the written symbols are recognizable as stylized graphs of the outlines of such movements;

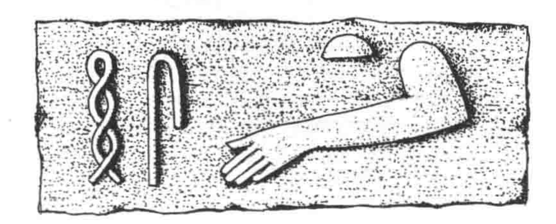
(iii) as the conversion of the conducting hand into a kind of reading-board (such as the Guidonian Hand: *see* SOLMIZATION, §I) by using the single ends and joints of the fingers as the sites of pitches. In the Western medieval system these pitches were presented as isolated notes of a measured acoustical ratio, in contrast to the fluctuating intonation of the singing voice. Moreover, these exact and instrumentally conceived pitches by then formed part of a modal unit such as the HEXACHORD, and could thus be assigned places within the measured space of the palm of the hand;

(iv) as the more recent didactic method of TONIC SOL-FA combining the two ancient methods: the Guidonian syllables together with the visible hand signs now representing the intervals contained within an octave. This was a conscious retreat from staff notation, for the benefit of the singer and the training of his aural sensitivity. It became manifest in John Curwen's 'interpreting notation' (since 1841), stressing the interrelationship of sounds within a given key and towards its key-note, irrespective of its absolute pitch. The most striking single item in this 19th-century method is the resumption of the Egyptian style of cheironomic hand signs to be mastered by the modern cheironomist-conductor;

(v) as the present-day renewal of hand-conducting in the teaching of Gregorian chant, now based on the reading of printed music (see the work of A. Mocquereau).

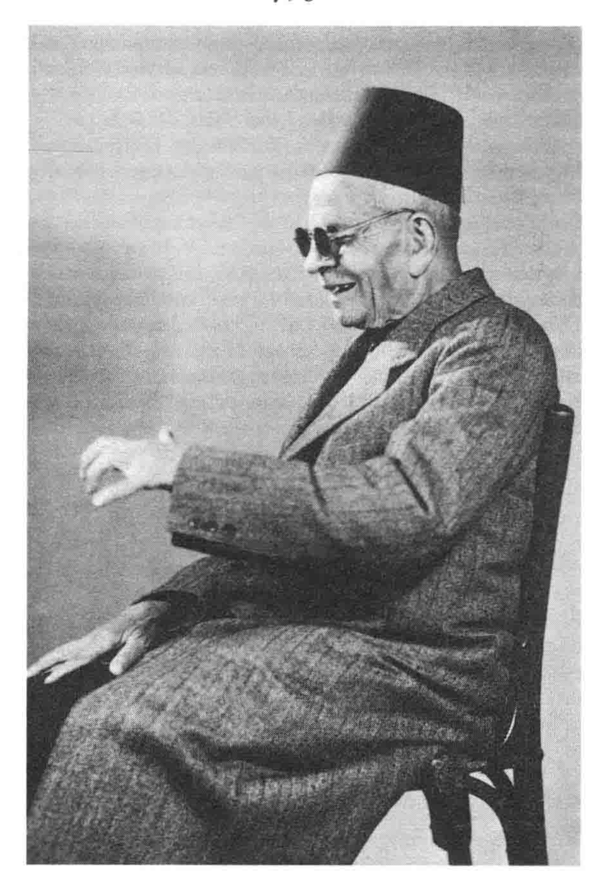
This article will concentrate entirely on (i). There is ample evidence of the practice of cheironomy in ancient Pharaonic Egypt from the fourth dynasty (2723–2563 BCE) onwards, and lasting through many later periods; certain remnants of it are still practised today. There are also indications that cheironomic systems were used in

1. Three cheironomists guiding two harpists and a flautist: relief from the tomb of Ra-em-remet, c2400 BCE *(Ny Carlsberg Glyptothek, Copenhagen)*



many ancient civilizations including those of Greece, China, India, Israel and Mesopotamia.

2. EGYPT. Knowledge of the Egyptian art of cheironomy is based mainly on the detailed research done by H. Hickmann. According to him in ancient Egypt cheironomy was not a conductor's art but an educational system of melodic graphs indicated by hand signs – a musical science that was rooted in earlier myths and that had evolved over centuries of artistic growth. Hickmann's shrewd attempts at deciphering the 'writing in the air' brought to light some of the 'speaking' messages depicted on tombs of antiquity. There is a wealth of iconographical documentation for cheironomy whose signs are clearly distinct (fig.1). Some questions, however, remain unanswered. For instance, it is not yet known whether the hand signs of the cheironomists are meant to indicate single intervals or melodic formulae comprising a group of notes. Of particular interest is the cheironomic guidance of instrumentalists – a branch not known to have existed in other cheironomic traditions of antiquity.



Hickmann's method of decipherment is based not only on the interpretation of hieroglyphic symbols and the realistic designs on murals and bas-reliefs, but also on present-day ethnomusicological observation of living musicians in their own environment. Cheironomy is still practised by some Coptic and Egyptian cantors who also act as teachers and professional cheironomists. Their hand movements reveal a remarkable similarity to those of antiquity. Their finger and arm movements have been recorded on film, and a basic repertory of melodic and rhythmic signs has thus been reconstructed. Comparison of these with all the available representations of such gestures in ancient Egypt has enabled the meanings of some of the movements to be identified.

Of the rhythmic signs, a stroke on the thigh apparently signifies a downbeat or thesis; the pressing of fingers against thumb signifies the weak parts of the measure, as also practised in ancient magical counting rhymes. Melodic signs were probably based on two principal hand positions, representing the melodic centre and its dominant note by keeping the rounded index finger on the thumb, or by stretching the hand vertically. The position of the upper or lower octave seems to have been given by lifting the elbow into the air or by supporting the elbow on the knee. Even if a final version of all the interrelated movements of fingers and hand has not yet been established, the solution of this mystery of musical instruction and guidance in the ancient world is now much closer.

A subject closely connected with the system of cheironomy is the ancient polyphony documented, among other places, on the relief at Ptahhotep's tomb at Saqqara, where there is an illustration of two cheironomists guiding

2. Arm and hand symbols associated with music and musicians in ancient Egypt

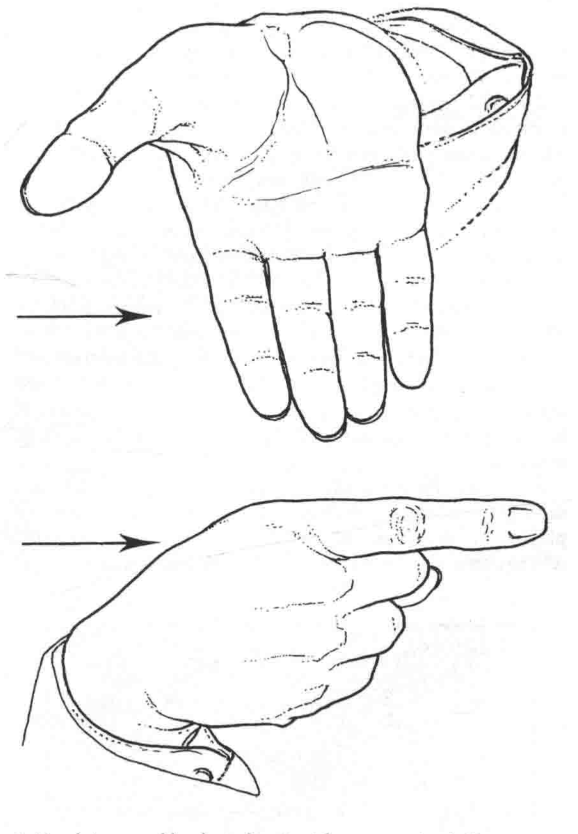
3. Present-day Coptic cantor using hand symbols

a harpist simultaneously with different hand symbols. These hand symbols, here interpreted as tonic and dominant, suggest a kind of instrumental drone style – a musical form still alive in the rural parts of Egypt and Sudan.

The guild of cheironomists in Pharaonic Egypt had its own divinity who, according to legend, created the living world with a swing of his arm. Arm and hand (fig.2), therefore, became the exclusive symbols of music and musicians. Little hands made of wood or ivory have been found in tombs, and were until recently believed to have been tokens given to deceased musicians. Yet according to Hickmann's conclusions they are not to be considered merely as ornaments, but as real musical instruments of the clapper type. Unfortunately they have not, so far, been found in the tomb of a professional musician.

Cheironomy seems to be deeply rooted in Egyptian musical performance. From the historical evidence so far assembled, it appears that the system has never died out, and has even survived through Greek, Roman and early Christian periods. It is not altogether surprising, therefore, that it is still practised in Egypt today, mainly in the teaching of the chant repertory of the Coptic Church (fig.3). The series of hand symbols used by Coptic cantors reveals that not only the principles of cheironomy but also the actual hand movements have been preserved over millennia.

3. SOUTH ASIA. Gestures indicating the division of rhythmic cycles are used in the Hindustani and Karnatak traditions of South Asia. The current system of claps,



waves and finger counts denoting the various beats and structures of the *tāla* (from Sanskrit: 'flat surface', 'palm') derive from the complex historical *tāla* described in the *Nātyaśātra* and *Dattilam* (*see* INDIA, §III, 4(i–ii)).

Cheironomy also occurs in South Asian Hindu ritual. Movement, gesture and posture are important elements of Vedic ritual, often corresponding to changes in chant. One notable example is that of the *soma* sacrifice (for an in-depth description, see W. Caland and V. Henry's study: *L'agnistoma: description complète de la forme normale du sacrifice de soma dans la culte védique*, Paris, 1906). The song-manuals (*gāna*), which aid the practice of *sāmavedic* chant, give indications of gestures that act as mnemonics (see B. Varadarajan: 'Music in the Sama Veda', *Journal of the Music Academy*, lviii, 1987, 169–80; *see* INDIA, §I, 2).

4. JEWISH TRADITION. In addition to the Egyptian, Indian and East Asian traditions of cheironomy there is an equally strong tradition of hand signs in Jewish synagogue music. A tradition of hand signs is continuously documented in ancient Israel from at least the middle of the 3rd millenium BCE onwards. The Talmudic treatise *Berakhot* 62a states that the right hand was to be kept clean and holy for signalling the melodic intonations of the Bible. Continuing this line, a legitimate successor to these earlier spatial movements can be seen in the system of biblical accents (*ṭe'amim*) as added to the Hebrew texts by the Tiberian School of Masoretes in the 9th century CE. Clearly this is a series of written symbols based on the original gestures of the hand delineated in the air by the teachers.

As in the Egyptian and Hindu traditions, this practice has survived in the Israeli tradition from Jewish antiquity until the present. The art of cheironomy continues in use today in varying degrees and forms by many Jewish communities such as those of the Yemen, Egypt, Tunisia or Morocco, whether in the country of their origin or following their return to Israel since 1948. In order fully to understand the roots of this ancient custom, the original meaning of 'cheironomy' as an art of bodily gesticulation, not confined to hands and arms as suggested by the Greek name, should be considered. The term was itself probably coined by taking the most striking part for the whole. It is not surprising, therefore, to find that in the Jewish tradition the head and the back as well as the hand are employed in spatial writing. Their respective functions are clearly defined. Of the three, the hand is the proper didactic medium for elementary teaching in religious schools (*cheder*). It should be noted that the cantillation of the Bible (*te'amei ha-migra*) is not an independent piece of music, but a structural recitative, the main task of which is to emphasize the syntax of the individual sentences, especially to mark separation between each of them by means of an idiomatic melisma or thematic flourish (*see* JEWISH MUSIC, §II). Small children learn first how to chant the syntactical motifs and how to string them together according to the ever-changing structures of the prose texts. Only when the melodic outlines are fully memorized is the holy text interpolated, at a second stage of learning. Here then is the place of the didactic hand-'waving' and 'gesturing' (Gk. *neuma*) used by the teacher to indicate the general outlines of melody, and – even more so – its continuous flow and its animated spirituality (Gk. *pneuma*: 'spirit'). In Morocco, as in Egypt, the cheironomist–teacher even uses both hands simultaneously or in alternation to enable him to signal an almost complete series of accents. This practice should be a warning against the interpretation of Pharaonic paintings showing a cheironomist employing both hands in different positions as evidence of early polyphony.

The back is used mainly as a mnemonic aid for lay readers during the public reading of the Pentateuch. This reading is performed from handwritten scrolls in which no punctuation, no vocalization and no accents (neumes) are given. Hence the old custom whereby a bystander (supporter or prompter) assists the lay reader, using his back as a kind of writing-board and impressing on it the neumatic symbols. This strange custom of hand signs through direct physical contact is limited to the use of only seven signs and may be observed in the Tunisian liturgy of the Isle of Djerba as in the Egyptian one of Old Cairo. Of all the cheironomic traditions investigated so far in Jewish liturgy, the one originating from the community of Old Cairo seems the richest in spatial design and symbols, and the nearest to the ancient Pharaonic style of conducting note symbols in the air. In Europe the system of hand signs had been used mostly by Spanish and Italian cantors. The two hand positions shown in fig.4 in the tradition of the Italian congregation in Rome represent two different disjunctive neumes, the *paseq* (a dividing-line) and the *tehir* (a short interruption). There is one manual position that has remained alive through the millennia without a break or change of meaning: the hand covering the ear of a musician. In this

4. Hand signs used by the Italian-Jewish congregation in Rome: paseq (a dividing line, left), and tebir (a short interruption) (after Laufer)

case no technicality of intonation, interval or motif is intended, but rather the status of the musician as a professional singer. In addition, its purpose is to convey his prominence among the musicians as the most exalted personality, gifted with an inspired and ecstatic disposition. Today, as in Pharaonic times, great singers from Morocco to Persia and Kurdistan will enter a state of meditation by putting their left hand over their ear (often also pressing the thumb against the throat), thereby intimating a change of personality through change of their vocal resonance or timbre.

The third means of 'writing in the air' uses head movements. This custom is known from Morocco and, in a more elaborate form, from the Yemen. The reader accompanies his own chanting by vigorous turns and shakings of the head, mainly indicating the strongest punctuating melodic formulae, those attached to the full stop and comma. In the Yemenite tradition the movements are concentrated in four groups, each one represented by one motif; in addition, the right hand continuously draws the sequence of accents on the table or in the air. Observing the Yemenite reader one is amazed by the speed with which the singing and the cheironomic signalling proceed in coordination, the latter being not so much prescriptive as following after the chant.

Some preliminary documentary films of cheironomy in Jewish chant traditions have been made at the Hebrew University of Jerusalem and are being analysed in special research projects by S. Levin, M. Morag and A. Laufer.

Manual signs symbolizing the combination of melodic motifs according to the syntactical division of sentences are, of course, much older than the more rational forms of the written neumes. The calligraphic forms of Jewish accents preserve not only the outlines of the hand signs in a kind of stereotyped symbolic form, but also another of their characteristics, namely the comparative freedom of performance. The single sign hardly ever corresponds to a single note but to a complete organism of notes, that is, to an elaborate melodic motif; these motifs are never themselves defined sequentially note for note. This means that internally the aggregate of notes remains fluctuating and loose while their character as a group remains constant. This is a melodic phenomenon that is closely bound to the basic mentality of oral traditions in music, in which the melodic memory takes the place of the visible graphic symbol. Yet the Jewish singer, while working his way through the masses of stored melodic elements, keeps the mnemonic process in an equilibrium by, on the one hand, following the mainstream of constant characters and, on the other, leaving room for variants to fill in the open spaces.

Nearly all ancient oral traditions provide striking manifestations of the dual characteristics of endless variety within a fixed framework. In this sense, cheironomic gestures were never meant to function as a rational musical notation, and their air-drawn curves are no more than casual landmarks given to the expert singer, who of course knows the general direction of his chant, especially if it is connected with a running prose text of greater dimensions (such as that of the Bible stories). It also implies the purely vocal character of the cheironomic art together with its later transformation into written symbols. Thus the art of cheironomy may rightly be considered the main source for some, though not all, of the neumatic notations of the Middle Ages. The individual names of single neumes, particularly in the Syriac, Samaritan or Jewish-Aramaic traditions, are vivid reminders of their true origin: for instance, *zaqef* ('upright', i.e. the stretching of a word, and, therefore, a momentary interruption of the recitation), for which the corresponding cheironomic movement is the raising of the index finger; and *nagda* (also *legarmeih*, or *pisqā* or *revi'a*), a trill-like ornament whose corresponding cheironomic sign is a trembling hand movement.

Another indication of the strong links between the reading and the cheironomic signs is the fact that the reader, chanting the Hebrew Bible (*ba'al qore*), was aided by a supporter (*somekh*) who was the exact counterpart of the ancient Pharaonic cheironomist, facing the musician and directing his performance. The reading of the Hebrew Bible has always been steeped in melodic recitation: in fact, by law it could not be read without the melodic framework (Talmud Bab., *Megilla* 32*a*). This melodic recitation is, by its very nature, not a song or a spoken recitation but a chanting style or cantillation that may move between the extremes of pure logogenic speech-melody and the pathogenic or halleluiatic style. The cheironomic tradition was not generally used for the 24 books of the holy scripture but was applied exclusively to the Pentateuch. As already mentioned, only the latter was read in public from the scrolls, in which the punctuation, the vowels and the neumatic accents are not added to the holy text. Thus the reader had to memorize the whole sequence of cantillation, and it was here more than anywhere else that he was dependent on the helping hand of the cheironomist standing by.

Besides the early source in the talmudic treatise of *Berakhot* (which has frequently been discussed by theologians, grammarians and musicologists: see Werner, p.124), there is additional literary evidence from the Middle Ages. Among others, there was the talmudic scholar Rashi (11th century) who stated in his commentary to the above source that he had observed Bible readers from Palestine performing the hand signs during cantillation. The medieval traveller Petachyah of Regensburg reported in his travel diary (*c*1187) that he saw this tradition still practised when he visited the Jews of Iraq. The practice was also mentioned as a living one in the basic treatise on Hebrew syntax *Diqduqei ha-ṭe'amim* (10th century). Indirect evidence of the living tradition of cheironomy may be present in the many local variants of performance of the written neumatic symbols developed from the hand signs. Although it is tempting to emphasize the close affinity of Syriac, Armenian, Coptic, Hebrew, Byzantine and Western systems of accents, there are certain basic differences between them, not only in design but also in their different historic evolution. Of all the neumatic systems, only the Roman one reached the state of rational and independent legibility through diastematic design and final supersession by staff notation.

5. Byzantine and Western chant. Although cheironomy, in a general sense of conducting, is known in both Eastern and Western Christian chant performance, no precise cheironomic system in which particular gestures indicate specific melodic progressions appears to have existed during the Middle Ages or later. (Illustrations such as those discussed by Huglo, 1963, cannot be interpreted as evidence of such a system; see Hucke, 1979.) Although some theoretical treatises contain references to conducting and, occasionally, to eye-witness

accounts of the practice, such material tends to make the absence of detailed evidence even more obvious.

Regarding Byzantine practice, the treatise of Nicolas Mesarites (12th century) is often quoted; this work contains a description of novice choirboys being helped by gestures to hold the line, keep in time and in tune. Two further sources, however, are not Byzantine but were written by Western Christians: in the 12th-century manuscript *I-MC* 318 a monk of Monte Cassino gives an account of a conductor (whom he calls 'chironomica') directing the singing in a Greek monastery in South Italy; in his *Euchologium graecorum* (Paris, 1647) the Dominican J. Goar describes a performance he had heard in the East in 1631 in which the singing was led by a 'cantus moderator'. The only Byzantine music treatise to make a direct connection between cheironomy and the signs of Byzantine neumatic notation is that of Michael Blemmides (ed. Tardo, 1938, pp.245–7). The theory that the neumes of Western Latin chant notation derive from cheironomic gestures, though attractive and plausible, has even less basis in contemporary accounts.

EDITH GERSON-KIWI/DAVID HILEY

Chekhov, Anton Pavlovich (*b* Taganrog, 17/29 Jan 1860; *d* Badenweiler, 2/15 July 1904). Russian dramatist and short-story writer. He moved to Moscow in 1879 and, while qualifying as a doctor, wrote (for comic papers) stories which became popular; some appeared in book form in 1886. The publisher Suvorin then gave him financial security, and his style began to change: his stories became less anecdotal, more profound, sometimes tragic; plot and narrative diminished, replaced by evocations of mood alone. His first play to be produced, *Ivanov* (1887), was a success; but *The Seagull* (1896) was a failure until it was restaged by the newly formed Moscow Arts Theatre in 1898, at which time it established Chekhov as a major dramatist and created the theatre's reputation. *Uncle Vanya* (1899), *The Three Sisters* (1901) and *The Cherry Orchard* (1904) were all triumphs. In 1901 Chekhov married the actress Olga Knipper. Increasing ill-health forced him to live mainly in Yalta or abroad.

Chekhov knew and admired Tchaikovsky, to whom he dedicated a volume of stories, but plans for a collaboration with him (on an opera based on Lermontov's *Geroy nashego vremeni*) came to nothing. He also knew Chaliapin, Rachmaninoff and other Russian musicians. Composers have been attracted principally by his early, comic works.

WORKS SET TO MUSIC

Zabïl! [He Forgot!] (1882): op by I.V. Přibik
Khirurgiya [Surgery] (1884): comic op by P.-O. Ferroud, 1928; op by M. Ostroglazov
Na bol'shoy doroge [On the Highway] (1885): op by C. Nottara
Roman s kontrabasom [Romance with a Double Bass] (1886): op by A. Dubensky, 1916; op by Sauguet, 1930; op by V. Bucchi, 1954
Na puti [On the Path] (1886): Utyos [The Rock], sym. fantasia, op.7 by Rachmaninoff, 1893
Ved'ma [The Witch] (1886): op by Yanovsky, Moscow, 1916; The Scarf, op by L. Hoiby, 1959; radio op by Vlasov and Fere, 1961
Lebedinaya pesnya [Swan Song] (1888): op by Kh. Sheyi
Medved' [The Bear] (1888): The Boor, op by D. Argento, 1957; The Bear, extravaganza by Walton, 1967
Predlozheniye [The Proposal] (1889): op by L. Chayn
Svad'ba [The Marriage] (1889): op by V.G. Ehrenberg, 1916
Dyadya Vanya [Uncle Vanya] (1897): Sonya's final monologue, 1v, pf, op.26 no.3 by Rachmaninoff, 1906
Vishnyovïy sad [The Cherry Orchard] (1904): incid music by S. Bate

APRIL FITZLYON

Chekker (Fr. *archiquier*, *eschaquier*, *eschiquier*; Ger. *Schachtbrett*; Lat. *scacarum*, *scacatorum*; Sp. *eschaquer*, *scaquer*). The earliest term used in archives and other writings to denote a string keyboard instrument. Its exact

meaning is still the subject of debate and research, but it is probable that most references are to a clavichord. There appears to be no Italian equivalent of the name; Farmer suggested that it is derived from the Arabic 'al-shaqira' and tentatively identified this as a virginal, but there is no supporting evidence. Some writers identified the chekker as an upright harpsichord (i.e. a CLAVICYTHERIUM), since a letter written to Juan I of Aragon in 1388 referred to 'an instrument seeming like organs, that sounds with strings', but the instrument was not named. Galpin (*Grove4*, suppl.) believed that the DULCE MELOS described by Arnaut de Zwolle (*c*1440) was identical with the chekker. However, instruments with hammer action, such as the dulce melos, appear to have been rare, whereas the name 'chekker' appears frequently, and there is no evidence to support this identification. Galpin further suggested that the chekker's name was derived from the fact that the action was 'checked', in the sense that the motion of its keys was stopped by a fixed rail; this is unconvincing and could in any case apply to a clavichord, a harpsichord or a virginal. These suggestions can therefore be disregarded.

Documentary evidence reveals only that 'chekker' denoted a string keyboard instrument. Ripin, who thoroughly examined all the known documents, believed that he had found direct evidence for identifying the clavichord with the 'chekker': a sentence in a French court account book for 1448 refers to the purchase of 'un eschiquier ou manicordion'. However, the possibility that the scribe may have been ignorant of the exact usage of 'manicordian' and 'chekker' obliges us, as Page has argued, to be cautious in concluding that the two names were synonymous. Page further argued that it is a fundamental misconception to suppose that chekker denoted a particular instrument with its own special action, since terminology at that time was likely to have been imprecise. Although Page may be correct in this view, it is hardly verifiable. As evidence, Page described how Arnaut's 'clavichordium' could denote tangent, hammer or plucking action. Meeùs, however, has suggested that Arnaut could have been using the name 'clavichordium' in a didactic or illustrative way. Thus, when he wrote that the clavichord could be 'transformed' into a dulce melos or virginal by changing the action, it must be understood that he was not proposing an actual modification, because that would have been technically impossible. The 'clavichordium' was the instrument named (with other instruments in terms of it) simply because it was familiar to the reader.

In a pragmatic attempt to cut through the difficulties Meeùs argued that since 'chekker' is the earliest known name for a string keyboard instrument, the very first string keyboard instrument must have been denoted by that name. Since the earliest reference to the chekker is 1360 and there is evidence for the clavichord around the middle of the 14th century but none for the harpischord until about 1390 it seems probable, but not proven, that only the clavichord could have been intended. Arnaut's treatise of around 1440 provides the first reference to an instrument identifiable as the virginal, and the first clavicytherium reference is around 1460. Thus, the clavichord appears to have been indicated by the early usage of 'chekker'.

In discussing the derivation of the name 'chekker', Ripin suggested that it was derived from 'exchequer', the medieval counting-board consisting of squares laid out on a table. Meeùs also made a persuasive case in support of this derivation of the name. The title-page of Gregor Reisch's *Margarita philosophica* (1503) shows a woman operating a counting frame (an exchequer) and she appears at first glance to be playing a clavichord. The four or five lines on the rectangular board give it a sufficiently close resemblance to a clavichord for it to be conceivable that the name 'exchequer' might have been applied to a keyboard instrument. The possibility is hard to dismiss, and the natural alliance between the two would seem to be confirmed by Mersenne, who even as late as 1648 used the Latin 'abacus' (the modern English word for 'exchequer') for 'keyboard'. If we admit this derivation, however, we allow the possibility that any keyboard instrument, including the organ could have been called a 'chekker', whereas some of the documentary evidence clearly specifies a string keyboard instrument.

A further issue raised by this derivation, however, is whether we should infer from the shape of the exchequer that the chekker also had a rectangular form. If this were the case, then it would appear to strengthen the argument that the chekker must be a clavichord, since most known early clavichords have a rectangular case. Of the 26 known 15th-century representations of rectangular instruments, at least 20 are probably of clavichords, although it is not always possible to identify the instrument with certainty.

DENZIL WRAIGHT

Chelard [Chélard], **Hippolyte-André(-Jean)-Baptiste** (*b* Paris, 1 Feb 1789; *d* Weimar, 12 Feb 1861). French composer and conductor. The son of a clarinettist at the Paris Opéra, he began his formal music education with Fétis in 1800. He entered the Paris Conservatoire as a violin student of Rodolphe Kreutzer in 1803 and thereafter studied composition with Gossec and probably with Méhul and Cherubini. He won the Prix de Rome in 1811 and during the subsequent trip to Italy studied with Zingarelli and with Paisiello, who persuaded the Teatro dei Fiorentini in Naples to mount his *commedia per musica La casa da vendere* (1815) with some success. On his return to Paris the following year the Théâtre Favart agreed to stage the opera, but it failed, even with García and Cinti-Damoreau in the cast. He supplemented his income as a violinist at the Opéra by giving instrumental, singing and harmony lessons. By 1821 he had opened a publishing establishment from which he issued his *Solfèges à plusieurs parties*, a volume that boasted a distinguished list of subscribers.

In 1827 Chelard's opera *Macbeth* was given at the Opéra. Despite its brilliant cast, it failed and was withdrawn after five performances. Critics generally attributed the failure to the lack of experience of Chelard and the librettist Rouget de Lisle. The work combined the

traditional dramatic structure of *tragédie lyrique* with a Romantic, melodramatic subject, but failed to convince on either count. Having reworked many of its more criticized passages, Chelard submitted the score to the court theatre in Munich, where it was repeatedly and successfully performed between August 1828 and March 1829, and it also enjoyed success in London. After his return to Paris his comic opera *La table et le logement* was performed in December 1829, but once again the French public was unimpressed. This failure, together with the collapse of his music business in the revolution of July 1830, caused him to make his home in Germany. Some of the disenchantment he felt with the Paris music scene, having encountered 'every kind of vicissitude and obstacle', was reflected in a letter he wrote in October 1829 to an anonymous correspondent canvassing views on the founding of a new periodical (see Macnutt).

Chelard returned to Munich and in June 1831 staged his second serious opera *Mitternacht* (written as *Minuit* for the Salle Ventadour, but never performed there); although well received, it never achieved the success of *Macbeth*. In February 1832 *Der Student*, a largely rewritten version of *La table et le logement*, was an overwhelming success. He now had a considerable reputation in his adopted land and works such as the Mass, which includes parts for Turkish drums, triangles and cymbals, encouraged contemporary critics to compare him to Berlioz and Liszt. In 1832 and 1833 he successfully directed the German Opera's season in London, during which time his *Macbeth* was given twice at Covent Garden and *Der Student* (in an English translation by Planché as *The Students of Jena*) was performed at Drury Lane. Neither was a great success despite the contributions of the singers Malibran and Templeton.

In September 1835 Chelard's most significant work, the five-act opera *Die Hermannsschlacht*, achieved great success in Munich. In 1836 he was active as a theatre and concert director in Augsburg and in 1840 he was appointed Kapellmeister at Weimar, where his incidental music to *Der Scheibentoni* and his opera *Die Seekadetten* were performed in 1842 and 1844 respectively. In 1843 he gave considerable help and encouragement to his friend Berlioz, during the latter's visit to Weimar. In the following year he became foreign correspondent for the Paris Academy of Arts. Liszt's appointment to Weimar overshadowed Chelard's position there, and he gradually withdrew from the scene. With his official retirement in 1852 he returned to Paris, where he directed some notable concerts until he returned to Weimar permanently in 1854.

Chelard's compositional style is variable: whereas *Macbeth* is in the Gluck–Cherubini–Spontini tradition of *tragédie lyrique*, *Mitternacht* inclines more to the German Romantic school. In both there is an attempt to create local colour by rhythmic and harmonic means, but in neither is this wholly convincing. In *Macbeth* the supernatural is suggested by imitation of and allusion to the instrumental colour, harmonic effects and dramatic moments of other supernatural operas, notably *Der Freischütz* and Boieldieu's *La dame blanche*. Such simple allusion was a technique more commonly – and more successfully – encountered in genres of the secondary theatres, where it was underpinned by spectacular visual effects central to the drama. These operas, nevertheless, exerted considerable influence, and arrangements of Chelard's 'Marche hongroise' or of the ballet from *Macbeth* were popular with amateur pianists and organists. His activities in the concert hall or opera house were criticized for their supposed extravagance, though as an opera conductor and general music director he was known to be first-rate. His urge to compose was strong but was not matched by his powers of imaginative invention; consequently, his works, though competent and intelligently made, lack real excitement. He is significant mainly for having prepared southern Germany for the music of Berlioz and Liszt, whose orchestral and melodic characteristics he sometimes palely foreshadowed.

WORKS

STAGE

La casa da vendere (commedia per musica, 1, A.L. Tottola), Naples, Fiorentini, 1815, excerpts pubd separately

Macbeth (tragédie lyrique, 3, C.J. Rouget de Lisle), Paris, Opéra, 29 June 1827, *F-Po*; rev., perf. Munich, court theatre, 25 Aug 1828, vs (Munich, ?1828), excerpts pubd separately

La table et le logement (oc, 1, J.J. Gabriel, T.M. Dumersan), Paris, OC (Ventadour), 24 Dec 1829; rev. as Der Student, Munich, court theatre, 19 Feb 1832

Mitternacht (op, 3), Munich, court theatre, 19 June 1831, ov. in concert version (Berlin, 1846)

Die Hermannsschlacht (op, 5, K. Weichselbaumer), Munich, court theatre, 12 Sept 1835, ov. pubd in many arrs.

Der Scheibentoni (incid music, C. Birch-Pfeiffer), Weimar or Munich, 1842

Die Seekadetten, oder Die Emancipation der Frauen [Nieder mit den Männern] (comic op, 2, Sondershausen), Weimar, court theatre, ?April 1844

Le aquile romane (op, 3, M. Marcello, after P.E.A. Du Casse), Milan, La Scala, 10 March 1864

OTHER WORKS

Sacred: Messe solennelle, 1830; Salvum fac regem, 1831; Hymnus, 1834; Salve regina, 1846; Salve regina coeli, 1846

Secular vocal: Ariane (cant., B.-B. de Saint-Victor), 1811; Chant grec (P. Charles), 1826; Musikalische Reise, collection of songs, pf acc. (Munich and Leipzig, ?*c*1835); Le vieux drapeau (Béranger), vocal symphony, men's vv, 1848: Les aigles romains, ?cant., 1853; Symphonies vocales, incl. Marche hongroise arr. pf/(pf, org); other songs

Orch: Bravourstück, fantaisie concertante, 1834; Variations, 1839; La symphonéide, 1848

Pedagogical: Solfèges à plusieurs parties, vv, pf, suivis d'un cantique, S solo, 4vv, pf (Paris, 1821)

BRIAN PRIMMER/SARAH HIBBERD

Chelemele (Fr.). *See* SHAWM.

Chelleri [Kelleri, Keller, Cheler], **Fortunato** (*b* Parma, *c*1690; *d* Kassel, 11 Dec 1757). Italian composer of German origin. He was a choirboy at the chapel of the Madonna della Steccata, Parma (1700–03), but after the death of his German father when Fortunato was 12, and of his mother three years later, he was cared for by his maternal uncle Francesco Maria Bazzani, a priest and *maestro di cappella* of Piacenza cathedral, who instructed

him in singing and keyboard playing. The opera *Griselda* (1707/8, Piacenza), usually attributed to Chelleri, was in fact a revival of Albinoni's setting for Florence (1703); however, Chelleri may have contributed the six arias that are new. This and other misattributions originate in Gerber's long article (*GerberL*) based on a supposedly autobiographical account by Chelleri himself. Equally dubious is the authorship of an *Alessandro il grande* (1708, Cremona). It seems that Chelleri's first opera was *Zenobia in Palmira*, composed in 1709 for Barcelona, which during the war of the Spanish Succession regained its status as a court and mounted an opera season with a group of Italians headed by Caldara, Astorga and Porsile.

Chelleri's movements after his return from Spain in 1710 remain undocumented up to 1715, when, at the latest, he was employed as *maestro della cappella di camera* by the Elector Palatine Johann Wilhelm and, following his death in 1716, by his brother Karl III Philipp. It is uncertain whether Chelleri attended the electoral court in its various residences in Germany; his frequent engagements in Italy suggest otherwise. After 1718, he may have served the dowager electress Anna Maria Luisa de' Medici in Florence, where she retired after her husband's death. Possibly two of his operas, later given in Padua and Venice, had their première in Florence: *Temistocle* and *L'innocenza diffesa*. His main operatic activity spanned the years 1715–22 and took him to several northern Italian centres. In Venice, Vivaldi, responsible for the Teatro S Angelo in 1716–17, entrusted him with the second opera for the season, *Penelope la casta*, but the unsuccessful outcome provoked an assassination attempt against Chelleri and a 48-verse satire on the ill-fated production. Otherwise his career in Venice was moderately successful; he composed seven operas in eight years, and while he did not receive *scritture* from the major theatres, he was by far the youngest composer working in the city.

In 1722 Chelleri joined a group of Veneto-based musicians (among them Giovanni Benedetto Platti) who entered the service of Johann Philipp Franz von Schönborn, Prince-Archbishop of Würzburg. He was engaged as Hofkapellmeister and promoted to Court Councillor (Hofrat) in 1723, the year of his marriage to Apollonia Theresia Papius, with whom he had three sons. He wrote mainly oratorios, as required by the bishop and his brother, Count Rudolf Franz Erwein, who often translated Chelleri's oratorio texts into German and employed him in his private orchestra at Schloss Wiesentheid. However, the new post was short-lived as in 1725, soon after Johann Philipp's death, Chelleri became Kapellmeister to the Landgrave Karl of Hesse-Kassel in succession to Ruggiero Fedeli and moved to Kassel, where he spent most of his later life.

In October 1726, following an exploratory trip in summer 1725 to Hanover, where George I of England was residing, Chelleri travelled to London, where many of his Italian colleagues were employed, notably Pietro Sandoni and his wife (reportedly Chelleri's former pupil), Francesca Cuzzoni. His hopes for a commission from the Royal Academy of Music never materialized, but during his ten-month stay he briefly became a subscribing member of the Academy of Ancient Music (November 1726) and published a collection of arias and cantatas before returning home to Kassel. When Landgrave Karl died in 1730, his eldest son and successor, Friedrich, King of Sweden since 1720, dissolved the *cappella* and Chelleri was given an allowance until he found a new post elsewhere. In 1732 he joined Friedrich's court in Stockholm for two years but, unable to bear the northern climate, he returned to Kassel in 1734 with the title of Hofrat to direct music for Friedrich's brother Wilhelm, administrator of the landgravate.

Chelleri's composing followed largely the geographical pattern of his professional life when, after the operas for Italy and the oratorios for Würzburg, his move to Kassel and subsequent sojourn in Sweden signalled the beginning of his prolific career in instrumental music, the basis of his 18th-century reputation. His surviving works show the variety of options open to a composer of his time in relation to the number, order and character of movements and, given these choices, for formal disposition of his material. To the rondo, variation, simple binary and rounded binary forms he added others in which a sharper differentiation between tonic and dominant areas in the first section anticipates the procedures of sonata form. His two sets of harpsichord music of the late 1720s are written in an expressive idiom with French, Italian and German traits and mark early appearances of devices such as the Alberti bass and an original use of the alternate-hands technique. An undocumented ornament consisting of three diagonal strokes seems to stand for a mordent of variable length. Chelleri had a way of inserting, midway in the discourse, a short, haunting phrase in the minor that appears as natural as it is unexpected, while his musical invention and understanding of the keyboard often combine in strong gestures that remain in the memory.

WORKS

OPERAS

drammi per musica unless otherwise stated

Zenobia in Palmira (3, A. Zeno and P. Pariati), Barcelona, Casa Lonja, 1709, music lost

La caccia in Etolia (pastorale per musica, B. Valeriani), Ferrara, S Stefano, May 1715; rev. as I felici inganni d'amore in Etolia, Innsbruck, November 1715; rev. as L'Atalanta, Rovigo, Campagnella, Oct 1725; *D-WD*

Ircano innamorato (int, Valeriani), Ferrara, S Stefano, May 1715, music lost

Alessandro fra le Amazoni (3, G. Braccioli), Venice, S Angelo, aut. 1715, music lost

Penelope la casta (3, M. Noris), Venice, S Angelo, carn. 1717, music lost

Alessandro Severo (Zeno), Brescia, Accademia degli Erranti, carn. 1719, 2 arias *S-Skma*

Amalasunta (G. Gabrieli), Venice, S Angelo, carn. 1719; perf. with Il marito giocatore (int, Salvi) ?by G.M. Orlandini; 24 arias *?I-Vc*

La pace per amore (A. Schietti), Venice, S Moisè, carn. 1720, collab. G.M. Buini; rev. as Il nemico amante, Venice, S Moisè, carn. 1725; music lost

L'Arsacide (A. Zaniboni), Venice, S Moisè, carn. 1721; perf. with Petronio e Dorise (int), ?by Chelleri; 7 arias *?D-Mbs*

Temistocle (Zeno), ?Florence, Cocomero, aut. 1720; Padua, Obizzi, June 1721; music lost

L'innocenza difesa (F. Silvani), ?Florence, Pergola, carn. 1721; Venice, S Angelo, carn. 1722 [arias included in Judith, Gemahlin Läyser Ludewigs des Frommen, oder Die siegende Unschuld (pasticcio), Hamburg, 1733, with arias by Handel and Telemann and Ger, recits by Telemann], *D-Bsb* according to *EitnerQ*, *?Hs*, Act 1 *Kl*

L'amor tirannico (3, Lalli), Venice, S Angelo, May 1722; rev. as L'amor tirannico, o sia Il Farasmene, Ferrara, S Stefano, carn. 1724

doubtful: Tamerlano (A. Piovene), Treviso, Dolfin, Oct 1721, music lost

?arias in Griselda (Zeno) by T. Albinoni, 1707/8

OTHER SECULAR VOCAL

Cantate e arie con stromenti (London, 1727) [1727]

Cants., for S solo unless otherwise stated: Amor, più non m'inganni, 1727; Cinto d'intorno, 1727; Infelice è il viver mio, S/A *A-Wgm*, *D-Bsb*, *I-Nc*; Io son semplice pastorella, cited in Breitkopf catalogue; O memoria dolente, 1727; Pupille e fin a quando, lost (formerly *D-Dl*); Quanto mai sarai più bello; Sì, bellissima Clori, *Mbs*; Stille, voi del fresco rio, *US-BEm* (inc.); Su le deserte sponde (L'Arianna abbandonata), *D-Mbs*, *GB-Lbl*

8 arias, 1727; other arias, *D-Bsb*, *SÜN*, *WD*, *S-HÄ*, *L*, *Skma*, *Uu*; duets, *D-Dl* (see *EitnerQ*), *S-L*

ORATORIOS

Il cuore umano, Mannheim, 1722, *D-WD*
Maria virgine, Würzburg, *c*1722–4, *WD*
Per la morte del Redentore (D. Lalli), Würzburg, *c*1722–4, music lost
De annuntiatione B. Mariae V. (Lalli), Würzburg, 2 July 1723, music lost
Allegorie, Würzburg, 1724, music lost
Oratorio per il Venerdì Santo, Würzburg, 1730, music lost
Dio sul Sinai, Dresden, 24 March 1731, *Dl*
David umiliato, Würzburg, 1732, *WD*
Il serpente di bronzo (S.B. Pallavicini), Würzburg, after 1733

VASSILIS VAVOULIS

Chelsea Opera Group. A group formed in 1950 by Colin Davis, David Cairns and Stephen Gray, with the principal aim of giving concert performances of Mozart's operas. The orchestra consists largely of good amateur players. It first appeared at the Holywell Music Room, Oxford, with a performance of *Don Giovanni* that was so successful that it was soon repeated in Oxford and Cambridge. There followed performances of *Der Schauspieldirektor*, *Die Entführung aus dem Serail*, *Così fan tutte* and *Die Zauberflöte*. The group first appeared in London at St Pancras Town Hall in 1953, with a performance of *Fidelio*. Other works performed in Oxford, Cambridge and London have included *Falstaff*, *Les troyens*, *Benvenuto Cellini*, *Guillaume Tell*, *Der Freischütz*, *Euryanthe*, *Simon Boccanegra*, *Macbeth*, *Don Carlos*, *Iphigénie en Tauride* and *Khovanshchina*. It has proved an excellent training ground for young British conductors including Colin Davis, Maurits Sillem, John Matheson, Roger Norrington, Nicholas Braithwaite, John Eliot Gardiner and Martyn Brabbins. Several singers who appear regularly at Covent Garden and with the ENO have tried out new roles with the group; for example Peter Glossop his first Giovanni, Derek Hammond-Stroud his first Beckmesser, Elizabeth Robson her first Nannetta and Pauline Tinsley her first Leonora (*La forza del destino*). Operas performed in the 1970s and 80s included *Les vêspres siciliennes*, *Feuersnot*, *Mazepa*, *Béatrice and Bénédict*, *Oberon*, *Lady Macbeth of the Mtsensk District*, *Friedenstag*, *Turandot*, *The Snow Maiden*, Bizet's *Ivan IV*, *La Gioconda* and Berkeley's *Nelson*. In 1987 the group abandoned performances outside London, and now performs each opera only once, in the Queen Elizabeth Hall. Operas performed have included *Daphne*, *Mefistofele*, *The Olympians*, *Le Siège de Corinthe*, *Aroldo*, *Francesca da Rimini*, *Koanga*, *Esclarmonde*, *Il Guarany* and *Semiramide*.

HAROLD ROSENTHAL/R

Cheltenham International Festival. An annual series of orchestral, chamber and solo concerts, with occasional operas, held in June or July and lasting one to two weeks. The festival was instituted in 1945 by the Borough of Cheltenham as the Cheltenham Festival, and since 1947 has been additionally supported by the Arts Council of Great Britain, devolved to South West Arts from 1992. Until 1962 it was announced as a 'Festival of British Contemporary Music', and primarily featured new works by British composers in a context of more general programmes. In the first 25 festivals a total of 291 works by 142 British composers received their first public performances.

The decision to organize such a festival was taken during wartime, in 1944, on the proposal of G.A.M. Wilkinson, the borough entertainments manager, who advocated the inclusion of one new work by a British composer in each programme as a means of giving the festival a distinctive musical character. He served as festival organizer for 25 years, until 1969, when John Manduell became programme director for a further 25 years, being succeeded in 1995 by Michael Berkeley with a change of title to artistic director. The inaugural festival in 1945 consisted of three concerts by the LPO, at the first of which Britten conducted the first concert performance of the Four Sea Interludes from *Peter Grimes*, only a week after the opera's première. Concerts have since been shared between different orchestras and ensembles,

including several from abroad. There is no regular orchestra in Cheltenham, but a close association was once established with Barbirolli and the Hallé Orchestra, who appeared at 15 successive festivals from 1947. The BBC has made substantial contributions with regular participation by one or other of its 'house' orchestras (principally the BBC SO), and by the direct commission of new works.

For several years the festival added valuably to the meagre opportunities for performance available to young composers in the postwar period, and earned for itself the apt description of 'the shop-window for new British music'. The composers most frequently represented have been Fricker, Hoddinott, Bennett, Lennox Berkeley and Maxwell Davies. During the 1950s there was an underlying conservatism of taste in the choice of new works, which encouraged a species of neo-romantic composition nicknamed the 'Cheltenham symphony'; the preponderance of such works tended to diminish the festival's significance amid the opportunities for more progressive music that were proliferating elsewhere. After the 1959 festival there was a move towards the inclusion of more radical works, and from 1966 of representative contemporary music from other countries, as young composers became less attracted by Cheltenham-type commissions; this led to its being renamed the Cheltenham International Festival from 1974, and to a change of artistic policy towards a much smaller proportion of new works. In 1983 it was the only arts organization in Britain to perform the complete published works of Webern in his centenary year.

The scope of the festival has been challenged by the lack of any large auditorium other than the resonant town hall. Opera has accordingly made only sporadic appearances, with productions at the Everyman Theatre by the English Opera Group (1948–51), Intimate Opera (1955–6 and 1959) and the New Opera Company (1966), which gave première productions in a double bill of *Purgatory* by Gordon Crosse and *The What D'ye Call It* by Phyllis Tate. In 1974 the English Opera Group appeared at the town hall to mark Holst's centenary in his birthplace with a double bill of *Sāvitri* and *The Wandering Scholar*. Notable première successes were achieved by Kent Opera with Judith Weir's *A Night at the Chinese Opera* (1987) and by Opera North in 1993 with Michael Berkeley's *Baa Baa Black Sheep*. An ad hoc Festival Opera ensemble was formed in 1983 to give *Ruth* by the festival's then president, Sir Lennox Berkeley, and *What the Old Man Does is Always Right* during Alun Hoddinott's year as composer-in-residence (1989). In 1995 Almeida Opera gave the première of *Powder her Face* by Thomas Adès. Other productions have been staged by the Singers' Company (1980), WNO (1981), Warsaw Chamber Opera (1982), Opera Stage, Los Angeles (1985), Thameside Opera (1988), Opera North (1989 and 1992), British Youth Festival Opera (1990) and Music Theatre Wales (1990 and 1996).

NOËL GOODWIN

Chelys (Gk.: 'tortoise'). In medieval and Renaissance Latin writings a term (with TESTUDO) used for the lute (*see* LUTE). The word came to mean any arched structure, and Christopher Simpson (*The Division Viol*, 2/1665/*R*) defined it as a VIOL: the Viola da Gamba Society of Great Britain adopted the name for the title of its journal. *See also* LYRA (i).

Chemberdzhi, Yekaterina [Katya] (*b* Moscow, 6 May 1960). Russian composer and pianist. She received her musical education at the Central School of Music (1967–78) attached to the Moscow Conservatory, and at the Conservatory proper (1978–84). There she studied the piano (with Alumian), composition (with Sergey Balasanian) and the theory of music (with Yuri Kholopov), graduating with distinction. She taught composition, orchestration and the theory of music at the Gnesin State Institute in Moscow (1984–6), and joined the Russian Union of Composers in 1986. In 1990 she settled in Berlin, where she has combined teaching (piano, theory and composition) at the Berlin-Wilmersdorf Music School with intensive concert work as a soloist and ensemble player. In 1994 she completed a European tour with the cellist Natalya Gutman, and from 1995 she appeared with the clarinettist Eduard Brunner and the singer Mieko Kanesugi.

The works which have brought Chemberdzhi acclaim are mostly chamber compositions; her experience of performing them has given rise to a diverse technique preoccupied with instrumental timbre, unusual instrumental forces and theatrical elements. Her characteristic directness of expression is invariably equalled by clarity of form and idea (not only in terms of timbre and composition but also frequently in terms of programmatic content). In her *Labyrinth in memoriam Oleg Kagan* (1996) for solo cello and 12 strings, the principle of pitting the soloist against the chorus is given tragic poignancy. The *Trio dolcissimo mit einem Lied und einem Marsch* (1993) is constructed on subtle, interweaving timbre modulations, while the Piano Trio (1986) is based on a *diminuendo* in texture and timbre which dissolves the tense drama of the cyclic form. Her creative thinking is frequently stimulated by specific visual images, for instance the pictures of Escher and Bosch, and by scientific concepts.

WORKS

Stage: Elephant's Child (chbr op), 1990; Max and Moritz (chbr op, after W. Busch), 1998

Vocal: Die Irrsinnsinsel, S, orch, 1993; 4 Lieder aus 'Des Knaben Wunderhorn', chorus, 1994; 3 Gedichte (P. Celan), T, hn, hpd, accdn, 1995; Cantus controversus (cant., Bible, A. Einstein), S, Bar, male chorus, chbr ens, 1997; Reise nach China (J. Rasche), children's chbr ens, 1999

TAT'YANA FRUMKIS

Chementi, Margherita. *See* CHIMENTI, MARGHERITA.

Chemin-Petit, Hans (*b* Potsdam, 24 July 1902; *d* Berlin, 12 April 1981). German composer and conductor. He studied the cello with Hugo Becker (1920–25) and composition with Juon (1925–7) at the Berlin Musikhochschule. While still a student he played in, composed for and conducted theatre orchestras. From 1929 to 1969 he taught choral conducting, theory and composition at the Akademie für Kirchen- und Schulmusik in Berlin, where he was appointed professor in 1936 and professor emeritus in 1969. From 1939 to 1959 he conducted the Reblingscher Gesangverein Magdeburg and from 1939 to 1942 also the Magdeburg Cathedral choir. In addition he initiated the city symphony concerts and music festival in Memel (1939–44, now Klaipeda, Lithuania) and conducted the Potsdam City Chorus (1945–8). In 1943 he succeeded Ramin as conductor of the Berlin Philharmonic Chorus, a post which he held until 1981.

Chemin-Petit's oeuvre is stamped by a fundamentally ethical view of music. His style remained unaffected by rapidly changing trends in compositional techniques between 1920 and 1980. He relied instead on traditional forms and had a particular preference for polyphonic structures. For him, the most important channel of expression was melody. His harmonic language remained within tonal limits, although tonal boundaries were extended considerably in his late works.

A member of the Berlin Akademie der Künste, Chemin-Petit was head of its music section from 1968 to 1981. He was awarded the Berlin Arts Prize in 1964, the Federal Cross of Merit in 1968, and the Ernst Reuter Badge of the city of Berlin in 1977.

Chenevillet [Cheneveuillet], **Pierre** (*fl* 1652–72). French composer. According to F.-J. Fétis he was for a time choirmaster and canon of St Victor, Clermont. It is possible that he was the Chénevillette mentioned by Chartier as choirmaster of Notre Dame, Paris, from 1 December 1663 until the appointment of Mignon to that position on 30 August 1664. Between 1652 and 1672 three four-part masses by him were published in Paris, and the publisher, Ballard, still listed them in his catalogue of 1707. Only one, *Deus ultionem Dominus* (1653), survives (*F-Pc*).

Chen Gang (*b* Shanghai, 10 March 1935). Chinese composer. He studied composition with his father Chen Gexin and with Ding Shande, and then at Shanghai Conservatory (1955-60), continuing there after his graduation as a teacher, other than a period as head of the Guangxi Institute of the Arts. He has written in most of the genres of Western art music. The violin concerto *Liang Shanbo yu Zhu Yingtai*, co-written with his colleague He Zhanhao in 1959, was his first major success. Modelled on sonata form, this one-movement concerto, depicting a traditional tragic love story, employs material from the yueju local opera style from Zhejiang Province. His harmonic style in this and other works draws on Western precedents but, like many Chinese composers of his generation, Chen adapts these to make considerable use of pentatonic note sets. Though his later works have included traditional titles and themes, he has continued to compose absolute works and film scores.

JONATHAN P.J. STOCK

Cheng Changgeng (*b* Anhui, 22 Nov 1811; *d* Beijing, 24 Jan 1880). Chinese opera actor. He went to Beijing early in life and earned a living selling musical instruments before taking up a career on the stage. Although his first public appearance was a failure he later became famous through a brilliant performance at a private banquet attended by many of Beijing's most eminent citizens. By 1845 he had become the leader of the Sanqing troupe, one of the Four Great Anhui Companies (*sida huiban*), and retained the position until his death. Although most famous as a *laosheng* (old male), he could perform *dan* (female) and *xiaosheng* (young male) roles as well. Acknowledged by some as the father of Peking opera, he was the leading Peking opera actor of the 19th century, noted for his versatility, having mastered many kinds of Chinese opera music; he founded a style of Peking opera singing known as the 'Anhui school', which emphasized *erhuang* music (*see* CHINA, §IV, 1(i)). He was thorough and strict in his training methods and had many disciples.

COLIN MACKERRAS

Cheng Yanqiu (*b* Beijing, 4 Jan 1904; *d* Beijing, 9 March 1958). Chinese Beijing opera actor. He was a specialist in *dan* (female) roles. Cheng's brightest period on the stage was from 1919 until the late 1930s, but he gave more time to teaching from the mid-1930s on. He went abroad several times, notably to Germany, France, Italy and Switzerland in 1932 and 1933 to study Western opera. After the Communists came to power, he devoted himself more to administration and teaching than acting and joined the Communist Party in 1957.

Although mainly a performer of traditional opera, Cheng was adept at creating his own melodies and acted in many newly written operas, especially those featuring new ideas about women of the past. He was one of the four great actors of female roles (*sida mingdan*). As a singer, his voice was deeper than usual for *dan* actors, his genius lying in the representation of tragic figures.

COLIN MACKERRAS

Chenier, Clifton (*b* Opelousas, LA, 25 June 1925; *d* Lafayette, LA, 19 Dec 1987). American zydeco and blues singer and accordion and harmonica player. The son of an African American accordion player, he heard both white and black Cajun musicians as a child. He played music at weekends before moving in the mid-1950s to Houston, where he secured employment in zydeco dance halls attended by black migrants from Louisiana. He played the large piano accordion which was more versatile and suitable for blues in many keys. The success of his *Clifton Blues* (1954, Imper.) made him the most esteemed of the zydeco musicians. He was later joined by his brother Cleveland Chenier, who played a corrugated metal 'chest washboard' in the form of a breastplate; they had a hit recording, *Louisiana Blues* (1965, Bayou), a good example of Chenier's rich patois. His eminently danceable music, such as the songs *Monifique* (1967, Arhoolie), a slow drag with a heavy beat, and *Tu le ton son ton* (*c*1970, Arhoolie), had wide appeal, and in the 1970s he toured extensively. *Jambalaya* (1975, Arhoolie), made in Montreux, Louisiana, demonstrated the buoyant, jazz-influenced playing of his later style, and elaborate guitar work by Paul Senegal. The essence of his work and his improvisational ability was captured in the film *Hot Pepper* (1973). In 1979 ill-health curtailed his playing for a while, but he then resumed an active concert and recording career. He received a National Heritage Fellowship from the National Endowment for the Arts in 1984. Known as the foremost figure in zydeco music, Chenier performed blues in a manner closely related to that of urban blues, but with Cajun instrumentation and rhythm.

PAUL OLIVER

Chennevière, Daniel. *See* RUDHYAR, DANE.

Chen Peixun [Chan Pui-fang] (*b* Hong Kong, 7 Dec 1921). Chinese composer. After studying music privately for a year in London (1937), he returned to Hong Kong as a music teacher. He studied in Shanghai (1939–41) then took teaching posts across China. In 1949 he became a professor of composition and orchestration at the Central Conservatory in Beijing, and in 1980 moved to a similar post in the Hong Kong Baptist College.

Chen's output includes piano solos and orchestral works. His Symphony no.2 'Qingming ji', commemorating those who perished in the Cultural Revolution, received a prize in a national contest in 1981. A representative example of modern Chinese symphonic writing, its colourfully orchestrated pentatonic themes create a picturesque image reminiscent of film music, and there are echoes of the French Impressionist style current during Chen's youth and of the folk-inflected style of Bartók. Chen has also done much to encourage the use of Cantonese folktunes in the composition of art music, and several of his arrangements of these have achieved considerable popularity in China.

WORKS
(selective list)

JONATHAN P.J. STOCK

Chen Qigang (*b* Shanghai, 28 Aug 1955). Chinese composer. He studied composition at the Central Conservatory in Beijing with Luo Zhongrong, moving in 1984 to Paris to study with Malec, Baliff, Jolas, Castérède and, most influentially, Messiaen, who became a staunch supporter of his music. He obtained the doctorate in musicology at the Sorbonne (1989) and remained in Paris to work independently as a composer.

While not wanting to be labelled a Chinese composer, he has grown almost imperceptibly closer to the cultural traditions of his native country. Messiaen has praised his works for their harmonious stylistic union of Western and Asian musical ideas. Chen's early works possess a distinct French flavour, notably in the delicacy of their instrumentation. His Western examples range from Fauré and Debussy to Messiaen and Ligeti. In *Yuan* (1988), one of his most powerful scores, Chen has sought to recreate the pensive melos and timbral finesse of his early chamber pieces on the larger canvas of the symphony orchestra. He has further explored this direction in *Lumières de Guangling* (1989) and in his best-known work, *Poème Lyrique* (1990–91) for baritone and ensemble. This work, a profound expression of the feelings caused by separation, is based on an 11th-century poem by Su Shi and draws inspiration from vocal techniques used in Chinese opera. A more extrovert style of Romanticism dominates in his oboe concerto *Extase* (1995) and in his Cello Concerto written in the same year for Yo-Yo Ma and first performed in 1998.

WORKS
(selective list)

FRANK KOUWENHOVEN

Chen Shihui [Chen Shih-Hui] (*b* Taibei, 6 Sept 1962). Taiwanese composer, active in the USA. She graduated from the National Academy of Arts in 1982 where she studied with Ma Shuilong and Hsu Tsang-houei among others. She continued her education in the USA at Northern Illinois University (MM 1985) and at Boston University (DMA 1993) with Earl Kim, Joyce McKeel, Marjorie Merrymann and Bernard Rands. A great number of her works, such as her first and second string quartets (1979, 1987), *Water Ink* (1988) and *Moments* (1995) are modernist paintings in sound that do not immediately betray her Chinese origin. Where she employs Chinese traditional techniques she does so with subtlety, but to great effect. *Mime* (1988) uses vocal and percussion techniques from Chinese opera, her childrens' pieces *Little Dragonflies* (1996) make use of Taiwanese folk melodies, and the series *Fu* (1998–9) elaborates on a specific technique for the *pipa*. In the melodically charming *66 Times* (1992), Chen applies the Asian techniques of embellishment on a single sound and heterophony. Each of the movements revolves around a small number of notes and motifs which are continually reinterpreted. A similar technique is also used in her String Quartet no.3 (1998).

BARBARA MITTLER

Chen Xiaoyong (*b* Beijing, 13 May 1955). Chinese composer. He studied composition with Su Xia at the Central Conservatory in Beijing. His Piano Quintet (1984) led Ligeti to invite him to Hamburg, where Ligeti taught him for several years at the Musikhochschule and supported him financially. Chen's String Quartet no.1 (1986–7) was awarded a first prize in Donaueschingen in 1987. He remained in Hamburg as an independent composer after 1989, and participated in founding the Gesellschaft für Neue Musik Hamburg (1992) and a computer music studio.

Chen's music, like that of his compatriot Tan Dun, can be described as a continuous play of light and darkness, of delicate timbral shades and tiny variations in pitch. Most of his works are introvert, austere, tightly structured and fairly complex in nature, betraying a deep involvement in European music from Ligeti to Scelsi and beyond. Yet there are constant references in Chen's works to Chinese traditional music and culture. The elegant Duet for violin and *zheng* (1989) and the intriguing and folk-inflected *Circuit* for *zheng* (1996) stand out among a long series of chamber works in which Chen explores new instrumental sonorities and unusual playing techniques. Compositions on a more ambitious scale include *Die* (1988–92), and – one of his finest achievements – *Warp* (1994), which

effectively employs Tibetan singing bowls and Chinese percussion within the orchestra.

FRANK KOUWENHOVEN

Chen Yi (*b* Guangzhou, 4 April 1953). Chinese composer. She studied the violin and the piano as a child. Sent to the countryside as a labourer during the Cultural Revolution, she kept her violin with her, entertaining farmers with melodies from 'revolutionary operas' condoned by the Gang of Four and practising Western repertory when she was alone. After returning home at the age of 17, she served as leader and composer for the local Beijing opera troupe. She studied composition with Wu Zuqiang and visiting professor Alexander Goehr at the Central Conservatory in Beijing when it reopened in 1977. In 1986 she continued her studies with Chou Wen-chung, Mario Davidovsky and others at Columbia University (DMA 1993). Upon completion of the doctorate, she served as composer-in-residence for the Women's PO, Chanticleer and the Aptos Creative Arts Program, San Francisco. After teaching at the Peabody Conservatory (1996–8), she accepted an endowed professorship at the University of Missouri, Kansas City. Her honours have included awards from the Guggenheim, Ford, Rockefeller, Alpert, Fromm and Koussevitzky foundations, and the American Academy and Institute of Arts and Letters. She is the subject of video documentaries produced by the International Society for Contemporary Music (1989) and Taiwan Public Television (1991). Her husband, Zhou Long, is also a composer.

Chen's music combines Western compositional techniques with elements of Chinese musical tradition. *Duo Ye* no.2 (1987), her first mature large-scale orchestral composition, explores Chinese pentatonic tonalities within a Modernist idiom, displaying a masterful control of form and content, and a rich palette of dramatic and expressive orchestral colours. The *Chinese Myths Cantata* (1996) for male voices, Chinese instrumental quartet (*zheng*, *erhu*, *pipa*, *yangqin*) and orchestra, originates from three mythical stories (Pan Go, Nü Wa, and the Weaving Maid and Cowherd); the music attains a harmonious mixture of Chinese and Western instrumental colours, as well as exhibiting a firm grasp of multi-movement form and a keen sense of theatricality. Chen has also composed for traditional Chinese instruments. *The Points* for *pipa* solo (1991) translates the art of Chinese calligraphy into musical gestures.

JOANNA C. LEE

Cherbuliez, Antoine-Elisée (*b* Mulhouse, Alsace, 22 Aug 1888; *d* Zürich, 15 Oct 1964). Swiss musicologist. He came of French-Swiss family, but settled in eastern Switzerland and did most of his work in German. He first studied engineering, taking a diploma in 1911 and a doctorate in 1914. He received his musical training at the conservatories of Zürich and Strasbourg. From 1913 to 1916 he studied with Reger at Meiningen and Jena and during 1916 he worked in Berlin with Siegfried Ochs. In 1921 he became musical director in Chur, Graubünden. The University of Zürich appointed him lecturer in 1912, honorary professor and director of the musicological seminar in 1932 and reader in 1950. From 1938 to 1948 he was president of the Schweizerischer Musikpädagogischer Verband; from 1948 onwards he served as vice-president of the International Folk Music Council.

Cherbuliez has made important contributions to Swiss musicology. His book *Die Schweiz in der deutschen Musikgeschichte* (1932) is the first comprehensive account of Swiss music history while his *Geschichte der Musikpädagogik in der Schweiz* (1944) offers a historical survey of Swiss music teaching from its beginnings to the present day. Cherbuliez investigated the musical sources of Graubünden and published some of his findings in the *Schweizerisches Jahrbuch für Musikwissenschaft* (1933) and the *Jahrbuch der Historisch-Antiquarische Gesellschaft Graubünden* (1937). He also wrote or adapted numerous biographies of composers and published many studies of musical education and theory, and questions of musical form and structure.

ANDRES BRINER

Cherbury, Lord **Herbert of.** *See* HERBERT, EDWARD.

Cherednichenko, Tat'yana Vasil'yevna (*b* Dnepropetrovsk, Ukraine, 1 Sept 1952). Russian musicologist, cultural historian and music journalist. She studied musicology under Yu.N. Kholopov (1969–76) at the Moscow Conservatory, where she also completed her postgraduate studies. She obtained the *Kanditat* degree in philosophical sciences in 1979 and the doctorate in 1989. She taught aesthetics and the history of culture at the Moscow Conservatory from 1979 and was appointed senior lecturer in 1988 and professor in 1991. In 1993 she was made head of the department created at the conservatory to assist the post-Soviet reform in the teaching of social sciences. She has written more than 100 items on matters concerning musical aesthetics, the avant garde and post-avant garde, the history of 20th-century musical theatre and the theory of mass culture. As an expert on reconstituting literary texts, she has taken part in reconstructing a number of Russian operas including Pashkevich's *Skupoy* ('The Miser'), Borodin's *Knyaz' Igor'* ('Prince Igor') and Glinka's *Zhizn' za tsarya* ('A Life for the Tsar'). She is the author of the television series *Leksikon mirovoy kul'turï* ('A Lexicon of World Culture') and of radio broadcasts concerning issues in contemporary music.

TAT'YANA S. KYUREGYAN

Chéreau, Patrice (*b* Lézigné, Maine-et-Loire, 2 Nov 1944). French director. The early part of his career was spent almost entirely in the spoken theatre. He was administrator of the theatre in Sartrouville, 1966–9, artistic co-director of the Théâtre de la Cité Villeurbanne, Lyons, from 1971, co-director of the Théâtre National Populaire, Paris, from 1972 to 1981, and co-director with Richard Peduzzi of the Théâtre des Amandiers, Nanterre, from 1982.

His first excursions into opera were with productions of *L'italiana in Algeri* in Spoleto (1969) and *Les contes d'Hoffmann* at the Paris Opéra (1974). But it was with his centenary production of the *Ring* at Bayreuth (1976) that he made his international reputation. His *Lulu* at the Paris Opéra in 1979 was the first staging of the complete, three-act version made by Friedrich Cerha. Other productions have included Mozart's *Lucio Silla* at La Scala in 1984, later repeated at Nanterre and Brussels; *Wozzeck* in Paris in 1992 and *Don Giovanni* at Salzburg in 1994, both conducted by Barenboim.

Chéreau's deconstructionist *Ring*, though following in the wake of radical productions by Herz and Melchinger, has already taken its place as one of the most important and influential in the history not only of Bayreuth but also of opera production generally. His conviction that the mythological setting of the *Ring* heightens rather than diminishes the social and historical dimensions of the work led him to locate the action in a chronological continuum extending from the mid-19th century to the present day. His starting-point was the context of the 19th-century industrial revolution. Thus the flowing waters of the Rhine became a hydro-electric dam, and Siegfried's forge housed a mechanical steam-hammer. The trappings of pit-wheel, power station, privileged bourgeoisie and oppressed proletariat emphasized the extent to which the work was conceived as a political allegory, but the deliberate mixing of periods, as with the costumes and weapons, betokened an attempt to integrate the contemporary and mythological spheres.

A caged woodbird and the moving of trees by conspicuous stagehands emphasized the necessary artificiality of the stage representation of nature. These and other Brechtian alienation techniques, together with a strong element of parody (as in the pantomime dragon), gave rise to an unprecedented level of humour in the staging. Indeed, it was its theatricality and the physical realization of intense emotion, ranging from the tender embraces of lovers to the brutal violence of tyrants (including Wotan), that struck home most forcibly. Gesture, posture, facial expression and movement formed an integral part of the staging and were executed with an immediacy then rare on the operatic stage.

BARRY MILLINGTON

Cherepnin. *See* TCHEREPNIN family.

Cherici [Chierici, Clerici], **Sebastiano** (*b* Pistoia, 1647; *d* Pistoia, probably in 1703). Italian composer. He spent his formative years at Bologna as a pupil of G.P. Colonna and at Ferrara as a *musico suprano* in the Accademia della Morte (*I-FEc* Cl.I, 22, f.1*v*). Except for a brief visit to Dresden from September 1675 to March 1676 he resided at Ferrara until 1695, where he was *maestro di cappella* of the cathedral from 1670 to 1679 and of the Accademia dello Spirito Santo from at least 1672 to 1695. In 1685 he was elected to the Bolognese Accademia Filarmonica. In his op.4 (1686), dedicated to Grand Duke Ferdinando III de' Medici, he expressed a desire to return to his native Tuscany. He apparently continued to solicit a position away from Ferrara by dedicating his op.5 (1688) to Duke Francesco II d'Este of Modena and his op.6 (1695) to the Emperor Leopold I of Austria. Eventually, on 23 September 1695 the chapter of Pistoia Cathedral invited him to become *maestro di cappella*, and he held this position until 1703. He was mainly a composer of sacred music, which reveals his kinship with the composers of the Bolognese school, in whose orbit he was trained and whose compositional procedures he used, particularly in his works in the concertato style. He apparently gained some repute as a member of the prestigious Accademia Filarmonica, and his opp.2 and 4 were both reprinted, the latter twice.

ELVIDIO SURIAN

Cherkassky, Shura (*b* Odessa, 7 Oct 1909; *d* London, 27 Dec 1995). American pianist of Russian birth. A prodigy, he came to America in 1923, where he studied with Josef Hofmann at the Curtis Institute in Philadelphia, and in 1928 he started giving concerts. After World War II he left America to take up residence in London.

It was not until after the war that he achieved international prominence. By that time none of the great 19th-century pianists were in action, and it was suddenly realized that Cherkassky was virtually the last remaining exponent of the grand Romantic style, with his singing line, strong personality, controlled metrical fluctuations, total tonal control and strong musical personality. And, for a Romantic pianist, Cherkassky's repertory was unusual, containing as it did music by Boulez, Stockhausen, Hindemith, Ives, Ligeti and Berg. His enormous repertory also went back to Bach, Haydn and Mozart.

In his early years, his performances of the Classical composers were regarded as unstylistic; but later, thanks to studies sparked by the early music movement, Cherkassky's expressive, flexible and rhythmically free Haydn and Mozart found more sympathetic ears. In the Romantic literature it was universally agreed that he was one of a kind and, indeed, the last of his kind. His style was highly idiosyncratic, as were the styles of such great players as Rachmaninoff, Friedman and Hofmann; but it was a highly personal style based on solid musical and structural knowledge, and with a finger technique that never let him down. In an age of largely percussive playing, his sound was suave, never stressed, full of delicate applications of colour and yet big enough to encompass the sonorities of such massive works as the Tchaikovsky or Rachmaninoff concertos. And always his playing was suffused with a kind of poetry that threw new light on whatever music he played.

Cherkassky's art is well represented on records, although most of his many recordings came relatively late in his career. However, about 1926 he made his first recording, a Victor two-sided early electric ten-inch of the Beethoven E♭ Ecossaise and his own *Prélude Pathétique*. The latter, the label assures us, was composed by Cherkassky at the age of 11. He recorded sporadically in the early days of LP, but when his career took off a flood of discs ensued, many of them live recordings. By the time of his death he had recorded a substantial part of his immense repertory.

HAROLD C. SCHONBERG

Cherll, Giovanni Gasparo. *See* KERLL, JOHANN CASPAR.

Cherney, Brian (*b* Peterborough, ON, 4 Sept 1942). Canadian composer. He studied at the Royal Conservatory, Toronto and at the University of Toronto (BMus 1964, MMus 1967, PhD 1974), where his teachers included John Weinzweig. In 1966 and 1969 he attended courses at Darmstadt. He was appointed to a teaching post at McGill University in 1972. Among his honours are awards from the International Rostrum of Composers in Paris (1976, 1984), the Jules Léger Prize for new chamber music (1985), and commissions from the Société de Musique Contemporaire du Québec, the CBC, the Montreal SO, New Music America and numerous other organizations, ensembles and performers.

Cherney's music is based on a rigorously organized harmonic language and carefully planned temporal proportions. In *Seven Images for 22 Players* (1971) phrases of text, around which each section is structured, reflect compositional issues important to his style: 'Wispy fragments of yesterday', suggests the use of earlier music in later works; 'Silence echoes along dark paths', refers to the exploration of silence or stillness; 'And time rings slowly' expresses an interest in musical time. A number of other works are inspired by poets and writers such as T.S. Eliot, P.B. Shelley, Stéphane Mallarmé, R.M. Rilke, August Strindberg and Heinrich Böll. His music from the 1980s reflects the influence of Debussy in its sensitivity to timbre.

BRUCE MATHER

Chernov, Vladimir (*b* Caucasus, 22 Sept 1953). Russian baritone. In 1983, after studies at the Moscow Conservatory and Accademia della Scala, he joined the Kirov Opera. A prizewinner at the Glinka and Tchaikovsky competitions (1981 and 1983 respectively), and a finalist in the Voci Verdiane Concorso in Busseto (1983), he appeared at Covent Garden with the Kirov in 1987. In 1989 and 1990 he made auspicious débuts in Boston (Marcello), Los Angeles (his first Posa), Seattle (Andrey Bolkonsky in *War and Peace*), Glasgow (Don Carlo in *La forza del destino*), Rome (Miller in *Luisa Miller*) and returned to Covent Garden as Rossini's Figaro. In the 1990–91 season he made débuts at the Metropolitan Opera (Miller) and San Francisco (Ezio in *Attila*), and very quickly he became one of the most active Russian baritones in the West. Successes in other major centres include Ford at Salzburg, Rossini's Figaro in Brussels and Buenos Aires, Anckarstroem (*Un ballo in maschera*) in Chicago and Berlin, and Simon Boccanegra in Paris; he is a regular at the Met in Verdi, including such parts as Luna and Stankar (*Stiffelio*, 1993), and was a linchpin of Covent Garden's Verdi Festival, with appearances as Francesco Foscari (1995), Giacomo (*Giovanna d'Arco*, 1996) and Belfiore (*Un giorno di regno*, 1999, in concert). Chernov has sung in other major houses and festivals including Munich, Hamburg, Vienna, Bologna, Verona, Orange, Zürich, Barcelona and Mexico City, and further roles have included Yeletsky, Yevgeny Onegin, Germont, Enrico, Zurga, Guglielmo (*Le villi*), Alphonse (*La favorite*) and Filippo Maria Visconti (*Beatrice di Tenda*). His recordings include Yeletsky and many of his Verdi roles. He combines a charismatic stage presence with a beautiful, deeply expressive tone quality that has also made him much sought after as a recitalist.

JOHN ALLISON

Chéron, André (*b* Paris, bap. 6 Feb 1695; *d* Paris, bur. 7 Oct 1766). French organist, harpsichordist, conductor and composer. Born into a family of musicians and instrument makers, he studied from 1702 under Nicolas Bernier as a choirboy at the Ste Chapelle, where in 1713 he assumed the duties of auxiliary organist. Around 1729 he was in the entourage of the wealthy patron of the arts, Bonnier de la Mosson, to whom his opp.1 and 2 were dedicated. Serving in the same Parisian household was Jean-Marie Leclair *l'aîné* who, although only two years Chéron's junior and already internationally known, studied harmony and counterpoint with him. A decade later Leclair, with his op.7 violin concertos, acknowledged his debt in a warm letter of dedication to Chéron in which he stated that, 'all the world knows that I am your pupil … If some beauties are found here, I owe them to the learned lessons that I received from you'.

Chéron joined the Paris Opéra in 1734 as harpsichordist, and five years later was promoted to *batteur de mesure*, replacing Rebel. To his conducting duties were added in 1750 those of *maître de chant* of the Opéra, culminating in the position of *inspecteur de l'Opéra*. His regime saw such important premières as Leclair's *Scylla et Glaucus* (1746), Rameau's *Zoroastre* (1749) and *Les Paladins* (1760), Pergolesi's *La serva padrona* and *Il maestro di musica* (both 1753), and Rousseau's *Le devin du village* (1753).

Chéron also appeared frequently playing the harpsichord or organ continuo at the Concert Spirituel and at court. In both places his motets or sacred cantatas for solo voices and orchestra, with or without chorus, enjoyed favour for more than a quarter of a century; they were also well known in the French provinces. His music is of a conservative cast, following Lully for theatre music,

Corelli and Couperin for instrumental music, and Lalande and Campra (Chéron's godfather) for sacred music. His instrumental compositions, of minor importance, survive, while his motets, of historical significance, are lost.

WORKS

Sonates en trio, 2 fl/vn/ob, bc, op.1 (Paris, 1727)
Sonates en duo et en trio, fl, vn, bc, op.2 (Paris, 1729/*R*)
A military ballet in the tragedy Télégone, 1735, lost
Over 24 motets (sacred cants.), lost

NEAL ZASLAW

Cheroubikon [Cherubic Hymn]. The offertory chant in the Byzantine Divine Liturgy. Introduced into the liturgy in the 6th century by the Emperor Justin II, it is sung at the beginning of the Liturgy of the Faithful (after the Dismissal of the Catechumens) and accompanies the Great Entrance when the Holy Gifts are transferred in procession from the *prothēsis* (table of 'preparation') to the altar. For ordinary use the text begins 'Hoi ta cheroubim mystikōs' ('We who mystically represent the Cherubim'), but during Great Lent and Holy Week other texts are used: 'Nyn hai dynameis tōn ouranōn' ('Now the powers of the heavens') at the Liturgy of the Presanctified; 'Tou deipnou sou tou mystikou' ('At thy mystical supper') on Holy Thursday; and 'Sigēsatō pasa sarx' ('Let all mortal flesh be silent') on Holy Saturday.

The Cheroubikon was originally sung in simple style as an antiphon to prescribed psalm verses, but, like the Byzantine communion hymn (*koinōnikon*), it later lost its psalmody and became an independent choral chant. The asmatikon transmits a single, anonymous and incomplete melismatic setting of 'Hoi ta cheroubim' in the 2nd mode plagal; the Palaeologan and later composers produced highly elaborate settings in kalophonic style (*see* KALOPHONIC CHANT) in all the eight modes.

DIMITRI CONOMOS

Cherry, Don(ald Eugene) (*b* Oklahoma City, OK, 18 Nov 1936; *d* Málaga, Spain, 19 Oct 1995). American jazz cornettist and bandleader. He is the father of the African American pop singer Neneh Cherry. He learned to play many different brass instruments and began working professionally, sometimes as a pianist rather than a brass player, in rhythm and blues groups and in a bop quartet, the Jazz Messiahs (1957), which incorporated Ornette Coleman's compositions into its repertory. Cherry rose to prominence as a member of Coleman's groups and played a pocket cornet (calling it a pocket trumpet) on the leader's first seven albums, including *The Shape of Jazz to Come* (1959, Atl.) and *Free Jazz* (1960, Atl.). After leaving Coleman, Cherry worked with Sonny Rollins, touring Europe from 1962 to 1963. In 1963–4, with Archie Shepp and John Tchicai, he was a leader of the New York Contemporary Five, and in 1964 he joined Albert Ayler, touring Europe with both ensembles. In Paris in 1965 he formed a group that recorded his most widely praised albums, *Complete Communion* (1965, BN) and *Symphony for Improvisers* (1966, BN). While pursuing a nomadic life in Europe, Cherry organized an orchestral concert in Berlin (recorded as *Eternal Rhythm*, 1968, Saba MPS), which pioneered the incorporation of non-Western instruments and musical procedures into a jazz context.

After teaching at Dartmouth College in 1970, Cherry was based in Sweden for 15 years, while performing and studying informally throughout Europe and the Middle East. In the late 1970s and early 80s he worked with Lou Reed, the cooperative trio Codona, in which he played several instruments and vocalized, and the band Old and New Dreams (with Coleman's former sidemen). In the mid-1980s he joined an all-star band, the Leaders, and formed his own quintet, Nu. He had been based in New York from 1985 but in 1989 moved to the San Francisco Bay area, where he performed with Peter Apfelbaum's Hieroglyphics Ensemble and founded the Multikulti orchestra and quartet, which toured America, Europe and Japan.

Cherry was one of the most important free jazz musicians. His intentionally 'sloppy' approach to the cornet, and his kaleidoscopic sense for producing ever-changing shades of tone and note placement, fitted perfectly with Coleman's approach, as together they presented an intriguing heterophonic alternative to that which prevailed in the bop style and its derivatives. Later, in his own bands, Cherry demonstrated a brilliant control of motivically linked improvisation.

BARRY KERNFELD

Cherubic Hymn. *See* CHEROUBIKON.

Cherubini, Luigi (Carlo Zanobi Salvadore Maria) (*b* Florence, 8/14 Sept 1760; *d* Paris, 15 March 1842). Italian, composer, conductor, teacher, administrator, theorist, and music publisher, active in France. He took French citizenship, probably in 1794, and was a dominant figure in Parisian musical life for half a century. He was a successful opera composer during the Revolutionary period, and had comparable success with religious music from the beginning of the Restoration. He was made director of the Paris Conservatoire and consolidated its pre-eminent position in music education in Europe.

1. Education and early career in Italy and London (1760–86). In the biographical preface to his work catalogue, compiled in 1831, Cherubini gave 8 and 14 September as his dates of birth, but the records of the baptistery of S Giovanni state that he was born on 14 September (and baptized the following day). He was the tenth of 12 children. It has been claimed that his mother died when he was four years old (Pougin, 1881, p.321) but there is no documentary evidence to support this. He had his first music lessons at the age of six with his father, Bartolomeo Cherubini, *maestro al cembalo* at the Teatro della Pergola in Florence. From 1769 he studied composition with Bartolomeo Felici and his son Alessandro at their school, continuing after 1776 with Pietro Bizzarri and Giuseppe Castrucci. Among Cherubini's first compositions were sections of the mass set for solo voices, chorus and orchestra (1773, 1774, 1775), a cantata, *La pubblica felicità*, performed at Florence Cathedral in 1774 in honour of Duke Leopold of Tuscany (later Emperor Leopold II), and an intermezzo, *Il giocatore* (1775). The surviving works do not affirm the traditional view that compositional teaching in Florence was still in the thrall of a 'medieval, scholastic empiricism' (Picchianti). In the mass movements accentuated string figuration enlivens the score and the texts are set in a mostly homophonic, syllabic style with melismas reserved for soloists. The intermezzo demonstrates that in Florence Cherubini had already absorbed Neapolitan influences, particularly Pergolesi's model of *buffo* style consisting of fast recitative conversation, and arias or duets in which musical structure highlights the drama.

Despite having 18 works to his credit at the age of 18 and a scholarship awarded by the duke, it was through an apprenticeship with Giuseppe Sarti in Bologna and Milan between 1778 and 1781 that Cherubini felt he learnt counterpoint and the style of dramatic music. Sarti, who in those years was commissioned to write a number of operas for Florentine theatres, asked him to contribute the arias for the secondary characters. While in Bologna and Milan, Cherubini also wrote some 20 unaccompanied antiphones and litanies for four, five and six parts in the style of Palestrina, and made a foray into instrumental music with six sonatas for the harpsichord dedicated to a Florentine noble. In these two-movement sonatas (an allegro or moderato followed by a rondo in the same major key) invention remains on a motivic, mostly formaic level, and fizzles out altogether in some sequentially treated figurations.

Between 1779 and 1784 he composed a series of mostly serious operas based on historical plots for various Italian cities, including Alessandria, Florence, Livorno, Rome and Venice. In comparison with the level of musical dramatization already achieved by Traetta and Gluck, Cherubini's scores display his facility for treating predominantly Metastasian texts in a conventional way. As was common practice at the time, he omitted writing out secco recitatives in his scores. Starting with his first opera, *Quinto Fabio* (composed in 1780), he showed a particular interest in accompanied recitative, here inspired by the setting of an *ombra* scene, for which he invented orchestral motifs with incisive rhythmic accentuation. The only surviving aria of the main protagonist displays a complex rondò form in slow–fast tempos where pauses and interludes are imaginatively used with solo instruments. However, in the overtures and arias of these operas almost no attempt is made towards a harmonic or thematic development. His early interest in individual orchestral colouring came to the fore in the *Sinfonia* of *L'Alessandro nell'Indie* (1784) where he incorporated a slow section consisting of viola, cello and bassoon *soli* with accompanying strings; other parts of the opera feature solo instruments. Furthermore, the quotation of a musical passage in a later part of the drama enhances the opera's structure. *Lo sposo di tre e marito di nessuna* (1783), his only *opera buffa* of the time and his only commission from Venice, closely resembles Paisiello's style and, in musically parodying numinous powers, shows a sense of humour, particularly in the ensembles.

During his last years in Italy Cherubini also composed a motet, *Nemo gaudeat* (1781), and a five-part madrigal, *Ninfa crudel* (1783). Both have a basso continuo and counterpoint based on chordal harmony. According to his preface, the latter was composed following the theory of Francesco Vallotti. The musical life of Florence, where Cherubini returned between his opera commissions, was enlivened by the local and visiting nobility and, in particular, by Georg Nassau Clavering, 3rd Earl Cowper (1738–89), a wealthy English patron, who gave frequent concerts and assemblies in his villa, and to whom Cherubini dedicated two duets with two-horn accompaniment. Through Cowper, who negotiated many posts for the King's Theatre (the Italian opera house in London), Cherubini secured a contract in 1784. He was to leave Florence for good in September 1784 and joined the King's Theatre company as house composer (with Pasquale Anfossi) during a disorientating season dominated by litigation.

One of his first pieces as house composer was a pasticcio entitled *Demetrio* (1785), which consisted partly of music from his Italian operas, and featured Girolamo Crescentini and Adriana Ferrarese, the recently appointed singers at the King's Theatre. In the overture to another work written in the same year, *La finta principessa*, the first occurrence of a personal stylistic trait has been detected, namely the introduction of the main theme in one part only, to which is added the bass before the other instruments enter (Hohenemser, 1913, p.70). The opera remains in the mould of Paisiello (although without his dramatic gestures), especially in the central trio of Act 2. Cherubini also held the position of court composer, on a salary of £224 for the winter season of 1785–6, and conducted a number of concerts and operas, such as *Il marchese Tulipano* (a parody by J.A. Gourbillon of Paisiello's *Il matrimonio inaspettato*, 1789), for which he also composed six insertion arias. His own opera, *Il Giulio Sabino* (1786), was based on a two-act adaptation of the libretto which Sarti had successfully set for Venice in 1781. The resulting dramatic oddities were exacerbated by misplaced accompanied recitatives and orchestral textures. *Giulio Sabino* was performed only once, 'murdered in its birth, for want of the necessary support of capital singers in the principal parts' (*BurneyH*).

Cherubini had already spent the summer of 1785 in Paris. He struck up an immediate friendship with Giovanni Battista Viotti, who introduced him to the French queen, Marie Antoinette, the sister of Duke Leopold of Tuscany, and to the writers Jean François Marmontel and Jean-Pierre Claris de Florian, who were later to become his librettists. Undoubtedly, Viotti also had a hand in securing a performance at the Concert Spirituel of Cherubini's

work; the instrumental section was however criticized in the *Mercure de France* for 'incoherence of ideas' and 'little motivic interest' (Pougin, 1881, p.345). After the failure of *Giulio Sabino* Cherubini decided to leave London.

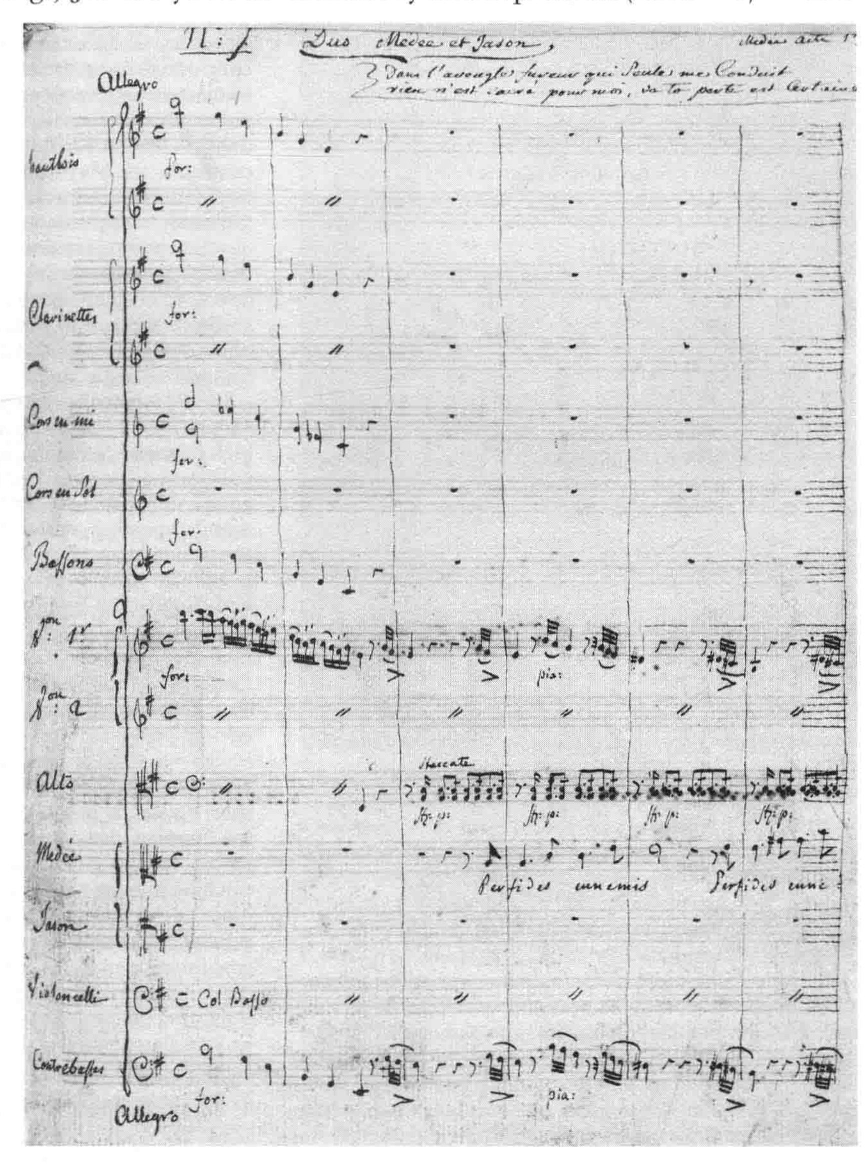
2. Paris: music for the stage and first affiliation with the Conservatoire (1786–1804). From his arrival in Paris in July 1786 Cherubini was to share an apartment for the next six years with Viotti, who having just abandoned the stage at the height of his career gave weekly matinées at home. Now they both formed part of the musical circle of Marie Antoinette at Versailles and, while learning French, Cherubini composed 18 *romances* to Florian's novel *Estelle*. Upon joining the masonic Loge Olympique in 1786 he composed a cantata, *Amphion*, the introduction of which he later used for the overture to his *opéra-ballet Anacréon* (1803). Fulfilling a contract he had signed on his very first journey from Florence to England, Cherubini spent the months from October 1787 to March 1788 in Turin, composing *Ifigenia in Aulide*. This opera received a glowing report in the Paris *Calendrier musical universel* (1789) where it inevitably provoked a comparison with Gluck's version of the plot with which he had started his momentous career in Paris in 1774. Cherubini was credited with almost unheard of effects apparently due to a tighter link between drama and music. While some protagonists – and especially Ulysses – still expressed their feelings in Metastasian-style metaphors, which resulted in formulaic, highly ornamented arias, Ifigenia's gradual emergence as the sacrificial heroine and the despair of her father, Agamemnon, are translated into pathos-laden, arioso declamation enhanced by accentuated ostinato figures in the orchestra.

These compositional features developed into a personal style in *Démophon* (1788), Cherubini's first commission for the Paris Opéra. Marmontel, who since the 1770s had provided Niccolò Piccinni with a series of librettos as well as an aesthetic rationale (insisting on a periodic structure and melodic flow), radically updated Metastasio's popular version of the plot, expressing the dramatic conflicts much more aggressively. The way in which the protagonists veer between submission to and revolt against supernatural powers has made it hard for contemporary as well as later audiences to resist making comparisons with Gluck's operas – *Alceste* in particular. Building on Gluck's expressivity, Cherubini transplanted techniques of motivic development from instrumental music into several arias of *Démophon* (Knepler, 1959, p.7; Döhring, 1975, p.158). The arioso declamation of the protagonists meant that the aria's structure was determined by the orchestra, which developed and varied instrumental figures. The origins of this noticeable stylistic change have been sought in Haydn's 'Paris' symphonies (Reichardt, 96); they have also been described as an aesthetic response to the French Revolution (Knepler, 1959 p.16) and interpreted as a compositional necessity deriving from the seemingly unstructured vocal melody (Dahlhaus, 1985, p.349ff). This orchestral technique, which was simultaneously developed in Paris by Etienne Méhul in *Euphrosine, ou Le tyran corrigé* (1790), just as Mozart had independently used it in *Idomeneo* (1781) and *Le nozze di Figaro* (1786), provided the musical means for the representation of emotions as dynamic phenomena. Still, *Démophon* was coolly received, and was eclipsed by Johann Christoph Vogel's treatment of the same topic, produced posthumously at the Opéra the following year.

With the unlimited financial backing of the king's brother, the Count of Provence, later Louis XVIII, Léonard-Alexis Autié and Viotti founded the Théâtre de Monsieur in January 1789 to bring the comic Italian repertory of Pergolesi, Paisiello, Cimarosa, Gazzaniga and others to Paris. Cherubini acted as musical director and over the next three years composed some 40 insertion arias and ensembles to the works of these composers. The company's orchestra soon gained a reputation as the best in Paris, performing without a *teneur de baton*, and Cherubini was given a contract of 2000 livres for his French opera *Lodoïska*. In January 1791 this costly assemblage of musicians and actors moved to the newly built Théâtre Feydeau. Cherubini signed a four-year contract stipulating that he would continue to compose insertion arias and ensembles for a monthly salary of 500 livres, but would also write two French operas a year for 2000 livres each, and would receive another 4000 livres for each additional opera. In the following years neither side managed to fulfil its obligations.

After the abandonment of his next opera, *Marguerite d'Anjou* (1790), on the theme of royal heroism, *Lodoïska* (1791) became his first international success. Both works reflect the gradual move of the company – and Cherubini – towards a repertory of French plays and operas with spoken dialogues. Based on a contemporary bestselling novel by Jean-Baptiste Louvet de Couvray, which was known to the Feydeau's audiences in Villemain d'Allancourt's highly successful stage adaptation, this heroic comedy was intended to provoke and mock aspirations to high pathos. The evil Dourlinski, whose musical traits later inspired Beethoven's characterization of Don Pizarro (in *Fidelio*), has imprisoned the young Lodoïska in his gloomy castle from which she is liberated not by the heroic pretensions of her lover, Floreski, but by the wit of his servant Varbel and the military might of the Tatar soldiers. Their burning of the castle at the end of the opera, a spectacle created by the stage designers Ignazio and Ilario De Gotti and the technician Boullet, had an awe-inspiring effect on Parisian audiences. To achieve the pathos demanded by the Gothic subject, Cherubini refined his orchestral technique and mixed serious and comic situations in the ensembles. Crudely speaking, he had made striking progress in fusing the traditions of Gluck and Paisiello. Such a synthesis of conflicting styles was probably unprecedented in French opera, and it provoked Fétis to date a 'revolution' in its history with *Lodoïska* (*FétisB*).

In 1792 Cherubini's success came to a halt. The Feydeau administrators had disbanded the French acting troupe after bad reviews, and they were unlucky with the other acting companies employed to fill the gap. The Italian troupe, which had provided the mainstay of the repertory, emigrated after the August insurrection and the operatic genre which Cherubini had helped introduce into France was dropped from the repertory. Ironically, as both Autié and Viotti fled to England, Cherubini was for some months a temporary director of the Théâtre Feydeau, but towards the end of 1792 he took refuge himself, staying for one year at the Chartreuse de Gaillon near Rouen, a residence owned by the theatre architect Victor Louis, and with friends in Le Havre. There he almost completed *Koukourgi*, a mock 'rescue opera' in a Chinese setting which parodied the heroic lover of noble birth – in a much more pungent fashion than Floreski in *Lodoïska*. The



story had been written by Honoré-Nicolas-Marie Duveyrier (1753–1839) who had been known since the 1780s for his political satires. At a time when Louis XVI lost more and more authority, the ridicule of a decadent ruler in *Koukourgi* could hardly have been more pertinent. Indeed Duveyrier's own imprisonment and subsequent flight to Denmark may have been the main reason why this work was not performed. While staying at the Chartreuse Cherubini also worked on his next two operas, *Eliza, ou Le voyage aux glaciers du Mont St Bernard* (1794) and *Médée* (1797).

After his return to Paris in 1794, Cherubini married Anne-Cécile Tourette (1773–1864), with whom he was to have three children. In the same year, *Eliza* was completed. The spectacular effects of an avalanche on stage and musical *couleur locale* form the backdrop for a love-smitten hero seeking suicide in the glaciers. Curiously, Cherubini first composed a tragic ending, although this was converted into a rescue by a community of selfless friars before the opera reached the stage. During 1794 Cherubini gained some much needed financial stability when he became a member of the music band of the Garde Nationale led by Bernard Sarrette, who founded the Conservatoire Nationale de Musique (3 August 1795), an institution where Cherubini, along with Gossec, Méhul, Grétry and Le Sueur, was employed as a teaching inspector. Since one of the conservatoire's tasks was to celebrate the political festivals, between 1794 and 1799 Cherubini composed at least nine hymns, odes and marches for mass choruses and bands, using special instruments (such as the buccin and tam-tam). There are no documents indicating his political views; however, he did conduct a *corps de musique* at the anniversary of the beheading of Louis XVI on 21 January 1796 (Pierre, 1894, p.42). Faced with a massive educational programme but modest resources, in the same year he over-officiously wrote to the general director of public education, Pierre Louis Ginguené, asking whether Napoleon's victorious conquest of Italy could help to bring the exceptional music library of Padre Martini in Bologna to the Conservatoire (letter of 2 July 1796).

While Cherubini contributed to the inspectors' discussions concerning the creation of elementary textbooks for the Conservatoire and began writing solfèges for pupils, he also composed *Médée* (1797). He may have received the libretto as early as 1790 and makes reference to a compositional plan in 1793. Imitating Jean-Marie-Bernard Clement's greater verisimilitude in his play based on the same story (1779), the librettist François-Benoît Hoffmann portrayed Médée as an abandoned mother who commits suicide. Jason's adulterous plans to marry Dirce are gradually destroyed by Médée, whose original hesitation (fig.1) gives way to ruthless revenge. With immense subtlety the composer follows an overall plan in which Médée's loss of identity and abandonment to her emotions are represented without resorting to a moralizing ensemble in the finale. The acceleration of dramatic action suited Cherubini's compositional technique at the time. His apt placing of lyrical, dramatic and declamatory melodies and his developmental orchestral techniques enhanced by jagged rhythms, chromatic harmonies and motivic connections between scenes had found their ideal subject, charting the process of a protagonist falling victim to her emotions and then becoming governed by their intensity (fig.2). No other composer had shed light on crimes of passion in such an unconciliatory manner. Only in this Parisian style of opera could the energy with which Médée pursues her goals be demonstrated as a constituent part of her character. And in Julie-Angélique Scio, Cherubini had a highly dramatic soprano-actress at his disposal, who also created roles in his other operas. Despite widespread praise in the Parisian press, the traditional ending of Médée escaping on a dragon chariot was subsequently reinstated, though without altering the score.

After Cherubini (simultaneously with Méhul) had inaugurated a genre of opera that was both dramaturgically and musically original, his style underwent a radical change. It may have been caused by a shift in Parisian taste in favour of lighter opera and could have been related to political as well as financial problems at the Théâtre Feydeau (whose director Sageret filed for bankruptcy in 1799), but it was perhaps also due to a contradiction or aporia in his compositional technique (Dean, 1982, p.36; Dahlhaus and Miller, 1999, 158ff). Despite his skill in adapting to new demands, Cherubini's three one-act comic operas (*L'hôtellerie portugaise*, *La punition*, *La prisonnière*) (1798, 1799), were unsuccessful. However, his increasing awareness of public demand triumphed in *Les deux journées* (1800) which was to remain in the international repertory for most of the 19th century. Bouilly, who had also written the original text of Beethoven's *Fidelio*, transferred the plot from the contemporary trauma of arbitrary imprisonments to the 17th century. His naive appeal to solidarity and the existence of providence is set in memorable strophic arias and chansons. Reminiscence motifs enhance the tight dramatical shape, as do the ostinato motifs and their dissonant treatment in the ensembles that dominate the last act.

The 56 performances of *Les deux journées* in its first year could not prevent the merger of the Théâtre Feydeau and the Théâtre de l'Opéra-Comique in 1801, following which Cherubini relied on his income as inspector at the Conservatoire. His attempts to become concert director in 1801 failed after just two concerts. In the same year he, together with his pupil François-Adrien Boieldieu and his colleague at the Conservatoire Louis-Emmanuel Jadin, founded the *Journal d'Apollon* to publish *romances* and other vocal works. In 1802 he became a partner, with Méhul, Rodolphe Kreutzer, Rode, Isouard and Boieldieu (mostly colleagues at the Conservatoire) in the Magasin de Musique, their publishing firm, which existed until 1811. In order to combat his ebbing fortunes, Cherubini had his first *opéra-ballet*, *Anacréon, ou L'amour fugitif*, staged at the Opéra in 1803. Miscalculating a certain vogue for anacreontic poetry and its playful eroticism, the work was a complete disaster which Cherubini, however, attributed to the Opéra's blind hostility to his affiliation with the Conservatoire. Instead of providing an aesthetic experience for the audience by way of intensive, meaningful action, *Anacréon* abandons dramatic time in the festivities of a banquet. Ostinato motifs acquire significance through their gestural qualities, and inventive instrumental colouring establishes the sound quality as an independent factor. This special interest in instrumental colour was more strongly developed in a successful ballet for the Opéra, *Achille à Scyros* (1804), which included music by Catel, Méhul, Haydn, Joseph Weigl and Righini. In the same year Cherubini conducted the first Parisian performance of Mozart's *Requiem*.

1. Autograph MS of the opening of the Jason-Medea duet from Cherubini's 'Médée', Act 1, 1797 (US-STu, Department of Special Collections)

3. The years of uncertainty and depression (1805–15). Cherubini's blossoming interest in Viennese music was reciprocated, as six of his operas from the previous decade, as well as operas by Méhul, Le Sueur, Devienne and other French composers, had been recently performed in Vienna to great acclaim. Abandoning a further opera project with Bouilly for fear of the Opéra's hostility, and renouncing Jouy's offer to set *La vestale*, which was passed on to Spontini, Cherubini accepted an invitation to Vienna. He travelled with his wife and youngest daughter to the Austrian capital in June 1805 in the company of Baron Peter von Braun, director of the Hofoper. Cherubini began immediately to direct his own works. He brought a diploma and a medal from the Conservatoire for Haydn, with whom he fostered an affectionate relationship and whose rumoured death earlier in 1805 he had prematurely commemorated in a *Chant sur la mort de Haydn*. He also saw the première of Beethoven's *Fidelio* on 20 November 1805, a week after Napoleon's conquest of the city brought its musical life to a standstill, and he possibly advised Beethoven on how to improve the treatment of the voices (Beethoven owned scores of *Médée* and later, *Faniska*). Napoleon ordered Cherubini to organise and conduct a dozen concerts at his residences in Schönbrunn and Vienna, expressing his wish that Cherubini should return to Paris.

Because of time constraints in Vienna, he only composed *Faniska* (1806), based on a *mélodrame* by Pixérécourt. Although the plot closely resembles *Lodoïska*, the score reflects Cherubini's technical development, notably in the trimmed links between vocal and orchestral parts, the increased variety of vocal and instrumental forms (including a canon) and the search for a Polish tone. With the score of Hummel's *Fantasie* op.18 in his luggage, Cherubini returned to Paris in April 1806. He fell into a severe depression which had manifested itself already in 1801–2 and was to recur at intervals throughout the rest of his life. It crippled his writing for two years, during which he developed an interest in botany, assembled a herbarium, and took to painting cards and fantastic objects. After a long stay at the château of the Prince of Chimay in 1808 and 1809, a request for a mass-setting

2. *Title-page of the full score of Cherubini's 'Médée' (Paris: Imbault, 1797), showing a scene from Act 3*

for the local church reawakened his interest in composition. This large-scale mass (in F major) received at first only a private performance in the prince's Parisian residence, although it was published in 1810 by the Magasin de Musique.

In 1809, Cherubini's *Pimmalione*, with the castrato Crescentini in the title role, was performed for the private entertainment of Napoleon. He also wrote ceremonial works for Napoleon's marriage ceremony with Marie-Louise of Austria in 1810, and for the birth of their son in 1811. If Napoleon's dislike of Cherubini's music had indeed impeded his career during the previous decade, as many biographers since Fétis have stated, he may have regained the emperor's favour by submitting to his musical demands. The plot's artificiality, and the string-dominated orchestra simply supporting a mellifluous vocal line, appear curiously out of date, although the opera features an early example of a *preghiera*. Similarly, the score of *Le crescendo* (1810) harks back to the comic characterization of *Lo sposo di tre* of 1783 (Hohenemser, 1913, p.374) and, according to contemporary reports, the plot caused the bored audience to break into a crescendo of whistles. Shortly afterwards, Cherubini abandoned a new opera, *Nausikaa*, and in 1811 composed a mass (D minor), even larger in scale than Beethoven's *Missa Solemnis*. The mass may have been written with some urgency, for contemporary letters show that Cherubini had grounds to believe that he might become Haydn's successor at the Esterházy court, but the prince appears to have renounced any verbal agreement.

Cherubini spent most of 1812 composing *Les abencérages*, the première of which in April 1813 was attended by Napoleon. In this early orientalist opera, which was removed to the late 15th century, the ideal image of an altruistic, Christian Spanish soldier overcoming the barbaric practices and nefarious infighting of muslim families soon became hard to reconcile with contemporary political realities, when a Spanish uprising supported by English troops forced France to abandon the Iberian peninsula in May–June 1813. But Cherubini's small international success may have been due to the spectacular tableaux, complemented by an ingenious display of instrumental colouring, which seriously delayed the dramatic action. In its structure that anticipated grand opera, Cherubini's symphonic technique appears at times to match the taste of Viennese composers rather than that of contemporary Parisian audiences, who criticized him for lacking a light touch.

In 1813 plans to compose new operas in Naples and Milan came to nothing, probably because of Cherubini's high financial demands and delicate health. His wavering political position reached extremes in 1814: in February, at the command of the Napoleonic regime, he wrote morale-boosting music for the Garde Nationale and contributed to a *pièce de circonstance*, *Bayard à Mezières*; in May he wrote for the victorious Prussians; then in July and August he composed cantatas for the returning Bourbon king, Louis XVIII, who in December nominated him superintendent of the royal chapel and made him Chevalier of the Légion d'Honneur. Meanwhile in London, at the instigation of Clementi and Viotti, the Royal Society commissioned a symphony, an overture and an Italian vocal piece from Cherubini for £200. Only days after Cherubini arrived in London, Napoleon began his short return to power on 1 March 1815. An offer from the Prussian king to become *maître de chapelle* in Berlin, which would include compositional, conducting and teaching duties at the planned new conservatory, was put on hold by Cherubini as he had recently received the equivalent position from Louis XVIII. Hopes for a London performance of *Eliza*, the financial purpose of his trip, did not materialize, and Cherubini succumbed to a new bout of depression (letter of 7 April 1815). In May 1815 he was elected (in his absence) member of the Institut de France.

4. Superintendent of the royal chapel (1815–30). After the final abdication of Napoleon in June 1815, Cherubini contributed two *chants de circonstance* to festivities marking the second return of Louis XVIII. As the budget of the Conservatoire was reduced from 200,000 francs in 1810 to 80,000 francs in 1816, and 31 of its professors were dismissed in a politically motivated purge (Devriès-Lesure, 45), Cherubini was demoted to a professorship in composition. However, his new position as superintendent of the royal chapel, which he shared with Le Sueur and was to retain from 1816 until its dissolution by Louis-Philippe in 1830, gave Cherubini a much needed financial boost (his annual income rose to 14,000 francs) (Pougin, 1882, p.234) and perhaps some spiritual stability.

Even though his masses written in the 1770s diverged strongly from Palestrina's style, Cherubini demonstrated his strong interest in the polyphonic tradition by transcribing a number of compositions by Palestrina, Marcello, Handel, Pergolesi, Jommelli and other authors. The only period in his entire career when he composed no religious music was from 1790 to 1806. However, in 1806 he completed an eight-part Credo *a cappella* for two choruses which, according to his own catalogue, he had already

begun in 1778 while studying with Sarti. Its final massive fugue, which deviates distinctly from the earlier sections, shows Cherubini as a complete master of contrapuntal technique. This fugue was first published in his *Cours de contrepoint et de fugue* (1835), which contained detailed commentaries.

Between 1816 and 1822 he composed religious music almost exclusively. These settings had a tighter structure than his masses of 1809 and 1811 as they were required to be no longer than the spoken prayers (*FétisB*). Thus, he mostly set individual mass movements or sections of movements, motets, Marian and other prayers which were used interchangeably in the services. For the anniversary of the execution of Louis XVI on 21 January 1817 he wrote his first Requiem (C minor) which, contrary to his usual practice, had no soloists. He created a sombre tone from the beginning by reducing the orchestra in the Introitus and Kyrie to lower strings and lower winds, and by setting their parts often in parallel motion to the voices, but his request for extra cellos and double basses for the first performance was rejected (letter of 9 January 1817). He used a tam-tam in the Dies Irae, but he reserved perhaps the most astonishing effect for the Agnus Dei, in which an ostinato accompanies a monotone recitation of the text.

In 1819 he was given the task of writing the Mass (G major) for the coronation of Louis XVIII, which in fact was never performed because the King considered the restoration process too fragile to risk displaying monarchical pomp. He also composed a three-part Mass (A major) for the coronation of Charles X, which was performed in 1825. In these two masses Cherubini seems intentionally to have avoided some of the more refined contrapuntal techniques so ostensibly displayed in his Credo of 1806. More noticeably, he omitted syncopation almost entirely so that the bar-structure and regular metre were preserved. Orchestral figures and motifs rarely exceed the length of a bar so that a much lighter, march-like tone comes to the fore in staccato passages. The vocal parts are usually bound into a homophonic structure and symmetric periods with a rich orchestration either imitating the voices or executing diminished ostinatos. Many general pauses enhance the lucid texture, as do distinct contrasts between the sections. Words and phrases of the Ordinary are repeated out of context, enabling the recapitulation of musical material (e.g. in the Gloria of the G major Mass) or the increase of sequential phrasing (e.g. in the Credo of the A major Mass). Similarly, the same music is reused in different text sections. Independent instrumental motifs occasionally play an equal role in the compositional structure (e.g. in the Agnus Dei of the G major Mass), where they immediately increase the musical effect. Most of these devices clearly enhance the overall musical unity and communicate the religious message. However, some chromatic crescendo passages on an orchestral pedal followed by a drawn out cadence and a recitative-style section are reminiscent of operatic scenes.

In 1834 the archbishop of Paris objected to the performance of the C minor Requiem at Boieldieu's funeral, as it included women's voices. Overcoming this criticism in a way that was highly characteristic, Cherubini resolved in 1836 to compose a second Requiem (D minor) for a male chorus and orchestra. It was first performed at the Conservatoire in 1838, and later at his own funeral. With the exception of a few traditionally forceful sections (such as the Dies Irae and Sanctus) Cherubini used the orchestra more sparingly than in his C minor Requiem. In search of an archaic effect, the Graduale and Pie Jesu are written *a cappella*, while the Agnus Dei has a section in which the text is recited on a monotone. Such conscious reductions of musical means render the sound bare and exhausted. As his sequential development of phrases leads uncompromisingly into harmonically remote areas, the most startling dissonances occur when praying with 'a heart as contrite as ashes'. Although there is a sense of drama when a section seems to act out a conflict between major and minor keys (as in the Hostias et Preces or the Agnus Dei), the effort to sustain hope is overcome by gloomy resignation. Cherubini's attitude to grief in the D minor Requiem is an illuminating contrast to that of Berlioz in his Requiem (1837).

5. Director of the Conservatoire (1822–42). Despite his compositional duties at the royal chapel and his teaching responsibilities at the Conservatoire (which in 1816 had been renamed the Ecole Royale de Musique et de Déclamation) Cherubini attempted unsuccessfully to become director of the Opéra in 1819. This led to tensions with Viotti, who was to hold this position until 1822, the year when Cherubini was finally appointed *directeur* of the Conservatoire with a salary of 8,000 francs (professors usually received salaries between 700 and 3,000 francs, see Devriès-Lesure, 52). He did not succeed in restoring its original name of 'Conservatoire' until 1831. During his tenure Cherubini was under the authority of three kings and seven ministers whose attitudes ranged from total support to petty interference. However, he had total control of the administration, teaching and house rules, supervising their execution down to the last detail, as famously recounted in Berlioz's *Mémoires*.

Since the quality of teaching and administration was in disarray on his arrival, he contributed to four reorganisations of the institution in 1822, 1827, 1828 and 1841. One of Cherubini's first measures was to make all students sit an examination; their number was then reduced by a third to 317 students, of which a third were female. In particular, the number of piano students was reduced from 73 to 30 as Cherubini considered Paris to be 'teeming with pianists' of little prosperity (Devriès-Lesure, 69). By 1840 the overall number of students had risen again to 416, half of which were women.

As his superiors and the public were particularly unhappy about the quality of singing at Parisian theatres, Cherubini immediately reopened the boarding house at the Conservatoire for the training of male and female singers, although in 1826 he closed the women's department as it was 'a constant source of trouble and disagreement' (Devriès-Lesure, 83). Against Cherubini's will, Rossini was appointed general inspector of singing in 1826. A major shake-up of personnel occurred in the following year, when the minister sent five existing professors of singing into early retirement to be substituted by three Italian professors, in the belief that only Italian methods could stave off the decline of French singing. Yet Cherubini, who also faced stiff competition from Choron's Institution Royale de Musique Classique et Religieuse, wanted to retain a diversity of teaching methods. His own proposals for vocal teaching, which were summarized in *Idées sur quelques articles du projet de règlement relatif aux classes de chant de l'Ecole royale de musique* (*F–Pan*), were accepted from 1828 onwards (Devriès-Lesure, 80).

Separate classes for speech, sight-reading and lyrical declamation were created, and later a distinction was introduced between classes for *opéra* and *opéra comique*.

In 1824 Cherubini resisted the ministerial appointment of Habeneck as honorary director of the Conservatoire (which thus became a purely advisory role), despite having previously proposed him as a member of the teaching committee, and despite supporting his promotion as professor of violin in 1825. In 1828 Habeneck founded the Société des Concerts du Conservatoire, and Cherubini was made honorary president. It quickly became renowned for its performances of Beethoven's symphonies and considerably increased Cherubini's own prestige. This foundation had grown out of the annual public performances of students in preparation for their musical career when the Conservatoire's teachers joined their students on the platform.

During Cherubini's tenure classes were created for harp (1825 for men and 1835 for women), double bass (1827), valve horn (1832), trumpet (1833) and trombone (1836), but female students had no access to classes for composition, violin, cello, double bass or wind instruments. He instigated a system of prizes for the end of every year and in 1827 made available 1200 francs to be shared between seven winners. He used his power to find professional engagements for students and, in 1832, succeeded in creating a pension fund for the Conservatoire's employees. To increase the supply of gifted students he instigated the creation of Conservatoire branches in Lille, Toulouse and Marseilles and had a number of *auditeurs* enrolled who were entitled to their own lessons if one of the ordinary students was absent. He resigned on 4 February 1842 because, among other things, he could not persuade the minister to exclude foreign students from certain classes and prizes. Three days later he was made Commander of the Légion d'Honneur.

During this period he returned to opera for the last time with *Ali-Baba* in 1833. The 1000-page manuscript score was the most ambitious he ever produced. The story of a father giving away his daughter in unwanted marriage purely to satisfy his greed is set with particular attention to instrumentation, and with dialogues in recitative or arioso style rather than traditionally extensive solo numbers. Yet the ensembles were not as effectively engaging as the choruses of the people in the political and religious plots of Auber's *La muette de Portici* (1828), Rossini's *Guillaume Tell* (1829) and Meyerbeer's *Robert le diable* (1831), models of grand opera with which *Ali-Baba* was unfavourably compared. Its fairy-tale elements were more suited to *opéra comique* and the ambivalence of some of the protagonists impeded the audience's empathies. Despite a lavish production at the Paris Opéra with Habeneck conducting, Cherubini was rightly so pessimistic about it that he never attended a performance. *Ali-Baba* folded after 11 performances.

3. 'Cherubini with the Muse of Lyric Poetry': portrait by Jean-Auguste-Dominique Ingres, 1842 (Musée du Louvre, Paris)

6. INSTRUMENTAL MUSIC. Just before composing his first and only symphony in 1815, Cherubini wrote his first string quartet. Perhaps he was encouraged by his colleague at the Conservatoire, the violinist Kreutzer, and by the subscription concerts which Cherubini's student Baillot founded with his quartet ensemble in 1814, to acquaint Parisians with the works of the Viennese Classical school. However, as Cherubini's first quartet was not performed until 1826, and as his second was an arrangement of his symphony (which had had no success), with a new second movement substituted in 1829, most of his string quartets were written between 1834 and 1837. Subsequently, he completed only the first of a planned series of string quintets, so this group of chamber music, together with the D minor Requiem, represents the final section of his oeuvre. In a letter dated 8 February 1838, Cherubini declared that he had no intention of writing another symphony for he did not wish to be perceived as competing with the symphonies of Haydn, Mozart and Beethoven.

Following a critical review by Schumann published in 1838, German writers in particular tended to evaluate Cherubini's chamber music techniques in the context of the Viennese school instead of recognizing their debt to the Parisian traditions of the *quatuor concertant* and *quatuor brillant* (Finscher, 24). Thus, the first violin dominates, almost invariably introducing the thematic material, but the other parts provide a harmonic foundation or, more often, participate in establishing and developing the theme. At times a high degree of virtuosity is demanded from all performers; the quartets are thus ostensibly to be played only by a professional ensemble.

Cherubini's quartet style shares with Viennese traditions the symmetric periodicity particularly associated with Haydn. However, his style deviates from Viennese models in the juxtaposition of short themes and motifs, each of which might be developed in any part of the movement, before being contrasted with a new musical idea. The cyclical reappearance of such themes and the often clear demarcation of sections facilitates musical comprehension. Still, this multitude of ideas of uncertain status may seem overwhelming, especially as 'curtain' gestures are often followed by a fugato, a recitative section, a march, dance, arioso, cadenza, or a gesture of high pathos. As such sequential treatment usually employs chromatically consecutive steps, startling harmonic alterations are introduced – usually in the middle two instruments – yet without changes to the movements' simple harmonic structure.

The audience's surprise at being continuously confronted with new musical ideas is effectively heightened by the *imprévu* of harmonic alterations. Combined they prevent the quartets – and the audience – from falling into an all too heavy mood. The perceived lack of 'warmth' is the reverse of a noticeable avoidance of any sentimentality. While it seems appropriate, for example, to identify the *romance* character of the main theme in the Lento of Quartet no.2, it almost immediately disintegrates. The composer's experimental attitude is evident in the Scherzo of Quartet no.4, where major–minor alterations are linked with the statements of two contrasting themes, which subsequently appear in quick succession and in fragmented shape before an operatic coda. In the same movement a *fortissimo* semiquaver unison flourish over 22 bars shows the severe side of a playfulness, whose lighter features come to the fore in the thematic development of the final movement. In a similarly experimental fashion, in Quartet no.6 the openings of all the previous movements are quoted in the finale. In Quartet no.1, his most popular quartet, movements are linked thematically and by emphasizing contrapuntal technique; its Scherzo is a 'Spanish' genre piece with refined texture and colourful instrumentation.

Cherubini's overtures to his French operas became popular concert overtures in their own right during the 19th century. He quickly replaced the Italian overture of *Ifigenia in Aulide* with the French overture from *Démophon*, both of which he composed in 1788. The musical independence and relative technical simplicity of the former stands in marked contrast to the foreboding sound of *Démophon*, for which Cherubini took Gluck as his model. For the first time he employed metrically irregular demisemiquaver figures, which became popular during the Revolutionary period. He usually treated the main motifs of his overtures sequentially, while giving a quasi-vocal theme a subordinate role. In *Eliza*, for example, the main motif consists of two parts which are later developed separately. In *Les deux journées*, the unifying feature of the overture is a dotted rhythmic impulse, while the motivic content is much reduced. The overture to *Anacréon* introduces two themes which are subsequently combined. Cherubini's interest in specific instrumental colours which is already noticeable in his use of the horns in *Lodoïska* appears to outweigh his dramatic concerns by the time of *Anacréon*.

The instrumental music for *Médée* clearly surpasses that of the other operas, not least because Cherubini wrote introductions to all three acts. The main musical ideas of the overture consist of motifs which are brought to the listener's attention by their dynamic intensity before they are replaced by other equally powerful figurations. To capture Médée's growing obsession with violent revenge the second act is preceded by musical soul-painting spun from one motif. The first part of the third introduction omits any motivic content to demonstrate the flux of emotion in the purest possible fashion, whereas the second part is a pantomime to accompany Médée's fateful gift being delivered by her children to her rival. Thunder, imitated in the music, inspires the audience's awe.

7. Pedagogical works and other writings. While at the Conservatoire, Cherubini composed a substantial number of figured basses, canons, fugues and, particularly after his appointment as director, solfège exercises for semestrial exams and competitions. He also participated in the highly learned debate at the Conservatoire concerning the adoption of official teaching methods with which the Conservatoire hoped to overcome the idiosyncratic approaches prevalent in traditional teaching.

In 1801 he wrote a letter, with Gossec, Méhul and Martini, defending the Conservatoire's teaching against Le Sueur's public criticism and in 1802 he wrote an extensive report in support of Catel's *Traité d'harmonie* (1802). In these years he also collaborated on teaching manuals published by Gossec, and wrote a substantial evaluation of the oeuvre of Méhul (who in the last decade of his life lived with Cherubini's sister-in-law); his discussion of their stylistically similar operas of the 1790s can be read in part as a criticism of his own style.

Yet Cherubini's main theoretical contribution to the Conservatoire's teaching was his *Cours de contrepoint et de fugue* (1835). He defined his theory as 'modern strict counterpoint', that is to say, its basis was, firstly, the aeolian and ionian mode, representing the minor and major scale rather than the multitude of Medieval and Renaissance modes, and, secondly, the highly restrictive rules of vocal polyphony prescribed by some 16th-century theorists. Modelled on Fux's species counterpoint, the treatise presented a series of primarily technical exercises in voice leading, in which the rules on dissonances became progressively flexible to assimilate existing modern compositional techniques. Through Cherubini this understanding of counterpoint, which had been developed in the Italian tradition of Sarti and Martini, became the official counterpoint theory in 19th-century France (Groth, 81).

8. Reputation. When reading Cherubini's early scores (which he kept from view during his lifetime), his student Fromental Halévy commented that 'nothing indicated the genius which was to reveal itself later' (Pougin, 1881, p.323). Totally involved from an early age in the world of Italian music, Cherubini profited immensely from moving abroad. He first absorbed the compositional techniques of Parisian opera (Gluck, Piccinni, Grétry, Méhul and others), and then studied the Viennese Classical school and, after the turn of the century, Renaissance polyphony. He developed an independent style based on these models in his church music, which was highly influential during the 19th century, and in his string quartets, which remained mostly unknown. Over the last 20 years of his long, active life he proved to be a highly efficient administrator who gave the Conservatoire a sense of stability and a European reputation.

However, reception history demonstrates the negative aspect of his international career: Cherubini did not fit into the national schools which during most of the 19th and 20th centuries have been seen as boundaries in the work of conductors, orchestras, scholars, governments and patrons. His oeuvre 'lacks national identity' (Della Croce, i, 18). That the relevant countries did not compete in taking responsibility for his work is illustrated glaringly by the fate of his immense autograph collection which was eventually bought for the Berlin State Library in 1878 by the German government, encouraged by a glowing report from the Bach specialist Spitta and the support of Joseph Joachim. While printed copies of his works were scattered across Europe, the majority were left unpublished, and attempts to compile a collected edition were unsuccessful, largely because his oeuvre gradually

dropped out of the repertory. During World War II the autograph collection was moved out of Berlin and remained partly inaccessible until the end of the Cold War.

In the 20th century the Viennese Classical school was still the paradigm for the evaluation of 19th-century composers, and Cherubini scholars have often felt compelled to praise defiantly the musical values of a composer to whom very few wished to listen. They invariably remind their readers that between 1817 and 1823 Beethoven repeatedly called Cherubini the greatest living composer and that Brahms considered *Médée* the epitome of dramatic music, as if the praises of the great could still sway the taste of the many. Arthur Pougin's study from 1881–2 was based on the most thorough knowledge of historical sources, while Hohenemser's book of 1913 was written with the most complete knowledge of the scores. However, it has been independent-minded musicians such as Toscanini, the circle around the Maggio Musicale Fiorentino in the 1950s (including Callas), the Melos Quartet and Muti who have stimulated interest in Cherubini's oeuvre over the last 50 years.

No other composer at the end of the 18th century (except perhaps Méhul) dared to impress upon the audience the dark side of human emotion so radically. The compositional complexity reached by the time of writing *Médée* was succeeded partly by Cherubini's return to a simpler style, evidenced by his life-long predisposition for *romances*, and partly by his development of contrapuntal techniques in his religious music and string quartets. His life and work under a succession of regimes present one of the earliest historical cases for studying music as a field of conflict between an unquenchable search for self-expression and the duties imposed by state employment. Constant demands from the king's chapel, for example, resulted in his often combining new material with old. A very different work concept emerges from that associated with Viennese composers.

Once Cherubini had settled in Paris, his career soon became dominated by the quickly changing musical demands that accompanied the political developments following the Revolution. This is reflected in the large number of abandoned projects during the 1790s. He survived the political upheavals probably because of his versatility, for example, he conducted music for the celebration of the beheading of Louis XVI in 1796 and wrote the C minor Requiem for his memorial service in 1817. However, the concern for the welfare of his staff at the Conservatoire shows a sense of responsibility grounded perhaps in his own experience of high inflation and loss of income during his career. Jean-Auguste-Dominique Ingres reported that when he invited Cherubini in 1841 to see his portrait, the composer looked at it for some time and left without uttering a word. The pictorial apotheosis of an artist protected by the muse Euterpe seems a far cry from the composer's real life in which, according to contemporary accounts, an obsessive pedantry was perhaps his strategy to keep *ennui* at bay. Still, composing may indeed have been his salvation, for a little later he sent Ingres a canon, 'O Ingres amabile', which was to be Cherubini's last work.

MICHAEL FEND

Chérubini, Méhul et Cie. *See* MAGASIN DE MUSIQUE (ii).

Cheslock, Louis (*b* London, 25 Sept 1898; *d* Baltimore, 19 July 1981). American composer, violinist and writer on music. He came to the USA as a child and acquired citizenship through his father's naturalization. He graduated from the Peabody Conservatory in the violin (1917), harmony (1919) and composition (1921) and was appointed to the theory and composition faculty in 1922, having been a violin instructor in the school's preparatory department for six years; he remained there until his retirement in 1976. In 1964 he was awarded the DMus by the Peabody Institute. For 21 years (1916–37) he was a violinist in the Baltimore SO, serving for five years as assistant concertmaster and conducting his own works on a number of occasions. He participated in H.L. Mencken's Saturday Night Club from 1928 to 1950.

Cheslock's compositions have been widely performed. Neo-romantic in style, they contain a rich and varied harmonic language, expansive melodic lines and distinctive rhythms and meters. Although he preferred traditional forms and procedures, from the 1940s Cheslock's works incorporated jazz elements, whole-tone and polytonal sonorities and aleatory and dodecaphonic techniques. He wrote an *Introductory Study on Violin Vibrato* (1931), numerous magazine and newspaper articles, and edited *H.L. Mencken on Music* (1961).

SAM DI BONAVENTURA

Chess. American record company. It was established in 1950 by brothers Leonard and Phil Chess who had bought out their partners in the Aristocrat label, founded in 1947. The new label concentrated on blues, and included recordings by Muddy Waters, Howlin' Wolf, John Lee Hooker, Jimmy Rogers, Willie Mabon and Eddie Boyd. A sister label, Checker, began in 1952 with a similar policy, and its catalogue included Little Walter, Lowell Fulson, Sonny Boy Williamson 'II' and (briefly) Elmore James. Two leading African-American pioneers in the transition to rock and roll, Chuck Berry and Bo Diddley, were on Chess and Checker respectively from 1955. Some white artists were also recorded, notably Bobby Charles. The labels' doo-wop acts included the Moonglows and the Flamingos. In 1955 Argo was formed as a subsidiary label for jazz. Recordings for Chess were made by Buddy Guy, Otis Rush (both from 1960) and Koko Taylor (1967), and for Checker by Little Milton (1961). Despite such signings, the decline in the African-American market for blues affected the company adversely and it was sold to GRT (General Recorded Tape) in January 1969. When Leonard Chess died later that year, his son Marshall became president, with Phil Chess as vice-president. After both had left, Chess was acquired by All Platinum Records in 1975 and subsequently by Sugar Hill before being purchased by MCA in 1986; all produced reissues from the back catalogue.

HOWARD RYE

Chester. City in England. The former medieval monastery of Chester became a cathedral church in 1541 and among the more notable of its organists have been Robert White (1567–*c*1570), Robert Stevenson (*c*1570–*c*1600), Thomas Bateson (1599–1609) and J.C. Bridge (1877–1925). The madrigalist Francis Pilkington was a 'conduct' (lay clerk) of the cathedral from 1602 to about 1612, and then a minor canon until his death. William Lawes was killed at the siege of Chester in 1645 while fighting on the royalist side in the Civil War. Charles Burney was a schoolboy at the Free School (later the King's School, Chester), and occasionally deputized for Edmund Baker, then the cathedral organist.

The city was on the route from London to Dublin, and here Handel stayed for several days at the Golden Falcon in November 1741 waiting for his ship to Ireland. Burney, in his 'Sketch of the Life of Handel' prefixed to his *Commemoration of Handel* (1785), tells how the parts of *Messiah* were tried over in Chester at this time; the reliability of his recollection has, however, been called into question (see D. Burrows, *ML*, lvi, 1975, p.323).

In 1772 Chester joined the number of provincial centres holding 'music meetings' or festivals when a four-day event was organized by Edward Orme, the cathedral organist, who had already promoted concerts in the city. The conductor was William Hayes; on three mornings in the cathedral Handel's *Messiah*, *Samson* and *Judas Maccabaeus* were performed, and on one evening a

'Concert of Select Musick' was given in the Exchange Hall. The soloists in the oratorios included 'the two Miss Linleys' (Elizabeth and Mary), and at the secular concert 'Mr [Thomas] Linley, Jnr, distinguished himself as one of the greatest masters of the Violin which this nation has produced' (*Chester Courant*, 23 June 1772). Further festivals were held in 1783, 1786, 1791, 1806, 1814, 1821 and 1829. Like other such events elsewhere in the provinces at that time, these conformed largely to the pattern by then regular at the Three Choirs Festivals, with their emphasis on the cathedral performances of Handel's music, miscellaneous evening concerts in the city, and balls and social events. Similar leading vocalists and orchestral players to those who performed at Gloucester, Hereford and Worcester were also found at Chester, but the conductor, by contrast, came from London, the festival of 1783 being conducted by Knyvett and the last four festivals by Greatorex. (For fuller details, see 'Chester Musical Festival', *Grove5*.) On the initiative of J.C. Bridge, festivals at Chester based in the cathedral were reinstated in 1879, and were held triennially up to and including 1900, all conducted by Bridge. Special organs were built for some of the festivals, notably one in 1829 by Samuel Renn; it is now lost, but most of the pipes are preserved in the Netherlands. The Chester SO, founded by Aidan Woodcock in 1966, participated in the festivals but was disbanded in the 1980s. Other performing groups include the Chester Cathedral Choir, the Chester Bach Singers and the St Cecilia Singers.

The practice of holding music festivals in conjunction with performances of the Chester Mystery Plays continued until the 1970s. Since then, mystery plays have been performed separately every five years. The Chester Summer Music Festival was established in 1977 and is held each July for two weeks; it has its own choir and orchestra and also brings guest choirs, orchestras and soloists to the city. It has commissioned works by prominent composers including Richard Rodney Bennett (1984), Odaline de la Martinez (1985), Judith Bingham (1991) and John Tavener (1992). In 1996 an International Mozart Festival was organized under the direction of H.C. Robbins Landon.

Stray references survive to the band of three or four waits which the city of Chester employed from the 15th century to the 17th. The city museum possesses a celebrated quartet of recorders by Bressan – treble, alto, tenor and bass – and a further alto one in E♭ by the same maker. In 1684 'Father' Smith built a one-manual organ of ten stops, including a trumpet, for the cathedral at a price of £310 (see W. Shaw, *The Organ*, li, 1971–2, p.26). In the second half of the 18th century Snetzler added a new trumpet stop and a choir organ, and in this form the instrument did duty until 1844, when it found its way to St Paul's Anglican Cathedral, Valletta, Malta. Gray & Davison's 1844 instrument, which replaced it, was removed by George Gilbert Scott in his monumental restoration of the cathedral. A new organ was built by Charles Whiteley and Co. of Chester in 1876; a rebuilding by Wm. Hill & Son in 1910 was notable for an early form of electro-pneumatic action which, powered by a car battery, continued to work reliably until 1969, when Rushworth & Dreaper rebuilt the organ. A series of weekly recitals was inaugurated in 1973, and continues to attract large audiences, with performers from around the world.

WATKINS SHAW/ROGER FISHER

Chester, J. & W. English firm of music publishers. It was founded in Brighton by John Chester and his son William as a retail music shop in 1874, when they took over the branch office of Augener which John Chester had opened in 1860 or 1861. They established a reputation for service, and maintained both a large stock and a comprehensive lending library. In 1915 the firm was bought by Otto Marius Kling, and headquarters were set up in London, the Brighton house becoming a branch that was eventually sold. In addition to acting as agents, particularly for French and Russian publishers, the firm began its own publishing activities at this time, and soon entered into contracts not only with English composers such as Bantock, Bax, Lord Berners, Goossens and Ireland, but also with foreign composers such as Casella, Falla, Malipiero, Poulenc and Stravinsky. A small periodical, *The Chesterian*, was started in November 1915, mainly as a publishing bulletin; in 1919, when Georges Jean-Aubry was appointed editor, the magazine began to publish articles by an international team of contributors. Although interrupted by World War II, it was revived in 1947 and continued until 1961. Among present-day composers in the firm's catalogue Peter Maxwell Davies, John Tavener, Robert Saxton, Anthony Payne and Geoffrey Burgon are prominent, while educational music and Catholic church music have long been strongly represented. From 1957 the firm was linked with Hansen and other Scandinavian publishers, in addition to having ties with the Polish state publishing house through issuing works by Lutosławski. In 1989 it was taken over by Music Sales, and its hire library, now combined with that of Novello, is among the largest in Britain.

ERIC BLOM/PETER WARD JONES

Chester plays. One of the four principal cycles of medieval English religious plays. The Chester cycle exists in five manuscripts dating from the period 1591–1607. All are antiquarian compilations, apparently based on the texts of a now lost mid-16th-century exemplar, perhaps the city's official copy. A Corpus Christi play was performed in Chester at least as early as 1422, with individual pageants produced by the city guilds. In or before 1521 the play was transferred to Whitsunday, and ten years

later the 25-pageant cycle was distributed over a three-day period, probably the Monday, Tuesday and Wednesday in Whitsun week, with performances at four stations. The last performance was probably at Midsummer 1575, when material offensive to Protestants was omitted.

Vocal music is required by some 30 cues. Play 2, the Drapers' pageant of Adam and Cain, requires 'heavenly minstrelsy'. The main purpose of this music is to represent heaven and, by extension, God's heavenly messengers and earthly agents; but, as in some other plays, the misuse of music shows the performer to be an ungodly person. A second function of the music is structural, marking entrances, exits and the transition from one scene to another. Most of the text incipits can be identified as liturgical items, presumably intended to be sung to chant. In the latest manuscript (*GB-Lbl* Harl.2124, dating from 1607; *see* MEDIEVAL DRAMA, §III, 3, ex.20), the Painters' play of *The Shepherds* (play 7) includes a single line of measured music for the first part of the angelic annunciation to the shepherds, 'Gloria in excelsis Deo'. Stevens considered this to be monophonic (1958, p.81; *Grove6*), but it could be a tenor line from a polyphonic setting of the mid-16th century (see Rastall, 1985, p.96, for a reconstruction).

RICHARD RASTALL

Chest of viols. A term used, particularly in 16th- and 17th-century England, for a box containing viols (usually six), matched in power, size and colour, and used for chamber music. It normally comprised two trebles, two tenors and two basses, or occasionally two trebles, three tenors and one bass, the bass being properly twice as long in the string as the treble. These sets of viols were carefully fitted into a 'chest', which seems to have been a shallow vertical press with double doors. Thomas Tudway, in a letter addressed to his son, printed in Hawkins's *General History* (ii, 686n.), described it as 'a large hutch, with several apartments and partitions in it; each partition was lined with green bays, to keep the instruments from being injured by the weather'. When additional instruments were purchased, it was sometimes necessary to have the chest enlarged by a carpenter, as in the following payment in the Cecil family accounts for 1607: 'Item: for carrying the viol chest to the joiners to have the lyra and the treble viol fitted in it – 6d'. In 17th-century usage, the term 'chest' sometimes signified merely a 'set' or 'consort' of viols, and not the piece of furniture in which they were housed. It is often difficult to decide which sense is meant. In 1659, Sir Peter Leycester wrote a memorandum under the heading: 'Concerninge the Chest of Violes now in my Custody'. In the course of the memorandum, however, he refers only to a 'set': 'there being seven Violes in all belonging to the Set, viz two Trebles, two Tenours, and two Basses, & one Lyro-Viole'.

In a well-known passage in *Musick's Monument* (p.245), Thomas Mace said of the 'Press for Instruments', which formed a conspicuous part of the furniture of his elaborately designed music room:

> First see that it be conveniently large, to contain such a number as you shall design for your use, and to be made very close and warm, lyn'd through with bayes, etc., by which means your instruments will speak livelily, brisk and clear... Your best provision, and most complete, will be a good chest of viols, six in number, viz. two basses, two tenors, and two trebles, all truly and proportionably suited... Suppose you cannot procure an entire chest of viols, suitable, etc., then thus: endeavour to pick up, here or there, so many excellent good odd ones, as near suiting as you can, every way, viz. both for shape, wood, colour, etc., but especially for size.

Mace's press for instruments included, besides the chest of viols, a pair of violins, a pair of 'lusty full-sized theorboes' and three 'lusty smart-speaking' lyra viols (*see* LYRA VIOL), the whole constituting 'a ready entertainment for the greatest prince in the world'.

HOWARD MAYER BROWN/IAN WOODFIELD

Chetham [Cheetham], **John** (bap. Almondbury, Yorks. ?8 June 1688; bur. Skipton, 26 June 1746). English psalmodist. Almondbury parish records show two baptisms of John Chetham, son of James Chetham: one on 26 December 1687, the other on 8 June 1688; presumably the first infant died soon after he was baptized. Axon printed a letter of 1752 by William Chetham giving details of the writer's father, John Chetham; it is not certain, however, that this is John Chetham the psalmodist. The only certain facts about Chetham are his appointments as Master of the Clerk's School, Skipton, on 7 July 1723 and curate of Skipton on 4 February 1741 at £30 a year, and his burial.

Chetham's importance in English parish church music is considerable, although resting on a single work: *A Book of Psalmody*, published in Sheffield in 1718, but advertised in the *Nottingham Weekly Courant* as early as 27 February 1717. It had reached its 11th edition by 1787 and had become enormously popular in the north of England. Its contents were rifled for dozens of other collections. At Halifax Parish Church it had become such an institution by the 19th century that successive organists retained the name while revising the contents almost out of recognition. Thomas Stopford (organist 1766–1819) issued a revised edition entitled *Sacred Music, by John Chetham* in 1811. His successor John Houldsworth (organist 1819–36) compiled a new, greatly revised edition, with full organ accompaniments, in 1832, which became known as 'Houldsworth's Cheetham's Psalmody' and went into at least 12 editions. Joseph Frobisher (organist 1838–62) issued a supplement. By the time 'Pohlmann's Cheetham's Psalmody' came out in 1879, little was left except the name, but the contents had survived elsewhere. Three of Chetham's

anthems, *I heard a voice, O give thanks* and *Sing we merrily*, were copied from one parochial collection to another, but the original source was forgotten. Two of his hymn tunes appeared in *Hymns Ancient and Modern* and are still current.

A Book of Psalmody is therefore a representative psalmody, important at a time when many of the clergy disapproved of parish choirs and elaborate music. Chetham explained:

> The design of this undertaking is to better and improve this excellent and useful Part of our Service, to keep up an Uniformity in our Parish Churches, and bring them as much as may be, to imitate their Mother Churches the Cathedrals.

To this end Chetham provided psalm tunes, both plain and florid, and simple anthems, such as had appeared in Henry Playford's *Divine Companion* (1701) and in the collections of John Bishop and of James and John Green; some were taken from these collections, without acknowledgment. The anthems are all of the 'parochial' variety: the tenor leads, and makes an effective duet with the bass, but the partwriting in the treble and alto is often anomalous. Chetham stated that the music 'may be Sung in Three and Two Parts, without any Disallowances'. Some of the harmonies, in both tunes and anthems, are archaic, even modal. Rhythms are free, and often incorrectly notated. Chetham did not claim to have composed any of the music. About half of it had not been printed before, but oral tradition, as well as manuscript music, played a significant part in the transmission of parish church music at this date. It is likely that most of the new music originated in the West Riding of Yorkshire.

Chetham took one further step in the 'cathedral' direction by introducing, for the first time, harmonized psalm chants for the canticles. Like many features in his book, this was copied in later collections, especially in the north of England, and there is reason to believe that psalms were chanted in many parish churches in that region.

NICHOLAS TEMPERLEY

Chetwoode, Robert (*fl* 1622). English composer. Four dull fantasias for treble, tenor and bass viols by him survive in manuscript (*GB-Lbl* Add.40657–61; ed. in B. Capleton: *Mr Chetwoode: Four Fantasies for Three Viols*, Oxford, 1995). The composer may perhaps be identified with the 'Mr Robert Chetwode' to whom Thomas Tomkins dedicated the 13th of his *Songs of 3. 4. 5. and 6. parts* (London, 1622).

ANDREW ASHBEE

Cheute [chute] (Fr.: 'fall'). A term used in French Baroque music for an appoggiatura or note of anticipation; it is also found in keyboard music for a passing note or acciaccatura used as an ornament in an arpeggiated chord. *See* ORNAMENTS, §7.

Chevalet (Fr.). *See* BRIDGE.

Chevalier [Chevallier]. More than 12 French musicians in the 16th–18th centuries bore this surname. Notably among the Chevalier family, a Charles (*b* 1557) was oboist to the king in 1596 and composed *ballets de cour*; Nicolas (*fl* 1626–31) contributed to Ballard's *Tablature de luth de differens auteurs* (RISM 1631[6]). The family Chevallier had four violinists at the royal court. Several other court musicians in the 16th and 17th centuries may be related to these families. Perhaps the most prominent musician to bear the name was the singer Marie-Jeanne Fesch Chevalier, a pupil of Royer. She was a member of the Académie Royale de Musique and enjoyed success in the operas of Lully, Rameau and others in the mid-18th century. For further details see M. Benoit, ed.: *Dictionnaire de musique en France aux XVIIe et XVIIIe siècles* (Paris, 1992).

IRVING GODT

Chevalier, Maurice (Auguste) (*b* Ménilmontant, 12 Sep 1888; *d* Paris, 1 Jan 1972). French singer and actor. He left school at 11 to become an electrician and soon thereafter became an acrobat, until an injury forced him to pursue singing and dancing instead. In 1900 he made his début at the Café des Trois Lions as a singer and comedian. His song-and-dance routines made him popular at local cafés and music halls where he was known as 'Le Petit Chevalier'. Through a three-year contract at the Folies Bergères, where he began a ten-year partnership both on and off stage with the star Mistinguett, he developed the sophisticated and charismatic persona that was to make him popular on stage and in film. He learned English from a fellow POW during WWI, after which he successfully resumed his music-hall career and appeared in silent films and theatrical productions. His trademark straw hat, bow tie and cane complemented the elegant grace and joie de vivre that would come to personify French charm and sophistication. The advent of sound film allowed his charisma and talent to come through, and in 1928 he signed a contract with Paramount.

His first Hollywood film was *Innocents of Paris* (1929) in which he sang his trademark song *Louise*, and he became an international star in Lubitsch's *The Love Parade* (1929) with Jeanette MacDonald. For the next five years Chevalier defined sophisticated Hollywood musicals, with films such as *Love Me Tonight* (1932) and *The Merry Widow* (1934). Seeking to expand his acting range, he returned to France in the 1930s, and for the next two decades appeared in several important films, notably Clair's *Le silence est d'or* (1947), his greatest dramatic performance. He was made a member of the Légion d'Honneur in 1938. He went into seclusion during WWII, though he agreed to perform in Germany in exchange for the release of French POWs. After the war Chevalier took his one-man show around the world, returning to Hollywood in the mid-1950s. At 70 he made a comeback in musicals, notably with Wilder's *Love in the Afternoon* (1957) and *Gigi* (1958), a highlight of his career. He received a special Academy Award in 1958. His last performance was at the Théâtre des Champs-Élysées in 1968. His memoirs include the eight volumes of *Ma route et mes chansons* (Paris, 1946–63).

MARK BRILL

Chevardière, Louis Balthazard de la. *See* LA CHEVARDIÈRE, LOUIS BALTHAZARD DE.

Chevé, Emile Joseph Maurice (*b* Douarnenez, 1804; *d* Fontenay-le-Comte, 26 Aug 1864). French physician. He abandoned a medical career to devote himself to the development of a method of teaching sight-singing founded on that of Pierre Galin. Working with his wife and with his brother-in-law Aimé Paris, Chevé helped to elaborate the GALIN-PARIS-CHEVÉ METHOD of which he became the most active propagandist.

BERNARR RAINBOW

Chevé method. An abbreviated name for the GALIN-PARIS-CHEVÉ METHOD of teaching sight-singing.

Chevillard, (Paul Alexandre) Camille (*b* Paris, 14 Oct 1859; *d* Chatou, Paris, 30 May 1923). French conductor and composer, son of Pierre Alexandre François Chevillard. He studied the piano at the Paris Conservatoire with Georges Mathias, winning a *second prix* in 1880, but had no formal training in composition. In 1882 he completed his first work, a piano quintet, and shortly afterwards his conducting career began when he became choral director for the Concerts Lamoureux, in which capacity he assisted in the first Parisian performance of *Lohengrin* in 1887. In the 1890s he frequently deputized for Lamoureux (his father-in-law), particularly after 1897 when Lamoureux was touring Europe. On the latter's death in 1899, Chevillard assumed permanent directorship of these concerts. His conducting was praised for its warmth, vigour, delicacy and precision, and in 1905 he was selected, with Strauss and Mahler, to conduct the first Alsace-Lorraine music festival. In particular he promoted the music of German composers (mainly Beethoven, Schumann and Wagner) and the Russian nationalists, but he had little appreciation of his younger contemporaries in France; he expressed a bias towards 'absolute' music, believing that dramatic music belonged in the theatre. In 1914 he was named music director of the Opéra. He founded the Société Beethoven in 1889 and the Chevillard–Hayot–Salmon Trio in 1895. He was named a Chevalier of the Légion d'Honneur in 1903, appointed professor of instrumental ensemble music at the Conservatoire in 1907 and became president of the Société Française de Musique de Chambre in 1916.

His compositions include numerous chamber works (one of which won the Chartier Prize in 1903), orchestral works, incidental music for Edouard Schuré's *La roussalka*, piano pieces and songs. Gustave Ferrari described Chevillard's music as 'personal, solid and refined'. He also published piano transcriptions of music by Bach, Handel, Wagner and others.

WORKS

printed works published in Paris, unless otherwise indicated

La roussalka (incid music, E. Schuré), Paris, Nouveau, 23 March 1903

JEFFREY COOPER

Chevillard, Pierre (Alexandre François) (*b* Antwerp, 15 Jan 1811; *d* Paris, 18 Dec 1877). Belgian cellist, father of Camille Chevillard. At the age of nine he entered the Paris Conservatoire, where he remained until 1827 when he won the *premier prix* for cello; his teachers included Norblin. Appointed solo cellist at the Théâtre du Gymnase, he continued to study theory with Fétis and made a number of very successful concert tours; in 1831 he became solo cellist at the Théâtre Italien. In 1835 Chevillard formed the Société des Derniers Quatuors de Beethoven. The first quartet associated with the society (which included Alard, Vignier and Sabatier) suffered from a lack of individual intelligence in its efforts to promote Beethoven's late quartets; but Chevillard's artistry and enthusiasm eventually prevailed, and after 1849, when Maurin and Mas had replaced Alard and Vignier, the quartet progressed from private to public performances, starting with an appearance at the Salle Pleyel. In 1855–6 they toured France and Germany, were well received, and particularly attracted the interest of Berlioz. Chevillard succeeded Vaslin as professor at the Paris Conservatoire on 1 January 1860, training a number of distinguished cellists.

A significant figure in the 'Paris School', he was considered a fine musician as well as a good technician. He played on an important Stradivari dated 1726. Chevillard's compositions, apart from a string quartet, include a concerto, *Morceaux developpés* and *Quinze mélodies* for cello and orchestra, other cello solos and a *Méthode complète de violoncelle* (Paris, *c*1850).

Chevreuille, Raymond (*b* Watermael-Boitsfort, Brussels, 17 Nov 1901; *d* Montignies-le-Tilleul, 9 May 1976). Belgian composer. Having had to abandon his studies at

the Brussels Conservatory, Chevreuille was self-taught. From 1934 his works were regularly performed at ISCM festivals and in 1950 he was awarded the Italia Prize for *D'un diable de briquet* op.45. His Second Piano Concerto was the set work for the Queen Elisabeth International Competition in 1952, and in the following year the Koussevitzky Foundation commissioned the *Symphonie printanière* op.60. In 1936 he worked as an acoustical engineer with Belgian radio. In 1974 he was elected to the Belgian Royal Academy.

Chevreuille destroyed his earliest attempts at composition, influenced by Richard Strauss and Stravinsky. His First String Quartet op.1 bears the imprint of Berg, with whom Chevreuille had affinities of temperament. Nevertheless, he sought out his own style, and if by 1935 he had composed little, it was because his work was achieved only with difficulty. Rejecting all preforming techniques, Chevreuille tended to begin with a 12-note series so as to draw from it a brief but characteristic theme divided into two asymmetrical elements. He would work this theme either by varying it, though without rendering it unrecognizable, or by altering its sonority through an interplay of timbres. Once this development was over, he would start on another theme, working it in a similar manner. This often resulted in a characteristic absence of formal unity, since the composer deliberately juxtaposed or alternated different themes. Chevreuille's music is not truly atonal, for the harmonic texture discloses that he gives a certain predominance to one of the 12 notes. Besides this, he does not employ the series exclusively; in a single work there may be tonal, polytonal and atonal passages, yet the whole never appears incongruous. Rhythm is relatively simple; clearly marked accents punctuate the fast movements, while the slow movements are more fluid.

His works create a tender and poetical atmosphere (notable in the *Evasions* op.25), which may develop towards carefree joy or pessimistic anguish. Chevreuille rarely combined these two extremes in a single work, generally preferring to attenuate the violent contrasts shown in the Second Symphony op.30, by adopting for each composition a predominant tone which is sometimes upset by the intervention of elements having an opposite tendency. The ethos of a work having once been determined by the choice of themes, Chevreuille applied himself to the task of working it up to a paroxysm. Instrumental colour also contributes towards creating a work's atmosphere. The string quartets are usually of a solemn pathos while the concertos for horn and trumpet bask in joy and optimism. Through his work as an acoustical engineer, it had been day-to-day practice that acquainted Chevreuille with the resources of the orchestra – resources he had an admirable ability to manipulate. His unceasing quest for renewed and more intensified expressivity led him to demand of the performer an ever-increasing virtuosity. In his radio works, he used tapes, altering their speed to create new sonorities.

HENRI VANHULST

Chew Shyh-Ji. *See* PAN SHIJI.

Chézy, Helmina [Wilhelmine Christiane] **von** [née Klencke] (*b* Berlin, 26 Jan 1783; *d* Geneva, 28 Jan 1856). German poet and librettist. She was, on her mother's side, a granddaughter of the poet Anna Luise Karsch, whom she

deeply admired and to some extent imitated. In 1799 she married Baron C.G. von Hastfer, leaving him after two years and setting up house in Paris with Friedrich and Dorothea Schlegel; they introduced her to the orientalist Antoine-Léonard de Chézy, whom she married in 1801. Under the Schlegels' auspices, she came to know the German artistic colony in Paris, including Mme de Staël, and began studying medieval romances. In 1810, when her second marriage also failed, she returned to Germany with her sons Wilhelm and Max. After spending some time on the Rhine and in Belgium she was prosecuted for her support for disabled war veterans and fled to Berlin, where she was successfully defended by E.T.A. Hoffmann at her trial. In 1817 she settled in Dresden, where her friends in the so-called Liederkreis included Tieck, Kind and other writers, and Weber, who in 1821 asked her to write a libretto for him. The troubled progress of *Euryanthe* is described from Chézy's point of view in the *Neue Zeitschrift für Musik*, and from Weber's in his son's biography. She was in Vienna for the première in 1823; at this time Schubert wrote incidental music for her play *Rosamunde*. She settled in Munich in 1830, moving to Heidelberg in 1843, and to Geneva in 1852. On her deathbed, by then blind, she dictated her autobiography *Unvergessenes* to her cousin Bertha Borngräber.

Weber originally chose Chézy as librettist not on the strength of her novellas, for which she was most famous, but on account of her lyric poetry, which is sentimental and conventional but not without musical possibilities. What little dramatic gift she possessed was weakened rather than stimulated by the many changes required by Weber. Certain passages, notably Lysiart's soliloquy opening Act 2, indicate that she did not totally lack dramatic perception. *Unvergessenes* gives a sentimental but readable account of the artistic life of the time in Paris and Germany, and includes some glimpses of composers, among them Schubert, Weber and Grétry.

Wilhelm von Chézy (1806–56) became a writer, and was introduced to the Schubert circle by Ernest von Feuchtersleben; Max von Chézy (1808–46) became a painter.

JOHN WARRACK/JOACHIM VEIT

Chiabrano [Ciabran, Ciabrano], **Carlo (Giuseppe Valentino)** [Chabran, Charles] (*b* Turin, 12 Feb 1723; *d* ?London after 1752). Italian violinist and composer. The brother of Gaetano Chiabrano, in some sources he is mistakenly referred to as Carlo Francesco. He studied the violin in Turin under his uncle, G.B. Somis, although his father, Giovanni Nicola (*c*1686–1776) was also a violinist, and was engaged as a violinist in the royal chapel on 26 April 1737. He performed at the Concert Spirituel in Paris in 1751 and was praised in a review in the *Mercure de France* (May 1751), for the extraordinary brilliance, polish and originality of his playing. In November he published, under the name Charles Chabran, *Six sonates à violon seul et basse continue* op.1, the fifth of which was reprinted in J.B. Cartier's *L'art du violon* (Paris, 1798) as an example of the early use of natural double harmonics. In 1752 he was in London, playing a major part in concerts there for three seasons, and leading the important Dean Street series in 1753. His subsequent career is unknown.

Carlo Chiabrano has sometimes been confused with Felice (originally Francesco) Chabran (*b* 6 March 1756; *d* London, 1 March 1829), another violinist active in London from at least 1782 to 1820. Felice Chabran was particularly associated with the ballet at the Italian Opera and issued four books of *Favorite Opera Dances* in 1790. He was also a successful guitar teacher. Among his three tutors for the instrument, his *New Tutor for the Harp & Spanish Guitar* (London, 1813) was the first English method for the six-stringed guitar, which replaced the five-stringed instrument.

GUIDO SALVETTI/SIMON McVEIGH

Chiabrano [Chabran, Ciabran, Ciabrano], **(Gaspare Giuseppe) Gaetano** (*b* Turin, 9 Feb 1725; *d* *c*1800). Italian cellist and composer. He came from a musical family: his father was the violinist Giovanni Nicola (*c*1686–1776) and his brothers the guitarist Giovanni Francesco Benedetto and violinist Carlo Giuseppe Valentino. He probably began his musical studies on the violin with his uncle,

G.B. Somis, before learning the cello and double bass. As early as 1735 his father and uncle arranged for him to work in the Turin theatres accompanying the operas. He received an appointment as cellist and double bassist for the royal chapel and royal chamber in Turin on 27 December 1752, but continued theatre work until at least 1782. He also toured: he was probably the 'Capperan' who played the cello in the Paris Opéra orchestra and the Concert Spirituel in 1755 and six of his sonatas were published in Paris before 1780. He probably joined his brothers in London in 1784. He is thought to be the Chabran who played in the Concerts of Ancient Music that year. Other sonatas were published in London in 1767 and 1785, the latter advertising that the English cellist John Crosdill had played them.

Chiabrano's cello writing is stylistically conservative, but tuneful. He favoured the three movement form of fast–slow–fast; the sonatas are constructed with idiomatic note patterns, double stops, and contrasting rhythms. He incorporated simple to moderately difficult shifting below the half-string harmonics in a manner similar to J.-B.S. Bréval's pedagogical sonatas. All 44 of his sonatas have been edited in Monumenti musicali italiani, xii: Monumenti di musica piedmontese, v (Milan, 1988).

VALERIE WALDEN

Chiabrera, Gabriello [Il Savonese] (*b* Savona, 8 June 1552; *d* Savona, 11 Oct 1638). Italian poet and librettist. He wrote an autobiography which gives a brief general statement about his life and works but few biographical details. He was educated at the Jesuit College in Rome until the age of 20, when he entered the service of Cardinal Cornaro. After being involved in a duel, he left Rome, and returned to his birthplace, where he spent the next decade pursuing his literary studies. He spent his later years in Florence (1595–1633) and Savona, enjoying the patronage of the Grand Dukes of Tuscany, Duke Carlo Emanuele I of Savoy, Duke Vincenzo Gonzaga I and Pope Urban VIII, all of whom he celebrated in his occasional verse. He also eulogized many of his contemporaries, among them Jacopo Corsi, Ottavio Rinuccini, Giulio Caccini and Torquato Tasso.

Although Chiabrera wrote in almost every literary genre of his day, his most important contribution was in the field of lyric and dramatic poetry intended for music. Influenced by the humanist theories of the Pléiade and by the strophic forms of the more popular vein of the Italian Renaissance, he experimented with the metrical patterns and simple strophic verse adapted by Ronsard from classical models, as well as with the varied stanza types of earlier Italian poets, such as Sannazaro, Serafino Aquilano, Lorenzo de' Medici and Poliziano. After publishing several collections of poetry (two books of *Canzonette* in 1591, *Scherzi e canzonette morali* and *Maniere de' versi toscani* in 1599) he was celebrated as a modern Pindar and as the creator of a new lyric style in Florence. The short, varied verses and novel, often symmetrical internal schemes of his canzonettas and *scherzi* (the latter a term he introduced) were natural aids to musical organization and attracted many song-writers in the early 17th century, such as Caccini, Peri, Monteverdi (the majority of the *Scherzi musicali* of 1607 are to Chiabrera's texts), Francesco Rasi, Stefano Landi and others. Although his theatrical works (*L'Orzalesi*, *Il Geri* and *Il Bamberini*) remained unpublished until 1826, they reveal an attitude of conscious reform aimed at greater simplicity and immediacy of appeal than the Petrarchist lyrics of his contemporaries.

A member of the Florentine Accademia degli Alterati, Chiabrera was also among the literary figures who frequented Corsi's salon in the 1590s and was one of the first poets to experiment with the new dramatic genre, the libretto. His *Rapimento di Cefalo*, set largely by Caccini, was the most spectacular event of the Florentine wedding celebrations of 1600. He visited Mantua in 1602 and 1605 and provided the prologue and *intermedi* to Guarini's *L'idropica*, presented during the Gonzaga court festivities in 1608. Also in that year, for the wedding of Cosimo II in Florence, he wrote a 'canzona sopra il balletto a cavallo' and two 'favolette da rappresentarsi cantando', one of which was probably *Il pianto d'Orfeo*. Other librettos from this period are *Oritia* and *Il Polifemo geloso* (both published only in 1615, with *Il pianto*), and *La Galatea* (1614, revised as *Gli amori di Aci e Galatea* and set by Santi Orlandi for a performance in Mantua in 1617). Probably somewhat later are *Angelica in Ebuda* (1615) and *La vegghia [veglia] delle Grazie* (or *Il ballo delle Grazie*), the latter produced in Florence in 1615 with music in part by Peri. Two other librettos, *Amore sbandito* and *La pietà di Cosmo*, are lost.

Chiabrera's influence on his contemporaries may be seen in the fact that certain formal features of Rinuccini's expanded *Dafne* libretto of 1608 and of Striggio's *Orfeo* resemble those in *Polifemo* and *Galatea*, particularly in the use of specific strophic forms and unifying choral structures. His experimentation with new formal schemes has been credited with inspiring some elements of Monteverdi's *concertato* designs as well as with fostering the musical separation between recitative and aria in the operas and chamber cantatas of the mid-17th century and with providing the basis for the psychological portrayal of their characters.

Il rapimento di Cefalo and seven other librettos are in Angelo Solerti's *Gli albori del melodramma* (Milan, 1904/*R*), iii; and there is an edition by Luigi Negri of his *Canzonette, rime varie, dialoghi* (Turin, 1952), and an *Opere di Gabriello Chiabrera* by Marcello Turchi (Turin, 1973, 2/1984).

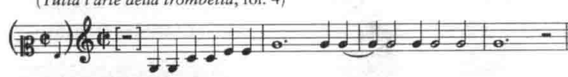
BARBARA R. HANNING



Chiamata (It.: 'call'; Fr. *chamade*; Sp. *chamado*). A term indicating a monophonic trumpet or horn call, or a homophonous imitation of the same on other instruments, normally strings. The *chiamata* was apparently introduced shortly before 1600 as a prefatory piece to a newly developed series of military trumpet calls known as 'alarm' signals. In the course of the 17th century it came to supersede the military toccata, which had performed a similar function for an older body of military calls. The *chiamata* was originally a single-section piece consisting of a characteristic arpeggio figure rising from *g* to *g′*, followed by a rapid reiteration of the latter pitch (ex.1*a*). The form was extended before 1630: the first section was occasionally given a varied repeat; and a second section, comprising an arpeggio figure falling from *c″* to *c′* before rising to a rapidly reiterated *g′*, was added (ex.1*b*). Bendinelli (*Tutta l'arte della trombetta*, 1614) and Fantini (*Modo per imparare di sonare di tromba*, 1638) included military chiamatas together with their associated military trumpet calls. Fantini also included an unassociated 'prima chiamata di guerra' and composed six free-standing *chiamate di capriccio*, which add to the two-section form the same music transposed one octave higher. During the second half of the 17th century, the trumpet *chiamata* reverted to a single-section form, now an arpeggio rising and falling, *c′*-*c″*-*c′*, and terminating on *g′*, which was sometimes reiterated and/or trilled upon (ex.1*c*). It was employed in many signals into the 19th century.

The term *chiamata* was also employed more generally to describe the 'alarm' signals themselves, as in Mersenne's 'Autre Charge ou Chamade' (*Harmonie universelle*). In this sense it indicated 'a call, or summon, . . . a parley . . . [or] challenge', as noted by Randle Cotgrave (*Dictionarie of the French and English Tongues*, 1611), John Florio (*Queen Anna's New World of Words*, 1611), Gervase Markham (*The Souldiers Exercise*, 1639), Du Praissic (*The Art of Warre*, trans. J. Cruso, 1639) and others. Walther (*Musicalisches Lexicon*) expressly associated *chiamata* with 'the sound of trumpets and timpani challenging a [besieged] city'; *chamade* was 'a sign given by a trumpet or drum to notify the enemy that one wished to make some suggestions to him regarding the surrender of his besieged place'. Altenburg (*Versuch*, 1795) described the conventions pertaining to such dispatches, including the sounding of 'a signal consisting of several so-called calls [*Rüfe*]'.

The musical figure of the *chiamata* became associated with the circular hunting horn as it came into use during the 17th century. Orchestral *chiamate* – particularly the *chiamata alla caccia*, a short programmatic piece for strings representing the bustle of the hunt and based on rising and falling arpeggio figures – feature in some 17th-century stage works, including Cavalli's *Le nozze di Teti e di Peleo* (1639) and Lully's *La princesse d'Elide* (1664). The call was quoted by a number of composers, most notably Christoph Strauss (*Missa 'Veni sponsa Christi'*), Biber (Sonata *a* 7, 1668; *Trombet undt musicalischer Taffeldienst*) and J.S. Bach (Suite no.1 in C; Brandenburg Concerto no.1; and in the obbligato trumpet part to the bass aria 'Grosser Herr, o starker König' of the *Christmas Oratorio*, ex.1*d*).

Chiara, Maria(-Rita) (*b* Oderzo, 24 Nov 1939). Italian soprano. She studied in Venice and Turin, making her début in 1965 as Desdemona at the Doge's Palace, Venice. Engagements in the major Italian theatres led to appearances throughout Europe and in South America. She made her Covent Garden début as Liù in 1973, her US début (in Chicago) as Manon Lescaut and her Metropolitan début as Violetta in 1977. Chiara's roles included Anna Bolena, Mathilde (*Guillaume Tell*), Elsa, Massenet's Manon, Bellini's Juliet, Micaëla, Adriana Lecouvreur and Maddalena (*Andrea Chénier*), as well as many Verdi heroines, notably Aida, which she sang in Luxor (1987) and at the 50th anniversary season at the Baths of Caracalla, Rome (1991). However, her beautiful, soft-grained voice was best displayed in Puccini, as Tosca, Mimì, Suor Angelica, Butterfly and, in particular, Liù.

ELIZABETH FORBES

Chiarentana [chiarenzana, chirinitana, giaranzana] (It.). An Italian dance, especially of the 15th and 16th centuries. It was known as early as 1459, when one is said to have been included in a ballo performed for Pope Pius II in Florence, and choreographies for *chiarentane* were included in treatises by DOMENICO DA PIACENZA and

GUGLIELMO EBREO DA PESARO. The dance is mentioned in Gazoni's *La piazza universale di tutte le professioni* (1587) in a list of such popular dances as the pavan, galliard and saltarello. John Florio's *Queen Anna's New World of Wordis; or a Dictionarie of the Italian and English Tongues* (London, 1611) defined the 'chiarenzana' as 'a Kinde of Caroll or song full of leaping, like a Scottish gigge'. FABRITIO CAROSO included a sophisticated choreography in *Il Ballarino* (1581), describing something much like the English contredanse, with some individual steps taken from the pavan. Caroso noted that the *chiarentana* ordinarily caused great confusion at a ball, partly because of the concentration needed to execute correctly the passes, figures-of-eight and other floor patterns, and partly because before the dance began it was customary for each man to chase his chosen partner: 'gl'Huomini corrono à pigliar le Dame, come se fossero tanti Falconi, che corressero à pigliare la preda' ['the men run to seize the ladies, like falcons running to seize their prey'].

Music for the *chiarentana* is extremely rare in surviving sources of Renaissance instrumental music. Caroso included a brief example, with its *sciolta* or after-dance, and 14 were included in Marc'Antonio Pifaro's *Intabolatura de lauto* (1546). All are duple-metre dances (in spite of Chilesotti's transcription of Caroso's in *Lautenspieler des XVI. Jahrhunderts*, 1891) in a simple homophonic style with eight-bar phrases. Some individual dances are organized as variation forms over a recurring harmonic series. Several of Pifaro's are arrangements of vocal models, including Janequin's *La bataille* and Passereau's *Il est bel et bon*.

□

Chiari, Giuseppe (*b* Florence, 26 Sept 1926). Italian composer. He began to compose in 1950 after he took private piano lessons and after a period at the engineering faculty of Florence University, where in 1947 he founded a jazz club. In 1961–2 he cooperated in the Florentine concert association Vita Musicale Contemporanea, and in 1962 he was co-organizer with Bussotti of the exhibition Musica e Segno, which was mounted in various cities in Europe and the USA. He was also a member of the Florentine Gruppo 70 and of the Fluxus Movement of New York (from 1962), and contributed to a number of journals including *Marcatre* and *Collage*.

Chiari is considered the leading Italian exponent of 'action music'. Beginning with *Qualche oggetto* (1964, included in *La strada*), his conviction that 'the writing of action music is equivalent to not knowing how much dignity it is necessary to lose in order to express one's negative arguments' led him to devise his works for performance by himself. Frequently they consist of 'suites' in progress, including pages of music, verbal and graphic instructions, collages and 'décollages', all intended for happenings that can use any means in any location. Chiari's anti-professional instrumental technique – using simple objects as musical instruments and vice versa – restored acoustic events to everyday immediacy. From his typical investigation of music-making at its budding stage (*Strimpellare*, included in *Quel che volete*) he evolved to the more constructive social criticism of *Happening sulla TV*, and to the political utopia of *Suonare la città*. Free, technically and ideologically, from any acquired theory of composition, Chiari's works can be fully appreciated only by taking into account avant-garde developments in total or visual art (from the Fluxus Movement to conceptual art), and his performances have tended to be in galleries rather than concert halls.

WORKS
(*selective list*)

Suites: Intervalli, pf, 1950; La strada, several performers, 1965; Teatrino, pf, 1965; Opera: I Don't Trade here, 2 Sonata, several performers, chorus, pf, orch, 1965–71; Quel che volete, ens, 1965; Il silenzio, tapes, 1965; Valzer, several performers, chorus, org, orch, 1969–71; Senza titolo, 1971

Single works: Studi su una sola frequenza, pf, 1951–3; Variations, str orch, 1955–71; Lettera, 1v, orch, 1962; Per arco, vc, tape, 1962; Gesti sul piano, 1965; Le corde, speaker, pf tuner, 1966; Ave Maria di Schubert, vc, 1968; Pf Conc., 1970; Conceptual Music, 1v, 1975

Other works: Critica del giornale 'La nazione', play, 1970–71; Happening sulla TV, play, 1971; Suonare la città, 1972

Most verbal scores pubd in Chiari's three books, others in *Marcatre*, *In* and other reviews; scores distributed by Centro Di, Florence

CLAUDIO ANNIBALDI/STEFANO A.E. LEONI

Chiarini, Pietro (*b* Brescia, early 18th century; *d* ?Cremona, after *c*1765). Italian composer. Fétis gave his birthdate as 1717. He was remembered by La Borde (1780) as a 'professeur habile & bon joueur de clavecin', an estimate paraphrased by Gerber (1790) and others. His activity as an opera composer is attested by the surviving librettos of works produced at Venice, Verona and Genoa from 1738 to 1746. A solitary libretto of 1754 places him at Cremona, as does the title of a keyboard sonata published by Haffner in 1765; the latter, in G major, reveals him as a lesser contemporary of Galuppi. Chiarini's collaboration with Goldoni, 1741–2, was first elucidated by Ortolani in his edition of Goldoni's complete works; Walker's further researches into the tangled history of the intermezzo *Il finto pazzo* and its later version *Amor fa l'uomo cieco* succeeded in establishing Chiarini's share in their music.

On the basis of a manuscript in the library of the Paris Conservatoire, Walker also concluded that *Il geloso schernito*, previously ascribed to Pergolesi (and published as such in the composer's complete works), was in fact by Chiarini; and there can be no doubt that this is music of a later vintage, and of less importance, than Pergolesi's.

WORKS

OPERAS

lost unless otherwise stated

Argenide (dramma per musica, A. Giusti), Venice, S Angelo, aut. 1738
Achille in Sciro (dramma per musica, 3, P. Metastasio), Venice, S Angelo, carn. 1739, *GB-Lbl*
Arianna e Teseo (after Pariati: *Teseo in Creta*), Brescia, 1739
Issipile (dramma per musica, Metastasio), Brescia, Erranti, carn. 1740
Statira (dramma per musica, C. Goldoni), Venice, S Samuele, May 1741
Il finto pazzo (int, Goldoni, after T. Mariani: *La contadina astuta*), perf. with Statira [rev. of G.B. Pergolesi: Livietta e Tracollo]; rev. as Amor fa l'uomo cieco (int), perf. with Artaserse
Artaserse (dramma per musica, 3, Metastasio), Verona, Accademia Filarmonica, carn. 1741–2, aria *I-Gl*
Ciro riconosciuto (dramma per musica, Metastasio), Verona, Accademia Filarmonica, carn. 1743
I fratelli riconosciuti (dramma per musica, ? after F. Silvani: *La verità nell'inganno*), Verona, Accademia Filarmonica, Jan 1743
Meride e Selinunte (dramma per musica, A. Zeno), Venice, S Giovanni Grisostomo, carn. 1743–4
Alessandro nell'Indie (dramma per musica, Metastasio), Verona, Accademia Filarmonica, carn. 1744–5
Il geloso schernito (int, 3), Venice, S Moisè, aut. 1746, *F-Pc* [wrongly attrib. Pergolesi], ed. in *Opera omnia di Giovanni Battista Pergolesi*, iii [iii/1] (1939)
Didone abbandonata (Metastasio), Brescia, Erranti, 1748; Cremona, private perf., carn. 1756
La donna dottoressa (int), Cremona, 1754

Music in: Ezio, Cremona, Nuovo, 1757

PIERO WEISS

Chiaroscuro. British vocal ensemble. Founded by the tenor Nigel Rogers, it specializes in the performance of early Italian Baroque music. The ensemble's membership has always been very flexible, including at various times Rogers, Patrizia Kwella, Emma Kirkby, Mark Padmore, Richard Wistreich, David Thomas and many others. It has focussed on the secular music of Monteverdi and his contemporaries, often in association with the instrumental ensemble London Baroque. The discography of Chiaroscuro includes an important recording of Monteverdi's *L'Orfeo*, made in 1983 with London Baroque and the London Cornet and Sackbut Ensemble. The ensemble has occasionally ventured into the secular repertory of the 15th and 16th centuries.

FABRICE FITCH

Chiaula [Chiaula, da Palermo, Palermitano, Panormitano], **Mauro** [Maurus Panhormita] (*b* Palermo, *c*1544; *d* Palermo, *c*1603). Italian composer. He was a Benedictine monk in the congregation of Monte Cassino and took orders in the abbey of San Martino delle Scale, near Monreale, on 28 August 1561 (Mongitore) or on 28 August 1562 or 6 November 1578 (Balsano). In 1581 the senate of Palermo decided to mount a new performance at the church of S Maria della Pinta of Teofilo Folengo's *Atti della creazione del mondo e dell'incarnazione del Verbo* (this *rappresentazione sacra* had had its first performance there in 1538, whence its popular title 'L'atto della Pinta'); the viceroy, Marc'Antonio Colonna, commissioned Ciaula to compose the music. In 1588 he dedicated his five-voice masses from Venice to the abbot of S Benedetto Po, near Mantua; he dedicated the motets of 1590 from S Benedetto and by 1597 he had returned to San Martino delle Scale where he remained until his death.

Folengo's *Atti della creazione del mondo* is a compilation into scenes, with stage directions, of Bible passages, mostly in Latin, interspersed with Latin and Italian poems; Ciaula set the biblical words as polychoral motets and the poems as monodic recitatives. The opening Sanctus, sung by a chorus of angels accompanied by various instruments, continued to be performed in the churches of Palermo until the early decades of the 19th century. Of Ciaula's four masses one is on the cantus firmus, *Fa sol la re*; the others are parodies of *Susanne un jour* and *Gustate et videte* by Lassus, and *Corona aurea* by Palestrina. In two masses he experimented with conflicting proportions: in the second 'Osanna' of the *Missa super 'Susanne un jour'* and the second 'Agnus Dei' of the *Missa super 'Corona aurea'* each of the five voices is assigned a different mensuration. The dedication of his *Sacrae cantiones* is addressed to Cardinal Montalto, a nephew of Pope Sistus V and a generous patron of musicians. Its title page indicates that instruments may be used to double or replace voices. All his secular music, a book of madrigals and a madrigal in the collection *Infidi lumi* (Palermo, 1603; see Bianconi), is lost.

Because of his alternative names Mauro Ciaula has sometimes been confused with Bartolomeo Lieto Panhormitano, with Niccolò Panhormitano, abbot of Monte Cassino, with Fra Mauro (i) and with Mauro Matti.

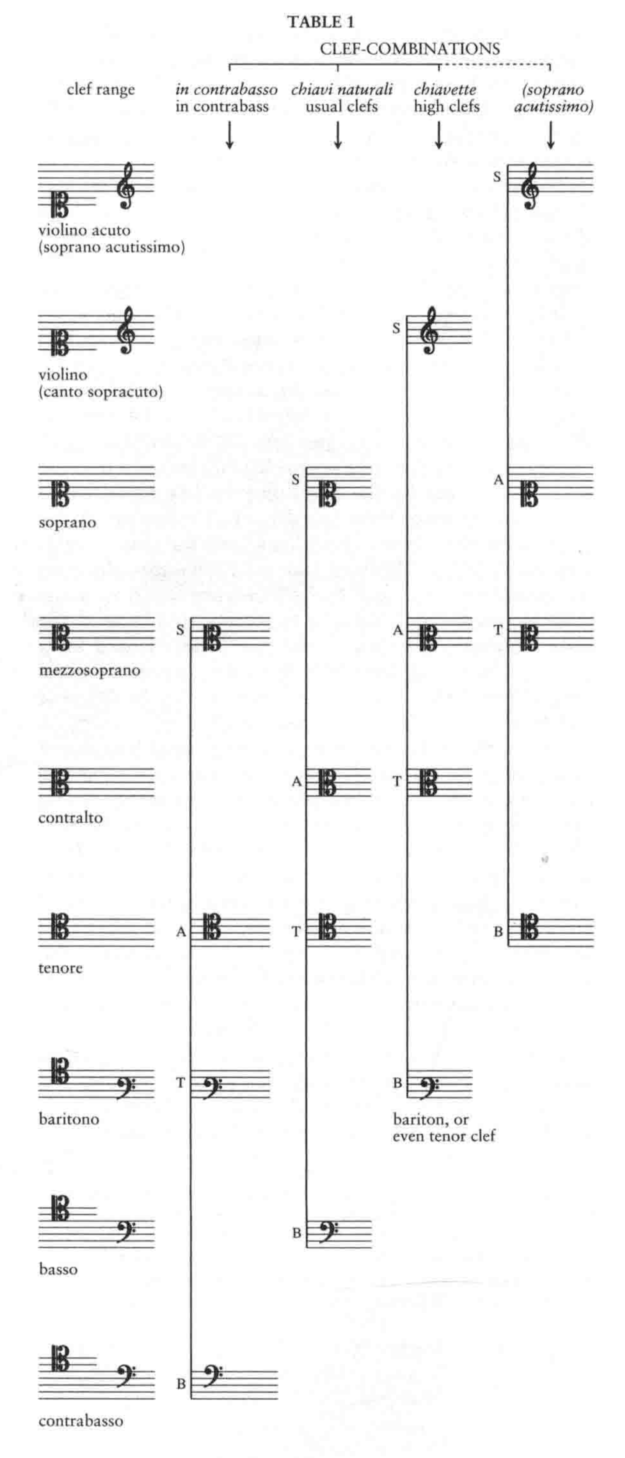
PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Chiavelloni, Vincenzo (*fl* 1668). Italian theorist. From the content of his only extant printed work it seems likely that he was not a musician. His *Discorsi della musica* (Rome, 1668), dedicated to Cardinal Giacomo Rospigliosi, nephew of Pope Clement IX, consists of 24 essays on the relationship of music to moral values and the development of virtue and as an aid to philosophy. The work relies entirely on ancient classical authors and is thus an example of the 17th-century Italian interest in the broad humanistic knowledge found in the works of philosophy, rhetoric and aesthetics of classical Greek and Latin sources. Of particular value to Baroque music aesthetics is the emphasis on music as a vehicle for representing and controlling the emotions of audiences, an aspect of ancient classical philosophy that was the basis for the Baroque theory of the Affects.



GEORGE J. BUELOW

Chiavette (It.: 'little clefs'). Term for certain combinations of clefs used in 16th- and 17th-century polyphonic music, distinct from the *chiavi naturali* (the combination of soprano, alto, tenor and bass clefs); it is especially used for the combination of 'high clefs' (treble, mezzo-soprano, alto and baritone clefs). Some theorists stated that the chiavette implied transposition by a 4th or 5th into the register of the 'normal' clefs, whence the alternative term *chiavi trasportate* (transposing clefs). These terms arose in the 18th century, when the practice was no longer current outside the papal chapel in Rome. Some modern scholars see clef combinations as an important clue to the mode of particular compositions, especially ones from late 16th-century Italy.

To correspond with CLEF, *italic* letters are used here to represent the pitches as named by Guido of Arezzo (*see* PITCH NOMENCLATURE); a figure after the letter-name of a clef denotes the staff line on which it stands, counting from the lowest (e.g. the modern treble clef, *g*2, the modern bass clef, *F*4).

Table 1 provides an overview of the clef groupings. The first three were employed by composers while the fourth, *soprano acutissimo*, was added by Bononcini (*Musico prattico*, 1673) to complete the list of theoretical possibilities. *In contrabasso* notation was widely used by Franco-Flemish composers, but in Italy it appeared only in the polychoral compositions of the two Gabrielis and their followers; otherwise it had disappeared by the middle of the 16th century. Contrary to long-held opinion, *in contrabasso* notation was seldom employed to emphasize a funerary character: while there is a Josquin *De profundis* set *in contrabasso*, one by Willaert is notated in high clefs and Vatican sources provide several examples of non-funerary music *in contrabasso*, including Févin's motet *Le vilain jaloux* and an *Ave Maria* by Marbrianus de Orto. High clef notation was used for much longer: in the age of Palestrina and Victoria the vast majority of *a cappella* polyphony was notated in this clef grouping. It

TABLE 1

remained in use in the *stile diatonico osservato alla Palestrina* of the Roman school throughout the 18th century and into the 19th, when it was last used by Giuseppe Baini (*Apparuit Dominus Salomoni*, 1837). This conservative practice was, however, restricted to composers writing for the papal chapel.

The first writer to mention standard and high clefs was Ganassi (*Lettione seconda*, 1543); he referred to the high clef grouping as 'composizione ordinata per la parte sopra acuta' (i.e. in the *g*2 clef). The term 'chiavette' first appeared in Girolamo Chiti's *Recercari, e solfeggi a voce sola di diverse chiavi* of 1718 (ms, *I-Rli* Ms.Mus. P.15, p.11), by which time, however, these clef groupings had become obsolete everywhere except Rome. Chiti defined *Chiavi naturali*, or *chiavi madri*, as the seven clefs of the *setticlavio musicale* (*g*2, *c*1, *c*2, *c*3, *c*4, *F*3, *F*4) with at most one flat in the key signature. *Chiavi accidentali*, or 'chiavette', were the same seven clefs but brought into use for transposition by the addition of a key signature of sharps or of more than one flat. The chiavette ('baby clefs') were thus seen as generated from the *chiavi madri* ('mother clefs') to facilitate transposition – thus the term 'transposition clefs' used by 18th-century theorists. Some writers (Paolucci, 1765–72; Becherini, 1813) used the term 'chiavette' for those clefs other than *F*4 used for a few bars here and there in a figured bass part to avoid ledger lines. Table 2 lists the names by which the different clef combinations have been designated.

The origin of the chiavette clef groupings is a source of controversy. It is clear, however, that the need to notate the *ambitus* of each of the eight (later 12) modes without resorting to ledger lines played a role (see Bononcini). This led to a difference in character between a mode as notated in the normal clefs (i.e. *chiavi naturali*) and as notated in high clefs: each *ambitus* has a different interval structure, and there was a different relationship between the highest note and the *finalis* (see Kurtzman, who confirmed an earlier observation by Hermelink). Another factor was the convention (see Paolucci and Martini) of conforming to the original key of a cantus firmus as it had appeared in the antiphonary; once the appropriate transposed clef had been chosen for the tenor, the notational system had to be adjusted to keep the parts at the correct distance from one another. Kurtzman analysed the relationship in Rome between the notation of plainchant antiphons and that of the polyphonic psalms and Magnificats with which they were modally associated in the Office; he found confirmation of the importance of this factor and suggested that this notational correspondence could be the origin of high clefs.

Chiavette clearly played an important role in the modal system. Towards the end of the 16th century, the confusion among eight 'psalm-modes', the eight 'motet-modes' and the 12 new Glarean modes made correct identification even more difficult (Powers). Bona (1595) and Cerone (1613) affirmed that transposition clefs could be of help in this task. The Spaniard Joseph de Torres y Martinez Bravo (1702), however, declared that the type of notation, together with the *finalis*, was sufficient for identifying the mode. The custom of using the final note of the bass to identify the mode had already been mentioned by Galilei (*Fronimo*, 1584); in 1640, Doni (*Annotazioni sopra il compendio*) explicitly confirmed that in order to differentiate between the authentic mode and its plagal, in the latter case the above mentioned final note was an octave lower than in the former. The disappearance of chiavette in the mid-17th century may have been directly linked to the growth in popularity around that time of the modern tonal system, in which the *ambitus* is not a defining element. But the decline of the system might also have been caused by the increasing use in the late 16th century of instruments such as the violin and the cornett, which were capable of producing higher pitches than all but a few singers; the larger range of these instruments hastened the abandonment of chiavette for voices.

Only those pieces set in *chiavi naturali* were considered unproblematic for standard vocal ensembles. Pieces notated in high clefs were intended to be transposed downwards, according to Ganassi, by a 5th, and according to Banchieri (*Cartella, overo Regole*, 1601) and Picerli (*Specchio secondo di musica*, 1631) by a 4th when the B♭ is present in the signature and by a 5th with no key signature. An explanation of Banchieri's rule is the following (Baini, 1828). When the mode is notated in high clefs and there is a flat in the key signature, this means that the piece has been transposed a 4th upwards; for the piece to be sung, it must be returned to its natural

TABLE 2

AUTHOR	CLEF-COMBINATION		
	in contrabass	*usual clefs*	*high clefs*
Ganassi, 1543	—	—	composizione ordinata per la parete sopra acuta
Morley, 1597	—	low keys	high keys

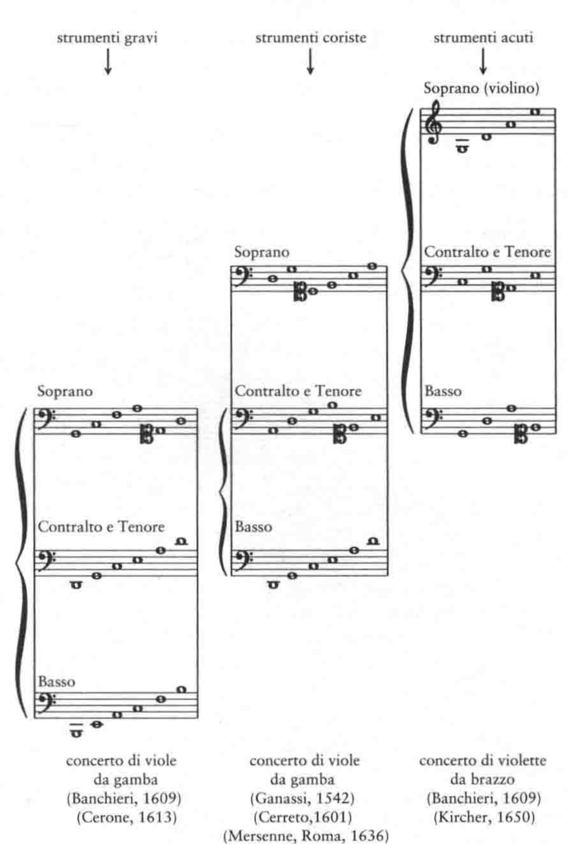
Martini, 1774	—	—	chiavi trasportate
Capalti, 1788	—	chiavi naturali chiavi usuali chiavi comuni	chiavi di trasporto
Baini, 1796–1808	—	chiavi naturali	chiavi trasportate

place by removing the flat and lowering it by a 4th. When, however, the mode is set in high clefs but without a flat in the key signature, it has been transposed to remove the flat; for it to be sung, it must therefore be returned to its proper transposed key by restoring the flat and lowering it a 5th. The converse applies to pieces notated *in contrabasso*.



The above rule finds agreement in Italian sources dating from about 1561–3 to 1608. In mid-17th century Rome only transpositions to the 4th below are mentioned, and at the end of the century and throughout the next the transposition was to a 3rd below on account of the lowering by a whole tone of the pitch of Roman organs. Exceptions to the rule were provided by Philippe Rogier, whose first kyrie in the *Missa 'Domine Dominus noster'* (*c*1590–95) is the earliest example of a sacred composition in high clefs with a bass part for organ already transposed, Morley, who in 1597 declared against any kind of transposition, Praetorius (*Syntagma musicum*, iii, 2/1619) and Schütz (1619–36). According to J.B. Samber (1707), the downward transposition should be by a 4th when the bass is notated in *F*3, by a 5th when the bass in notated in *c*4. In general, transposition seems to have been made to suit the singers.

'Standard' clef combinations came into use in the second quarter of the 16th century; from that time onwards it was possible to speak of variants. Hybrid clef combinations such as *c*1, *c*3, *c*4, *F*3 required no transposition; in order to prevent the organist from transposing automatically on seeing the clef *F*3, the continuo part was marked 'sonate come stà' (play as it stands). A similar situation is encountered in the clef combination *g*2, *c*3, *c*4, *F*4, but in this case the warning was applied to the treble part (in the early 17th century, violin or cornett). This clef grouping became common around the beginning of the 17th century when violins and cornetts began to play the leading treble parts.

When used in instrumental music, 'transposition' clefs were meant to be read at pitch. Banchieri (*Conclusioni*, 1609 and *Cartella musicale*, 1614) connected the three standard clef combinations with three different types of ensembles: 'high clefs' were linked with 'strumenti acuti', the 'usual clefs' with 'strumenti choristi' or 'voci humane' and 'in contrabass' with 'strumenti gravi' (Table 3).

This division corresponds to the polychoral practice of composers such as the Gabrielis, Giacobbi, Lodovico Viadana, Leone Leoni, Clinio and Banchieri himself. Giacobbi (*Salmi concertati*, 1609) used the terms 'choro acuto', 'choro ordinario' and 'choro grave', and Viadana (*Salmi per cantare e concertare*, 1612) called for 'acuto', 'capella' and 'grave' choirs. This sytem may have led to the development of the low G-tuned viol consort, whose origin has long been unexplained.
